In a speech at Wimborne-Minster on Wednesday evening, Lord Randolph Churchill denounced the Radicals for wishing to tax the poor man's beer, which, he said, was food equally with bread. He defied the caucus arrangements of the Liberals, and said he believed the Tories would be victorious at the general elections. Lord Randolph, continuing, said he cared not a rap what the *Daily News* and the *Standard* said about him. Such criticism was as effective as water on a duck's back. He claimed for the Conservatives the passage of the Seats Bill. Lord Randolph taunted the Radicals with having no policy, while the Tories were carrying out a great one, having for its object the strengthening of the empire at home and abroad. The Conservatives hoped to give peace to Ireland and security to India; they hoped to create an overpowering navy, which would be an adequate defence to the coasts of Great Britain and the colonies and to commerce; they believed they could bring about a revival of the trade and industries of the country. Lord Randolph repudiated the charge that he desired a war with Russia for the sake of securing votes at the election. The *Standard* ignored the speech in its Thursday morning issue.

The British Government will utilize the material intended for the Suakim-Berber Railway in connecting the forts at Chatham, Portsmouth, and Plymouth, which will also be connected with the great railway lines in order to provide ready transportation for troops in case of necessity.

Lord and Lady Carnarvon started on Monday on a tour through Ireland. Their first stop was at Galway, where a large crowd had assembled to meet the new Viceroy. The people received the visitors respectfully, but without any cheering.

Michael Davitt made an important speech at Longford, Ireland, on Sunday. He said that no difference existed between himself and Mr. Parnell. Mr. Davitt had a great reception at Longford and Lanesborough. Mr. Parnell, resting himself at his seat at Avondale, has made no move, and will not do anything for a fortnight.

The Bishopric of Salisbury has been offered to the Rev. John Wordsworth, nephew of the poet Wordsworth.

Mr. John Ruskin is critically ill. He suffers from insomnia and serious cerebral troubles, and death has been momentarily expected. On Monday night he showed signs of improvement, and there are now indications of his recovery.

Lord Chief-Justice Coleridge was married on Saturday afternoon to an English lady thirty-two years of age. The wedding ceremonies were conducted privately.

General Booth, of the Salvation Army, writes to the London papers that he has a project for the formation of an "Office of Help and Inquiry," with headquarters in London and agencies in the provinces and in the principal cities throughout the world. Men speaking different languages and familiar with the haunts of vice and the traffic in girls will be employed, who will be ready to assist all girls who desire to reform, and who will aid parents and guardians in tracing missing children. The establishment of such houses of refuge will especially meet the cases of thousands of girls who have been thrown destitute upon the world through the raising of the age of consent. Receiving houses will be established in Canada and the United States.

The ravages of the cholera in Granada, Spain, are horrible. Scores of the victims of the disease die in the streets, where in many cases they remain for hours before they are gathered up at night for a hurried and unceremonious burial in a common trench.

In the whole of Spain on Sunday there were 4,696 new cases of cholera and 1,556 deaths. On Monday there were 4,880 new cases and 1,718 deaths.

Count Kálnoky, the Austro-Hungarian Foreign Minister, has submitted to Prince Bismarck a plan for a commercial union between Austria-Hungary and Germany directed against all foreign countries, but leaving to each of the two countries in the compact independence in its home policy. It is believed that the plan will not meet the views of Prince Bismarck.

The conflict of authority between the Sultan of Zanzibar and the German authorities has been amicably settled.

Germany has occupied one or two of the Caroline Islands, where Spain has not exercised authority, in order to obtain laborers for New Guinea. The German newspapers approve the step, and think that it ought not to raise a difficulty with Spain. It is stated that the Zanzibar settlement is due to a secret agreement between England and Germany.

The German Government has formally notified the Powers of Germany's occupation of the Caroline Islands, the plea being repeated appeals from German traders.

The Tariff Committee of the Telegraph Conference at Berlin has rejected the proposals of Prince Bismarck for uniform rates by a vote of 11 to 7.

M. Rothan, the author of a history of the war, and formerly French Ambassador to Italy, has been ordered to quit Alsace-Lorraine. It is reported that Prince Bismarck was offended at Rothan's 'Diplomatic Souvenirs of Germany and Italy.'

Forty Germans have been expelled from Russia Many Germans are becoming naturalized to avoid expulsion.

The Slav party in Russia is urging the Czar to form a great Slavic alliance for the purpose of regaining supremacy in the East, and establishing a great Russian empire of central Asia. The Slavs also deprecate entering into negotiations with Austria, in the hope of securing an amelioration of the condition of the Slavs in that empire.

The Turkoman tribes are agitated by Russia's steps to destroy the influence of their chiefs and reduce their income from plunder. A further outbreak is imminent.

Reports are continually received in London of a massing of Afghan troops at Herat. The Afghans have destroyed all the gardens and villages round about that city likely to afford food or shelter to an attacking force. The owners of the destroyed property have been assured that England will compensate them for their losses.

A fearful state of anarchy prevails in Kordofan. There is also a famine at the place.

Information has been received at Cairo that a civil war has broken out at Khartum, that the Treasury has been sacked, and that the Mahdi's successor and other officers have been killed. Osman Digna has forsaken his followers around Suakim and fled to Kordofan. Many sheiks are going into Suakim and offering submission to the British commander.

In a five-column interview with Henry M. Stanley, published in this city on Sunday, the explorer defends himself from the charges of exaggeration and misstatement of facts in regard to the Congo region. He concludes: "As I have no pecuniary interests in the Congo or Africa, I think the terms 'fraud' and 'swindle' are a gross misuse of words, and to say that a man 'exaggerates' when he simply states his candid opinion is also a misuse of the word. Though I say these things, it is immaterial to me what you do. My duty is, just like Emerson, to teach men by going about my own business; and it was my business to give you a faithful impression such as I had of Africa and the things I saw. I have no further interest in it. Nobody is required to do anything for Africa unless the spirit moves him. There are fields as open in Africa for Americans, if they are enterprising enough and have the proper commercial spirit, as there are in China or any other part of the world. I have discovered a field where the white men's enterprise can do a great deal of good, not only to themselves, but to the natives. That is really the *raison d'être* of all I have said. I have tried to open this new field for the world's enterprise. At the same time I beg to say that it is perfectly immaterial to me whether they do it, because there is no loss to me or to any of the officers of the Congo State, who have nothing at all to do there except to do their duty, get their pay, and come home and be happy."

The reports of the recent massacre of Christians in Anam were greatly exaggerated. Instead of 10,000 only a few hundred were killed.

Mr. Heap, the United States Consul at Constantinople, has sent to the Porte another protest, couched in stronger terms than those of his first, against the expulsion of Americans from Jerusalem on the ground of their being Jews. Mr. Heap points out that the expulsions are in violation of treaty stipulations and are likely to lead to serious difficulty. The matter has been referred to the Government at Washington.

It is said that a general feeling in favor of the Iglesias Government prevails in the central provinces of Peru.

The Mexican Cabinet, after a protracted discussion, has decided that no exception shall be made in favor of the railroads in the law of June 22, and the decree will be enforced to the letter. Subsidies will not be paid, and not one cent of the customs revenue will be appropriated to the railroads, which will have to submit to the exigencies of the situation.

"POLITICAL SCIENTISTS."

THE United States Coast Survey has recently been investigated by experts from the Treasury Department. They report to the Department that "our investigation leaves no ground for doubt that the actual condition of the office of the Survey was one of demoralization, and its workings to a certain extent inefficient, unjust, and to some extent disreputable." This general verdict will be received with astonishment by the intelligent men of the country, as the Coast Survey has long been looked upon as a strictly scientific organization, devoted to elevated objects, and composed of men protected by their pursuits from vulgar aims. It is true, too, that the examination has been secret and ex parte, and avowedly does not rest on sworn evidence, and that justice to the implicated officials calls for the making of formal charges which they can meet in a public manner, after having seen the evidence against them. Nevertheless, the Superintendent has resigned his position, and there can be no doubt that extraordinary laxity, to say the least, has marked the recent conduct of the Survey.

If the question were simply of the fitness or unfitness of one man, we might be content to dismiss this painful subject. But the case is not so simple. We have to do with the breaking down of a system, a method; and it seems to be worth while to see what this system was. What is it that has brought down the high efficiency, the strict standard of honor, the great scientific usefulness of the Coast Survey from the level at which they were maintained by Bache, and reduced them to the present lamentable state? During the administration of Bache, the service had the best characteristics of a civil and of a military system. The civil element was in power. The appropriations of Congress were asked for to promote scientific works which were decided on by competent persons, and which were prosecuted on a uniform and steady plan. The services of both army and navy officers were sought and secured. Bache himself was a graduate of West Point. This element brought into the service a high standard of personal and official honor. The relations of the Survey to the Government were as intimate as now, but the spirit in which appropriations were asked was totally and utterly different. The late Professor Henry, then and for many years Secretary of the Smithsonian Institution, had much to do with setting the model on which the relations of all scientific departments and the Government were formed. He constantly laid the greatest stress upon the necessity of unimpeachable moral character, of purity of motive, of justice and truth in all dealings between institutions and the Government, and by his words actually created the spirit which he constantly exemplified. Up to the beginning of the war it may be said without inexactness that the spirit inculcated by Henry really governed the actions of the men who were directing our principal scientific departments—Gilliss, of the Observatory; Bache and Gould, of the Coast Survey; Henry, of the Smithsonian.

Some time after the war new men and new methods arose. The writer distinctly remembers the unusual epithet applied to a distinguished scientific man, the head of a scientific department, by one of his imitators: "He is the best *political scientist* in Washington." It appeared that a "political scientist" was a man who must have scientific ability—he should be a professor of something, if practicable, although this was by no means essential; but his chief characteristic should be a skill in getting appropriations, and *large* appropriations, from Congress. It was then easy, and it has always been easy of late years, to obtain from Congress an adequate sum of money to carry out any scientific project or to carry on any efficient scientific bureau. But the political scientist was the man who got more than his neighbor. He must have inventive power. New ways of catching the Congressional dicky-bird by new kinds of salt must be devised. Photographs, chromo-lithographs, illustrated books must be provided and liberally distributed. The Congressman must order the preparation of the very chromos which were designed to induce him to order more. Personal favors must be done for Congressmen; their nephews must be put and kept in office; the official misdemeanors of their friends must not be noticed. A "deficient moral sense" must be cultivated.

The chaos which arose among the Geological Surveys is fresh in the minds of all. The political scientist was in his glory. The Signal Office, the Observatory, the Hydrographic Office, the Smithsonian, were all more or less affected. The Coast Survey was more deeply hurt than all. How well the friends of Professor Henry can remember his patient protest against the horde of lobbyists who seemed to be the important persons of the great scientific bureaus to which Congress was annually giving millions of dollars. Robert Browning somewhere speaks of one of Verdi's vulgar operas going noisily on before Rossini, sitting silent in his stall. Silence was the only resource. The spirit of the political scientist is not yet dead. It is but a few months since the *Century* printed an illustrated article on the National Museum at Washington, in which the author had only open sneers at the administration of Professor Henry, and contempt for methods which did not bring appropriations from Congress as fast as they could be used. It was amusing and painful to see how unconsciously his standard was degraded.

The position of a scientific man in the United States has always been a very high one. It can be for ever maintained at a high level by adhering to the methods according to which Professor Henry administered the Smithsonian Institution and Bache the Coast Survey for many years. Make every official statement luminous with truth. Especially in dealings with Congress be exact—even punctilious—in avoidance of overstatement. Do not ask for $100,000 when you want only $90,000, allowing for an expected reduction of 10 per cent. Ask for exactly the sum that is required. Take what is given and administer it honestly, and at the end Congress will see that your original estimate was just. If you get $10,000 more than you want, by overestimates, you will despise Congress as being full of fools easily gulled, and you will despise yourself that you make so little in exchange for an honorable name. Cherish an exalted standard of official honor. It was by the exercise of simple, plain rules like these that our early scientific institutions were firmly based. It is by the disregard of these rules that such demoralization as existed in an honorable service like the Coast Survey has grown up.

While it is not believed that demoralization of this sort exists in the other scientific bureaus at Washington, we can all see that they need a thorough reorganization. Here is the Geological Survey doing the geodetic work of the Coast Survey, the Coast Survey doing the work of the Hydrographic Office, and the Signal Office, the Observatory, the Land Surveys, etc., all in a state of confusion. The political scientist has more or less had a hand in producing this state of affairs. We may thank the new Administration for a solemn warning given to him in the only way which he can understand.

NEW ENGLAND'S TRANSFORMATION.

THE annual report of the Superintendent of Public Instruction for New Hampshire, which appeared last week, shows that the number of children attending the public schools of the State was nearly a thousand less in 1884 than in 1883. A falling off in the patronage of the common schools in a New England commonwealth strikes the outsider as remarkable, and suggests the inquiry whether there was any special cause for such a showing last year. Investigation proves that there is nothing exceptional in these figures. The school attendance in New Hampshire has been diminishing pretty uniformly for a number of years, having fallen from 72,762 in 1872 to 63,656 in 1884. Further examination develops a similar condition of things in the adjoining State of Maine, which reported 226,143 pupils in 1869 and only 213,877 in the last year. That is to say, in these two States the number of children in the public schools has decreased by more than 21,000 during the last fifteen years, although their total population has increased by more than 50,000 within the same period.

Two or three partial explanations of this surprising retrogression in education at once suggest themselves. Everybody knows that in the dwindling population of the hill towns many "districts" are remiss in maintaining schools for the few straggling pupils. In the manufacturing centres, on the other hand, there is great difficulty about securing the attendance of the operatives' children, although the more rigid enforcement of truancy laws goes far to overcome this. Private schools also appear to secure more children than formerly, but this factor does not carry much weight in such States as New Hampshire and Maine.

The radical trouble is that there are not so many children as there used to be. The national census shows the number of children in the country of the "school age," which covers those from five to seventeen years, both inclusive. In 1870 there were 175,588 such children in Maine; in 1880, only 166,856—a falling off of 8,732, or 5 per cent., although the whole number of inhabitants in the State was larger in 1880 than in 1870 by 22,021, or 3½ per cent.

The population of Vermont a trifle more than held its own from 1870 to 1880, rising from 330,551 to 332,286; but that portion of it within the school age fell off in the decade from 89,831 to 86,270, or 4 per cent. New Hampshire reported 318,300 people of all ages in 1870 and 346,991 in 1880—a gain of 9 per cent., but the number of children grew in the ten years only from 78,766 to 79,120, or less than half of 1 per cent. The three southern of the Eastern States show a similar disparity. In Massachusetts, population increased more than 22 per cent., and children only 15; in Connecticut, population nearly 16 per cent., and children not quite 12; in Rhode Island, population 27 per cent., and children only 22.

It is thus clear that throughout New England children now constitute a smaller proportion of the population than they formerly did. The reason, of course, is that fewer adults, proportionally, marry nowadays, and that those who marry rear smaller families of children. It has been demonstrated that in Massachusetts the population from 1875 to 1885 was two-thirds larger than from 1850 to 1860, while the number of marriages was not quite one-third larger; and the relative decrease in marriages is scarcely less noticeable in the adjoining States. That the average foreign couple have more children than the average native couple is not only a matter of common notoriety, but is clearly shown by the vital statistics. The State where the increase of children has come nearest to keeping pace with that of the whole population is Rhode Island, and the proportion of foreigners is larger in Rhode Island than anywhere else. The State where the decrease of children is most marked is Maine, and the proportion of foreigners is smaller in Maine than anywhere else. In New Hampshire the last census showed that less than a quarter of the population was of foreign parentage; yet the recent registration report showed that nearly one-half of all the births in 1884 were credited to foreign parents. In Massachusetts, while the marriages in which both parties are native-born have for ten years past averaged 58 per cent. of all, only 41 per cent. of the children born during this period have had native-born parents on both sides.

It is thus obvious that the old New England stock constitutes each year a smaller ratio of the New England population. This is due not so much to its dying out as to its transplantation. The descendants of the Yankees who remain in the home of their forefathers are not, as a rule, so fruitful in offspring as their ancestors, but the Yankees who settle in the Western country rear large families. It is the active, vigorous class who emigrate; the less robust and virile remain, marry not at all or else late in life, and when they marry have few or no children. Of course, many of the best physical type continue in New England and reproduce largely, but the influence of the other two classes overshadows them. On the other hand, foreigners usually marry early in life and their women are more prolific.

The extent of the transformation already wrought is startling. In the oldest and most populous State in New England, barely half of the population in 1880 had parents who were native-born on both sides. Of the 1,783,085 people in Massachusetts, 798,652 came of parents born abroad, and 82,079 had one foreign-born parent, the fathers and mothers of almost 30 per cent. of the population having been born in Ireland. In Rhode Island the people with one or both parents foreign-born exceeded those with native-born parents, and here too the fathers and mothers of almost 30 per cent. were born in Ireland. In Vermont over a quarter of the people had a foreign or mixed parentage, the French-Canadian type being here most marked; and in New Hampshire nearly a quarter, the same class being here also most prominent. Nor do these figures tell the whole story, for they treat as natives the descendants of immigrants in the third generation. By 1880 there had been born many grandchildren to people who came from Ireland in the period following the potato famine of 1847, but they are treated by the census as the children of native-born parents. The proportion of the whole population who have descended from the original Puritan stock is therefore even smaller than the above figures indicate. Moreover, it is steadily diminishing all the while, by reason of the emigration of natives to other parts of the country, the immigration of foreigners, and the larger birth-rate among those of foreign than among those of native descent.

New England? New Ireland, rather, some Yankees are inclined to rename the region, when they see that the natives of Ireland and the immediate descendants of immigrants from that island already number a third of the population in more than one State, and that the chief magistrate of their metropolis is an Irishman. The comparative suddenness of the transformation renders it the more striking, for it has come about within the life-time of a generation. Forty years ago the foreign element in the population was utterly insignificant, and nothing seemed more improbable than that people then living would see that element constituting half of the inhabitants. The man would have been regarded as a lunatic who had predicted that in 1885 an Irishman would be the Mayor of Boston, while another of the race represented one of the city districts in Congress, and a third delivered the traditional Fourth of July oration under the auspices of the city government.

The amalgamation of this great body of aliens has been the crucial test alike of New England character and of popular government. They have stood the test. The sudden infusion of so much new blood has somewhat disturbed the circulation in the body politic, but it is already evident that the two strains will mingle harmoniously and profitably. A desire for liberal education is developing. From among the thrifty immigrants who have settled in the hill towns and are successfully tilling the lands which native emigrants have deserted in disgust, there are coming Irish students to the colleges of western Massachusetts. Candid Bostonians of the oldest families admit that the city has not in many years had a representative in Congress who showed more independence or displayed better judgment than Leopold Morse, a native of Bavaria. People who questioned the full comprehension of the American idea by the ruling element among the newcomers have been reassured upon reading the thoroughly patriotic oration by Thomas J. Gargan on the Fourth of July last. The Republican majority in the Legislature, controlled by the descendants of the original stock, recently demonstrated their faith in the new blood by conferring vastly increased powers upon the Mayor of Boston, though they knew that the first man to exercise these prerogatives would be a Democratic Irishman—and Hugh O'Brien is more than justifying their confidence. The newer immigrants are evidently going to turn out ultimately as good Americans as the old ones—for, though he is apt to forget it, the Yankee of the longest lineage is himself only the offspring of an immigrant.

THE LAST RETREAT OF THE BOARDER.

A YEAR ago we attempted in these columns some account of the process by which all along the northern portion of the Atlantic Coast the Cottager is gradually driving the Boarder away from the most attractive sites. We showed that there is literally hardly a desirable spot on the seashore between Cape May and Eastport, of which he has not already taken possession or is not threatening to take possession in the insidious way with which everybody is now so familiar, beginning with the modest wooden "camp," but one degree better shelter than a tent, and ending with the $20,000, $50,000, or even $100,000 villa. Go where we will within easy reach of a railroad station or steamboat landing, and we find the Boarder slowly but surely lapsing into a position of social inferiority toward the Cottager, and disgusted and made uncomfortable by the luxury with which the Cottager surrounds himself, his trim lawn, his tennis-ground, his expensive piazza, his dog-cart, and pony phaeton; and though last not least, by his exclusiveness. The last drop, in fact, in the Boarder's cup of bitterness is his discovering that the Cottager has, in a certain sense, begun to look on him as an intruder of another class, on whom in these times a well-equipped Cottager, even if he knew him in the city, can hardly be expected to call, much less to invite to dinner or tea. Indeed, the Cottager now rarely takes "tea" as a meal. He has begun to dine late just as he does in New York or Boston, and, more than this, dine in evening dress, while the wretched Boarder is perhaps struggling, probably within a hundred yards of him, with a "supper" of weak tea, sour bread, and cold meat and huckleberries, for which even his oldest clothes would be too good.

These contrasts are, of course, galling, and this is what the Cottager means them to be. In fact, he wishes the Boarder to "go." He considers him an injury to the neighborhood, and secretly hopes that the hotel or boarding-house is uncomfortable or does not pay, and will have to be given up. The worst of it is, too, that there is no way in which the wounded Boarder can get even with him. He seldom writes a book and hardly ever runs for Congress. He might possibly be punished occasionally in Wall Street by being caught "long" or "short" of stocks, but the Boarder is now rarely a man of mark on the floor of the Stock Exchange, so that his wrath has really no terrors. They laugh in the cottages when they hear that he is out of temper, because they know that he will do nothing

more terrible than take the train or the boat for home.

This is, as we have before remarked, the state of things to be witnessed along the coast. It may be witnessed on Long Island, to some extent in New Jersey, and all along the rocky shores of New England. In all the most favored portions of these regions the Boarder is vanishing very much as the red man vanished before him. A great number of the places he once rejoiced in, and for fully forty years had to himself, know him now no more, or are witnessing his last struggles against an order of things which is as resistless as the spirit of the age. Curiously enough, too, he is following the example of many conquered races in retreating to the mountains after being dislodged from the lowlands and the seacoast. In other words, he is doing what the ancient Britons and the Irish and the Basques and the Montenegrins did when they found the invader too much for them on the plains. More curiously still, into these fastnesses the Cottager does not attempt to follow him. The Boarder, for instance, still retains almost undisputed possession both of the White Mountains and the Catskills. In the Catskills, a region estimated at 1,200 square miles, and abounding in magnificent sites, the Boarder still roves as free, as unrestrained, as unconscious of any social superior, as he did fifty years ago. The white walls and green shutters of his houses swarm in all the woods. He mounts his simple and unpretending long wagon at the railroad station with a gayety which is not checked by the presence of T-carts, or wagonettes, or phaetons. He meets neither man nor woman in any of his excursions who is better fed or tended than himself. He is in fact monarch of all he surveys, and can look even his own landlord in the eye without wincing, for the competition is so great that even the landlord is kind and conciliatory.

In the old days before the railroads it was not so. In those early times, when the Boarder was still a strange animal to the honest Dutch farmers of those regions, it was by no means safe to grumble, and we can recall one case in which a complaining guest was chastised by his host with a stable bucket. There was at that time, too, in the mountains, but one house of entertainment which could be called a hotel, and it commanded the finest view in all the highlands. But the discipline to which the unhappy tourist was subjected in it was stern and remorseless almost beyond example. If he ventured to express any dissatisfaction either with his room, or what was set before him, it was proposed to him by the clerk, in terms anything but soothing, that he should seek quarters more to his liking at the foot of the mountain. But this tyranny is now a thing of the past. The Boarder is wooed and pursued by the landlord at every step. The railroad carries him past scores of piazzas filled with people of his own kind, whose whole appearance shows that their minds are as free as their bodies are well fed. He strolls without fear or misgiving in his daily rambles over sites of surpassing loveliness, on which it would appear that as yet no Cottager's greedy eye has rested. He is not even troubled by the sight of the insidious "camp" or the cluster of shanties with a common kitchen, which so often along the seashore are the precursors of the "Sur-mers," and the "Beaumanoirs," and the "Chez Mois," and the "Allez-vous-ens," which now hold possession of the finest spots on our coast.

Indeed, to sum up, it is to the mountains one must now go to see the Boarder at his best, or before the Cottager became a prominent feature in American life. How long this halcyon state of things will last, or, in other words, how long the mountains will continue to furnish a refuge to one of the most interesting relics of our ante-bellum civilization, it is impossible to say. The Cottager may any day begin to find the seashore too crowded for him, and turn the White Mountains or the Catskills into scenes of unbridled luxury and dissipation like Simla and Darjeeling in British India, and we may witness then the final disappearance of the Summer Boarder from American life. It will be a bad day for the country, however, whenever this comes to pass, for, unless we are greatly mistaken, it is the boarding-houses rather than the cottages which are the nurseries of the manly virtues and simple manners that are the salt of democracies.

HELEN JACKSON.

THE news of the death of Mrs. Helen Jackson—better known as "H. H."—will probably carry a pang of regret into more American homes than similar intelligence in regard to any other woman, with the possible exception of Mrs. H. B. Stowe, who belongs to an earlier literary generation. With this last-named exception, no American woman has produced literary work of such marked ability. Her fame was limited by the comparatively late period at which she began to write, and by her preference for a somewhat veiled and disguised way of writing. It is hard for two initial letters to cross the Atlantic, and she had therefore no European fame; and as she took apparently a real satisfaction in concealing her identity and mystifying her public, it is very likely that the authorship of some of her best prose work will never be absolutely known. Enough remained, however, to give her a peculiar both hold upon thoughtful and casual readers.

Helen Maria (Fiske) Jackson was the daughter of Prof. Nathan W. Fiske, of Amherst College, whose 'Manual of Classical Literature,' based on that of Eschenberg, was long in use in our colleges, and who wrote several other books. She was born in Amherst, Mass., October 18, 1831; her mother's maiden name being Vinal. The daughter was educated in part at Ipswich (Mass.) Female Seminary, and in part at the school of the Rev. J. S. C. Abbott in this city. She was early married to Captain (afterward Major) Edward B. Hunt, an eminent engineer officer of the United States Army. Major Hunt was a man of scientific attainments quite unusual in his profession, was a member of various learned societies, and for some time an assistant professor at West Point. He contributed to one of the early volumes of the *Atlantic Monthly* (xii, 794) a paper on "Military Bridges." His wife resided with him at various military stations—West Point, Washington, Newport, R. I., etc.—and they had several children, all of whom died very young except one boy, Rennie, who lived to the age of eight or ten, showing extraordinary promise. His death and that of Major Hunt—who was killed in 1863 by the discharge of suffocating vapors from a submarine battery of his own invention—left Mrs. Hunt alone in the world, and she removed her residence a year or two after to Newport, R. I., where the second period of her life began.

Up to this time she had given absolutely no signs of literary talent. She had been absorbed in her duties as wife and mother, and had been fond of society, in which she was always welcome because of her vivacity, wit, and ready sympathy. In Newport she found herself, from various causes, under strong literary influences, appealing to tastes that developed rapidly in herself. She soon began to publish poems, one of the first of which, if not the first—a translation from Victor Hugo—appeared in the *Nation*. Others of her poems, perhaps her best—including the sonnets "Burnt Ships" and "Ariadne's Farewell"—appeared also in the *Nation*. Not long after, she began to print short papers on domestic subjects in the *Independent* and elsewhere, and soon found herself thoroughly embarked in a literary career. Her first poem in the *Atlantic Monthly* appeared in February, 1869; and her volume of 'Verses' was printed at her own expense in 1870, being reprinted with some enlargement in 1871, and again, almost doubled in size, in 1874. Her 'Bits of Travel' (1872) was made up of sketches of a tour in Europe in 1868-9; a portion of these, called 'Encyclicals of a Traveller,' having been originally written as circular letters to her many friends and then printed—rather against her judgment, but at the urgent request of Mr. J. T. Fields—almost precisely as they were written. Upon this followed 'Bits of Talk About Home Matters' (1873), 'Bits of Talk for Young Folks' (1876), and 'Bits of Travel at Home' (1878). These, with a little poem called 'The Story of Boon,' constituted, for some time, all her acknowledged volumes; but it is now no secret that she wrote two of the most successful novels of the "No Name" series—'Mercy Philbrick's Choice' (1876) and 'Hetty's Strange History' (1877). We do not propose here to enter into the vexed question of the authorship of the "Saxe Holm" stories, which appeared in the early volumes of *Scribner's Monthly*, and were published in two volumes (1873, 1878). The secret was certainly very well kept, and in spite of her denials, they were very often attributed to her by readers and critics.

Her residence in Newport as a busy and successful literary woman thus formed a distinct period of her life, quite apart from the epoch which preceded it and from the later one which followed. A change soon came. Her health was never very strong, and she was liable to severe attacks of diphtheria, to relieve which she tried the climate of Colorado. She finally took up her residence there, and was married, about 1876, to William S. Jackson, a merchant of Colorado Springs. She had always had the greatest love for travel and exploration, and found unbounded field for this in her new life, driving many miles a day over precipitous roads, and thinking little of crossing the continent by rail from the Atlantic to the Pacific. In the course of these journeys she became profoundly interested in the wrongs of the Indians, and for the rest of her life all literary interests and ambitions were utterly subordinated to this. During a winter of hard work at the Astor Library in this city she prepared her 'Century of Dishonor' (1881). As one result of this book she was appointed by the United States Government as one of two commissioners (Abbot Kinney being the other) to examine and report upon "the condition and needs of the Mission Indians of California." Their report, to which Mrs. Jackson's name is first signed, is dated at Colorado Springs, July 13, 1883, and is a thoroughly business-like document of thirty-five pages.

As another fruit of this philanthropic interest, she wrote, during another winter in this city, her

novel, 'Ramona,' a book composed with the greatest rapidity, and printed first in the *Christian Union*, afterward appearing in a volume in 1884. Its sole object was further to delineate the wrongs of the aborigines. Besides these two books, she wrote, during this later period, some children's stories, 'Nelly's Silver Mine, a Story of Colorado Life' (1878), and two little volumes of tales about cats. But her lifework, as she viewed it at the end, was in her two books in behalf of the Indians. In one of her last letters to her Eastern friends she said (July 27, 1885):

"I feel that my work is done, and I am heartily, honestly, and cheerfully ready to go. In fact, I am glad to go. You have never fully realized how for the last four years my whole heart has been full of the Indian cause—how I have felt, as the Quakers says, 'a concern' to work for it. My 'Century of Dishonor' and 'Ramona' are the only things I have done of which I am glad now. The rest is of no moment. They will live, and they will bear fruit. They already have. The change in public feeling on the Indian question in the last three years is marvellous; an Indian Rights' Association in every large city in the land. . . . Every word of the Indian history in 'Ramona' is literally true, and it is being re-enacted here every day.

"I did mean to write a child's story on the same theme as 'Ramona,' but I doubt if I could have made it so telling a stroke, so perhaps it is as well that I shall not do it. And perhaps I shall do it after all, but I cannot conceive of getting well after such an illness as this."

In all this there was not a trace of personal vanity or display; there never was a more complete absorption in a "cause" than that of this woman, whose earlier years had been so different. But in all else she remained the same; time could not dim her vivacity, her freshness, her wit, her winning and persuasive manners. Few women who have such variety of nature as she had, make friends so warmly or so easily, or light up life for these friends in so many different ways. Her likes and dislikes were spontaneous, ardent, sometimes unjust; yet even the injustice was sometimes an inaccurately aimed impulse of justice in disguise; and when she was convinced of it—which indeed was not always—she would be quick to apologize to any one whom she had wronged. In literature her work was conscientious and thorough beyond that of almost any American woman; she never slighted it, never wilfully neglected details, never was weary of trying to perfect it. This applies especially to her prose. For her poetry, it is enough to say that it has won the applause of very fastidious critics—including emphatically the late Mr. R. W. Emerson—while her simpler poems are to be found widely distributed through the cottages and log-huts of our furthest borders, and have given comfort to many hearts. Many notices of her separate books may be found scattered through the magazines; but we can recall no systematic critical essay on her qualities as a writer except that contained in Higginson's 'Short Studies of American Authors.'

Mrs. Jackson died far away from home and kindred; but the spirit with which she met death may be seen in a further extract which we are permitted to make from the letter already mentioned. It would be difficult to imagine a worthier ending to a life marked by steady progress in the direction of unselfish aims:

"As you say, we may meet and 'smile over these solicitudes.' But I do not think we shall—and I want you to know that I am looking with almost an eager interest into the 'undiscovered country,' and leaving this earth with no regret except that I have not accomplished more work; especially that it was so late in the day when I began to work in real earnest. But I do not doubt we shall keep on working. Do you not believe so? Any other conception of existence is to me monstrous. It seems to me also impossible that we shall not be able to return to this earth and see our loved ones. Whether we can in any way communicate with them I doubt—but that we can see them I believe."

ENGLAND: THE TWO PARTIES AND THEIR TROUBLES.

LONDON, August 6.

THE condition of our two great historical parties at this moment presents phenomena not dissimilar to those which appeared in your American parties a year ago. Each has a disaffected wing, a minority displeased with the conduct of the leaders, and threatening to detach itself from the main body. Should the detachment occur from either party, that party will be seriously damaged, if not defeated, at the general election. Should both disaffected sections revolt, then, as each party will suffer nearly equally, their present relative strength will be preserved, though each will be weaker as against that common foe of both, the Irish phalanx which follows Mr. Parnell.

I begin with the Tories. For some time past there have been serious jealousies and heart-burnings among them. The old Conservatives, the aristocratic land-owning men who wished to maintain the Established Church and the ascendency of the county gentry, have seen themselves threatened by democratic Toryism under the auspices of Lord Randolph Churchill. Several times the feud broke out visibly, but it was always closed when an attack had to be made on the Gladstone Ministry. Parties can generally—such, at least, is our experience—hold better together in opposition, when they have only to criticise and denounce, than in power, when they have executive steps to take and a positive programme to announce. This necessity came at last on the Tories when they took office in June, after the resignation of Mr. Gladstone. Lord Randolph Churchill, who had triumphed in the composition of the new Ministry by driving Sir Stafford Northcote to the House of Lords and obtaining important posts for himself and his friends, triumphed also in the decisions of policy which the new Cabinet had to take. He induced them to attempt to outbid the Liberals by bringing in the Medical Disqualification Relief Bill—a measure in itself very distasteful to the county Tories; and he carried out the compact with the Irish Nationalists by persuading his colleagues not only to let the Crimes Act lapse, but ostentatiously to separate themselves from the whole policy of Lord Spencer, to bring in a Laborers' Bill for Ireland intended to assist the agricultural laborers out of the local rates, and a Land Purchase Bill, under which the Imperial Treasury is to advance money to Irish tenants, on improvident terms, to enable them to buy the fee-simple of their holdings. These acts have been startling to moderate men of all parties. But the language held toward Lord Spencer's administration, and the sudden change of front on the question of a Crimes Act (for nine-tenths of the Tory newspapers and public speakers had till quite recently been pressing Mr. Gladstone's Government to renew that coercive measure), have done more. They have disgusted a respectable section of the Tory party, and made its members feel degraded in their own eyes. To be taunted by the Liberals with their alliance with Mr. Parnell—a taunt which is illustrated by the careful abstention of his followers from irritating or obstructive tactics in Parliament—is more than the Irish Orangemen or the more old-fashioned Conservatives in England can sit down quietly under. The sweets of office may reconcile some of the leaders to this retractation of their former words and deeds; and the Parliamentary Tories have the satisfaction of thinking that they have, as the late Lord Derby said on a similar occasion, "dished the Whigs." But the Conservatives throughout the country, and particularly those who are not habitually active as party workers, have not these consolations. It is among them that one hears loud murmurs of disaffection, mixed with threats that they will abstain from voting, or speaking, or exercising their influence at the general election on behalf of their chiefs and members. These threats may not be fulfilled, for the impulse to rally to the old flag is very strong when the battle begins. We are still three months from the election, a time long enough for the first feeling of resentment to wear off. But if the election were to take place next week, there can be no doubt that the Tories would suffer grievously from the cold neutrality of many who have hitherto been zealous partisans.

The causes of Liberal discussion are different. The most conspicuous errors and failures of the late Liberal Government were in the sphere of foreign policy. These weakened its hold on the respect and confidence of many Liberals, but never led, and probably would not have led, to any large secession. What alarms the more cautious or conservative members of the party is the language held by a few advanced spirits, particularly by Mr. Chamberlain, and the measures of social and political change which he advocates. More than once Mr. Goschen, the most conspicuous of the so-called Whig party in the Lower House, as the Duke of Argyll is in the Upper, has attacked Mr. Chamberlain's proposals; and in this he represents the sentiment of a large number of persons who have hitherto voted the Liberal ticket. These persons fear that Mr. Chamberlain is already the real, and may soon become also the recognized, leader of the Liberal party; and they hasten to announce that they will not be led by him. There have been moments when it seemed possible that a fatal schism might open in the Liberal ranks; indeed, it required all the respect felt for the supremacy of Mr. Gladstone, who had allowed it to be announced that he intended to enter the next Parliament, to prevent the quarrel from breaking out. Fortunately for the Liberals, the moment when the danger was greatest was the very moment when the Tory Cabinet made that declaration of Irish policy which, in irritating its supporters, alienated and repelled any inclination which moderate Whigs might have felt to support Lord Salisbury. They now feel that to move toward such a Tory Government would be to jump out of the frying-pan into the fire; and for the moment they prefer to make the best of their hopes that Mr. Gladstone may remain to keep his lieutenants, or that the leadership may devolve, when he retires, upon Lord Hartington rather than on Mr. Chamberlain. Thus the disaffection of one wing of the Liberals will probably remain disaffection without ripening into revolt. But, as with the Tories, it will do something to divide their efforts and weaken their force at the general election.

It may be asked whether these two discontented sections from each party, if they cannot cross over (which they are not likely to do) might not unite to form a third or moderate party, holding the balance between the two extremes. This might happen if one had the men to form and lead such a party. However, there are not such men—or at least there are only two or three, Mr. Goschen being the most eminent; and the Parliamentary strength of such a party would be slender, because the constituencies prefer "regular" candidates, strong Governmental Tories or strong Radicals, as the case may be. There is therefore no reason to expect a fusion. The uneasy Liberals will not ask Tory help; the disgusted Tories will not go over to the Liberals. Bolting is a less frequent remedy with us than simple abstention; and even the abstention will

probably be less numerous when the day of bolting comes, than any one might think who hears the unusually free criticisms which men of both parties are now passing upon their leaders.

Among the disaffected Tories there is, luckily for that party, no conspicuous man who gives powerful expression to the sentiments one gathers from the talk of clubs and dinner-tables. But the Liberals are less reticent. They are very anxious to have a "good cry" with which to go to the country, and are discussing what the cry shall be, or, as you would say, of what planks their platform shall be composed. The advocates of Disestablishment, of Liquor Prohibition, of Land Laws Reform, and other schemes rush in, each wishing his question to have the first place. All are agreed that the reform of local government is a matter of importance, but it is feared that it will not touch the emotions or imagination of the "new democracy." All feel the paramount necessity of devising some *modus vivendi* with Ireland, but nobody is prepared to say how far we can go toward granting her a parliament of her own. In this state of matters, what with the discontent of some and the perplexity of most, it will be easily understood that the general frame of mind is an unquiet and unhappy one. Neither party likes the prospect before it. The Tories profess to be hopeful, and point to the smoothness and promptitude which have marked their conduct of business during the last five weeks of this expiring session. But in their hearts they do not expect to carry the general election. The Liberals are more sanguine about the new Electorate, and count on a majority, though not sure how far it will overpass that of Tories and Irish Nationalists taken together. But they are distracted by fears of a split among themselves; they shrink from the problem which they must face when Mr. Gladstone retires; they are uncertain what kind of policy to propound either at home or abroad; they are, at least the more humble-minded among them, disheartened by the contrast between the hopes and professions, sincere professions, with which they formed their Cabinet in 1880, and the record of troubles abroad and non-performances at home which has marked its career from May, 1880, till June, 1885.

One thing, however, would put heart into them—the certainty that Mr. Gladstone would be found leading them into combat, and prepared to form a new Government on the morrow of victory. In our new democracies, the individual man seems still to count for as much as in the oligarchies of earlier days. It is curious to note how much, for the moment, seems to turn on the health or will of Mr. Gladstone. He is past seventy-five years of age; he has been suffering lately from a throat affection which will debar him from campaigning if it be not, as his doctors expect, removed in a few weeks' time. It is understood that he is disposed to sacrifice his own wish for repose in order to secure the unity of his party, but his state of body may not permit it. Nor are the questions of policy without difficulties for him. The Irish problem is the most pressing problem. He may see the solution, and is believed to be disposed to try bold and large methods of solution. But can he be sure that the timid section of his party, which has often pulled him back before, will follow him? Or can he count on remaining long enough in power to give his scheme of solution a fair chance of success against the criticism, perhaps even the opposition, which the extremer section of the Nationalist party is sure to direct against any and every scheme that comes from an English Ministry? These are some of the difficulties which make the prospect of our autumnal struggle a troubled one even to those who count upon a party triumph. Y.

D'HAUSSONVILLE'S SOUVENIRS.

PARIS, July 31, 1885.

COMTE D'HAUSSONVILLE, who was a member of the French Academy, wrote two important historical works—one, 'The Roman Church and the First Empire'; the other, a 'History of the Reunion of Lorraine to France.' His son, the present Count, has just published a volume of 'Souvenirs' of his father, under the title, 'Ma Jeunesse: 1814-1830.' M. d'Haussonville sometimes read extracts of these souvenirs to his friends. They are fragments of memoirs rather than memoirs. Written in a clear, light, spirited manner, they give the reader very vivid impressions of a dramatic time. The family name of the D'Haussonvilles is Cléron; they belonged to a group of families known in Lorraine under the curious name of the "petits chevaux de Lorraine," in opposition to the "grands chevaux." These denominations were purely fantastic, and implied no privileges nor any real supremacy. The "grands chevaux" were only four in number, namely, the Lignevilles, the Du Châtelets, the Lenoncourts, the Harancourts; the three last are now extinct. The "petits chevaux" had among them the Beauvaus, the Choiseuls, the D'Haussonvilles, etc.—some authors cite eight, some others twelve or even sixteen families with this honorary appellation. The D'Haussonvilles were great Nimrods, and had the charge of "grand louvetier" at the court of Nancy; and when Lorraine, after the death of Stanislas, King of Poland, was united to France, the grandfather of M. d'Haussonville was appointed by Louis XVI. "grand louvetier" of France. He was also lieutenant-general in the French army. "My father," says M. d'Haussonville, "often told me that my grandfather found himself in the antechamber of M. Necker with the Marshal Duc de Broglie; they were both calling on the new Minister. 'We will enter together,' said the Marshal, 'and you will present me to M. Necker, for I don't know him.' 'Do you think I know him any better than you do?' 'Well, we will present each other.' So it was done. It much amused my father to think that the grandson of the Marshal married afterward the granddaughter of M. Necker, and that I married his great-granddaughter. [The late Duc de Broglie was married to a daughter of Mme. de Staël's, and the author of the 'Souvenirs' married his daughter.]"

The "grand louvetier" of France did not emigrate; he remained near Louis XVI., at the King's own request. After the massacres of the 10th of August he retired to his country place at Gurcy, where he stayed quietly till, in 1794, he was arrested, with his wife and his three daughters, and thrown into prison at Provins. The death of Robespierre saved his life. During the whole of the Terror he suffered no indignity from the peasantry; the richest peasants sent him provisions, and even offered him money. "This will not last, Monsieur le Comte," they used to say to him. One day, during this terrible period, he was walking alone on the high road, and met a man with an overloaded cart. The horse could not go up hill; the man was struggling with the horse, and swearing. "That is not the way," said the *grand louvetier;* "you push at the wheel, I will drive the horse zigzag." This was accordingly done. When the horse was on the plain, the man asked him where he was coming from. "From Gurcy." "What! there are no bourgeois at Gurcy; there is only that *canaille* of a *ci-devant* Comte d'Haussonville." "Well, I am that *canaille* of a *ci-devant!*" "It is not possible!" and then he said immediately: "Sh! those good-for-nothing villains, those *sans-culottes* of Donnemarie, with their clubs and their committees, they would not have helped me as you have done, though you are an aristocrat and a *ci-devant*. I will tell all these *sans-culottes* what I think."

The *grand louvetier* died at Gurcy in November, 1806. His son had been brought up in the world and for the world. He had been introduced in the most intimate circle of Mesdames the aunts of Louis XVI. and in the circle of Marie Antoinette. He was among the children who played with the children of France under the eyes of the Queen, of the Princesse de Lamballe, of Madame de Polignac. At the age of fourteen he received a brevet of lieutenant, and at fifteen he was made captain and sent to the Camp at Lunéville with an abbé, who was his preceptor. In 1791 his father sent for him, gave him 300 louis, and told him to start the next day for the army of the Princes. "I myself remain," said he, "by order of the King; at your age you must do as the young men of your generation."

Emigration was the fashion of the time. D'Haussonville made no remark and joined the army of the Princes. After the dissolution of his corps he left for England with the Harcourts, who were very well received by the English branch of their family. When he returned to France he was appointed Chamberlain and made a Count by Napoleon (though he was a Count already). The Emperor liked to converse with him on two subjects—on hunting and on the Faubourg St. Germain. When Chateaubriand composed his speech for the French Academy, a proof, as usual, was sent to the Cabinet of the Emperor. The author of the 'Genius of Christianity' dared in his speech to speak of the Revolution, of the condemnation of Louis XVI. Napoleon was very angry; M. d'Haussonville took note of his imprecations:

"Why! I try to make this country forget the divisions of the past. I have cured it of its revolutionary fever by intoxicating it with military glory; all my efforts tend to make old France and new France live in peace under my sceptre. I have surrounded myself with men who formerly hated each other. They live together in my court in peace, the old émigrés, the members of the Committee of Public Safety, the regicides—for you voted the death of Louis XVI., you, Cambacérès; . . . and shall I now allow a young writer who wishes to round his periods, a conceited writer, to compromise the happy results of my policy? Ungrateful fools, they don't understand the part which I have to play. The Royalists always have Henri IV. on their tongues. I am Henri IV.; my situation is just his. I do what he did, and in my more difficult times, and better than he did, though he was a clever man. He was placed between the Leaguers and the Protestants, and I am placed between the Revolutionists and the men of the *ancien régime*. When he did something for his old co-religionists, 'You see,' said the Leaguers, 'he has remained a Huguenot.' When he did something for the Catholics, 'He has forgotten his old and trusty friends,' said Duplessis Mornay and his ancient companions in arms. I protect you all and I will not be interrupted in my work. M. de Chateaubriand does not like France as I made it? Well, let him go and live somewhere else."

It seems as if we heard the young lion roar. The effect of these scenes must have been great, as they inspired such men as Fouché and Talleyrand with awe. I was reading a little while ago some letters of Manzoni's. The great Italian poet saw Napoleon at Notre Dame, at the Te Deum after the battle of Austerlitz. He says that nothing could render the proud and angry expression of the young demi-god, of the new Mars. I suppose that M. d'Haussonville did not see the Emperor with the same eyes as Manzoni; people can be protected even against genius by a certain sort of gentlemanlike propriety, and by an inherited self-contentment.

After 1814, M. d'Haussonville accompanied the Empress Marie Louise to Blois. After the Restoration he was appointed officer in the gray mousquetaires of the King's Guards. In that capacity he escorted Louis XVIII. to the Belgian

frontier, at the time of the return of the Emperor from the island of Elba. He was, in consequence, exiled by Napoleon from Paris and allowed to remain in his country place. Curiously enough, Louis XVIII. had made him an officer of the Legion of Honor, and Napoleon confirmed him in this title; he found himself at the same time exiled and decorated. When Louis XVIII. returned for the second time, he was made peer of France. He was a moderate royalist, opposed to the excesses of the extreme parties. He was not much surprised by the July Revolution; he wrote to Louis Philippe, begging him not to take the crown, but to place it on the head of the young Duc de Bordeaux. He escaped the Revolution, however, and took his oath as peer of France. He never took any active part in politics, and spent his last years chiefly in the country.

The author of the 'Souvenirs' tells us that his first recollections go as far back as the return of the Bourbons to Paris, though he was then only five years old. He remembers the coronation of Charles X., having accompanied his father to Rheims. He gives us amusing details about his college days. In 1828, at the age of nineteen, he was appointed attaché to M. de Chateaubriand at Rome. He does not seem to have been overpowered with feelings of admiration and of awe for his chief. Rather, he speaks of him somewhat in the tone of Sainte-Beuve; he takes the great man off his pedestal. Chateaubriand writes in his memoirs: "I had no sooner gone with Mme. de Chateaubriand than my natural sadness overtook me on the road."

"Did the company of Mme. de Chateaubriand," asks M. d'Haussonville, "count for something in this sadness? I don't know. Many people thought that the obligation, which he could not avoid, of taking his wife with him, to do, in the capital of the Christian world, the honors of his drawing-room, was a burden of his new position which he only accepted with difficulty. . . . As for Mme. de Chateaubriand, who had much *esprit*, who had, I believe, passionately loved her husband, who loved him still with an always suffering and a little jaundiced affection, she perfectly knew his disposition toward herself. She enjoyed, as it seemed to me, but without having any illusions, the important place which, for the first time, she held in their conjugal life."

He tells us that she used sometimes a little tyrannically her privileges as mistress of the house, opposing hard facts to her husband's poetical assertions, opening the windows when M. de Chateaubriand would have liked them shut. Chateaubriand never said a word, he was resigned, patient. "He had," says M. d'Haussonville, "so much to expiate." The life of the Embassy was monotonous. "Our chief had almost always the profoundly wearied look which was his natural expression. . . . He often placed himself before the glass, with his legs apart, his back slightly bent, and both elbows on the chimney, with his hands through his hair and on his large forehead. Not seldom he looked thus at himself during a quarter of an hour. What was he thinking of? of Mme. Récamier? of his next return to the Foreign Office? Others besides Mme. Récamier at that time gave him agreeable distractions." M. d'Haussonville speaks of a lady, perfectly unknown at the time, who spent the winter in Rome in 1828, a lady who afterward, under the title 'Les Enchantemens de Prudence,' did not hesitate to give the details of her acquaintance with Chateaubriand—an acquaintance which was afterward continued in Paris.

Chateaubriand was a very tolerant chief. He allowed his young attaché to frequent the salon of the ex-Queen Hortense, who lived in Rome under the name of Duchesse de St. Leu. His father had known her, and she had a very agreeable house. She affected, with the Frenchmen attached to the Bourbon dynasty, to be simply a Beauharnais, the daughter of a French gentleman. She had two sons, one of whom died young, and the other became Napoleon III. "You are very happy," said the Queen one day on the Pincio to M. d'Haussonville, the father, pointing to the young French attaché and to her son Louis. "Your son has a career. If I could only ask Charles X. to give my son a place as sub-lieutenant in a French army." The attaché often took rides with Prince Louis in the Campagna Romana. Their horses were little Roman horses and often used to quarrel. D'Haussonville little thought then that he should some day quarrel with his companion. This first volume of 'Souvenirs' ends with the Revolution of 1830; it will, we hope, be followed by others.

Correspondence.

METHODISM IN THE SOUTH.

To the Editor of The Nation:

Sir: The reasoning of "Southerner" is hard to follow. How, for instance, does your review of Bishop McTyeire's 'History of Methodism' "show plainly that the South has yet to develop an impartial historical or biographical writer"? What does it show about Cooke's 'History of Virginia'? As well say that your recent review of McMaster's 'History of the People of the United States' shows plainly that the North has yet to develop a writer capable of giving an impartial estimate of such men as Washington, Jefferson, and Monroe.

But why should any one expect to find an impartial account of the slavery difficulty in the work of one who took a prominent part in it? Does Doctor Whedon prove an impartial writer when he tries to make good the anti-slavery fame of Methodism? Your recent review might have shown "Southerner" this.

"Southerner" seems to forget that there is a Methodist Church in the North. Else why should he say: "Its [Southern Methodism] facilities for speedy control of public opinion are almost incredible in the North"? The Northern Methodist Church has exactly the same facilities for speedy control of public opinion, in some cases even better. We have nothing like their Sunday-school Secretary. They have more colleges and schools, a more "gigantic" publishing house; and "the influence of the church in warping the intellectual development of the people at large" is also exerted through a larger and better-circulated series of religious papers. Why, then, should it be "almost impossible to convey to anyone not residing in the South an idea of the tremendous influence exerted upon the social, political, and educational institutions of that section by the church of which the Bishop is the virtual head"? Any one who has paid attention to such things in the North, as "Southerner" evidently has not, will readily understand the kind of influence the Southern Methodist Church exerts.

How colleges of other denominations and State universities are held in subjugation by the competition of Methodist colleges is hard to see. "Southerner" ought to know that, as a rule, no inducements can be offered to a Baptist or a Presbyterian to make him send his son to a Methodist college. That Vanderbilt University is not what it should be, is only what might have been expected by any one who knew what powers were put into the hands of the head of a denomination. Would the result have been different if the university were under the absolute control of any other denomination?

What is said, too, about the influence of "emotional revivals of religion" is in like manner misleading. Is the South the only part of the country where revivals are held? Wherever Methodism is found, there will be found "revivals of religion." Nor is the Methodist the only denomination that has them. Moreover, the men that are "converted" so "instantaneously" have from childhood held the most orthodox views on religion. They believe and tremble. The class that furnish the inflammable material for emotional revivals never have "calm, sober years of reflection" on any subject. I might remind "Southerner," however, that "sudden conversions" were known to the church before there was any South or any Methodism. When this emotional religion is declared to be "the prime cause of our Southern impulsiveness that pervades many of the ways of secular life," the climax of philosophizing is reached. Does "Southerner" know how old Methodism is? Does he know that for a number of years after its birth its influence on Southern character was inappreciable? Has he ever heard of the emotional revivals of Jonathan Edwards? Was *he* a Southern Methodist? Perhaps some philosophizer will tell us that such revivals were the prime cause of Northern shrewdness.

The truth is, that "Southerner" could make out just as strong a case against denominationalism as against Southern Methodism; against Christianity as a bulwark which opposes all liberalizing tendencies, as against Methodism. Perhaps he was trying to do this. He certainly implies as much when he stigmatizes Southern Christianity by saying that President White, when he asserted that an ignorant religion was the curse of the Southern negro, would, "if he had witnessed one-tenth of the scenes of fanaticism that the writer has seen during a lifetime in the South, have included the whites in his statement."

To give "Southerner" some hope for the future, let us put the case this way. We will concede "the tremendous influence exerted upon social, political, and educational institutions of that section by the [Methodist] church." Now, if we listen to those who have made a study of the subject—to such men as Carl Schurz and to such papers as the *Nation*—we are assured that the South has made and is making rather creditable strides in social, political, and educational matters. It would be asking too much of "Southerner" to insist on his drawing the conclusion that Methodism, "the tremendous influence," is in ever so small a degree a cause of this improvement; but he will have to admit that this "largest and most influential body in the South" is at least being dragged at the wheels of the car of progress. That it can be so easily dragged must be our consolation. A Southern Methodist.

Ashland, Va.

PROHIBITION IN IOWA.

To the Editor of The Nation:

Sir: I have been much surprised that your statistics of and comments upon the liquor traffic, and unfavorable criticism of prohibition, have not provoked a reply from this State. We have had one year of so-called prohibition. Both its friends and enemies are examining its results, and its record will soon be "tried in the balance" of popular sentiment at the coming election. The report of the Temperance Alliance thus far savors a little of the methods and mathematics of a hopeful but apprehensive political party when the returns are coming in.

A short time ago we were informed, through the Alliance, that a report from a certain number of towns showed that the same ratio in the decrease of saloons in the remaining portions of the State would make a most favorable showing for the prohibitory law. On the contrary, the Dubuque *Herald*, in its issue of July 26, had reports from 105 towns and cities covering the 99 counties. Its conclusions are:

1. That in the cities the law has had no effect, saloons being open as usual.

2. That in the towns the saloons have been closed, but liquor and beer are sold on the sly and in secret, especially by druggists.

3. That most of the places (towns as well as cities) report no diminution in drunkenness. Some report less, some more, and fully half no change.

4. That the revenue formerly obtained by saloon license has been almost entirely lost to the towns and cities, and it is obtained now chiefly by increased taxation.

5. That the sentiment in favor of repeal has grown rapidly, and is increasing.

The Iowa City *Press*, from inquiries into the workings of the law as evidenced by crimes and misdemeanors tried by legal tribunals, reaches the conclusion that there has been no decrease of crime from drunkenness.

It is too early, perhaps, to criticise the results of the law with fairness to its friends; but that it has thus far proved a lamentable failure as a *prohibitory* law, may be read "between the lines" of the Dubuque *Prohibitionist*, which I send you. So far as present evidence goes, I think the following to be fair conclusions:

1. That where there has been successful enforcement of the law, such success has been the result of agitation and resulting popular sentiment, rather than inherent excellence of the law.

2. That where there is an overwhelming public sentiment in favor of the law, its enforcement is easy, so far as public violation is concerned, though not to greater extent than without a prohibitory law.

3. That where a majority is opposed to enforcement, the law is inoperative.

Why do not some of our prohibition friends assail you with the statistics of Major Ben Cotton, which furnished so much campaign thunder during the past campaign? I believe the figures demonstrate, to Prohibitionists, that the use of the stronger liquors and the resulting habit of drunkenness are relatively increasing. According to the figures of an esteemed clerical friend, there is a most alarming geometrical ratio.

IOWA.

August 9, 1885.

PARLIAMENTARY GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: "M. N." commends our committee system for its financial effect, and I am quite ready to take him on that ground. He points to the reduction of our debt, but how has that reduction been effected? Simply by the maintenance of a tariff system which is about worthy of the fourteenth century, and which, with the uncertainty of its continuance, has landed the country in the present business depression. Better, far better, would it have been if we had not paid a dollar of the debt, but while reducing the interest as the Government credit improved, had used our surplus in simplifying and reducing the tariff at least to a condition of stable equilibrium, to say nothing of reducing the legal-tender paper money. Our currency and national-bank system grew up under the financial despotism of Mr. Chase, which, like every branch of the Administration during the war, curiously illustrated the inability of Congress to do anything. What has Congress done to modify or amend it since, the return to specie payments having been a simple drift? Congress has been liberal enough with river-and-harbor and pension and mail-subsidy bills; and a Government which has tolerated the silver swindle for so many years has not much to boast of in the way of financiering.

That the United States have such an enormous revenue that they can hardly expend it, while Canada is poor and sinking into debt, is not conclusive as to the merits of the two systems. Will "M. N." undertake to show that Canada would be any better off under a government by standing committees? That is the way the French finances are now managed, and it is plain enough what they are coming to. On the other hand, I believe there has never been national financiering (meaning strictly the management of the finances) equal to that of Great Britain in the last half-century.

The truth is, a government by committees—in other words, by a representative body—may be described as a government of negatives. It may prevent things from being done, but it cannot do anything. It may block schemes of expenditure, but then it blocks everything else. If the former were the only object, it would be better not to have any government at all, and let society get along as it could—probably a very much more costly proceeding in the end.

According to "M. N.'s" own statement, the differences between the governments of Canada and the United States may be placed on quite other grounds. He says: "The members of the House are elected for five years, and feel little sense of responsibility to their constituents." Now, considering the opportunities for intrigue and corruption at Washington, the fact that there is really so little shows that members do stand in a very healthy awe of their constituents, which could not fail to be increased by the publicity which Cabinet responsibility would bring with it. And whatever may be the case in Canada, "M. N." can be very certain that the Senate of the United States will never be a nonentity or the President a figurehead.

When "M. N." says that Parliamentary government works badly in Great Britain, I answer that I know of no government which works well. It is a relative question, and if he will take the trouble to think out what Parliament would be with the Ministry excluded, and that body left to its own devices, with secret standing committees, I think he would picture a much worse state of things. At any particular moment it looks as if everything were going to pieces, but whoever will compare the actual condition of Great Britain and the steps by which she has arrived at it with what existed a hundred years ago, and her present position with that of any other nation, will hardly deny that, whatever we may think of her social condition, her political machinery is second to none in the world. Can our Government, also regarded *politically* and apart from social condition, stand the same test?

But, after all, it seems to me that the weak points of both the English and Canadian systems are exactly where ours is strong. I believe that the English Ministry are too dependent upon Parliament and stand upon too slippery ground. There is a sort of double election, according to which ministers have to look to Parliament first and to the people only second. Again, the Ministry are only a kind of voluntary partnership, the Premier having no authority, and keeping his place only through the consent of his colleagues and of Parliament. With a President elected directly by the people, having the veto power and a Cabinet of his own choice, Congress would not dare to bully that Cabinet as Parliament bullies the Ministers. The resignation of one official need not involve the whole, while the fixed term of the House would tend to prevent a change of the Executive by a snap vote, and to make a clearly developed incompatibility a question to be settled by an appeal to the people.

Above all this reasoning stands one hard fact. A committee of eight leading Senators of both parties has recommended unanimously that the experiment should be tried, and nothing interferes with its trial except the obstinate clinging of Congress to its usurped powers. If it succeeds, it will be an immense boon to the country. If it fails, it can be cancelled by the same authority which established it. Shall it be tried?

G. B.

NORTH ELBA, August 10, 1885.

WHY CAN WE SAFELY TRUST CONFEDERATE BRIGADIERS IN NATIONAL LEGISLATION?

TO THE EDITOR OF THE NATION:

SIR: In Professor Seeley's recent work upon 'The Expansion of England,' the principle is propounded that local self-government can only be securely maintained by a small State when such State forms an integral part of a large empire or dominion, by which it can be defended.

The advocates of secession, as a body, believed that they were fighting for local self-government, being then unaware that no such thing as self-government could exist where slavery was established—the very essence of slavery being government by a despotism or by a local aristocracy.

Slavery was destroyed, and the Southern States have now discovered that they have secured local self-government within the Union, which they would have lost had they succeeded in their attempt to secede, and which they never had in any true sense while slavery existed.

Having, then, attained their purpose by their own defeat, they have also discovered that the Northern States are and always have been more devoted to local self-government than themselves. In this entire agreement on fundamental principles may not our safety now consist, even when Confederate brigadiers share the responsibility of government?

E. A.

BOSTON, August 11, 1885.

Notes.

A NEW, subscription edition of Miss Cleveland's book, 'George Eliot's Poetry, and Other Studies,' with illustrations, is in the press of Funk & Wagnalls.

An atlas of early English history is in preparation by Dr. Labberton, author of a well-known historical atlas.

Mr. Thomas Hughes, who is about to revisit this country, is engaged, says the *Athenæum*, upon a biography of the late Peter Cooper, for which the materials at first hand are abundant.

Ginn & Co. have now ready the revised edition of 'Beówulf, and the Fight at Finnsburgh,' with text and glossary, edited by Prof. James A. Harrison and Prof. Robert Sharp. The appendix contains recent readings derived from the best German scholarship.

The first of the flood of books more or less called by the death of Grant is (poetry aside) 'Words of Our Hero,' edited by Jeremiah Chaplin, and published in Boston by D. Lothrop & Co. The number of sententious expressions that have fixed themselves in the hearts of his countrymen is not so great that an editor can be excused for omitting "Let us have peace," as is done here. Mrs. Jessie Benton Frémont contributes some interesting reminiscences of the President, and there is a poor photographic frontispiece.

The preface to "Seneca's" 'Canoe and Camp Cookery' (*Forest and Stream* Publishing Co.) at once captivates the reader ready to be initiated. Nor is his confidence disarmed when he is told, on p. 20: "You may find grubs in fish along the backbone in July and August. . . . But if you don't get them all out, never mind; they are good to eat."

Last year we heard much concerning the frilled shark (*Chlamydoselachus anguineus*), caught in

Japanese waters and first described by Mr. Samuel Garman. Its likeness to an eel made plausible the suggestion that it was the original sea-serpent. The creature, curious in many ways, has been fully dissected, pictured, and labelled by Mr. Garman in the July Bulletin of the Museum of Comparative Zoölogy (Vol. 12, No. 1); and the history of it shows that it has caused much discussion among our zoölogists, ending in the virtual acceptance of Mr. Garman's classification. He determines it to be a living representative of the fossil Cladodonti of the Middle Devonian, which had been supposed extinct, and in our present knowledge it is "the oldest living type of vetebrate." Twenty plates accompany the monograph.

Four years ago we had a good word for J. G. Fitch's 'Lectures on Teaching,' delivered in the University of Cambridge in 1880. Macmillan & Co. have now brought out a new edition, with a short preface by an American normal teacher; and we recommend the book afresh for its sensible thought and readable style.

Only two years have elapsed since our review of Dr. Morris's 'Specimens of Early English,' and already the Clarendon Press has issued a second edition, overhauled in the most thorough manner by Mr. A. L. Mayhew, with the coöperation of Professor Skeat. The glossarial index, we are told, has been "recast and rewritten from beginning to end," the references verified, and new words added, while notes and glossary have been harmonized. The editors return thanks to an American scholar, Professor J. M. Garnett, for a useful review of the first edition in the *American Journal of Philology*.

The second part of Vol. 4 of Cassell's 'Encyclopædic Dictionary' begins with Interlink and ends with Melyris. We have had several occasions on which to praise this work for its comprehensive vocabulary, current and obsolete, which nevertheless does not so greatly depart from the range of the common dictionary as its title might indicate. The following are characteristic examples of its inclusiveness: Irredentist, with a citation from the *Saturday Review*, date and page specified, as is customary in citations from books also; Isaiah, James, Joshua, etc.—apparently in accordance with a scheme for noticing the several books of the Bible; Irvingites, Jainism, Jansenism —and other sects; Isis, Jesus, Jupiter; Java, London, etc.; Jew-baiting; John Doe; Kantian philosophy; Keystone State; Liberation Society; Low-German; Maine liquor law, etc., etc. Add the Mahdi, which furnishes evidence of the freshness of the editing, as well as of a curious extension of the limits of historical definition in a work like this. Gordon, we are told, "was overcome by treachery on January 26, 1885, the Mahdi's troops being admitted within the fortifications, and Gordon and many others slain, just as a relieving army was approaching for his deliverance. Previous to this he had completely lost faith in peaceful negotiations, and declared that there would be no peace for Egypt unless the Mahdi was 'smashed.' Three views now exist as to future policy: that of the Government, to recapture Khartum and then retire; . . . The first view was approved by the House of Commons on February 27, 1885, by the narrow majority of fourteen."

In the September *Magazine of Art* (Cassell & Co.) Mr. Austin Dobson has a paper on a fertile and charming etcher of the last century, Chodowiecki, whose vignettes are associated with the works of Goethe, Schiller, Voltaire, Rousseau, Diderot, Beaumarchais, Goldsmith, Richardson, Sterne, Smollett, and many other lights of literature. We shall hear more of him when his drawings now in the Berlin Academy are published. Meantime, with the help of Mr. Dobson's numerous facsimiles, any collector *in petto* may make a good beginning. Further examples of Chodowiecki's vignettes may be found in Koenig's 'Deutsche Literaturgeschichte.'

Mr. Austin Dobson has done with the proof-sheets of his volume of 'Selections from Steele,' which is to be published shortly by the Clarendon Press. His new life of Steele, which is about as long as his life of Fielding, will not appear before the new year. The English edition of his 'At the Sign of the Lyre' will differ not a little from the American edition; it will be published early in the fall.

Collectors of Longfellow's works will do well to note that his translation of Dante has just appeared in Professor Henry Morley's Universal Library, a volume of which is published monthly at the uniform price of a shilling.

Mr. Andrew Lang is collecting his scattered magazine essays on Bibliomania and other kindred topics. The book will be an agreeable supplement to his delightful little volume on the 'Library.'

Two highly comic misprints in recent English periodicals deserve to be pointed out. In the July number of the *Fortnightly Review* Mr. Marion Crawford had a thoughtful paper on Roman life and character, in which he said that in fifty years the old Roman would be as extinct as the steinbock or the dodo—and the printer sent it forth as "the dado." The *St. James's Gazette*, having occasion to refer to a recent English translation of M. Coppée's little drama "Le Passant," called in English "The Passer By," changed its name to "The Paper Boy." It was the *St James's Gazette* which, two or three years ago, made the delightfully British blunder of translating the name of the Georgia Air Line Railroad into the "Aerial Railway in Georgia."

Ringel's medallion portraits of Renan, Augier, and Sarcey arrest the eye in Nos. 506, 507 of *L'Art* (Macmillan & Co.). So does the photograph from the relief model of a group for the base of the Chanzy monument at Mans—a squad of men picturesquely disposed in various spirited attitudes, and preparing to fire as directed by their superior officer. Pen-sketches show the entire corona of these men of the Army of the Loire in 1870-'71, from the midst of whom rises the memorial obelisk. The sculptor is Aristide Croisy. Charles Yriarte concludes his description of the restored Château de Chantilly, and the illustrations embrace a fine perspective view of the whole edifice and its surroundings, and one, larger in scale, of the façade facing the statue of the Constable of Montmorency, which allows us to judge somewhat of the spirit of M. Daumet's design. M. Yriarte remarks that the chapel, at the hands of this architect, has assumed an importance in the general scheme greater than it ever had at any epoch—for reasons, we may suppose, purely artistic.

Each fresh number of *Mélusine* exposes us to great temptation to report how good is this ideally well-edited magazine (Paris, 6, rue des Fossés-Saint-Bernard). Whether one likes an endless variety of folk-lore, or is pleased with old French songs for the sake of words or music, or is curious as to French dialect and idiom, "here's richness," we may truly say. The number for August 5 is a representative one, beginning with a continuation of M. Rolland's "Popular Songs of Upper Brittany," which is followed by more of the amusing "Béotiana" furnished by his colleague, M. Gaidoz. The dominant flavor, however, is of the sea, what with the diverse forms of the song of "Les Filles de la Rochelle," who

> "ont fait bâtir navire
> Pour aller dans le Levant,"

and the chapters on sea monsters, sea fairies, and deities, oblations to the sea, on drowning men, on the tide, the diver, etc., etc.

Mr. Frederic Harrison's share in the Spencer-Harrison controversy is being translated into French and published in the *Revue Occidentale*, the organ of orthodox Positivism. His first article, "The Ghost of Religion," appeared in the March number, and the second, "Agnostic Metaphysics," has just been published in the July number. The articles are given without alteration, except that a short note is appended to a passage in the first. Having only Mr. Harrison's reply to Mr. Spencer's papers, the readers of the *Revue* are furnished with only one side of the discussion. Perhaps Mr. Spencer refused to permit his share in the controversy to be translated and published in the *Revue*.

Some months since we called attention to the bold conveyance of an article, illustrations and all, from the pages of *Harper's Magazine* to those of *Vom Fels zum Meer*, where it appeared as original with a German author. Since then, every number of the German magazine has had one article—sometimes more—the illustrations of which have been copied from *Harper's*, though the text has sometimes been original. As the names of the American engravers generally remain on the cuts, we suppose these are reproduced from *clichés*. The last article to be reproduced was Professor Ely's "Pullman," which appears in the September number, without the least credit, as written by W. Uhland. The *Harper* illustrations to papers on Biarritz and Trouville were provided with a new text; that on Sheffield, the Sierra Nevada, Merino sheep, etc., was "adapted" from the original. In a Teunyson article the adapter acknowledges his indebtedness to "a writer in an *English* magazine." It is needless to say that the American engravings betray themselves by their superior quality.

B. Westermann & Co. send us Part 1 of a 'Kirchliches Handlexikon,' an aid to information in matters theological and ecclesiastical, published under Lutheran auspices, with Carl Meusel for chief editor (Leipzig: Justus Naumann). It is both topical, geographical, and biographical, and is very attractively printed, and is expected to make four large octavo volumes. From the same source we receive also a specimen number of a 'Lexicon Lapponicum,' with definitions in Latin and Norwegian, and an epitome of Lapp grammar by Prof. J. A. Friis (Christiania: J. Dybwad). No similar work has been published since the last century. The present embraces the Norwegian, Swedish, and Russian Lapp dialectic forms. Like the foregoing, it is to be commended for its typography.

Firemen will be grateful to Herr Otto Hirschfeld, if they ever hear of him, for the third part of his 'Gallische Studien,' which treats of the Præfectus Vigilum at Nîmes and the methods of extinguishing fire in the cities of the Roman Empire. Among other things he gives reason for believing that the Collegia Fabrorum and the Collegia Centonariorum were fire companies.

Georg Curtius, the eminent Greek philologist, and brother of the more famous historian of ancient Greece, Ernst Curtius, died at the close of last week. He was born at Lübeck in 1820, studied at Berlin and Bonn, became professor at Prague in 1849, at Kiel in 1854, and in 1862 ordinary Professor of Classical Philology at the University of Leipzig, a position which he held till his death. He successfully applied to the study of the classical languages the methods and achievements of modern comparative philology. Among his most important productions are 'Grundzüge der griechischen Etymologie' (5th ed., 1879), 'Das Verbum der griechischen Sprache' (2d ed., 2 vols., 1877-80), and the widely propagated and often translated 'Griechische Schulgrammatik,' of which the fifteenth German edition appeared in 1882. His brother, whose seventieth birthday, last year, was signally celebrated on both sides of the Atlantic, survives him.

Mr. Woodbury, the inventive genius to whom photography owes so many practical discoveries, is, as our readers were made aware last winter, in very straightened circumstances and ill of an incurable malady. He desires to sell two oil pictures by Audubon the ornithologist, painted for Woodbury's grandfather as a token of friendship, Audubon having been long an inmate of his family. The pictures are 2 ft. 10 by 2 ft. 2, and were called by the painter "Before, and After, Marriage," the former being a pair of messenger pigeons billing, and the latter a pair of the great woodpeckers fighting. They ought to be in some American natural history museum. Photographs of them may be seen at the *Nation* office. The price is $250 the pair.

—In No. 1048 of the *Nation* the danger was pointed out of underrating our present population, if we forget that the immigration of more than the total of the whole decade from 1870 to 1880 has been compressed into the last five years. On the other hand, the danger of overrating our numbers is still greater if we put much trust in the quinquennial census just finished in several States, and now going on in others. The least reliable of these estimates is indeed a vast remove from Heliogabalus, who attempted to discover from the quantity of spiders' webs the number of inhabitants in Rome, and from Bishop Wilkins, who ascertained how many species of animals there are in existence by calculating how many of them could be accommodated in the ark of Noah. But no State census can bear any comparison with the national, which is by no means so good as it is great. In all ordinary cases the real increment in the last half of a decade is larger than in the first half. But this populational law is reversed according to the census returns of individual States. Each State exaggerates, being ambitious to appear "equal to its superiors and superior to its equals." Wisconsin is no greater sinner in this regard than other States, but in 1875 her local census was 1,236,729, an advance of 182,056 from the United States record of 1,054,670 in 1870. But in 1880 the national officials could find in Wisconsin only a population of 1,315,497—or but 78,768 more persons than had been reported there five years before. In the first half of the decade the percentage of growth was well-nigh three times as large as in the last half. In one case it was 17.2 per cent., in the other it was 6.3. Yet it would be hard to discover any ground for believing the real progress of Wisconsin to have been any slower in the latter than in the former period. Regarding Madison, the Wisconsin capital, the local census is no less suspicious than that of the State. During the first half of the decade ending in 1880 that city showed a gain of 857 souls, but of only 291 during the last half. Facts like these will give jealous rivals of Madison reason to dispute the increment of 1,739 which the State census of 1885 authorizes her to claim, setting down her population as 12,063.

—Something of the inflation in State censuses may be due to the custom of paying census-takers so much a head for all the inhabitants they can enumerate. In the old London theatres "numberers" were employed to count the audience as a check on cheating doorkeepers who had an interest in having those who paid at the door thought fewer than they were. As long as our numberers are not paid by the job we need a better detector of their frauds than has yet been devised, or they will imitate those who have so swindlingly enrolled the Cheyennes and Arapahoes. It has always been thus. When Norridgewock scalps were brought into Boston and once paid for, the Treasurer was ordered to "bury them in some private place lest they should be discovered and produced again for getting the high bounty a second time." A living poll is more likely to reappear under an alias than a dead scalp.

—We are told that Voiture, the favorite letter-writer of the Hôtel de Rambouillet, said not long before his death: "You will see that there will be people silly enough to wish to publish all these letters of mine when I am dead." And in fact the letters were afterward found all arranged and ready for the press. Victor Hugo, a personage of far greater importance than Voiture ever was, has been no less true to his nature, always somewhat dramatic, in preparing his "literary will." The text of this document has been published *in extenso* in the *Rappel*. He has divided the manuscripts he leaves into three classes—works entirely completed; works begun and partly finished; fragments in verse and prose, memoranda on loose sheets. He leaves full directions for the publication of all these, appointing as his literary executors MM. Paul Meurice, Auguste Vacquerie, and Ernest Lefèvre. These gentlemen, in a note accompanying the published document, accept the task, but refuse the very liberal share in the proceeds of the publication allotted to them by the testator. A part of this, they announce, will be subscribed by them to the fund for the monument to be erected to the poet. The *Figaro* gives additional details as to their intentions. After the completion of the monument in Paris, a part of the remaining funds will be subscribed for the statue of Victor Hugo at Besançon, his native place. They will then petition the State to authorize them to raise in the interior of the Pantheon a tomb worthy of the poet, devoting to this purpose the remainder of their share of the proceeds.

—The works wholly completed consist of five plays, which will be published in one volume on the 1st of next October. The works begun and partly finished have also been examined. They are found to be mostly verses written in exile. The volume which is to contain them will form a sort of link between 'Les Châtiments' and 'L'Année terrible.' Its title, fixed by the author himself, is to be 'Années funestes,' and it will probably appear next April. The loose fragments will demand more labor on the part of the editors. Victor Hugo was in the habit of writing down his thoughts whenever they occurred to him, upon any bit of paper that was at hand, an envelope or the margin of a newspaper. In the night, when sleepless, he would suddenly rise, and, without a light, would write down, in a big, bold hand, the freshly-born verses that had disturbed him. There are thousands of such "chips" or "shavings" (*copeaux*), as he was pleased to call them—as many as three hundred piles, we are told, the first one examined containing two hundred and fifty-two separate pieces. As these fragments often contain only a verse or two, or a single sentence, the classification will take time. The editors, however, hope that each year they will be able to publish two volumes of this long series in prose and verse, which, according to the instructions left by the master, will be entitled 'Océan.' He says in his will: "Almost all this was written during my exile. Je rends à la mer ce que j'ai reçu d'elle."

—Owing to changes made in recent years, and to the efforts toward raising the standard of higher education in France, the intellectual stagnation of some of the provincial towns is fast disappearing. This is due in great measure to the activity of the local faculties. In an address delivered before the members of the Academy of Moral and Political Sciences, on the 18th of July, M. Zeller, the Vice-President, dwelt upon this new literary and scientific movement. The Faculty of Letters of Bordeaux was the first to take the field, with the publication of its *Annales*, a collection of historical, philological, philosophical, and literary papers, contributed by the professors and other men of letters of the locality. Three years ago the Faculty of Letters of Toulouse joined with their colleagues of Bordeaux in issuing their publications in the *Annales*. The Faculty of Letters of Lyons, under the title of *Annuaire*, and that of Poitiers, under the title of *Bulletin*, issue similar and very successful publications. At Caen, whose university, already celebrated in the thirteenth century, had won for it the name of the "Athens of the North," at Douai, at Rennes, and, as M. Zeller states, at more than half of the seats of provincial academies, a like vitality manifests itself. This is a very encouraging reaction against the hitherto all-absorbing centralization in Paris.

—The accuracy and thoroughness which are demanded of historical investigators by the modern school of criticism are well displayed in "La question de l'ensevelissement du comte de Toulouse Raimond VI." (Angers, 1885), by Charles Molinier, Professor in the Faculty of Letters at Besançon. The destruction of the Albigenses is one of the dramatic scenes of history which will never lose its interest, and not its least curious episode is the story of the efforts made by Raymond VII., after his reconciliation with the Church, to procure Christian sepulture for the unburied corpse of his father. These were unsuccessful, and, after nearly five hundred years, the skull of the old count was still shown as an object of curiosity in the house of the Knights of St. John at Toulouse. M. Molinier is already well known by labors which have thrown more light on some points of the history of Languedoc in the thirteenth century than those of any of his predecessors; and the present essay, with its appendix of hitherto inedited documents, displays the abundant wealth of knowledge and conscientious care which have distinguished his previous contributions.

HUMPHRY SANDWITH.

Humphry Sandwith: A Memoir, compiled, from autobiographical notes, by his nephew, Thomas Humphry Ward. Cassell & Co. 8vo, pp. 261.

Among the many Englishmen who in recent years have made a career and a reputation in the East, few have obtained such an honorable position as Humphry Sandwith. Memories of him go back to two periods—either to his aid in the defence of Kars during the Crimean war, or to his long-continued efforts for the oppressed nationalities of what was then European Turkey.

He was the son of a country surgeon, born at Bridlington in 1822. Brought up in an irregular way, and in a Methodistical family, it was only his illicit taste for field sports which really kept him alive. He was educated like his father as a surgeon, but from a knee sprained in snipe-shooting got a chance to make a voyage to the East, which in the end settled his career. After that he was a surgeon in the Hull Infirmary, and few can imagine what a routine life is among such Philistines as the people of Hull were then and are greatly now. After a violent attack of fever, caught in the discharge of his duties, he acted on the hint of a distant relative, and set out for Constantinople to try his chances there. His first experiences were anything but pleasant, but he fell in with a set of young fellows who became remarkable men: Layard, who had already begun discoveries at Nineveh; Alison, who was subsequently Minister in Persia; Hughes and Smythe, later Lord Strangford, who were then part of the corps of student interpreters at Constantinople, a body which began so well and finished so badly owing to the preponderating influence of Levantines at the Embassy. We may

remark, parenthetically, that if the scheme of Lord Palmerston for the education of student interpreters had been carried out, the relations of England and Turkey would probably have been far different from what they have been of recent years. In China and Japan it is also necessary to have interpreters in order that the minister may explain himself to the Government to which he is accredited. In these countries they confine themselves to translation pure and simple. In Constantinople, owing to a practice which has grown with time and seems almost insurmountable, the interpreters or dragomans have taken a very different position, and they are not simply interpreters, but act as go-betweens for communications between the foreign legations and the Sublime Porte. In order to finish any piece of business it is necessary to see the Turkish officials not one, but a dozen times, and the dragoman, from over-confidence or negligence, has been given this work, until it might be said that in most cases he carries on the official business quite independently of the Ambassador; for no control whatever is exercised over him. There is nothing to show that the statements which he brings back to his chief are at all correct. To such a degree had this system been carried that the interpreters of most of the foreign legations received large presents in lands, houses, and money in order to smooth matters between the Porte and their chiefs. The dragomans were nearly always members of Levantine families who had lived in Constantinople for generations, and, on account of their knowledge of the languages, were supposed to be indispensable. At the time of which we speak, the Pisani family were all-powerful both at the English Embassy and at the Porte. Lord Palmerston had taken up the scheme of educating young Englishmen in the Oriental languages in order to put down this abuse, but, owing to the objections of Sir Stratford Canning, who was then Ambassador, the whole system came to nothing. The English Embassy again fell into the hands of Levantines, who, although nominally English subjects, had rarely been to England and were thorough Orientals. Although five or six years ago this plan was revived by the English Government, and a school of student interpreters has been started at Constantinople, the main reliance of the English Embassy at the Porte is on men on whom slight dependence can be placed. The young men who have passed successfully through the school have been sent off into the consular service, and the Embassy for all information remains still in the power of the Porte.

Sandwith, like many others, had to complain of his treatment by Sir Stratford Canning, which was subsequently explained by the fact that on Lady Canning's invitation he had dined too often at the Embassy. He was on the point of obtaining a successful medical practice in Constantinople when he was persuaded to accompany Mr. Layard on his second expedition to Nineveh, which occupied him from the summer of 1849 to that of 1851. For two years more he practised in Constantinople, while matters were rapidly tending toward war. Just before the war broke out he became a regular correspondent of the London *Times*, but was obliged to leave the paper, as his views with regard to the Mussulman population were not agreeable to the editor. The opinions of the *Times* were in 1853 diametrically opposite to those expressed in 1877-8. Turkey was to be tolerated, but only so far as suited English interests, but not defended or sympathized with. The letter of Mr. Delane is very amusing reading, but is too long for quotation.

When war began, Sandwith offered his services for the army, and was sent first to Varna and Silistria, and subsequently to Kars. Here he organized a hospital, though greatly distressed by the class of physicians, surgeons, and apothecaries who were under his orders, and by the stores which had been supplied. They were, he writes, "a marvel and a phenomenon." He "found cosmetics, aromatic vinegar, . . . and medicines *de luxe*, besides sundry instruments destined for the infirmities of ladies in an interesting condition; but the medicines really necessary for the use of the army in the field were scarcely to be found, and the few that did exist were of the most worthless description." The Italian contractor had furnished the army with the sweepings of the apothecary shops of Constantinople bought up wholesale at a nominal rate and delivered to the Government at the highest tariff. After General Williams had capitulated, Sandwith was given his unconditional liberty by General Muravieff in recognition of the services which he had rendered to the Russian wounded, and immediately proceeded to London. There he was received as the hero of the gallant defence, for General Williams was still a prisoner in Russia. He was, in fact, so much lionized that Williams on his return at first turned the cold shoulder to him. His book, 'The Siege of Kars,' had a wonderful success.

After the peace was signed, Sandwith had the opportunity of going as physician to the special embassy which, under Lord Granville, attended the coronation of the Emperor Alexander II. He was then promised a position in the consular service in the East, which was subsequently changed to that of Chief Secretary of the Ionian Islands; but owing to a change of Ministry just at that time he was transferred to be Colonial Secretary at Mauritius. While this was an honorable post for him, it had the disadvantages of being in a tropical climate and far distant from the previous field of his activity, and one where his special requirements would be of no use. In 1860 he was led by failing health to resign it, and soon after, owing to the bombardment of Belgrade by the Turks in 1862, he became interested in the East in a different way. Before that his efforts had all been for the Mohammedans; now they were turned to the support of the Christians. He began by rendering some efficient services to the Serbian cause in a debate in the House of Commons, and subsequently visited Belgrade and travelled through Rumania and Bulgaria. In a letter to the *Spectator*, June 22, 1864, he describes the landing of various cargoes of Circassians, and proceeds:

"The most horrible misrule in these Danubian provinces has created a somewhat dangerous discontent among the Christians. To cope with this a large Mussulman element was wanted to play the part of the Druses in Syria, and these Circassians, burning with hatred to all Christians, came ready to hand. So thousands of them are being turned into Bulgaria among the most industrious, long-suffering people in Turkey. *The next Christian massacre will probably be in Bulgaria.*"

This was a prophecy abundantly verified in 1876. About that time Sandwith wrote a novel of Eastern life called 'The Hekim Bashy,' the adventures of a doctor in the Turkish service, a book which made little impression at the time in England, but which is full of true pictures of life in the Turkish provinces. Its exposure of the abuses of the Turkish Government was so strong that it was even translated into Serbian.

During the Franco-Prussian war Sandwith employed himself in ambulance service, and after that went again several times to Serbia, partly with a hope of doing something to develop that country commercially. During the Serbian war he devoted his whole time to the hospital service, and came near dying of fever at Zaitchar. He was rescued in time, after he had been supposed dead, by a young English doctor, Hume, who is now in charge of the American consulate at Belgrade; recuperating in southern France, he was able to go again to the East on hospital duty during the Russo-Turkish war. Once more he visited the East in 1878 with Lord Bath, but was again stricken down. He recovered for a time, but the seeds of disease were too deeply planted, and he died in Paris in 1881.

We have given but a bare outline of Doctor Sandwith's earnest life, and if we have any fault to find with his interesting but too brief biography, it is that Mr. Ward has not given more extracts from Doctor Sandwith's journals during his life in Serbia; for it is that period of his activity which endeared him to all the oppressed nationalities of European Turkey, and which made him, to all who were acquainted with the East, one of the most interesting figures in the struggle for liberty.

Perhaps we may be allowed to quote an anecdote about Thackeray, with whom Sandwith became intimate after his return from Mauritius:

"He told me that the mother of Pendennis was painted from his own mother, and that the rides of young Pendennis to and fro to see his boyish love were his own youthful rides when he lived in the neighborhood of Exeter. He told me that the original of Becky Sharp lived in his neighborhood. He mentioned also the original of the romantic Miss Amory, and related how he once travelled with her in a railway carriage, and cut his finger. She tore what was apparently a costly cambric pocket-handkerchief, and exclaimed, 'See what I have sacrificed for you!' but he detected her hiding the common rag which she had torn."

RECENT NOVELS.

At Love's Extremes. By Maurice Thompson. Cassell & Co.

A Second Life. By Mrs. Alexander. [Leisure Hour Series.] Henry Holt & Co.

The Dynamiter. By R. L. Stevenson. [Leisure Hour Series.] Henry Holt & Co.

Zoroaster. By F. Marion Crawford. Macmillan & Co.

Mr. Oldmixon. By William A. Hammond. D. Appleton & Co.

Down the Ravine. By Charles Egbert Craddock. Boston: Houghton, Mifflin & Co.

A Marsh Island. By Sarah Orne Jewett. Boston: Houghton, Mifflin & Co.

By Shore and Sedge. By Bret Harte. Boston: Houghton, Mifflin & Co.

Upon a Cast. By Charlotte Dunning. Harper & Bros.

Mr. Butler's Ward. By F. Mabel Robinson. Harper's Handy Series.

'LOVE'S EXTREMES' does not fulfil the promise of 'The Tallahassee Girl.' The latter was, it is true, of the lightest, but it had a delicacy of touch, not wanting in vigor withal, that dashed off pictures that were worth looking at a second time if the book came in one's way. This story has style as the other did, which can rarely be said of books of similar rank; but what was in the first a graceful adornment—the little refrain that rang softly through the pages like a silvery laugh or a bird's call—becomes here a mere device of mannerism. Mr. Thompson does not lack for ideas, for conceptions, but the power to coördinate them, or (if we substitute the figure from music for that of logic) to harmonize them, seems to be wanting. A man in love with a woman whom he does not know to be the widow of a man he has murdered in a street quarrel, presents a most tragic situation, but it is here turned to merely sensational effect. The lonely mountain home, with its one precious wild rose, is none the less pathetic for its rudeness, but it is morally or psychologically false that a man is led through pity to abject baseness. We do not be-

lieve that this was the author's theory of Reynolds's conduct, but his presentation of it makes it appear so. Once more, in the character of Miss Crabb he has in his mind a very clear apprehension of a type—witness the description of Moreton's feeling about her: "Evidently she did not possess any genius, and was only gifted with a shrewd, quick mind and a hungry imagination. She was mistaking notoriety for just fame, and was deluding herself with the belief that her burning desire for success was proof positive of her power to succeed. Nevertheless, her attitude was heroic, and he wished her a better fate than was sure to befall her." But when it comes to the concrete embodiment, there is an entire failure. A selection of hackneyed phrases parcelled out in a dialogue will never outline a real woman. The book may serve as a new proof, if one were needed, that the art of fiction is to be studied like any other. Good ideas of themselves are of no more use than good colors or good marble.

Mrs. Alexander's sense of proportion has somehow failed her in 'A Second Life.' Not that any of her stories had line or measure in the sense of crystallization or of organic growth. They were simply long ribbons unrolled before the spectator, into which were interwoven the threads of life of the fair maiden, her heroine, and her attendant train of suitors. Of these there might be two or six. It required only a little more or less of gently varying incident to color the pattern. For the end, it was only needful at a given moment to entwine two of the threads of life and to cut off the ribbon. In this book more than one-quarter was too much to devote to the *first* life, when it is the second we are promised. Such knowledge as was needed to comprehend the after trials and dangers had better have been given in a rapid retrospect from the author's own hand, or in glimpses now and then in the later action, not in amplification of incident, in fulness of detail sufficient for a story complete in itself. Thus much as a mere matter of perspective, of blocking out of space. Dealing with the actual material of the story, we come to much graver difficulties. The heroine, out of devotion to her mother in their sudden impoverishment, marries a man hard, sordid, repulsive to every sense. The bare statement of the position would be tragic enough, but the reader is dragged through scene after scene, till the disgust for what he sees and what he does not see becomes so fixed that the heroine never after escapes from the impression. However heroic her later conduct, however steadfast her adherence to absolute right, there remains in the mind a shrinking as from a thing smirched and soiled. The author overreached her end. She meant to excite the sympathetic pity which always finds its object beautiful. She has not helped her case by the extravagances of the catastrophe. More is the pity, for the leading motive of the part of the book properly called "the Second Life"—the respect for legal bonds when moral obligation no longer exists—presents the temptation wherein the imagination has too often betrayed the conscience, and the opportunity in which the novelist has too often chosen the side of consent and pleasure rather than of self-denial. With the question itself Mrs. Alexander deals clearly and justly. Of other things we need not speak, for the book is like all hers. Old Mrs. Griffith is a very good character sketch, as they say on the stage.

Mr. Stevenson has added to his second volume of "New Arabian Nights" a deep seriousness by his dedication to Cole and Cox, the faithful policemen: "If our society were the mere kingdom of the devil (as, indeed, it wears some of its colors), it yet embraces many precious elements, and many innocent persons whom it is a glory to defend. History . . . will not forget Mr. Cole carrying the dynamite in his defenceless hands, nor Mr. Cox coming coolly to his aid." The reader, however, need not fear the horrors of the subject. 'The Dynamiter' deals mainly with intentions, and the author has made very felicitous use of what has been a most perplexing feature of all the business—the pure wantonness and entire uselessness of most of the attempts at crime. It is not for want of logical theory or of expert plans, but simply from the scare of the agents. The trusted messenger gets frightened, loses his head, and drops his villanous bundle when and where he can. The book, if anything, gains upon its predecessor by continuity of subject and unity of effect. The imitative style flows smoothly on, even more aptly rendering the manner of the old tales. The idea is one of the happiest of the many of the sort taken up in this time of "reproductions."

In 'Zoroaster' Mr. Crawford has interleaved a few pages of Persian or Magian philosophy with some notes of Eastern architecture, rather than Eastern scenery. The philosophy is rendered in the same grandiose style in which "Ram-Lal" was introduced; the painting is done with the same haphazard brush he has used before. The scene-painters of any fairly good theatre will provide to order temples and hanging-gardens just as fine, any day. For personages, Daniel, Zoroaster, Darius, the queen Atossa are historic enough to give an air of reality to a superficial eye, and at the same time so out of reach for detail that Mr. Crawford may avail himself of poetic license to any extent. What purple robes can do for royalty, or long sweeping beards for a prophet, he has done; but when it comes to deeper things, to the essentials of demeanor or of character, he is as little capable of sustained effect as ever. He strikes a chord or two that prelude a symphony, and then the air rattles off into a jig, Atossa the queen enters stately, faultlessly cold in anger or in joy, divinely fair in a beauty "such as man has not seen since, nor ever will see." She crosses the balcony, "the heels of her small golden shoes clicking sharply on the polished floor," like a sprightly soubrette. Such a master of familiar quotation as Mr. Crawford should not forget, *vera incessu patuit dea*. Passing to graver things, even the faults of a character have their consistency. The women of that race and time may have been jealous, cruel, bloodthirsty, but they were queenly too. Atossa's treachery might be monstrous, never mean. Mr. Crawford makes her stoop to a shabby trick of a sort that turns up at least once a year in some trumpery novel.

'Mr. Oldmixon,' so far from being a tragedy by virtue of having in it a murder and a suicide —or rather two suicides, for Mr. Oldmixon to all intents and purposes kills himself—is a farce, a "roaring" one, if it were not so tediously long. Four hundred and fifty pages of absurdity on a stretch are exhausting. These sweeping phrases perhaps need justification. The story defies condensation, but Mr. Oldmixon's portrait can be made out. He is "a man of literary and scientific tastes," but, meeting no encouragement from publishers, he has "devoted himself to reading and the cultivation of gastronomic science." By his own account he has "the acuteness of the devil himself." Like Dr. Hammond's last hero, he has written a novel which he has kept by him for twenty years, expecting publishers "to tear each other's eyes out for it," and which he uses at last, as *Hamlet* the players, to convict the murderer in the plot. It is not surprising that a nature so delicate as to fall into a fit at the solecism of currant-jelly with a canvas-back, is gifted with Scotch second-sight. By its supernatural power he detects the guilt of his own nephew, who in one month marries and murders the lady who had been the forty-third object of his own undeclared passion. "Never in the whole course of his life had he been in a condition of greater pleasurable excitement" than when he greets the company he has invited to the dinner at which he intends to unmask the villany of his nephew. No wonder he dropped dead as soon as it was over. Books like Dr. Hammond's and Mr. Crawford's present grave difficulties for reviewers who try to express enlightened and honest opinions. Whatever they may say of logic or of good taste is met by a triumphant display of the number of the latest edition, the total of the thousands sold. Even authors of established position find it hard to escape moments of despondency in which the question, Of what use, then, are skill and care? is forced upon them. It is an old trial. Two centuries ago one supreme in both arts, in criticism and in fiction, wrote: "As the Artist is often unsuccessful, while the Mountebank succeeds; so Farces more commonly take the People than Comedies. For to write unnatural Things is the most probable Way of pleasing them who understand not Nature. And a true Poet often misses of Applause, because he cannot debase himself to write so Ill as to please his Audience."

It is wise of the publishers not to announce 'Down the Ravine' as a story for young people, for its first appearance in *Wide Awake* limited it much too closely to children. Its incidents might well amuse a boy too small to read it for himself, but its moral, inculcated in no perfunctory way, but by the whole spirit of the book, is one to be taken home by parents as well as children. The safety and the beauty of confidence between mother and son are as impressive when illustrated by the uncouth dwellers in the mountain hamlet as if borrowed from some mediæval romance. The relations between the children carry on, perhaps unwittingly, the same idea (the woman's part by the side of the man). Little Tennessee is a saving grace because she is the *sister*. No brother could have done her work. The small boy is the imp of the piece. The tale has all the quick and varied perception, the glow of imagination, which gave charm to the earlier sketches. It shows also a constructive power which, naturally, they gave no opportunity to display. Plot and underplot unfold within each other through the simplest, most ordinary circumstances of frontier life. Whatever may be said of the accuracy with which the odd speech of the people is reproduced, it is certainly, under Miss Murfree's pen, no mere cloak for nothingness, but lends an indispensable color to our picture of the people, by its unexpected turns, its fantastic metaphors. It is doubtful if the word dialect, in any strict sense, can be applied to it. This has been used for want of a better, but it is too exact, too restricted. Those people in their mountain solitudes are not preserving an ancient speech like the northern dalesmen or the Dorset peasants. It is simply the deterioration, by illiteracy and isolation, of the language carried there a century ago, now and again reinforced by some strong imagination, or by the half-learning of men like the circuit-riders. Hence come noticeable differences. "Coves" not a day's journey apart will have each its own peculiarities, and hence, too, the explanation that some travellers find no so-called dialect. Many of the people have learned ordinary speech simultaneously and take care to use it to a stranger. Only a life-long acquaintance with this talk of the mountains such as Miss Murfree's, beginning in the unreserved frankness shown to a child, could give one control of its poetry, its wit, and its weird fancies.

After 'Down the Ravine,' 'A Marsh Island' presents the other extreme of rural life—the one, a scanty, starved existence, too often compelled to that last of hardships, the fighting of a losing battle; the other, sheltered, placid, striking deep roots during the long inheritance of assured com-

fort. Miss Jewett's story makes a very modest claim in its quiet tone, yet it shows a marked advance in literary skill beyond 'The Country Doctor.' Delightful as that book was, it was as much a collection of sketches as either of her earlier volumes. The present story is one complete, harmonious picture. We have before said that Miss Jewett has more distinctly a style than any other American woman, and it lends itself most happily to her present subject—that type of New England farm life which, alas! the next generation may know only from records like hers. The changes on our northern coast are fast turning such chronicles into history. She has very deftly grouped,in a six-weeks' pastoral,contrasts that outline and accent each other. We, too, look with Mrs. Owen through the artist's eyes, and find the ancient farm a fairer, nobler place than its mistress knew. Or we echo the artist's own words: "I shall thank those sincere, simple people for setting me the example of following my duty, and working hard and steadily. . . . You have to be put into an honest place like that to know anything of yourself." The daughter of the house, "a fair young girl of out-door growth and flower-like fashioning," is a faithful portrait of the American girl who has been unconsciously moulded by the good old Puritan traditions, as they have come down to our day. Her intuitions are as true and fine as in any high-wrought nature that has grown where life has most of decoration. That strong fibre, that stern nature which never spared itself, survives in the gentle dignity of Doris Owen, in her fearless persistence in repairing a wrong. Fate asked of her only the heroism that can be put into simple things. The spirit that braced itself to endure the looks of the fishermen in Westmarket harbor would have been daunted by no extreme of peril.

'By Shore and Sedge' is the euphonious though not felicitous title with which Bret Harte has headed a collection of three very slight sketches. In spite of their slightness, however, they are, both in their matter and manner, marked by their author's usual extravagance. For, notwithstanding the occasional touches of beautiful simplicity in Bret Harte's earlier writings, exaggeration is undoubtedly their prevailing characteristic; and the desire to say striking things in a striking manner has evidently led him—at least in 'By Shore and Sedge'—further than ever from naturalness. "Long-drawn phrase of saccharine tenuity" may not be an attempted improvement on Milton; yet even as an original expression it is strained, and conveys but a very abstract conception to the ordinary hasty reader. As for the stories themselves, "A Ship of '49" is the longest and best; it is, in fact, the only one that can lay good claim to being a story at all.

'Upon a Cast' is a novel quite fit and proper for summer reading; it is light and pleasant and extremely entertaining. The action, which embraces but the brief space of a summer, is rapid, and, if never absorbing, is still never entirely devoid of interest. The author is evidently an admirer of Thomas Hardy; and, whether consciously or not, has been not a little influenced by his charm of style and treatment. There is a likeness noticeable between them in a number of points—in the way in which the most trivial incidents are sometimes made the important instruments of fate, in the succinct and effective portrayal of character, in the style of the conversations—until, indeed, one is so continually reminded of Hardy that one half expects to find some touch of his descriptions of nature. At this point, however, the likeness fails; nature with Miss Dunning means but a stage setting. Of the characters, perhaps Mrs. Dearborne, the jealous mother, is the best drawn, although now and then she comes dangerously near being overdrawn. Yet she never quite loses the naturalness which surrounds all the *personæ* of the story, from Mrs. Milinowski, who "seemed to pass through life making explanations," to little Lelia, with her childish ways and curiosity. Which lover the heroine will finally choose—the salient point of interest in the story, and one that again recalls Hardy—remains in engaging uncertainty until the very last, and is eventually decided in a way that, so evenly divided are the merits of the rivals, is half a disappointment and half a satisfaction to the reader.

In marked contrast with the pleasant lightness of 'Upon a Cast' is one of the early issues of Harper's Handy Series—a series which, for its convenience and mechanical workmanship, is a welcome substitute for the Franklin Square Library. Nothing, scarcely, could be heavier than the story of Mr. Butler's ward, with her romantic name of Dierdrè, her childhood in Ireland, her conventual schooling in France, and her two marriages and final insanity in England. The true artist, as Mr. Howells says, will discard the actual if it seems improbable; yet here is a novel evidently written with almost the sole purpose of utilizing an incident which, it seems necessary to vouch in a foot-note, really occurred. Dierdrè's father had been an Irish bailiff, murdered by an ejected tenant and buried beneath a few sods ere life was quite extinct. Here, a week or two after, Dierdrè, still a mere child, had found his body; and it was the memory of this hideous fact haunting her whole life that gave a peculiar impress to her character, and that eventually led to the loss of her reason and to her dismal waiting for the last act of her tragical existence—for her second husband, whom she had seen and loved before her first was dead, was no other than the son of her father's murderer. This, in brief, is the story, which is padded out with much tedious writing to the regulation length of an English novel. Nowhere is there a real touch of humor or genuine pathos—only a vain striving after effect. The touch of nature that invests tragedy with its strength of charm over one's mind is lacking, and one lays the book down with a feeling of depression, thinking it would have been much better unwritten.

American Journal of Archæology. No. 2. Baltimore.

THE publication of the *American Journal of Archæology*, of which the first number appeared last spring, is now continued by what seems a double number. With the coming winter the *Journal* is to settle into regular quarterly sequence. Once a quarter is as often as it ought to appear, and the gradual enlargement we hope for ought to be in the size of its quarterly numbers, because its chief end should be to give to this community an account and running criticism of the archæological doings all over the world; and once in three months is often enough to make up such a *résumé* as that. Four numbers a year, then, but twice as big as even this double number, and each accompanied by its atlas of plates of larger size than the printed pages—that is what we hope for in the near future.

Estimating, as we do, the value of this journal as a guide and directory, we do not regret nor feel surprise at the prodigious development of what might be called the editors' pages toward the end, viz.: the "Miscellanies," the "Correspondence," (16 pages), the "Reviews and Notices of Books" (30 pages), the "Archæological News" (33 pages), perhaps the most important of all, and the "Summaries of Periodicals" (13 pages). But the 52 pages of body articles have their value, too. Mr. Henshaw's paper on "The Aboriginal Relics called 'Sinkers' or 'Plummets,'" has seven illustrations,which form Plate IV. of the first volume. It is not scientifically accurate, by the way, nor yet good grammar, to print, as here, "All one-half size of original," when what is meant is evidently One-half the scale of the originals, or, briefly, Scale, ½ Full Size. American Archæology is further treated under "Correspondence," in a letter from Prof. Cyrus Thomas about a mound in Tennessee which has been explored, and a longer letter from Mr. Dall, of the United States Geological Survey, giving a very clear account of the mounds at Satsuma and Enterprise, in Florida, with a catalogue of the shells found in them. But as to this whole subject of American aboriginal and prehistoric antiquity it could be wished that a separate periodical should be devoted to it, certainly to all of it that lies outside of the domain of decorative art. The Central American temples and the Peruvian textiles and keramics may have a claim to be studied alongside of the productions of ancient Europe; but the purely ethnological matter belongs between other covers. No journal can take in everything. Archæology, considered as the study of man's enlightenment, his works of intelligence and sentiment, ought to be the field of this journal.

Of Mediæval Archæology there is M. Eugène Müntz's article on "The Lost Mosaics of Ravenna," a paper of a too uncommon kind, for we can all visit Ravenna and see the mosaics that remain, but it is not so simple to learn what proportion these bore to the whole artistic wealth of Ravenna; and such researches into the relation of the monuments we possess to the greater number that are lost, are as valuable to us as they are laborious, time-consuming, and seemingly thankless. Mr. Perkins's account of "The Abbey of Jumiéges and the Legend of the Énervés," as it is legendary to call the poor young princes who were condemned to life-long lameness as well as to the tonsure, is the only other mediæval study, as Mr. Frothingham's *opus* concerning the sculpture of the thirteenth century is not continued.

Mr. Ramsay's paper on Greek Inscriptions in Asia Minor is the only long article devoted to Classical Archæology. Of the paper nothing can be said here; but the *Journal* is fortunate in securing its author as a contributor, for Mr. Ramsay, though perhaps best known as the restorer of the geography of central Asia Minor, has shown what we think a very unusual and precious combination of qualities. He is an erudite antiquarian if there ever was one, and withal he has true feeling for classic sculpture, and a great knowledge of it. These gifts, united in a man who has long years yet before him, and who has been appointed, even now, to an important chair at Oxford, go far to make up an archæologist of another type than the one most common among English-speaking men. Dr. Emerson, of Johns Hopkins University, examines "Two Modern Antiques," one of which is a clear case enough, while of the other, the Carapanos Herakles, it can be said here only that we are for Dr. Emerson's view as against M. Rayet's undoubting belief. The splendid plate given in Rayet's book leaves nothing to be desired as to sufficiency of representation. Doerpfeld's new restoration of the Propylaia, being a modification of Bohn's and based upon the latest discoveries; the arrangement of the hair in the sphinxes of Eujuk; the unexplained "whorls" of terracotta, which so many museums have, to worry the student; the Siris Bronzes in the British Museum—all these have notices; and (under "Art Collections") a long article by Mr. Goodyear is at once an account of the Charvet Collection of ancient glass and a review of Fröhner's monograph about it. There remain to be noticed M. Babelon's letter on antiquities in Tunis, and Dr. Ward's letter from his Babylonian expedition.

Among the reviews of books is a not wholly favorable but very just notice of the big books of

MM. Perrot and Chipiez; but why is the English translation selected for examination, and not the original? Mr. J. T. Clarke's review of Virchow's studies of craniology at Assos, Cyprus, and Hissarlik is an admirable paper. But all or almost all these signed book reviews are interesting and worthy, and we have here the foundation of an admirable critical department for the whole world of art-books and archæological treatises, nearly the most inaccessible to the general reader here of all classes of books whatever.

By "Archæological News" is meant a minute directory to the diggings and explorations, to the actions of societies and the utterances of individuals, to discoveries and to controversies, all over the world. Of course the greater number of these notices are from periodicals and the Proceedings of societies; and no one who has ever tried that sort of research will need to be reminded how valuable this full reference-list may be to the student. The notices are distributed under the names of the places concerned, and there is a little confusion in this distribution, as where the different headings "Krete," "Thessalonike," and "Turkey: (Constantinople)" come in the alphabetical order of places in "Greece." But these are trifles, and easy to avoid next time. No European journal gives so full and so logical an account of what is doing in the way of Archæology, and this department is perhaps the most needed part of our American *Journal*.

Finally, the "Summaries of Periodicals" are what would be expected from that title, and include this time an elaborate analysis of the *Ephemeris* of the Archæological Society of Athens, a periodical which may well be taken, as being in a tongue unknown to most American students. Much of the contents of "Archæological News" is also, as we have said, from periodicals; and it will be well in future numbers to keep a sharp line drawn here—to admit recent news only to the "News" pages, and let all discussion of well-known monuments—such as that of the Mykenæ dagger-blades—find its place under this head of "Summaries." Nothing good can be said of the illustrations. Excellence in that department is still to come.

Home Letters, Written by the late Earl of Beaconsfield in 1830 and 1831. Harper & Bros. 1885.

THIS little volume, though it has been modernized by the cheap device of illustrating it with woodcuts "in stock" having the least relation to the text and sometimes none at all, takes one back to the society world of the young Bulwer and Disraeli with something of the suddenness and surprise of an old caricature. The letters were written from the south of Spain and the islands and coasts of the eastern Mediterranean by the brilliant, self-conscious author of 'Vivian Grey' and 'The Young Duke,' to the household of the now aging connoisseur, his father. They were composed in haste, and though they picture some Oriental groups against a strange landscape with a vivid sense of color and pose, they have naturally their *raison d'être*, as a book, only in the personality of their young worldling of an author. The personal traits; the skill in taking the world and captivating the immediate prey of lord, lady, or elegant fool; the habits of pleasing or gulling, as the case might be, are self-revealed. The inborn susceptibility to the strange and bright, which counts for so much in his literary firstlings; the taste which makes him turn the actual live landscape into sensationalism, the desert and lonely mountain-top themselves into stage scenery with London footlights, as if it were all a mimic show for Cockneys—this, too, is conspicuous. But in the disciplined exercise of such traits and the elaborate disposition of such scenes, the man's literary and political future was to be. What a strange capital to start with, we say; but he made it "breed as fast" as Jacob's sheep or Shylock's ducats. There are a few adventures—very few; a happily described tipsy frolic (necessary through courtesy, like that most humorous Latin speech of Lord Dufferin in "high latitudes"), among them. And throughout one is pleased to notice a sincere attachment to "the folks at home," an interest in their affairs, a mingling of real affection and respect and good-comradeship. This one sincerity of family life Lord Beaconsfield seems to have kept throughout his career.

The SOUTHERN BIVOUAC for September is now for sale at all the news-stands. 20 cents a copy; $2 per annum.

Editors, { BASIL W. DUKE, RICHARD W. KNOTT.

B. F. AVERY & SONS,
PUBLISHERS, LOUISVILLE, KY.

Grant's Last Hours.

"Talking of his reading," says Dr. Douglas, "reminds me to say that the last book he read was a small book entitled

'The Fall of the Great Republic.'

"It turned out to be the last book he read, and when the letter containing his parting words to his family is made public it will be seen that he makes a reference to this book and his reading of it, which shows that it profoundly interested him."

The 6th 1,000 of 'THE FALL OF THE GREAT REPUBLIC' is now selling. Price 30 cents.

Ramona—15th 1,000—$1.50.

In a letter to her publishers, written only a few days ago, Mrs. Jackson speaks these prophetic words:

"I did not write 'Ramona' as it was written through me. My life blood went into it, as I had thought, felt, and suffered for five years the Indian question. I shall never write another novel."

Mrs. Jackson's Other Writings.

Verses. By H. H., $1; Bits of Travel, $1.25; Bits of Travel at Home, $1.50; Bits of Talk About Home Matters, $1; Bits of Talk for Young Folks, $1; Nellie's Silver Mine, $1.50; H. H.'s Cat Stories, 3 vols., $1.25 each.

Sold by all booksellers. Mailed, postpaid, by the Publishers,

ROBERTS BROTHERS,
BOSTON.

PENNSYLVANIA, Bryn Mawr.

A NEW COLLEGE FOR WOMEN.—Bryn Mawr College, near Philadelphia, will open in the Autumn of 1885. For programme of graduate and undergraduate courses offered in 1885-86, address
JAMES E. RHOADS, President.

PENNSYLVANIA, Bustleton.

ST. LUKE'S SCHOOL.—RT. REV. WM. Bacon Stevens, D.D., LL.D., Visitor. A Home School, with refining influences. Absolutely healthful location, *entirely free from malaria*. Number of pupils limited, rendering most careful individual attention possible. Thorough instruction and discipline. Faithful attention to health, manners, and morals. Physical exercise, under careful supervision, encouraged to secure pleasure, health, and manliness. Prepares for college or business.
CHAS. H. STROUT, M.A., Principal.

PENNSYLVANIA, Germantown, 5128 Germantown Avenue, Philada.

FRANKLIN SCHOOL.—A NEW ENG- lish and Classical School for Boys—will open Sept. 21, 1885. Provision is made for six resident pupils. The Prospectus for 1885-6, giving the full course of study, will be sent on application. References: William Pepper, M.D., LL.D., Provost of the University of Pennsylvania; Rev. Thomas Hill, D.D., ex-Pres. of Harvard University, and others. GEORGE A. PERRY, A.M., Head-Master.

PENNSYLVANIA, Media.

MEDIA (PA.) ACADEMY FITS FOR business or college. Special drill for backward boys. Single or double rooms. All students board with Prin., SWITHIN C. SHORTLIDGE (Harvard A. B. and A.M.).

PENNSYLVANIA, Philadelphia, Locust and Juniper Streets.

ACADEMY OF THE PROT. EPIS. Church.—Founded A. D. 1785. One hundred and first year begins Sept. 17. Prepares for College, Scientific Schools, and Business.
JAMES W. ROBINS, D.D., Head Master.

PENNSYLVANIA, Philadelphia, 50th St. and Woodland Ave.

DIVINITY SCHOOL OF THE PRO- testant Episcopal Church in Philadelphia.—The next year begins on *Thursday, September 17*, with a complete faculty and improved opportunities for thorough work. *Special* and *Post-Graduate* courses as well as the regular three years' course of study. Griswold Lecturer for 1885, Archdeacon Farrar. For information, etc., address the Dean, Rev. EDWARD T. BARTLETT.

PENNSYLVANIA, Philadelphia, 2106 Spruce St.

MISS M. S. GIBSON'S FAMILY AND Day School for Young Ladies and Little Girls (formerly 1519 Walnut St.) will reopen September 24.

PENNSYLVANIA, Philadelphia, 1833 Chestnut St.

MISS L. V. SMITH'S English and French Boarding and Day School for Young Ladies and Children will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, Norwood Avenue, Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's English and French Boarding and Day School for Young Ladies will reopen Sept. 21.

PENNSYLVANIA, WEST PHILADELPHIA.

UNIVERSITY OF PENNSYLVANIA.
I. DEPARTMENT OF ARTS, four-years' classical course. Degree A. B.
II. TOWNE SCIENTIFIC SCHOOL, five-year courses in (a) Chemistry, (b) Geology and Mining, (c) Civil Engineering, (d) Dynamical Engineering, (e) Architecture, leading to B. S., and to technical degrees, P. C. (Practical Chemist), M. E., C. E., E. M., Architect.
III. WHARTON SCHOOL OF FINANCE AND ECONOMY. Courses in Constitutional Law and Public Administration, Political Economy, Mercantile Law and Practice, Finance, Banking, Railroading. Degree Ph. B.
IV. COURSE IN PHILOSOPHY, four years. English, Latin, French, German, Mental and Moral Philosophy, Mathematics, General Science, extended instruction in Biology with laboratory work. Degree Ph. B.
Liberal electives in and between these courses at close of Second Year.
V. COURSE IN MUSIC. Two-years' graded course. Degree Mus. Bac.
VI. MEDICAL SCHOOL. Three-years' graded course with optional fourth year. Degree M. D.
VII. DENTAL SCHOOL. Two-years' graded course. Degree D. D. S.
VIII. VETERINARY SCHOOL. Three-years' graded course similar to European schools. Degree V. S.
Clinical and laboratory advantages a prominent feature in these three schools.
IX. LAW SCHOOL. Two-years' course; diploma admits to Pennsylvania Bar. Degree LL. B.
X. BIOLOGICAL SCHOOL. Two-years' course, with extended laboratory work. Certificate admits to Medical School without examination. Special courses.
XI. DEPARTMENT OF PHILOSOPHY. Two-years' post-graduate course in numerous subjects leading to degree Ph. D.
In making inquiry please specify department.
Rev. JESSE Y. BURK, Secretary,
University of Pennsylvania, West Philadelphia, Pa.

PENNSYLVANIA, Philadelphia, N. E. cor. Chestnut and Eighteenth Sts.

RITTENHOUSE ACADEMY. — Boys thoroughly prepared for College or business. Catalogues sent upon application.
DEB. K. LUDWIG, A.M., Principal.

PENNSYLVANIA, Swathmore.

SWATHMORE COLLEGE.—THIRTY minutes from Broad Street Station, Philadelphia. Under the care of Friends, but all others admitted. Full college course for both sexes; Classical, Scientific, and Literary. Also a preparatory school. Healthful location, large grounds, new and extensive buildings and apparatus. For Catalogue and full particulars address
EDWARD H. MAGILL, A.M., President.

PENNSYLVANIA, West Philadelphia, 3903 Locust St.

MR. GEORGE F. MARTIN'S SCHOOL for Boys, will reopen September 21. Provision is made for five resident pupils. Course of study arranged with especial reference to the demands of the University of Pennsylvania. References: the Provost and Vice-Provost of the University.

RHODE ISLAND, Providence.

FRIENDS' SCHOOL FOR BOTH sexes.—Founded 1784. $150 per half year for board and tuition. First term begins Sept. 9, 1885. For circular address AUGUSTINE JONES, A.M., Prin.

TENNESSEE, Nashville.

THOROUGH PREPARATION FOR college for two boys only. Mild Southern climate. Home comforts, personal instruction and supervision. For full information address JOHN L. LAMPSON, A.M.,

VERMONT, Bellows Falls.

ST. AGNES' HALL. A Church Boarding- School for Girls. Receives twenty boarders. Thorough English and Classical course. Superior vocal and piano instruction. Terms $300 and extras. Seventeenth year. Apply to Miss HAPGOOD, Principal.

VIRGINIA, Alexandria.

EPISCOPAL HIGH SCHOOL OF VIR- ginia.—A Classical School for Boys, three miles from town. Elevated and beautiful situation. Exceptionally healthy. The 47th year opens Sept. 23, 1885. Catalogue sent. L. M. BLACKFORD, M.A.

VIRGINIA, Lexington.

VIRGINIA MILITARY INSTITUTE, —The academic exercises of this well-known Institution will be resumed on Sept. 10. Those desiring admission should apply without delay for all needed information to FRANCIS H. SMITH, Supt.

VIRGINIA, Norfolk.

THE NORFOLK ACADEMY.—SCHOOL for Boys and Young Men. Open Sept. 23, 1885.
J. H. DILLARD, M.A., } Principals.
R. W. TUNSTALL, B.A., }

VIRGINIA, P. O. University of Virginia.

UNIVERSITY OF VIRGINIA.—THE Sixty-second session begins October 1st, 1885. Thorough instruction in *Literature, Scientific, and Professional Departments*, including *Law, Medicine, Engineering, and Agriculture*. For Catalogue apply (P. O. University of Va.) to
JAMES F. HARRISON,
Chairman of the Faculty.

WISCONSIN, Milwaukee.

MARKHAM ACADEMY.—A THO- roughly reliable college-preparatory school for boys and young men. Twenty-second annual session begins Sept. 7. A. MARKHAM, Principal.

CANADA, Quebec, 8 Hébert St.

THE MISSES MACHIN'S SCHOOL for the Board and Education of Young Ladies will reopen Sept. 7, 1885. Circulars sent on application.

School Agencies.

The Union Teachers' Agency.

1. Provides School Boards and Principals with Teachers. 2. Aids Teachers in obtaining positions.
Apply to A. LOVELL & CO., Managers,
16 Astor Place, New York.

BROCKWAY TEACHERS' AGENCY, *Times* Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

SCHOOL AGENCY.—OLDEST AND best known in the United States.
J. W. SCHERMERHORN & CO., 7 East 14th St., N. Y.

SCHOOLS and private ladies desiring very highest class of Vocal Instruction by brilliant artiste, experienced instructress, address
LEONORA, *Nation* Office.

Teachers.

A GRADUATE OF HARVARD, OF unusually successful experience in preparing students for the University and the Massachusetts Institute of Technology, wishes to correspond with families desiring the services of a private tutor, or with Principals of Select Schools where a classical master is required.
Address Box 461, Beverly, Mass.

A GERMAN LADY, A GRADUATE of the Dresden Normal School, who has taught in Germany, England, and France, would like a position to teach French or German in a school. References given.
Address E. Z., Winthrop, Mass.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

GERMANY.—Prof. A. FLEISCHMANN, late of Mrs. Platt's Seminary, Utica, N. Y., will receive a limited number of persons wishing to study German, &c., in his family at his present home in Arnstadt, in Thüringen, Germany. For particulars address
PROF. J. M. CROW, Ph.D., Grinnell, Iowa.

TUTORING IN ALL BRANCHES FOR Harvard and other Colleges by GAMALIEL BRADFORD, Jr., Cambridge, Mass.

WANTED—A GENTLEMAN OF EX- perience in the care and instruction of boys would like to take two or three into his family for the coming school year; references given. Address
M., Quincy, Mass.

Wants.

A HIGH-SCHOOL TEACHER, OF EX- tended experience in preparing pupils for colleges and scientific schools, will take a boy into his family for private tutoring. WM. L. EATON, Concord, Mass.

EXPERIENCED SCIENCE TEACHER wanted to instruct children how to observe and draw out of doors. Must know plants and birds or insects, and give a known naturalist as reference. Compensation, a pleasant home for the vacation.
Box 298, Newburgh, N. Y.

EXPERIENCED TEACHER OF LAN- guages, Literature, and Philosophy wanted immediately. Must know ancient and modern languages and refer to some well-known philologist. Compensation, good board (without lodging) in a kind family for the remainder of the vacation. Box 450, Newton Centre, Mass.

TEACHERS WANTED:—Two for In- dustrial Art and Drawing; a head master for Musical Department, Seminary; German, native; Natural Sciences. J. RANSOM BRIDGE & CO.,
110 Tremont Street, Boston, Mass.

TO INVALIDS.—A Physician, long in practice, having partially retired, residing in an ideal town in Massachusetts, with unequalled railroad facilities, telegraph and telephone communication, will take charge of three or four invalids who need pure air and water, combined with a fair amount of exercise. Terms moderate. Address, for further particulars, MEDICUS, *Nation* Office.

WANTED.—A COLLEGE INSTRUC- tor in Latin and French. Must be a man of complete classical training, with a good speaking knowledge of French. Address, with references, X. Y. Z., *Nation* Office.

Huckins' Soups.

Green Turtle, Tomato, Mock Turtle, Ox Tail, Chicken, Mullagatawney, Julienne, Okra or Gumbo, Pea, Beef, Consomme, Macaroni, Vermicelli, Soup and Bouilli, Parvapin.

RICH AND PERFECTLY SEASONED. Require only to be heated and are then ready to serve. Put up in quart cans only. Prepared with great care from only the best material. Also,

Huckins' Sandwich Meats.

Sandwich Ham, Sandwich Tongue, Sandwich Chicken Sandwich Turkey. These meats make *perfect* Sandwiches.

SOLD BY ALL LEADING GROCERS.

J. H. W. HUCKINS & CO.,
Sole Manufacturers, Boston, Mass.

For New Roofs. *For Old Roofs.*

ROOFING

Price low; *anybody* can apply on Steep or Flat surface; materials durable, Fire-proof. Write at once for Illustrated Book. Ind. Paint & Roofing Co., New York.

SCHOOL BOOKS IN FOREIGN LAN- guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals.
CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

The Nation.

NEW YORK, THURSDAY, AUGUST 27, 1885.

The Week.

THE Ohio Democrats have renominated Governor Hoadly by acclamation, and are hopeful, if not confident, of reëlecting him. There are said to be factious differences in the party, and the usual rumors of a determination to "knife" the ticket on the part of the "Mossbacks" are circulated. It will be remembered that when Judge Hoadly was nominated two years ago, the Convention was nearly split in twain, and that the "Mossbacks," under the lead of General Durbin Ward, were so bitter that they threatened openly to bolt the ticket. Yet when election day came around, the party went solidly to the polls and elected their ticket. The opposition to the Governor within his party is much less now than it was then, but he may not be so strong a candidate before the people this year as he was in 1883, because of mistakes which he has made in office. His canvass will be so complicated by various local issues of a perplexing nature, chief of which is the liquor question, and is so likely to be made secondary to the fight for the United States Senatorship, that nobody will venture a prediction as to its outcome.

The platform upon which the Governor stands is not likely to help him much. It is a badly constructed document, with a few sound principles buried beneath a lot of rubbish. Thus, while the Administration is "heartily endorsed," the approval is accompanied with the absurd declaration that the "revival of prosperity and the increase in the value of property have already begun to demonstrate the beneficence of Democratic principles, even before any session of Congress has enabled the country to realize the full fruition of their application by legislation." The endorsement of the Administration is significant as having been drawn up by the editor of the Democratic organ in Cleveland, which for some time past has been expressing dissatisfaction with the slowness with which the offices were being dealt out. Even he is forced by the pressure of public sentiment to give formal approval of the policy which at heart he dislikes. Any lack of warmth which may be discernible in his resolution was atoned for by the heartiness with which the speakers and the Convention commended the Administration's work. The "chief feature" of the Chairman's opening speech, according to the *Sun's* correspondent, "was his strong endorsement of President Cleveland's Administration," and it "was received with rounds of applause, and at its conclusion renewed cheers went up from the floor and galleries." In his speech of acceptance Governor Hoadly spoke of the "duty of every American citizen to support, not only loyally, but with hearty good will and enthusiastic affection, the Administration of that brave, self-reliant, and able Democratic gentleman, our excellent President, Grover Cleveland." If there were any "Jeffersonian Democrats" present, they held their tongues, and the whole Convention joined in three cheers for the Governor when he concluded

The leadership of the Democratic party in Ohio is, nevertheless, in bad hands—so bad that a sound thrashing at the polls would be beneficial to the party everywhere. It is dominated by the Cincinnati *Enquirer*—a newspaper which supported Blaine in the last Presidential election, and which has suppressed every Democrat of eminence and character in Ohio who would not bow to its corrupt dictation. It shelved Senators Thurman and Pendleton successively because they would not yield their independence to its degrading behests. It has converted Ohio politics, so far as it had the power, into a disgusting stew, and it controlled the recent Convention as completely as it controlled the Legislature which elected Payne to the Senate. It nominated Hoadly two years ago, but did not elect him—that was the achievement of the temperance fanatics and the liquor-dealers. It has nominated Hoadly again, and if he is elected again the result will be due to the same unhappy conjunction that served the *Enquirer's* ends before. Governor Hoadly is a respectable and an able man, but his reëlection at this time is not an event in which the public have a very deep interest. The most important concern that the people of Ohio and those of the United States have in the campaign relates to the Senatorship falling vacant on the 4th of March next. It is quite certain that if the Republicans carry the Legislature, Senator Sherman will be reëlected. If the Democrats gain a majority, some pliant tool of the *Enquirer* faction will succeed him.

The Hon. Gibson Atherton, Democratic nominee for Supreme Court Judge in Ohio, is either a bad jurist or an indifferent joker. He is reported as saying at Newark, in a speech in response to the congratulations of friends upon his nomination: "I repeat that I am under many obligations to the gentlemen who worked for my nomination. If my friends have any cases on which they need favorable action, bring them before me." This astonishing suggestion was not favorably received by the audience, some of them thinking that he was in earnest, others that he was testing the capacity of his hearers to appreciate irony. In a case of so much doubt, the better way to decide the point is to elect the other candidate to the Supreme Bench and choose Mr. Atherton as State humorist, an office which the Cincinnati *Commercial Gazette* has endeavored to fill, but which has been really vacant since the death of Artemus Ward.

It would be difficult to imagine anything more disheartening to Republicans who are anxious that their party should have a future than the spectacle of the Pennsylvania campaign. The Convention nominated for the single State office to be filled, "Matt" Quay, the most offensive boss whom the Cameron Machine has ever produced, and it placed the management of the canvass in the hands of Thomas V. Cooper, who, as Chairman of the State Committee, is sending out to the organs "slips" which make John Roach and the essay on the monastery in Miss Cleveland's book the two chief issues. "As the book was revised and sent to the publishers from the White House," says Cooper, "it is easy to trace between its lines an attempt to punish the Irish-Americans who voted for Blaine." This is the depth to which Blaineism has sunk the Republican party in the strongest Republican State in the Union.

The Democrats of three States, in the East, the West, and the South, which fairly represent the party sentiment in those divisions of the country, went upon record on Wednesday of last week as hearty supporters of the President. We give elsewhere the text of the resolutions adopted by the Mississippi Democrats, assembled in convention at Jackson; by the Iowa Democratic State Convention, at Cedar Rapids; and by the Democratic members of the Legislature of New Hampshire, in a quite special and fully attended caucus at Concord. The unqualified tone of these resolutions gains an added significance when we learn the spirit in which they were adopted. In Mississippi, the resolution endorsing the Administration "was adopted by a rising vote"; in Iowa, "the resolution endorsing the Administration was received with much enthusiasm"; in New Hampshire, the resolution was "unanimously adopted, amid long and hearty applause"—we quote, in each case, from the reports of the *Sun*. In other words, the representatives of the Democratic party organization, in New England, the West, and the South alike, not only endorse the President, but they endorse him with remarkable unanimity and enthusiasm. The explanation is very simple. The men who adopted these resolutions are politicians, ambitious for personal and party success. They see that Mr. Cleveland's reform policy is popular with the country; that by reason of it the prospects of their party are better than they have been before for a quarter of a century. They see that the people sustain the President, and that the politician who desires popular support must also sustain him or go to the wall. The delusion which the Blaine and Butler people have so long been hugging, that the Democratic party would "go back on" a President for pursuing a course which was visibly strengthening the party with the country, showed an amazing ignorance of human nature.

The Mississippi endorsement in especial is a token of political progress over which all good citizens must rejoice. The one important act of the Administration in Mississippi has been the seal of condemnation which it set upon bulldozing and Bourbonism generally in its treatment of the Hazlehurst Post-office. Having unwittingly appointed to the chief Federal position in Copiah County Meade, the man who became notorious for approving the murder of a leading Republican two years ago, the President promptly removed him after learning the facts. Meade immediately began breathing out threatenings and slaughter against the Administration, and sought to ral-

ly the Bourbons in opposition to the President. He was going to "rebuke" Mr. Cleveland by getting nominated to the Legislature, and he ridiculed the idea that the State Convention would endorse a President who pursued such a course. The Democratic County Convention in Copiah County three weeks ago refused Meade the "vindication" which he was so sure of getting, by giving another man the nomination for Representative over him, and now the State Convention of the party expresses its "unqualified endorsement" of the President's policy. The theory of the Republican organs last fall was that Cleveland's election would mean the triumph of the bulldozer and the Bourbon at the South; the practical result of it has already been that bulldozing and Bourbonism have suffered worse blows at the hands of a Democratic President than all his Republican predecessors were able to inflict.

We find the following remarkable passage in a recent article in the Albany *Evening Journal* on the Republican Convention:

"If the Convention is to be held after the Democratic meeting, it must be called for the 29th or 30th of September. This will leave the month of October for Republican organization and the prosecution of the campaign. So far as the cities are concerned, this is doubtless time enough. The bulk of the Republican vote, however, is cast in rural counties, where voters are somewhat scattered. We have already dwelt upon the special obstacles in the way of Republican organization this year, *owing to the changes in so many of the fourth-class post-offices*, and other causes incident to a Democratic National Administration."

This is an admission that the removals which the Administration has been making in the post-offices on the ground of "offensive partisanship" have been justifiable, so far as New York is concerned at least. Of that there was never any doubt. If is notorious that under Republican rule the minor post-offices of the land constituted a political machine of tremendous power. They advertised and in every way aided the circulation of Republican newspapers and campaign documents, and discriminated in every way against the journals and documents of the Opposition.

One of the most zealous advocates of the spoils system, and one of the President's most bitter opponents within his party, the Rochester *Union and Advertiser*, seizes eagerly upon this admission of the *Journal* as affording the Post-office Department "ample justification for making a clean sweep" of all the fourth-class postmasters, saying that such action would be "in the line of the honest civil-service reform of the Chicago platform." There is force in this statement, but we believe that the slow policy of the Administration in the matter is the best. There is scarcely one of these postmasters who has not been an "offensive partisan," but a "clean sweep" without investigation in each case would not be justified on that account, and would not be advantageous to the Democratic party in the end. One mistake of putting out a faithful official without just cause would aid the Republicans more than the just removal of 100 offensive partisans would aid the Democrats.

The appointment by the Democratic Administration of a man as Postmaster in a Maine town who was serving a term in prison for defalcation while acting as Assistant Postmaster, has had the extraordinary sequel of revealing the fact that reappointments of proved defaulters were repeatedly made by the last Republican Administration. At Oneonta, in this State, the Postmaster was reported by an inspector to be a defaulter in a large amount on the 28th of last January, and yet on the 28th of February he was reappointed for another four years' term. Investigation has discovered several other cases where papers on file in the Department show that defalcations had been found in postmasters' accounts months and even years ago, and yet the same men are still in office. The explanation given is that the papers had been pigeon-holed, and so neither the Postmaster-General nor the First Assistant, who makes the appointments to all the smaller offices, ever knew anything about the frauds. One such case was brought to light the other day purely by accident, where an Ohio postmaster was last year twice reported for grave delinquencies, with a recommendation for his immediate dismissal, and yet it was not until the office became a Presidential one, and all the papers relating to it were called for, that Assistant Postmaster-General Stevenson knew anything about the case. The blame for such a disgraceful state of things is ascribed to the "system" of red-tape which has grown up in the Department, rather than to any conspiracy among the clerks for the protection of defaulters; and a radical change in the treatment of inspectors' reports has been ordered which will prevent such gross abuses in future. The Maine incident has thus served a good purpose in exposing and ending a system which is most discreditable to the administration of the Post-office Department in recent years.

The speech of ex-Governor Seymour at the Canal Conference at Utica was non-committal upon the question of chief interest to the conferees, viz.: Shall the State of New York assume the cost of deepening the Erie Canal and lengthening the locks so as to increase the carrying capacity and cheapen the cost of transportation? The resolutions adopted by the Conference look to State aid for the accomplishment of this work, but apparently without much confidence that it will be granted. "Preservation and improvement" of the canals are mentioned as the objects sought to be attained by the action of the Legislature, but no definite expenditure is pointed out as sufficient to satisfy the needs of commerce. It is clear that the gentlemen who met at Utica were in a hesitating frame of mind—not because they did not know what they wanted, but because they had little expectation that their wants would be gratified by the taxpayers of the State. It is not enough to show that the Erie Canal carried to this city in the past year more grain than all the railroads together. That is a gratifying circumstance, and is a strong argument for maintaining our great water-way in a state of efficiency to continue this service. But it fails to convince anybody that the power of taxation should be employed to enlarge the canal, and that people who are not benefited by canal transportation, but are injured by it—as, for instance, the shareholders of railways—should be required to pay a portion of the cost of a work from which they can reap no resulting advantage. The State is virtually committed to the maintenance of the existing canal free of toll. It has not only made a present of that costly work to the commercial interests of the country, East and West, but it has charged itself with the expense of keeping it in repair. In making this apparent sacrifice it has undoubtedly consulted its own interests, and insured its commercial preëminence in the present and for a long time to come, but it would not be wise, in our judgment, to call into dispute the policy already adopted by reaching out for something more.

What the canal needs, looking at the subject in its political as well as its commercial aspects, is the preservation of the *status quo*. It is no small thing to have made it a free highway like the Hudson River. It is a boon to commerce of the first magnitude; and so long as the people are willing to pay out of the common treasury the charges for keeping it in such a state of efficiency that it can outcarry all the competing railroads in the moving of bulky freight, it is the part of prudence, we think, to rest satisfied. Probably the pride of the State and the prevailing hostility to monopolies, coupled with the promise made when the free-canal amendment to the Constitution was adopted, will serve to secure the necessary appropriations for keeping the canal in as good condition as at present, but we could not advise any step which should bring that policy up for rediscussion. The Constitution, it is true, requires the Legislature to make appropriations for the superintendence and repairs of the canal, but this is not a self-executing provision, and if the Legislature should at any time fail to appropriate the money, there would be no means of enforcing it. Moreover, the amount to be appropriated is always in the discretion of the Legislature.

A Boston paper has been keeping account of the centenarians whose cases have been brought before the public during the past three months, either by their deaths or by celebrations of their anniversaries, and the list covers more than twenty names. The records in some of these cases cannot be implicitly depended upon, but there are a number as to which there is no more doubt about the person's having passed a hundred years than there was about Sir Moses Montefiore. It is not a great many years ago since it was soberly maintained that nobody lived to be a centenarian, and the frequency with which authentic cases are reported nowadays must be rather startling to people who remember those ingenious theories. The increase in the number of known centenarians is in part due to the more careful reporting of such matters by the modern press, but it is also in part due to the fact that there are more cases to be reported in proportion to the population than there used to be. The average of human life is steadily lengthening, and with it the ratio of persons who live through a century increases. New Hampshire claims preëminence in the matter of longevity, the census of 1880 showing that one person in every seventy-four had passed four-

score years, while no less than eleven people claimed to be over 100 years old. Vermont came next to New Hampshire.

It sometimes happens that a question is discussed at great length and by many disputants, while one important element in the problem is left out of sight by everybody. This curious fact has been freshly illustrated in the debate as to the relative increase of the white and black races in this country, and the prospect of the blacks outnumbering the whites at the South. After all that has been written it has been left for the Rev. Dr. William F. Warren, President of Boston University, to point out a factor which has all along been overlooked, viz., that while the white is credited by the census simply with his own white offspring, the negro is credited not only with all his own proper descendants, but also with all the increase of the entire mixed population of the country, and, over and above this, with all the children of white men by negro or mixed mothers, and with all the children of white women by negro or mixed fathers. Dr. Warren justly observes that to state this fact is to show its great significance in any estimate of the relative propagating power of the two stocks, and he believes that, were the census men to turn the tables, and reckon to the increase of the white man every child in which the slightest strain of the white man's blood can be detected, we should get a showing wonderfully changed. At any rate, he does not propose to despair of the white man until we get some statistics which give him fair play, and he declares his belief that when we get these he will still be found superior in populating power to every competing type of humanity. Dr. Warren does not express any opinion as to whether the proportion of mulattoes in the Southern population is increasing or not, but the observation of competent Southern judges is that the number of illegitimate children to black mothers by white fathers is diminishing—a fact which has a vital bearing upon the morality of the negro population.

Some of the Massachusetts papers show a singular narrowness of view in discussing the statistics as to the decadence of marriage in New England during the past quarter of a century which were recently reviewed in these columns. They point out that the number of marriages in their State increased largely during the four years following 1879, and treat this showing as a sufficient answer. But if they had made any study of the subject, they would know that, so far from being "surprising," this increase, in accordance with a well-known law of social economy, is directly due to the business "boom" which began in 1879–80, just as the smaller number of marriages in 1879 and the years immediately preceding was directly due to the panic of 1873 and the era of business depression which followed it. Moreover, if they had taken the trouble to procure the figures for 1884, which are accessible although not yet published, they would have discovered that the increase had already been arrested last year by the hard times. Statistics upon such subjects are of no value unless they cover two long periods, in both of which the financial conditions were essentially the same. Two such periods are to be found between 1850 and 1860 and between 1875 and 1885, the former decade including an era of prosperity broken by the terrible panic of 1857, and the last decade covering the years of depression after the panic of 1873 and the "boom" which began in 1879. The average number of marriages for the ten years following 1850, as compared with the average number for the ten years following 1875, therefore affords a fair test of the question whether there has been a falling off in matrimony during the past quarter of a century. The figures are 11,873 marriages per year from 1850 to 1860, and 15,138 from 1875 to 1885—an increase of only 28 per cent., while the population of the State was 66 per cent. greater in the later than in the earlier period. That these figures represent a change which is not confined to Massachusetts, is proved by the fact that the falling off in marriages to population during the same period has been only less marked in Connecticut, Rhode Island, and Ohio.

Rhode Island has always had the densest population of all the States, and its new census maintains the old lead, the number of inhabitants to the square mile being 280, as against 240 in Massachusetts, which has from the foundation of the Union ranked second in the list. The population in 1885 foots up 304,419, an increase of 25,888 since 1880, or, in other words, a gain of more than 9 per cent. in five years, which is nearly at the rate for the decade between 1870 and 1880. Almost half of the increase has been in Providence, and the greater part of the remainder in Newport and Pawtucket, while a number of the farming towns have fallen off in population. Rhode Island is the only State where a clear majority of the people live in cities, and the country towns would have but little to say about the government of the State did not the Constitution restrict the size of Providence's delegation in the Legislature to only twelve of the seventy-two Representatives.

During the past year Wisconsin has developed a pronounced sentiment in favor of high license as the most effective means of restricting the evils of intemperance. The last Legislature passed a law which raised the minimum fee considerably above the old figures, and allowed any municipality by popular vote to increase the sum to $500. An election upon this question is before long to be held in Milwaukee, and the contest promises to be a lively one. The most noteworthy feature of the discussion is the fact that the German press is not a unit upon the issue. While some of the daily papers published in that language bitterly oppose any increase, the *Germania*, a weekly which has the largest circulation of any German paper published in the State, favors the change, saying: "We are fully convinced of the benefits of a higher license, and believe that here in Milwaukee the saloons can well bear a license of $350, or even $500." When "the beer-drinking Germans" begin to favor high license, nobody can reasonably doubt that they are rapidly becoming Americanized.

The West is following the East in the application of civil-service reform. No State in that part of the Union has passed a general law after the New York and Massachusetts model, but the principles of the merit system were put in operation in the municipal government of Milwaukee last week. A law passed by the last Legislature of Wisconsin authorized the fire and police commissioners of the chief city in the State to draw up rules under which men should in future be admitted to those branches of the municipal service. Hitherto places in the police and fire departments have been the prizes of ward politics, and after each city election changes have been made to reward "workers," while the whole force has been rendered uneasy and inefficient by the fear of unjust removal. The new law does away with the spoils principle entirely, since it requires all appointments to be made upon ascertained merit, under established rules, and, once made, to be permanent unless the incumbent forfeits his right to retention by misconduct. Seventeen men have just entered the fire department as the result of a competitive examination, and everybody admits that they are a better lot than could ever have been expected under the old system of political favor. It is only a question of time when all the other large cities in the West will follow Milwaukee's example, as the large cities in the East have already anticipated her.

The new Electoral Law adopted by the Belgian Chamber on August 12 is considered a heavy blow to the future prospects of the Liberals. That it was finally passed by a vote of 74 to 41, almost all the Independents voting with the Clericals, shows how far dissensions have demoralized the anti-Clerical phalanx in the Legislature. To make its recovery from this condition a task of almost insurmountable difficulty, is the very object of the law. It is an ingenious piece of partisanship, calculated, both by extensions and limitations of the suffrage, to diminish the vote of urban classes and localities favorable to the Liberal cause, and to increase that of the rural populations, almost completely controlled by the Catholic clergy. The Liberals of Brussels, who suffered so unexpected a defeat in June, 1884, but counted on a *revanche* in the next elections, will find it now very difficult to reverse the last electoral verdict. Another stronghold of the Liberals, Ghent, where the anti-Clerical victory in 1884 was achieved only by a very light majority, is in danger of being lost in 1886, with the possible disastrous result of securing the Government party a two-thirds majority in the Chamber. In Antwerp, too, the Communal Council is not unlikely to lose its Liberal complexion in consequence of the electoral reform; and members of the victorious party have no hesitation in asserting that this reform, added to last year's reactionary Education Law, is but one of many similar measures to follow. The electoral triumph of June, 1884, completely intoxicated the Ultramontanes of Belgium, and the rebuffs which they met with in the succeeding municipal elections, and the demonstrations of antipathy to their régime, have made them only more determined to profit by their victory to the utmost, regardless of decency or of the warnings of history.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 19, to TUESDAY, August 25, 1885, inclusive.]

DOMESTIC.

THE Ohio Democratic State Convention last Thursday renominated Governor Hoadly by acclamation. The platform says: "We congratulate President Cleveland and his Cabinet upon the auspicious beginning they have made in the necessary reforms of the Government, and we heartily endorse their Administration." It contains also a resolution offering sympathy to General Grant's family, and praising his "heroic character and great deeds."

The Mississippi Democrats have renominated Governor Lowery, and declared in their platform that "in the policy of President Cleveland, so far as disclosed, we see not only nothing to condemn, but everything to inspire confidence in his wisdom, integrity, and statesmanship, and we hereby express our unqualified endorsement of the same."

The Iowa Democratic Convention nominated ex-Judge Charles E. Whiting, a farmer, for Governor, and W. F. Brannon for Justice of the Supreme Court, and ratified the nomination of E. H. Gillette, the Greenback candidate for Lieutenant-Governor, and F. M. Moore, the Greenback candidate for Superintendent of Public Instruction. The platform says: "In President Cleveland the country has found a man of solid judgment, conscientious integrity, unswerving fidelity, patriotism, and courage equal to that of Andrew Jackson; and in his efforts for economy, for the exposure of criminal acts of the Republican party and its officers, for his unflinching firmness in dealing with the cattle kings, for his zeal in behalf of reform, for his efforts to restore the public lands to the settlers, for his efforts to enforce the law against polygamy, and for his constant watchfulness of the public welfare, he has acted in such a way as to receive the hearty thanks of the Democracy of Iowa and its unswerving support."

At a fully attended caucus of the Democratic members of the New Hampshire Legislature last Wednesday evening, resolutions were unanimously adopted, amid hearty applause, unqualifiedly endorsing the National Administration. The resolutions say: "We heartily sympathize with President Cleveland in his manifest determination to fill the offices of the country with honest and capable men. We commend his caution, his firmness, and his sagacity. We believe his hand is strong, his heart true, and that his courage will not fail. We assure him of our abiding faith in him, and pledge him our steadfast support, with the confident expectation that the American people will rally around and enable him to banish corruption from high places, and to re-establish wholesome rule, peace, and prosperity throughout all our borders."

The New York Republican State Convention is called to meet at Saratoga on September 22, two days before that of the Democrats. The call is addressed to "the Republican electors of the State of New York, and all who are willing to unite with them in carrying out the accepted principles of the Republican party as expressed in its national platform of 1884."

The State Department is advised by the ministers to whom letters of instruction were sent to present the desire of our Government to consider again the question of international coinage, that all efforts in that direction have been without success or encouragement.

The efforts of the Treasury Department to force out its minor silver coin have been in progress for a month, and a reduction of about $300,000 has been secured in addition to that accomplished by the transfer of nearly $6,000,000 to the New York Clearing-house Association. One month ago the Department began to send out circulars with a view to inducing banks to accept this coin. Favorable responses have been received from several hundred banks, and the daily issue at some of the Sub-Treasuries has been very large, but the inpour has been constant. The experiment has been most successful at San Francisco.

An official who may be supposed to have Secretary Manning's confidence in the fullest degree, says that it is the intention of the Administration to show by the experiences of the next three months that the Bland dollar is one of the most expensive experiments a civilized nation has ever made; to prove to the people, to Congress, and to the silver men themselves that the execution of the law, and the issue of the dollars in the quantities contemplated by the Coinage Act, involve the Government in expense so heavy and inconvenience so great that they cannot and will not be tolerated.

The striking feature of the replies which are daily received to the Treasury circular of inquiry for views on tariff legislation is the unanimous approval expressed of the means adopted for securing the views of the people on this question. Almost every correspondent comments upon the fact that a just revision of the tariff can only result from a popular expression of views from every part of the country, and they heartily approve the Democratic mode of letting the people speak for themselves, and of bringing their opinions directly to the attention of Congress.

The administration of the Bureau of Engraving and Printing since the appointment of its new chief, Mr. Graves, affords a model of retrenchment and reform. The Bureau had been conducted on so expensive a plan that by last January a deficiency of $20,000 had been created in the appropriation for the fiscal year, and Congress was called upon to make a deficiency appropriation of $50,000. The appropriation for the new fiscal year contemplates an average monthly expenditure of $39,641, while the actual expense for August will not exceed $20,000. At this rate the expenses of the current fiscal year will be $200,000 less than the amount appropriated. During the three months since the new chief took possession several hundred unnecessary employees have been dropped, but up to the present time not a single appointment has been made.

Mr. Dorman B. Eaton and Chief Examiner Lyman, of the United States Civil-Service Commission, spent last Thursday and Friday in this city arranging to fill the vacancies in the local Board of Civil-Service Examiners at the Custom-house. Edward Rowe, Assistant Appraiser, has been appointed one member of the local Board. He has been for twenty years a member of the Board of Education in Brooklyn. Mr. Eaton says the trouble over filling the other vacancies will be easily adjusted. Surveyor Beattie has declared: "I propose to carry out the civil-service rules in the administration of this office, not only in their letter, but in their spirit."

The Grant Monument Committee in this city have voted to raise $1,000,000 to carry out the project they have in hand.

Charges, which seem rather late are made that the engineer in charge of building the pedestal for the Bartholdi Statue of Liberty has been extravagant and incompetent. Among other things it is specified that nine inspectors have been employed where one or two would have been sufficient, and that he has used an expensive steam yacht. During February, it is said, the contractor received $3,291 87, and the cost of seeing that he did his work properly was about $3,000.

The railroad passenger agents, at their meeting in this city last Friday, made a general and considerable advance of rates to Western points. As from the beginning of the conferences, the Pennsylvania Road was not represented. It was agreed by the New York Central to allow the Erie, West Shore, and Lackawanna Roads a reduction of $1 under its tariff for first-class business.

Charleston, S. C., and Savannah, Ga., were visited by a tornado on Tuesday, which unroofed houses, blew down steeples, and drove vessels ashore. In Charleston the damage is estimated at $1,000,000.

The British ship *Huntingtonshire* was wrecked on Point Reyes, about forty miles north of the Golden Gate, near San Francisco, last Wednesday, and eighteen lives were lost. The *Huntingtonshire* sailed from Portland, Oregon, for Liverpool, with a crew of twenty men and a cargo of 10,000 cases of Columbia River salmon. Soon after leaving port the Captain accidentally dropped his principal nautical instrument overboard, and was unable thereafter to determine the position of his vessel. The ship drifted south as far as the equator. Striking a favorable breeze, she began to retrace her way to more northern latitudes. When off the California coast for the second time the Captain attempted to make San Francisco, but winds and currents were against him, and he ran ashore.

There is little doubt that the explosion on the steamer *Felton* in the Delaware was due to dynamite, and it is thought that fragments of an infernal machine have been discovered.

A watchman on Saturday night discovered a quantity of dynamite so placed on the rails of the Denver and Rio Grande Railroad, near Denver, Col., that had a train struck it great loss of life must have ensued. The attempt doubtless grew out of the strike in the Denver and Rio Grande shops.

Maxwell, the murderer of Preller at St. Louis, has been identified as Hugh M. Brooks, the son of a schoolmaster at Hyde, Cheshire, England.

J. Nichols, Vice-President of the City National Bank, of Fort Worth, Texas, was last week, a few days after his death, found to be a defaulter, and the bank was closed. The city loses over $30,000 by Nichols, who was its Treasurer. It is said that his money was swallowed up in a silver mine and in cattle speculation. His death was doubtless his own act. He had stood very high in the community.

The death list of the past week includes John Cheney, aged eighty-four, at South Manchester, Conn., one of the eight Cheney brothers who founded the silk industry in that town; D. J. Morrell, one of the leading iron and steel manufacturers of the country, and for years general manager of the mammoth Cambria Iron Works of Wood, Morrell & Co., Johnstown, Pa.; Daniel Le Roy, a member of an old Knickerbocker family in New York; and ex-Gov. R. E. Fenton, who died suddenly of heart disease at Jamestown, N. Y., on Tuesday.

FOREIGN.

Mr. Clifford Lloyd, the best-known divisional magistrate in Ireland during the disturbed period, who was formerly famous for his administrative vigilance, and was sent on a special mission to Egypt because of his supposed danger from assassination, and as a reward for services, now in a long letter to the London *Times* takes an advanced Radical view, and advocates the rooting out of the entire organization of Irish bureaucracy established in Dublin, and the incorporation of Ireland into the integral life of the United Kingdom, from which the Viceroyalty excludes it; the administration of justice, the police, and taxation to be left in the hands of the Crown, and all else to be left to the people of Ireland. He condemns home rule, in the sense demanded by the Parnellites, and claims that its establishment in Ireland would result in civil war between Ulster and the remainder of the country.

At a banquet given in Belfast last Thursday to the Catholic Bishop of Down and Connor, the usual toast to the Queen was ignored.

There are symptoms of revolt in some of the counties in Ireland over the payment of the Irish members of the next Parliament. Mr. Parnell insists that each constituency shall be compelled to pay its own member a salary upon which he can manage to live in London. The electors generally recognize the justice of paying the members, so as to secure the services of able men who could not otherwise af-

ford to devote themselves to politics, but some of the poorer constituencies object to having the tax for the support of their members directly assessed upon them. They want a general fund raised to which they, with others in Ireland and elsewhere, shall contribute according to their means, and from which all the members shall be paid alike.

Mr. Parnell, in an address last Friday, said it would be impossible to revive the native industries of Ireland without a free elective National Assembly, possessing the power of control over all the political and economic affairs of the country. He said he hoped that a few months, or at least a few years, would bring back to the Irish people the right to govern Ireland at home, and banish English misrule forever from the land.

It is said that the purpose of Mr. Chamberlain's proposed visit to Ireland was to see if he would be well received. If so, then the Viceroyalty and the Chief Secretaryship would have been merged, and Mr. Chamberlain would have taken both, with a seat in the Cabinet. This would have been practically an abolition of the Viceroyalty.

A correspondent of the *Pall Mall Gazette* attributes the present apparent apathy among the dynamiters to the wranglings between the radical section of the party and the moderates. The latter, he says, wish to give the present Tory Prime Minister, the Marquis of Salisbury, a fair trial, and they contend that the pursuit of a policy of exasperation against England just now will hopelessly destroy all the chances of home rule.

Lord Salisbury and M. de Giers have reached a definite agreement with regard to the Afghanistan frontier question, and the protocol, it is expected, will be signed this week. Russia, after a topographic survey of the Afghan frontier, has decided to abandon her claim to the Zulfikar Pass.

There was almost a collision between the Russian and Afghan posts on the 13th instant at Karatepe, eighteen miles from Tchemenibaid. Some Russian troops approached Karatepe, and the Afghan troops there stood to their arms. A Russian officer, when he saw this, ordered his troopers to unsling their carbines, and he was shot and severely wounded by the accidental discharge of one of these weapons. Before the nature of this accident was ascertained there was considerable excitement, which, however, subsided as soon as the truth was made known. The Russian commander exonerated the Afghans, and promised that the troopers should not again advance beyond Tchemeni-baid.

The Czar has authorized provision for a war credit, if needed, without his sanction, when he happens to be absent.

The London *Standard* urges the great importance of securing an alliance between England and Turkey. It expresses a hope that Sir Henry Drummond Wolff, who has been sent on a special mission to the Sultan, will be successful in securing the desired alliance.

The Council of the British Trades Unions has issued a statement giving the points of the trades' proposed appeal to the new electorate. These points are: Reform of the Factory and Workshop Acts, representation of labor in Parliament, the amendment of the Employers' Liability Acts in the direction of increased protection in the mines, the issuing of certificates of competency to men who have charge of steam engines and boilers, and the appointment of skilled inspectors, the codification of the laws, and land-law reforms.

The demonstration in behalf of morality in Hyde Park, London, last Saturday afternoon, was attended by over 50,000 people. One of the wagons in the procession carried twenty-four little girls dressed in white, who held aloft a banner bearing the inscription, "Shall the innocents be slain?" Another cart carried a large facsimile of the Queen's letter to Mrs. Booth, approving the Salvation Army's work in rescuing young girls from vice. With the exception of the one bearing the twenty-four girls, the wagons were laden with women dressed in the deepest of mourning. The vehicles themselves were all heavily draped with black.

Sir Charles Dilke's affair is settled, until the divorce case is heard, by the action of the Chelsea Liberal Committee, which has unanimously adopted a resolution of confidence in him.

Mr. Ruskin, who has been very ill, is out of danger.

Mr. Gladstone has been greatly benefited by his yachting trip, but his voice is not yet restored.

A terrible collision occurred on Sunday evening on the Metropolitan District Underground Railroad at Earl's Court, London, due to unmanageable signals. One engineer was killed, and a stoker and five others were so badly injured that they cannot recover.

It is stated that the *Westminster Review* will be changed from a quarterly to a monthly.

Petitions praying for a British protectorate over Egypt are circulating for signatures in that country.

The Egyptian War Minister is said to be compiling a proclamation to the Arabs, urging the necessity of the reconquest of the Sudan for Egypt.

The Mudir of Dongola thinks the Mahdist movement is killed in the Sudan, and that the next outbreak will most likely occur in Algeria.

The Sultan, through the Khedive, has proclaimed that the Sudanese submit to the Caliph and the Caliph's officers.

The news that the rebels have occupied Debbeh, and are now marching on Dongola, is confirmed. Further information has been received that the garrison at Kassala, being unable to hold out, made an amicable arrangement with the rebels, and that Osman Digna was furious on receipt of the news and started immediately for Kassala.

Henri Rochefort has been stirring up public feeling in Paris through his paper, the *Intransigeant*, on account of the alleged execution of Olivier Pain by the British in Egypt, and has gone so far as to advise that Lord Lyons, the British Ambassador in Paris, be publicly insulted by Pain's friends. M. de Freycinet, the French Foreign Minister, instructed the French Consulate at Cairo to renew the inquiry regarding Pain's death, and promised, if it was proved that the English offered a reward for Pain, that the French Government would demand that England indemnify Pain's family. France has, however, become satisfied that if Pain is dead, his death was not due to British orders, and the French Cabinet officially apologized to the English Embassy on Saturday for the insult to Lord Lyons. The secretary of Lord Lyons returned the visit.

The elections for members of the French Councils-General has resulted in a complete Republican victory, which presages a Republican triumph at the coming elections. M. Grévy, addressing a group of friends who gathered to welcome him to his country-seat at Mont-Saint-Vaudry, said the republic was now placed upon a solid basis, and that the approaching elections would reduce the number of his party's opponents in the Chamber of Deputies and consolidate the republic.

The Bishop of Quinhon, in Anam, the scene of the recent massacres of Christians, implores liberal assistance. He reports that 10,000 Christian refugees are starving.

Letters from Tonquin say that the treaty of Tien-Tsin is a dead letter so far as the evacuation of the country by the Chinese is concerned. The troops have refused to return to China or to disarm, and are forming a strong army of irregulars and preparing to attack the French.

The cholera continues unabated in Spain. Up to Monday 72,347 deaths from it had been reported in that country this year; 4,701 cases and 1,433 deaths were reported there on Monday. There is a panic in Marseilles, where 67 deaths occurred on Monday.

Germany's occupation of the Caroline Islands has caused intense feeling in Spain, and the Spanish Government has made a formal protest at Berlin. An anti German demonstration in Madrid on Sunday called out 40,000 persons. Opposite the Prime Minister's palace cheers were raised for the Premier, but he did not appear, and the cheering changed to hooting and whistling. Several men scaled the balconies and planted a national flag amid a storm of enthusiastic cheers. Hundreds of people gathered in the neighborhood of the German Legation, which was guarded by fifteen policemen. There were similar demonstrations in other Spanish cities. King Alfonso is reported to have instructed the Spanish Ambassador at London to proceed to Berlin and entreat Emperor William to delay the occupation of the Caroline Islands, lest he (Alfonso) be deposed by his subjects. Germany's reply to Spain is couched in friendly terms, and in it the German Government offers to submit the claims of Spain to the Carolines to a fair examination. Prince Bismarck has ordered the German ministers at the foreign courts to hold over the notes intimating Germany's occupation of the Carolines.

Count Kálnoky and Prince Bismarck have agreed upon the bases of future negotiations for the admittance of Austria-Hungary to the Customs Union. Prince Bismarck has renounced the duty of three marks per 100 kilograms on cereals, and Austria and Hungary are to modify their pending tariff bills, which aim at extreme retaliation upon Germany.

The German corvette *Augusta* has been wrecked in a cyclone in the Red Sea. Her crew of 238 officers and sailors were lost. Her value was $1,750,000.

The King of Bavaria is so hard pressed for funds that he has recently made application to several financial firms in Paris for a loan, offering as a pledge for its security the income of the Crown for ten years. The application was unsuccessful. The King has ceased paying the salaries of his court officials, and the ministers decline to ask the Chambers to intervene for the purpose of assisting the King, declaring that bankruptcy is imminent.

Republican meetings to protest against the colonial policy of the Government have been held in many places in Italy. One of the speakers was stopped by the police.

Vecci and his wife, who were arrested with Signor Dorides, the editor of the *Moniteur de Rome*, for selling to a foreign Power plans of Italian maritime defences, have attempted to commit suicide. Dorides, it is said, intended the plans for France.

The political crisis in Denmark is reviving. There are four Deputies already in prison on the charge of treason.

The International Law Congress has decided that shipowners shall be answerable for the negligence of crews, but not for mishaps.

China has contracted with a Manchester, Eng., firm for materials for the construction of a railway from Taku, at the mouth of the Hoen-Ho, on the Yellow Sea, to Tungchow, on the Pei-Ho, an affluent of the Hoen-Ho, at a point about twenty-five miles east of Pekin. The railroad will give Pekin easy communication with the Yellow Sea.

The Mayor of Montreal last week issued an order forbidding a circus to enter that city, as the smallpox breaks out with increasing fury after every large gathering of people. The theatres have been forbidden to open until further notice. The boot and shoe manufacturers have petitioned the City Council to prohibit public meetings and everything that tends to draw crowds together while the epidemic lasts. The merchants say that their fall orders are being cancelled, and that commercial travellers can do no business outside the city.

THE WOOL-GROWERS AND THE MANUFACTURERS.

THE paragraph in the report of the South American Trade Commission which says that the republic of Uruguay would have been glad to arrange the terms of a treaty of reciprocity with the United States, if the Commissioners had been able to include wool among the articles to be admitted free into the United States, ought not to be passed over without some careful examination of the state of the wool-growing and the woollen-manufacturing industries. The facts and opinions collected by Secretary Manning in response to his recent circular will undoubtedly throw much light on this subject when they shall be laid before Congress. Meanwhile, there are certain facts known to the wool and woollen-tariff combination, yet little understood by the general public, which invite discussion.

The first and most important of these is that the wool-growers have got the manufacturers under a sort of terrorism by virtue of their supposed political influence. Duties on wool are a violation of all the principles upon which protection was originally based in this country. We do not sympathize with those principles, either in their original shape or in the form which the evolution of half a century has given them, but we take the liberty to point out that protection in the United States was founded upon the idea that it was necessary to build up manufacturing industries in order that we might not be dependent upon foreign countries for the constituents of a high civilization. It was pointed out by Henry Clay and his associates that this country possessed all the natural elements going to make a great manufacturing and commercial nation—coal and water-power, timber and iron, cotton and wool, bread and meat. Give our manufacturers, they said, a little time to get their machinery going and their operatives instructed, shield them for a season against foreign competition, let them have a small bonus for a limited period in order to learn their trade, and presently we shall be in a position to remove all protective duties, and thereafter every tub shall stand on its own bottom. There was much that was plausible in this reasoning, and so the policy was adopted, or rather reinforced by an augmentation of the preëxisting duties on manufactured goods. Every reader of history and every candid protectionist must acknowledge that this was the underlying principle of the so-called "American system" for which Henry Clay and Horace Greeley labored.

The system, having once taken root, began to grow in a fashion surprising to its founders. Not to enlarge the scope of this article, we will confine our attention to the subject of wool. Nothing could have been more repugnant to the ideas of Mr. Clay than a duty on any raw material of manufacturing industry. His mind was too logical and his conscience too clear to accept the doctrine that the tariff should be employed to build up manufactures and to strike them down at one and the same time. The folly of protecting shepherds in a country where grass grew in profusion and where land could be had for the asking, would have been, to the early advocates of the system, simply monstrous. But the bucolic mind, after much study of the workings of the tariff, came to the conclusion that it could be employed to increase the price of wool as well as of cloth. The conclusion was not exactly correct, as the event proved, but it had a plausible seeming, and when the wool-growers became fully possessed of it, they "organized" and demanded protection for wool, saying virtually to the manufacturers, "Give us this duty or we will pull down your system. We have votes, and we will burst the whole machine unless we are allowed a share in the net profits." The manufacturers quailed before this threat. They consented to the duty on wool on condition that the duties on woollens should be correspondingly augmented, and Congress acceded to the joint enterprise for taxing the people. The American system was transformed from its original purpose of building up manufactures and became a game of grab, in which "influence" at Washington was the only motive power that had any value or significance. Naturally the iron and coal miners, the salt boilers, the lumber dealers, the copper and lead interests, and all the producers of raw materials followed the example of the wool-growers, and demanded their innings, usually with a threat to smash the machine if they did not get them.

Things went on in this fashion till the shoe began to pinch terribly. The duty on wool did not yield the prosperity to the growers which they had anticipated, but it cramped the manufacturers even more than they had feared. When the Tariff Commission of 1882 was instituted, they asked and obtained a small measure of relief from the wool tax. It was granted. It was not much, but it stirred the ire of the wool growers. They held the Republican party responsible for the change, and they turned their votes over to the Democrats, giving the State of Ohio to the latter in the next succeeding election. Since that time they have held themselves in readiness to vote with either party, according as the one or the other might promise to restore the tariff of 1867.

This question must be fought out in Congress, and it will be well for the manufacturers to choose their ground before the next session of that body. There is no chance of their obtaining any increase of duties on woollen goods; and if they could, the increase would not help them, since the home market is already overstocked. The reënactment of the wool tariff of 1867 will take from them the last cent of profit remaining. The only way to face the coming storm is to consent to a reduction of the duties on their products. It would perhaps be too much to expect them to consent to free trade in both wool and woollens, but we believe that many of them, and notably the carpet and worsted industries, would find their interest in free trade in the immediate future, and increasingly as the years go on.

LAWYERS AND THE LAWS DELAYS.

THE subject of the law's delays has been so frequently and fully discussed that the public has grown almost as weary of the debate as of its cause. During the past year, however, some contributions have been made to the discussion which are as encouraging as they are novel. The *North American Review* has published more than one article in the last twelvemonth by judges of the highest courts in various States, including Judge W. L. Learned, of the New York Supreme Court, frankly admitting that the judiciary are responsible for no small share of the evil. Even more important is the plain-spoken report which was submitted by a committee of eminent lawyers to the American Bar Association at its annual meeting in Saratoga last week.

The Association, at its session in 1884, appointed a committee to investigate and report whether the present delay and uncertainty in judicial administration can be lessened, and if so, by what means. The committee was composed of five of the most distinguished men at the bar in this country, but death has removed Mr. Richard T. Merrick, of Washington, while Mr. Phelps, of Vermont, has gone to England as American Minister, and Mr. Broadhead, of Missouri, to France, on service for the Government in connection with the French spoliation claims, leaving only Mr. David Dudley Field, of this city, and Mr. John F. Dillon, formerly Judge of the United States Circuit Court for the Eighth Circuit, but now practising law in New York. They first present a clear statement of the condition of business in the highest courts of the country and of this State, showing how both the United States Supreme Court and the New York Court of Appeals are falling yearly further and further in arrear, while inexcusable delays are very common in the lower tribunals. The chief causes of the existing delay and uncertainty may in their opinion be put in these ten words: "Complex procedure, inadequate judiciary, procrastination, retrials, unreasonable appeals, uncertain law." They recall the rule of Magna Charta—four courts a year in each county and every case in readiness tried—and hold that if this was a good rule six hundred years ago, nothing less should satisfy us now.

They sum up under fourteen heads the remedies which they recommend, and their prescriptions are refreshingly clear and simple. Among the most important are these: Provisions for simple and direct methods of procedure in ordinary law-suits; stricter discipline in trials before courts, closer adherence to the precise issue, less irrelevant and redundant testimony, fewer debates, and "no personal altercation"; a time limit in trials before referees; no postponement of a trial because of the engagement of counsel elsewhere, or, indeed, ever except in strict conformity to rules previously made by the judges and for good reason; the restriction of new trials to cases where it is apparent that injustice has been done; the shortening of the time allowed for an appeal to one month, or at most two; greater care in the selection of judges; the reduction of the law itself, so far as possible, to the form of a statute; and the yearly publication of statistics of litigation in both the Federal and the State courts, "that the people may know what business has been done and what is waiting to be done."

By far the most important and significant feature of this report is its closing paragraph, which deserves to be quoted in full:

"In conclusion, we are obliged to admit that most of the blame for the delay and uncertainty which we have been discussing rests upon the profession of which we are members in both its branches, whether on the bench or at the bar. We are a host in numbers; we have influence, direct and indirect, greater than that of any other profession or class of men in the country; we are a part and parcel of the judicial establishment; we know best the laws of the land as they are, and we should know best what they ought to be; we can make ourselves heard and heeded in every legislative hall, in every executive chamber, and on every bench of justice, and we have given pledges, not less binding because not expressed in words, that the functions with which the State has endowed us shall be used to promote justice, not alone by assisting suitors in their private controversies as they arise, but by doing our best to make the occasions of such controversies as few as possible, and the issue thereof as speedy and as near right as we can make them. That we have failed so long to redeem these pledges is no reason for failing longer. Let us redeem them now."

While other causes, like the lack of a sufficient number of judges, notably in the Supreme Court of the United States, have contributed to the law's delays, the most serious obstacle to a thoroughgoing reform has always been the refusal of the lawyers to admit that reform was necessary, and that they were the persons who stood in need of reform. Lawyers practically make the laws which govern the administration of justice, since their influence in Legislatures is almost always controlling when such questions are considered; lawyers promoted to the bench administer the laws; lawyers at the bar defend the laws which lawyers in the Legislature have framed and lawyers on the bench administer. The whole dilatory system has grown up under the fostering care of lawyers. They are the class who are primarily responsible for unduly protracted trials; for delays upon frivolous pretexts; for unreasonable privileges of appeals; for the granting of new trials where no consideration of justice dictates a further hearing; in short, for all the evil practices which prevent a prompt and conclusive issue.

The attitude of the profession has afforded too much excuse for the charge that it favored the existing system from selfish motives, because under this system litigation is protracted, trials are multiplied, and fees are increased. There certainly has been justification for the charge that, as a class, lawyers have defended abuses which had ripened into precedents, and opposed reforms which a broad view of the public interests would have made them favor. It is a very hopeful sign that they are coming to assume a more disinterested attitude, even when it involves a confession of remissness in the past. When the oldest lawyer in active practice at the New York bar, and a judge who has had long experience upon the Federal bench, unite in an admission to the American Bar Association that "most of the blame" for the grave evils which they admit to exist rests upon their own profession, and call upon lawyers to redeem their forgotten pledges to promote speedy justice, the prospect of lessening the law's delays becomes hopeful. Very likely Mr. Field had one eye on the Field Code when he wrote this report, but it is wholesome reading nevertheless.

THE REVOLUTION IN LAW REPORTS.

THE rapidity with which volumes of reports of cases decided in the State courts are multiplied, has so often been commented upon and deplored that it is an old story. During the year 1884 the State of Indiana alone issued ten volumes of its Supreme Court reports, costing the lawyers of that State more than $30 at the price per volume fixed by law. So burdensome is this tax upon the legal profession felt to be that the Legislatures of nearly all the States have passed laws regulating the selling price of the reports within their respective territories. But, even when so regulated, the burden is an oppressive one, as is sufficiently proved by the instance of Indiana just cited. While it is generally conceded that a large proportion of the cases reported are valueless and ought never to be printed, yet it seems hopeless to attempt to remedy the matter by any rational system of selection, for where this has been tried (witness Pennsylvania, for example), the cases thrown out have been published and forced upon the long-suffering lawyer in an independent series of reports. The only present remedy seems to be to so alter the method of printing and distributing the reports that all the decisions can be furnished at a *minimum* cost. This can only be properly accomplished by the publication of one series to contain all the State reports, issued under responsible editorship—something after the pattern of the present English "Law Reports." When the lawyers of the United States fully realize that by some such method of publication they could obtain all the State reports, or any part of the State reports, they might wish, at about one-tenth of the present cost of the printed decisions, the thing will be easily accomplished, and in the meantime they are undergoing a process of education in this direction through familiarity with volumes of reports covering the decisions of the courts of several States, issued in weekly parts, or at short intervals, as one series of volumes.

The first step in this direction was taken by the enterprising West Publishing Company, of Saint Paul, Minn., which began the publication of the *Northwestern Reporter* on the 26th of April, 1879, a weekly publication containing the decisions of the supreme courts of Minnesota, Wisconsin, Iowa, Michigan, Nebraska, and Dakota, at a subscription price of $5 per year, or $3 50 per bound volume of something over 1,000 pages. This series has been successfully continued up to the present time, volume 23 being completed on June 27. About a year after their first venture the same publishers commenced, upon a similar plan, the *Federal Reporter*, a series containing all the cases in the United States circuit and district courts, and in October, 1882, they added the *Supreme Court Reporter*, the two series containing all the current Federal decisions. Returning to the State courts, they began the publication, on January 1 of last year, of a series containing the decisions of the supreme courts of all the States west of the Missouri River, except Nebraska and Dakota, called the *Pacific Reporter*, in form and price similar to the *Northwestern Reporter*. The first five volumes of this series contain more than 5,000 pages of matter and upwards of 2,000 opinions. The *Federal Reporter*, having to compete only with expensive reports issued at long and irregular intervals, has also reached its twenty-third volume at the comparatively high price of $10 per year, or $5 per volume, and has caused the discontinuance of several of the former Reports of the circuit and district courts, and will, doubtless, eventually supplant them all. The price of the *Supreme Court Reporter*—$5 for the two volumes, containing the opinions of one term of the court—is but little less than that of the official reports, and a sufficient sale is doubtless due to the promptness with which the opinions of the court are furnished to subscribers. The typography of these various series leaves little to find fault with, the shape is convenient, and each volume is well supplied with the necessary tables of cases and indexes.

Simultaneously with the advent of the *Pacific Reporter*, A. L. Bancroft & Co., of San Francisco, commenced publishing a weekly journal called the *West Coast Reporter*, under the editorship of the late John Norton Pomeroy, containing the cases in the supreme court of the Pacific and Rocky Mountain States, together with the decisions of the United States Circuit and District Courts for Alaska, California, Nevada, and Oregon, and, in addition, valuable legal essays by the late editor, the year 1884 making four large compactly printed volumes, sold, well bound, at $3 50 per volume. It was to be expected that these *Weekly Reporters* would, sooner or later, invade the Middle and Eastern States, and doubtless it was partly the fear of this which caused many publishers of the regular reports to issue them in parts at comparatively short intervals. On July 1 the Lawyers' Coöperative Publishing Company, of Newark, N. Y., favorably known to the legal profession through their low-priced annotated edition of the United States Supreme Court Reports, issued a prospectus for three new series of weekly reporters: the *New England Reporter*, to contain the reports of the supreme courts of the six New England States; the *Central Reporter*, to contain the decisions of the appellate courts of New York, Maryland, New Jersey, Pennsylvania, and Delaware, together with the New Jersey Chancery Court cases; and the *Western Reporter*, including the supreme court cases of Ohio, Indiana, Illinois, and Missouri. This circular had hardly been distributed when William Gould & Co., of Albany, appeared on July 11 with an "announcement extraordinary" of the *Eastern Reporter*, John T. Cook, editor, to contain all the current decisions of the courts of last resort of the New England States, together with New York, New Jersey, and Pennsylvania, nine States, at a subscription of $10 per year, or $3 50 per bound volume. The West Publishing Company also upon the same day announced the *Northeastern Reporter*, a weekly at $5 per year, to contain every opinion of the supreme courts of Massachusetts, Ohio, Indiana, and Illinois, and the Court of Appeals cases of New York. Upon these announcements, the Lawyers' Coöperative Company, on July 20, sent out a modified prospectus, offering the three series before advertised, covering the reports of 15 States, at $15 per year, each series to start from September 1.

Numbers 1 to 5 of the *Northeastern Reporter* have already been distributed, dated July 17-August 14, and making 400 pages. They contain 116 opinions, of which only twenty-four were decided last year, and sixty-three as late as May and June of this year, showing commendable promptness in reporting. The publishers further announce four additional *Reporters:* the *Atlantic*, the *Southeastern*, the *Southern*, and the *Southwestern*, which, together with the previous series issued by them, will contain the entire reports of the United States, State and Federal, except the reports of the courts of the District of Columbia, which seem to have escaped the notice of the various projectors. Meantime, Gould & Co. have issued No. 1 of vol. 1 of the *Eastern Reporter*, which is dated August 1 and in reality was printed some time earlier. It bears evidence of having been prepared mainly for the purpose of first occupying the ground. Of the 38 cases printed, from Maine, New York, and Rhode Island, 18 were decided in 1884, and 13 in January, 1885, leaving only 7 cases of later date. In appearance it is similar to the West Publishing Co.'s various publications. A well-known New Orleans publisher is said to have made preparations for publishing a series to include

the six Gulf States from Florida to Texas. In fine, there has sprung up a comparatively cheap and expeditious method for disseminating the judicial decisions of every State in the Union.

At first glance this method of publishing reports of decisions would seem to involve grave questions of copyright as between the publishers and the officially appointed reporters; but it is to be remembered that only the opinions of the judges are reprinted, and these opinions are commonly obtained directly from the clerks of courts, while the head-notes, or *syllabi*, and tables, indexes, etc., which, when prepared by the reporter, are his copyright property, are not reprinted, but are prepared anew by the editors. The important question whether a State, after proper remuneration of its judges, may secure a copyright in their judicial opinions by proper legislation and the fulfilment of the requirements of the copyright law, has never been decided in court; but in view of the many interests affected by this new method of reporting decisions, it is reasonable to expect that the matter will be tested in the courts. It is therefore of interest to note the words of Mr. Justice Sage, in a decision rendered on March 3, in the United States Circuit Court for the Southern District of Ohio, in the case of Banks vs. Manchester (23 *Federal Reporter*, pp. 143-146), where an injunction was applied for by the publishers of the Ohio Reports to enjoin their republication by the *American Law Journal*, of Columbus, Ohio. After referring to the provisions of the Revised Statutes of Ohio concerning the printing of the State reports, he says:

"Nowhere in the statute law relating to the publication of reports is authority given to the reporter or any other person to acquire a copyright in the decisions or opinions of the judges. . . . It is in accordance with sound public policy, in a commonwealth where every person is presumed to know the law, to regard the authoritative exposition of the law by the regularly constituted judicial tribunals as public property, to be published freely by any one who may choose to publish them. And such publication may be of everything which is the work of the judge, including the *syllabus* and the statement of the case, as well as the opinion. The copyright of the volume does not interfere with such free publication. It protects only the work of the reporter; that is to say, the indexes, the tables of cases, and the statement of points made and authorities cited by counsel."

In pursuance of the idea that sound public policy requires the free publication of judicial opinions, the Constitution of the State of New York provides that "all laws and judicial decisions shall be free for publication by any person," and the General Assembly of Pennsylvania doubtless intended to effect the same object when it enacted, in 1878, that "it shall not be lawful for the reporter or any other person to secure or obtain any copyright of said reports."

The above case is also printed in the *American Law Register* for August, pp. 519-527, with a long note appended by Mr. Charles Chauncey Savage, of Philadelphia, little of which, however, concerns the question decided, but in which the opinion is ventured that "on the whole it seems reasonable to conclude that by paying a compensation to her judges the State acquires copyright in their decisions, and by express legislation to that effect may control their publication." It may be noted also that Mr. Drone, in his 'Treatise on the Law of Property in Intellectual Productions,' after seemingly sound argumentation, arrives at the same opinion.

ENGLAND.—THE END OF THE SESSION.

LONDON, August 14.

THE last day of the session has now come, and it is also the last day of the present Parliament, since nothing less than some extraordinary and unexpected event could bring it together again before the middle of November, when, according to present arrangements, it is to be dissolved. Few sessions of recent years have been so eventful, so full of strange surprises. Its first period was most unlike its middle, and its last period different from both. It was in October last, four months before the usual time, that the session began. The House of Lords had refused to pass the County Franchise Bill unless it were accompanied by a scheme for the redistribution of seats, and, after an increasingly violent agitation against the hereditary chamber carried on through the autumn, Parliament was called together to pass the Franchise Bill a second time, so as to frighten the Lords into submission. The imminent conflict, as your readers will remember, though it all seems like ancient history now, was averted by a compromise, according to which the outlines of the redistribution scheme were settled in secret conclave by the leaders on both sides, and a bill embodying their scheme brought in. Then Parliament, having sat some five or six weeks, adjourned, both parties glad to have escaped a conflict whose issue was very doubtful, and the Liberals especially joyous because they thought they had outwitted their opponents and secured a large majority for themselves. Thus the first part of the session which opened with storm closed in a perfect calm, and gave promise of further calm to follow.

Just as Parliament adjourned, the critical period of the expedition to relieve Gordon began; and before it met again, the news had come of the capture of Khartum and his death—events which were soon seen to involve the failure of the whole expedition. This misfortune dealt a terrible blow at the Ministry; and in the debate on the vote of censure proposed on them they escaped defeat by a majority of fourteen only. Many of them (half, it is said) wished there and then to resign, but more sanguine counsels prevailed, they continued in office, and went on with the Redistribution Bill. It occupied every night for many weeks, and was debated with a moderation of language and disposition to conciliate which contrasted singularly with the bitterness developed by the Tory party whenever foreign affairs came up, as they did every now and then, or by the Irish Nationalists when Ireland was the subject of discussion. Sir Charles Dilke, who had the principal charge of this huge and complicated measure, showed eminent skill, knowledge, and tact in piloting it into port. When it had been disposed of, in the month of May, there followed registration bills and one or two other minor subsidiary electoral measures, and this brought the session down to the Whitsuntide vacation. Except for the debates on the Sudan, on the finances of Egypt, and on the question of the Afghan frontier, this central period was singularly quiet, for all the main questions which might have divided parties had been disposed of by the compromise. Neither party could venture to quarrel with the other, because it was the interest of each that the general election should be accelerated, the steps necessary to bring the new electors on the roll being taken at the earliest possible moment.

When this pressing need was at an end, the Redistribution Bill and its satellite measures having been passed, the tension suddenly relaxed. Everybody now felt that the work of the session and the Parliament was done. The remaining time was too short for serious legislation; members wished to begin electioneering in the country; Parliament itself seemed to have little authority, now that the sands of its life were so nearly run out. Another cause, moreover, which had kept the Liberal party fixed in its loyalty to the Gladstone Ministry—the fear of a rupture with Russia, and the belief that Mr. Gladstone was more likely to avert it than any other Minister would be, since both his firmness and his pacific disposition were known to the Czar—this cause also was now removed, for before the end of May it was understood that the heads of an arrangement with Russia were settled. Hence it happened that when Parliament met after the Whitsuntide recess, the old bonds had been greatly loosened, and there was not only less of party loyalty, but less interest in business altogether, a disposition among members to indulge their private sentiments of resentment, or selfishness, or mere laziness. The result was seen in the division of June 8, when the Government were beaten on their Budget proposals, beaten not so much by accessions to the Tory and Irish Opposition strength as by the absence of a large number of their usual supporters. The issues involved in the Budget were not great, and the Cabinet could easily have carried them had it put forth its full strength. The catastrophe was due to a sort of reaction from the previous strain, and partly to the apathy of the Cabinet itself, which, as has been subsequently admitted, was on the point of breaking up on the question of the renewal of the Crimes Act in Ireland.

The third period of the session, that subsequent to the formation of the present Salisbury Ministry, has lasted about five weeks. It has been quiet, singularly quiet when compared with previous years; for the Liberal Opposition, although in the majority, has not bullied the Government, and the Parnellite members have dealt very tenderly with it, treating it like a porcelain cup which might break under careless handling. But it has been remarkable for the light it sheds on the present temper and policy of the Tory party, and on the working of democratic institutions in general. The Salisbury Ministry seems chiefly bent on outbidding the Liberals in passing Radical measures. The Radicals applaud this conduct, wishing to get what they can at once, and believing that the masses will not be lured away from their old friends by the sops thus thrown to them.

In fact, Parliament has latterly been occupied solely in electioneering. While the new candidates have been going among the new boroughs and county divisions, getting themselves "accepted" by local delegates and haranguing public ratification meetings, the present members, or such of them as were left in London (for latterly the attendance had so declined that it was difficult to keep the quorum of forty members), and especially the Ministry, have been talking and voting solely with a view to the masses outside. The House of Commons has become quite demoralized. It is like a dyspeptic who, since he is to be executed at noon, thinks he may as well have a breakfast of indigestible dainties at ten. Instead of that sense of responsibility to enlightened public opinion which usually keeps men straight, there is the desire to do whatever is likely to gain a little popularity from the crowd, and an unwillingness to oppose anything, however mischievous. Most singular of all, that last check which is supposed to restrain our Democracy, I mean the House of Lords, has ceased to operate. The House of Lords is a Tory assembly. Lord Salisbury has a majority of nearly two to one in it. Hence whatever his Ministry carries through the Commons passes immediately through the Lords, though it may be a measure which, if proceeding from a Liberal Government, would have encountered stubborn and successful resistance. Our Second Chamber, which it is the fashion to describe as a drag on the wheel of Democracy, is a drag only when Liberals are in power, and we unfortunately see that the carriage may go down hill just as fast with Tories driving. Four bills have been passed

under these remarkable conditions, which no one would have dreamt of a year ago: the bill admitting to the franchise paupers who receive medical relief out of the rates; the bill under which local authorities in Ireland are to provide houses for the laborers there—a piece of thoroughgoing socialism which has been scarcely noticed in our press, because it is now well understood that economic principles in legislation stop at the Irish Channel, as witches stop at running water; a bill for lending money from the Exchequer to Irish tenants to enable them to buy their holdings, lending it on terms so advantageous that the interest on the loan is actually less than the rent of the land; and finally a bill for the better housing of the working classes. It is true that the most novel and doubtful proposal of this last-mentioned bill, viz., that certain State property in London should be sold at an undervalue to the Metropolitan Board of Works, the London local authority, for general purposes, in order that dwellings for the poor might be erected there below market price, and apparently also let below market price—it is true that this proposal was so vehemently resisted by a few members that the Ministry ultimately gave way, and agreed that the State should receive full price. But the significance of the Tory party, which had latterly, since it opposed the Irish Land Bill of 1881, taken orthodox political economy under its protection, now urging that the national Government should at public cost supply the poor with better houses than they could pay for, of a group of extreme Liberals applauding this suggestion, and the leader of the Liberal Opposition not condemning it, is not lost upon the country. Moderate Conservatives are getting terribly uneasy, and moderate men of all parties are heartily glad that the power of this Parliament for good and evil is now at an end.

Their five weeks of power have given no great opportunity for the display of statesmanlike gifts on the part of the new Ministers. There has been no big party debate, while in the ordinary conduct of business they have been little resisted or criticised by opponents whose interest lies elsewhere. But so far they have not shone. They show not only the faults of inexperience, which are pardonable in men lately called to office, but vacillation and indecision, not unmixed with touches of petulance. However, Sir Michael Hicks-Beach makes a fair leader of the House, for he is clear in expression, and not unconciliatory in manner. Lord Randolph Churchill improves in the delivery of his speeches as well as in their structure; but he is not less violent and aggressive than he was in Opposition, and does much by the intemperance of his language to lower the tone and banish the few remaining courtesies of political life. A truce of six weeks may now be expected, for the grouse, the harvest, and foreign trips always suspend business at this time of year. But before September ends, the torrent of platform oratory will have burst upon us. Y.

SOUTH-COAST LIVING IN ENGLAND.

BUDLEIGH, DEVONSHIRE, August 8.

ONE hears so much from the local guide-books which one naturally consults before leaving London for a summering, of the South Coast of England and its Italian climate, fabled to be so warm as even to be relaxing, that a fair-minded and charitable tourist may render the country itself a service by painting it in its true colors, and so preventing exaggerated anticipations. It is not pretty, it is not relaxing, and it in no respect resembles Nice or any part of the shores of the Genoese Sea. I am not now speaking of Cornwall and the southwest coast, which is supposed to be more bracing than that more accessible-from-London seashore which lies between Brighton and Torbay.

In search of an escape as complete as possible from the humid chilliness of the English climate, and having especially endured many things from that of the upper valley of the Thames, which I think must be taken as the chilliest section of England, as well as the dampest, we went wandering along the South Coast at adventure. The Isle of Wight and all the tame and formal coast eastward we knew well, and hoped to find something better; so we went westward, and found that as we went further we fared worse. The coast scenery of the Isle of Wight has nothing imposing to people who have visited even the coast of Normandy. The sea, attacking the land perpetually, cuts away the down and produces cliffs of moderate pretensions; and on some parts of the coast the subterranean waters wash away the underpinnings of the hills, and they come down in what are known as landslips—serial subsidences which may be called catastrophes from the landowners' point of view, without being windfalls to the artist and lover of the picturesque. Nothing so absurdly simulates the sublime of the great convulsions of the earth as these very reasonable modifications of its surface, which clearly involved no disaster, and only suggest great inconvenience. The interior of the island has some very pretty points; and the peculiar charm of all English landscape—the delightfully unexpected way in which the most picturesque and pictorial elements of artistic combinations are found at a chance turn of the road or the corner of a field—is certainly not lacking in the island. It may be found all the way from Reigate down to Arundel, and more or less everywhere in England, for it results from the chance disposition of the high general cultivation of the country with incidental elements of tree form in groups, in lanes, in overshadowed cottages of the most picturesque type, old manor-houses set in frames of unkempt trees, and flanked by long lines of thatch-covered farm-buildings. All this we may find in the interior of the Isle of Wight, but we need not go there for it. It is harder in the southern counties of England to get away from it than to get to it. All through Dorsetshire and Devon this element abounds inland, but the picturesque seacoast we longed for is not found.

The guide-book raptures are drawn from shallow wells of enthusiasm. What is undoubted is that the prevalent southwest winds make the South Coast air a continual sea breeze, and though we have passed the hottest summer for many years on it, we have never been able to sleep without blankets, or found the wearing of linen clothes quite possible. And what is comical is the way in which the people of one town abuse all the other localities on the coast. Sidmouth is especially praised in the guide-book as the most equable of all climates for invalids; but the druggist of Budleigh (six miles away) tells us that the climate of the latter place is not by several degrees as hot in summer or as cold in winter as that of Sidmouth, "where people roast in summer and freeze in winter." Lyme Regis, we were told, was quite like a bit of Italy. Well, we went to the King's Lyme, and we found it very dear, very crowded, and inferior in beauty of every kind to the Isle of Wight, and perhaps more bracing. Its coast is a continuation of the landslip system, as far from the true sublimity of a wild, precipitous coast as a mollusk is in character from a vertebrate. Jane Austen, the indefatigable chronicler of the boredom of English society two generations ago, has made Lyme Regis classic by laying the scene of one of her novels in part at the place, but we hardly comprehend why. One gets climbing without exhilaration on the hills back of it, because when you have climbed to the top, there is nothing to greet you but monotonous and characterless rolling downs one way, and a wider view of the sea the other. The essential principle of the sublime, unity in variety, is not present, and the secondary condition of immensity is equally wanting. Exmouth, beyond to the west, is flat and populous and overbuilt, and Torquay is even worse, for it is both fashionable and unpicturesque. And so we drift back to Budleigh, which has the advantage, common with Lyme Regis, that it is five miles from a railway. It has cliffs of red sandstone stretching away on each side, and no beach but a steep slope of pebbles, and therefore no bathing facilities; but beside it the pretty river Otter comes into the sea, and two or three miles back from its mouth abounds in good points of view. As it is a rapid and limpid stream, the strolls along its banks are a great delight, unmitigated by mosquitoes or midges.

Budleigh, even with its subdivisions of East Budleigh, Budleigh-Salterton, and what else that I have not yet found, is, except one, the smallest and least advanced English village I have ever sojourned in. A single street parallel with the seashore and close to it; a few houses on the uphill road which runs to the interior; and the beginning of two or three more streets parallel with the main street and further back, are all of it. Few New England coast towns of my acquaintance are nearly so small, and yet, as in every town or village in England moderately resorted to, we find here an element of comfort never found in any part of America that I have been in. This is the lodging-house system. Half the houses in Budleigh-Salterton (*i. e.*, Budleigh by the sea) have apartments to let in which, at the rate of from twenty dollars a week, for a family of six or seven, down, you may have comfortable bedrooms, with sitting and dining-rooms, or the two in one with more modest quarters, attendance, including the cooking; almost the quiet and independence of your own house, with the freedom from care of a hotel. You order in the morning from the butcher and baker, or the fishermen come round with the proceeds of the morning's draught of the seine or catch of the lobster-pots; the cooking is always plain and good, and, so far as my experience goes, the service fair, and the housekeeping clean and honest. The beds are clean, and the market, if limited, generally good in quality, for every English butcher seems to know what good beef and mut on are, and the necessity of furnishing them, so that even in a little out-of-the-way village like this you find a good mutton-chop or steak always to be had, and now and then a duck or fowl, and fish, if fitfully, yet exquisite in freshness when had. For the more serious dinner a roast joint is rarely wanting, but whatever it is, you order and choose it yourself, and prescribe how it shall be cooked and when it shall be served.

In America we are very fond of boasting of our superior comfort, but this consists in our having houses provided with every convenience and structural facility for comfort, in which, except for large incomes, real comfort is out of the question, for want of good service. In our own homes the miserable dependence on wretched servants makes life only diluted woe. In exceptional cases, and at great cost, people in America can enjoy comfort in their own houses, but when we go away for the summer the comfort of the poorest watering-place in England is not to be had for love or money. I remember once to have lived in a farmhouse six weeks, near a cascade which I wanted to paint, where I had with not a meal's exception, salt mackerel for breakfast and salt pork for

dinner, while paying normal rates for good board. In England the lodging-house is the rule and discomfort the exception, and easily escaped from if encountered. If for my family of six I attained in any American seacoast town the solid enjoyment we enjoy here, I should expect to pay not less than $30 per day, whereas here I pay less than $50 per week. It is a great mistake to suppose that we have the maximum of domestic comfort in America; say what we will, that is reserved for England. W. J. S.

RECENT FINDS AT BESANÇON.

BESANÇON, DOUBS, France, July 31.

THIS ancient town, the *Vesontio* of the time of Julius Cæsar, is at the present moment perhaps the most interesting spot in Europe in the way of archæological novelty, if the phrase may be permitted. Before describing the latest find in this fertile soil, let me sketch the steps by which the terrace upon which I am writing was identified with the Monticulus Capitolii of Marcus Aurelius's time. Where the Capitol was, had long been a question. Tradition pointed the wrong way, indicating for its site a position near the citadel which is of Julius Cæsar's and, indeed, of a much earlier time; for Besançon is a natural stronghold which had been seized as a point of defence long before the time of Cæsar's conquest. The identification of the real Capitolium by M. Castan, the learned librarian of Besançon, was a beautiful piece of research. Dissatisfied with the historic tradition, he set himself to search the ancient documents in which the library of the city abounds. In the ritual of St. Protade, the oldest of liturgical documents, dating from the seventh century, he found mention of a *Capitolium* or *Monticulus* which the clergy ascended in solemn procession on Palm Sundays,* and which could not have been far from the terrace just mentioned. Another clue was found in the name of the Rue du Chateur, a street which passes the same terrace or hanging garden on the northeast. Had *Chateur* any etymological connection with Capitolium? On search, M. Castan found that the vulgar tongue first began to displace Latin in written contracts, in this part of France, in the year 1247. Then the word *capitolium* was turned into *chatol;* this, later, into *chatoyl*, and this into *chatoul*, to become *chatour*, and finally, *chateur*, the name which the street now bears after six centuries of transformations in written documents, and an anterior period of phonetic change that must date as far back as the fourth century. By these converging lines of inquiry M. Castan was enabled to indicate the spot where excavations should be made in order to disclose the actual Roman Capitolium. It was the pointing of the telescope upon the predetermined planet of Leverrier and Adams. Excavations were made, and abundant remains were found of the Gallo-Roman period; they include the period when Besançon was a Roman colony. The Capitolium, an artificial rock eight and a half metres in elevation above the ancient level, was piled up in imitation of the Tarpeian Rock at Rome. The part of it which still remains contains 5,000 cubic metres of concrete. Upon it and around it numerous fragments of sculptures and of columns in cipolline marble were found; they may now be studied in the museums of this city. The terrace, now private property, is overgrown with gigantic horse-chestnut trees of the early eighteenth century. The concrete below them is of such extremely tenacious consistency as to make its removal, to adapt the site to modern building, an unprofitable thing in this land of low rents. M. Castan's monograph, *Le Capitole de Vesontio*, published among the lectures of the Sorbonne, is a remarkable record of what I may call the insight of scholarship. It will be followed by a larger work, to be published this year, on Roman provincial capitols ('Les Capitoles provinciaux du monde Romain').

What I have called an archæological novelty lies, however, in another part of Besançon, near the Rue des Arènes, a street which has preserved its name almost unchanged from the Roman time. It was already known that ruins of the adjacent arena or amphitheatre had been displaced by Vauban late in the seventeenth century (1678), to make room for his magnificent but now superseded fortifications. These fortifications have resigned their main function, that of defence, to the new forts that crown the hills around Besançon throughout a sweep of some forty miles' circuit. But as barracks the old forts, whether upon or without the walls, have a permanent value; and in enlarging, a few days ago, the courtyard of the northward barrack, the workmen pushed toward the walls of Vauban. Their excavations revealed massive curving walls connected by equally massive walls radiating at right angles to the curving galleries of the amphitheatre. The stolidity of the diggers, however, was not to be moved by any subterranean anomaly short of the discovery of coins and medals; and it was not until serious mischief had been done to the Roman masonry, which they levelled for more than the height of a metre, that the discoveries were reported to M. Castan. Hurrying to the spot, the remains of an amphitheatre which promise to be more important than those of Padua were discovered. Vauban, indeed, destroyed much of the ancient structure; but the eastern parts of the outer walls remain, the grand entrance and main staircase, the *vomitoria*, and three of the oval galleries just mentioned. The area thus far uncovered is perhaps 1,500 square metres, and much more remains hidden, for Vauban's great wall rises over the western foundations of the amphitheatre. Though it has incorporated much of the Roman masonry with its own, much remains beneath it. When this now useless rampart is thrown down, as some day it must be, to provide new room and a boulevard for this growing city, a much completer restoration of the Roman *arena* will be possible.

The situation at present is curious. Three architectural epochs are represented upon the same spot, and even by the same blocks of masonry: first, the arena; then a beautiful mortuary chapel of the year 1301; lastly, the massive wall of Vauban, cutting through Roman masonry and mediæval cemetery, and devouring with impartial rapacity the materials of each. The discovery of this little chapel, Saint-Jacques dans les Arènes, is one of considerable interest: completely inhumed for centuries, it was completely preserved. It is of the purest style of pointed architecture; even the frescoes upon its walls need but a little restoration. In this chapel many tombstones had been piled at the time of Vauban. I saw the uncovering of several of them. The upper one, carved in a very pure style, represents the full-length figure of two ladies, probably of Italian origin, named Bienvenue or Benvenuto: the date of sepulture is 1328. A larger stone below this is ornamented with portraits of a family whose name has not as yet appeared. The *conseil municipal* has already voted money to remove the débris of the excavations, and the work will be carried on under the scholarly and judicious direction of Messrs. Castan and Ducat.

I cannot close without remarking on the charm of this city, in which so much that is ancient lingers in the presence of the highest modern civilization. Yet, thanks to the profound indifference of my countrymen to all of France that lies outside of Paris, I cannot find that even a single American, before your correspondent, has ever visited it. T. M. C.

* The ancient ritual reads: "Quæ sic protendatur donec ad Capitolium perveniatur, clerici cum processione monticulum ascendant, et ibi se ordinent honeste et religiose."

Correspondence.

'UPON A CAST.'

TO THE EDITOR OF THE NATION:

SIR: In your pleasant notice of my novel 'Upon a Cast,' you trace the influence of Thomas Hardy in my style. I have read most of his books with such admiration that to find my way of telling a story compared to his is agreeable indeed; but whether his novels could have influenced me or not is a question I cannot answer. When I was about eighteen years old I read all of his novels then published in this country, and they made a deep impression upon me, especially 'Far from the Madding Crowd.' It was seven years after my Hardy enthusiasm that I wrote 'Upon a Cast,' and while I was giving it a final revision I put a copy of 'A Pair of Blue Eyes' into Chauncey Dearborne's hands. Then I read it again myself, and followed it up with some of Mr. Hardy's later work. I am sure that I had read nothing of his for several years before I wrote 'Upon a Cast,' and in the meantime I had studied *con amore* many masters of the art of fiction, from Balzac to Henry James. Mr. Hardy seems to have overshadowed them all. I beg leave to add that I take it as no poor compliment that my first novel should be compared in style and treatment of character to the work of so eminent an author; but I am surprised.

CHARLOTTE DUNNING.

RAPID TEACHING OF GREEK.

TO THE EDITOR OF THE NATION:

SIR: I have read Mr. Whiton's letter in the last *Nation*, and can more than confirm what he says as to the short time necessary for learning to read Greek at sight. Mr. Whiton will be glad to know that at Harvard, for some years, the minimum Greek requirement for admission has been the ability to read correctly at sight a random page of Xenophon, and to translate simple sentences from English into Greek. In the spring of 1884 I began to tutor a boy for admission to Harvard who knew no Greek at all except the alphabet, and who was rather deficient in several other subjects. For eight weeks before the June examinations he came to me two hours a day. The first two weeks were given mainly to Greek; in the next two Greek had very little attention; and after that we dropped it entirely in order to make sure of passing, at the June examinations, in the other fourteen subjects necessary for admission.

In the summer I worked with him again, two hours a day, for the six weeks before the September examinations. This time was spent wholly on Greek—on reading at sight and on composition—and at the time of the examinations I had no fear of the result. He passed well in both branches, and under unusually trying circumstances. The boy was ready to work, bright, and full of determination, but not a phenomenon or naturally fond of study. In the summer he worked four hours a day alone, besides his two hours with me, but his work was often interrupted by sickness in the family.

I do not consider the result anything remarkable, but it shows that one who knows no Greek can learn in a few weeks to read correctly, at sight, a fairly difficult page of Xenophon.

Yours truly, F. A.

BUFFALO, August 18, 1885.

AIDS TO MODERN GREEK.

To the Editor of The Nation:

Sir: The publication of the Modern Greek Lexicon which Professor Sophocles is said to have left in manuscript, is greatly to be desired. Interest in the language is growing, and would rapidly increase if proper helps for its study were to be had. One who attempts to go far into modern Greek literature with the aid of Contopoulos travels a road which quickly becomes obscure.

Before long, modern Greek will probably be studied in our colleges. Already there is a fairly good handbook in English, and the works of various Greek authors are now published in connection with their modern version. Teachers will find it at least interesting to introduce occasionally a Greek newspaper. The effect is somewhat startling, since students have learned to believe that nothing is more completely dead than Greek. They take up a newspaper with much the same feeling that one would have for a mummy lately restored to life. A few minutes' explanation suffices for putting clearly before a class the commoner points of difference between the new language and the old.

Specimen copies of several excellent newspapers can be obtained from Athens. *Clio*, to which you referred some months ago, is good, but it is published at Trieste, and, to the young student, lacks the true flavor of a publication actually Athenian. *Hestia* is probably as suitable as any for the purpose, though it is not exactly a newspaper. One number of it, which a class read with much interest and without interference with their regular reading, contains, among other things, Notes (on books, science, art, archæology, etc.), Greek News, Notes and Queries, one or two translations from the French, articles on Washington's Mother, the Study of Natural History, Cremation, the Money-market, together with the usual columns of witticisms, proverbs, household economy, puzzles, etc. Another number gives a most entertaining description of the siege of the Acropolis during the Revolution.

Teachers of Greek who have not tried the experiment of reading Greek newspapers with their classes, will find it at least worthy of trial. If nothing else were to be gained, increased interest in the regular work is in itself sufficient.

Yours truly, E. Alexander.

University of Tennessee, Knoxville, August 20, 1885.

DOUBLE PLURALS.

To the Editor of The Nation:

Sir: As another example of double plurals, I would cite the cry of the venders here who sell tomatoes, "tomatoses" (pronouncing the *a* as in *and*). Your correspondent in the issue of the 13th asks whether the use of the double plurals be for euphony or for emphasis. I think in this case it is for emphasis.

Double plurals (and double genitives) are greatly used by young children; and the reason of it there is a desire for euphony. As an example, I have heard children say, instead of "Mary's book," "Maryses book," "Johnses," etc. The pronunciation of the added syllable for a genitive differs from that added for a plural; the *e* in the former case being pronounced as in "*end*," in the latter as double *e* in "*eel*."

Respectfully yours, X.

Baltimore, August 18, 1885.

TEA AND COFFEE DRINKING.

To the Editor of The Nation:

Sir: In connection with your paragraph on the comparative consumption of tea and coffee in this country and England, you may be interested in the fact that tea is generally drunk from two to four times stronger in England than in the United States, while coffee, on the other hand, is nearly always made weaker there than here. To say, then, that the English consume much more tea and much less coffee per capita than Americans does not necessarily convey that there are very many more tea-drinkers and very many less coffee-drinkers in England than in the United States. Thomas F. Manning.

Baltimore, Md., 96 W. Lanvale St., August 22, 1885.

THE OUTLOOK IN OHIO.

To the Editor of The Nation:

Sir: As you may remember, this is in the heart of the Western Reserve, and one of the most essentially New England towns in America—the ancient seat of the Hitchcocks and Fords (one of the latter has just been nominated for the Senate). Thanks to the drought of last year and the protecting and fertilizing snows of last winter, there have never been such crops of grass, wheat, and oats in this region as those just harvested.

This is the season of Pioneer reunions, and men are beginning to think of the significance of the planting of a New England on Lake Erie. Though the political nominations have been made, as yet the preliminary movements of party machinery are not perceptible. The "previous" Republicans called their convention early, placed their candidates in the field, announced that Blaine and Logan were to be in the State, intending and hoping to resume the campaign where it was suspended by the election of the President last year, and, with its force, life, and spirit, to sweep the Democracy from the field as then. They were not long in finding that the campaign was ended, its life and spirit departed past recall. Nothing is said, or will be, of Blaine and Logan. The thing, whatever it may be, will be a thing of conjuring, spiritless, and, whatever may be claimed, of great uncertainty. The Republicans speak of the result as an assured thing. Not a man of them believes that. The Democrats, in conversation with Republicans, in a perfunctory way concede this claim, while there is not a man of them that does not cherish the expectation of success.

Foraker is actively in the field. Hoadly has been in this part of the State. His friends secured his presence at the Portage County Pioneer Reunion, at Geauga Lake, on the 18th instant. A handsome, graceful, slender man, of refined manner, intellectual face; a man of thought; a forcible, pleasing speaker, trained at the bar (which does not always insure success on the platform), his speech of an hour was happy and effective. His antecedents, his style, are not calculated to arouse enthusiasm among the time-honored Democrats, who do not care to give up their oats for his fresh and fragrant fodder. His thought is too elevated, his philosophy too refined and beautiful for the average, who require to be hit at the waistband. His presence created no excitement among the cool, calculating New Englanders. There was no unusual attendance, and he received little attention and no applause from the crowd. A man, a gentleman, a Governor for the State to be proud of, as governors rank, he evidently does not stir the Democratic pulse.

An effort has been made to secure the presence of Foraker at the North Solon reunion, on the 26th inst., in the adjoining County of Cuyahoga. His attendance there would doubtless produce a small ripple. Thus far in his career he seems to have overlooked the Western Reserve, which certainly has not given him great cause for gratitude or expectation. The success of Foraker means John Sherman for President, and while John is the inspiration of no enthusiasm, the solid, mature Republican thought of the State is entirely with him, and that would make any candidate powerful and dangerous to an enemy who, all things being equal, is fairly in a minority of 10,000 or 15,000.

One thing may be said, the name of Garfield has ceased to be a word of conjuration on the Reserve. The recurrence of a Presidential election dissolved that spell. He and his influence are now purely historic. Probably no man, a resident of his old district, who opposed him in 1873 could receive the full Republican vote of that people, but no one would now secure support on the ground of having been his friend, however honored and trusted by him.

The Republicans of Ohio seem oblivious of the vast distance between the war and the present. They seem utterly unaware that practically and really they never have themselves accepted the results of the war, and it may be necessary that Blaine should be again nominated to bring them to a just appreciation of the vast advance accomplished in the intervening twenty years. Perhaps the nomination of Logan would work this very desirable change in their apprehension.

D. D.

Burton, Ohio, August 20, 1885.

THE NEW IRREPRESSIBLE CONFLICT.

To the Editor of The Nation:

Sir: To an observer of current political events two reflections almost unavoidably present themselves—the common one, how history repeats itself, and this other, how wonderfully, in the apparently formless and aimless rush of this vast democracy, great and simple principles force their way to the front. After the war of Independence came the dark period of the old Confederation, and the emergence from it of the nation organized under the beautiful simplicity of our Constitution must always remain one of the most marvellous political events of history. The close of the civil war again found us in political difficulties, if not so desperate, perhaps even more subtle and complex. Then the problem was how to induce thirteen independent States, each following its own sweet will, to submit to one common rule. The task now is to bring the different branches of the Government into harmonious action. The grasping nature of legislative bodies has led them, in the nation, the States, and the cities, to usurp all the powers of government, reducing the executive to a cipher, while experience shows, what theory and history abundantly teach, not so much that they are corrupt as that they are absolutely unable to govern. That the executive will sooner or later reassert itself does not admit of doubt, the only question being whether the abuse of legislative power shall be allowed to run riot till the nation acquiesces in the violence of despotism by a Cæsar, a Cromwell, a Napoleon; or whether the popular will shall help to restore the executive to its due share of power accompanied by responsibility, and shall place the necessary curb upon the legislatures, while carefully preserving their proper functions as the guardians of popular liberty. For many years I have maintained that the next great battle in this country was to be between executive and legislative power, and my present object is to point out the phases in which the approaching conflict is manifesting itself. The apology for this tedious restatement of theory is that without it the force of the practical illustrations cannot be fully appreciated.

Of course the reaction comes first where the evil is most felt, and the new governments of Brooklyn and New York are a tremendous symptom of political change. Much is expected from the increased power of the Mayor, but the danger is in the want of provision for the enforcement of publicity and responsibility. The absence of the former and the opportunity for in-

trigue increase the chances of election of a bad mayor, and the absence of the latter gives a wide scope to his capacity for evil. The prompt and efficient action, within its proper sphere, of a legislature, whether council, aldermen, or whatever its name, is the safeguard which, it is to be feared, has been too much lost sight of. To show, however, how the same forces are working out on parallel lines, we will compare what is going on in Washington with similar events in the city of Boston. Last winter a reform charter for the city was obtained from the Legislature, giving to the Mayor the power of appointment and removal of all officials, though it left untouched the pernicious system of boards or commissions. The charter further declares that the committees of Council, which have hitherto controlled the whole executive as well as legislative business, shall have no longer any power over executive work, but that the Mayor shall have control of and be responsible for the whole of that department. Accordingly the Mayor has proceeded to remove the Superintendent of Streets elected by the last Council, and shows signs of a general intention to use his new powers with vigor. The Council still retains the power of appropriation, but no provision is made for contact between the authority which appropriates and that which spends. Each is left to work in secret and independently of the other. That a powerful body like the Council will be content passively to appropriate money for the Mayor to spend at his discretion is not at all likely, and a trial of strength is beginning which will be of the deepest interest to the political student.

Let us now turn to Washington. President Cleveland was elected on a reform basis, and has apparently made up his Cabinet in conformity, but every step is involving them deeper in the certainty of a conflict with Congress. In the first place, civil-service reform is for the interest of executive work and of the country, but not so much so for that of members of Congress—at least, as they see it. That body was compelled by the clamor of the country to pass the act, but it is safe to say that the majority dislike it, would be glad to evade or repeal it, and resent all attempts of the Executive to put it in force. The Secretary of the Navy and the Attorney-General have distinctly rebuked the action of Congress in the matter of Roach & Son, and now it appears that the Postmaster-General declines to pay over to the steamship companies subsidies which Congress voted in a lump sum to be divided among them.

It is to be remembered, moreover, that the corporate spirit in Congress is even stronger than that of party. Republicans and Democrats may hate each other cordially, but they will join hands, so far as they dare, to crush any President who ventures to assert his independence and encroach upon their supposed rights. The next session will throw some light upon the matter. What, for example, will be the disposition of Congress to listen to the recommendation of the Executive on the silver question? Thus we see how, both at the centre and the circumference, the conflict of the two branches is in the same, and a highly promising, condition.

The lightning-rod for drawing the electricity from these opposing clouds is to be found in Cabinet responsibility, with its equivalent in the States and cities. It is not merely an expedient for the better conduct of business, but the embodiment of a great principle. Upon it depends whether the battles of Executive and Legislature shall be fought out openly, under the eye of the nation and with the restraint of individual responsibility, or whether they shall be conducted in the secrecy of the committee-rooms on the one hand and the departments on the other, in an atmosphere reeking with intrigue, where honest men are at a discount and knaves in the long run are sure to come to the top; while the people look on in blind ignorance and apathy till the storm bursts upon them, as it did in the case of the civil war, like a thunderbolt out of the blue sky.

G. B.

North Elba, N. Y., August 5, 1885.

THE CATTLE BUSINESS.

To the Editor of The Nation:

Sir: In common with many Western cattlemen, I have read with interest the correspondence in your issues of July 2 and 16 and August 6, touching some features of the cattle business, and am gratified that you so far recognize the national importance of the subject as to give its discussion the considerable space already allotted it. But there are other features of the business, of vital importance to those engaged in it and of political and economic interest to the general public, upon which your correspondents have but lightly touched, for a brief statement of some facts concerning which I crave your further indulgence.

So far as the (more or less) popular fallacy of belief in a steadily increasing rainfall upon the plains of western Kansas and the gradual conversion of that region into a safe agricultural country is concerned, I believe only an unprejudiced survey of the local facts and comparison of the United States Signal Service reports for a term of years are needed for its correction. "Cattleman's" conclusions upon this point, as stated by him in your issue of the 6th instant, are, I believe, in substantial agreement with those of every intelligent observer who has impartially considered the relevant facts; and the advocacy of a contrary opinion by any one presumably well informed in the matter would, I think, be taken here as *prima-facie* evidence that the advocate was either an ultra-visionary theorist or a western Kansas "land operator."

But whatever dreams of fertile fields and fat harvests in the remote future may be cherished by the land-owner of western or southwestern Kansas, it is certain his brother land-owner further west can solace himself with no such hopes. The whole immense region embraced within the boundaries of Wyoming, Colorado, New Mexico, and Arizona, excluding the mountain valleys and comparatively small tracts of irrigable land adjacent to the larger streams, must in all probability always remain, as other regions similarly situated as to geographical and meteorological conditions elsewhere have ever remained, arid and wholly incapable of cultivation. Any inventory of our national resources or estimate of the value of our public domain which does not recognize this fact, will prove unsound and misleading. On the agricultural side, this region is worth just what it can be made to earn as pasture. And I hasten to add that it is only by virtue of its immense area that it is of much value even for pasturage. For these high, barren plains, wind-swept and treeless, with their scattered tufts of short, brown herbage, rarely thick enough to form a sod, and in bulk largely worthless "weeds," drought-stunted and juiceless, must not for a moment be confounded in our minds with what we know as "pastures" elsewhere, or in regions having over thirty inches annual rainfall. The two can properly only be contrasted. While the latter will sustain from five to ten animals upon a given area, the former will barely support one—long experience and numberless tests having shown that on this "Eastern Slope," say, from the base of the Rockies to the 100th meridian, fully thirty acres of natural grazing land of average quality are needed to support one cow the year round. Less than this—except in specially favored localities of small area—will not suffice in ordinarily "good years"; and in years of uncommon drought, or of too late rainfall, a considerably larger area is requisite.

This land, too, must all lie within a reasonable grazing distance—say, at furthest, six or seven miles—from suitable watering places; for the hardiest cattle will seldom graze out more than six miles from water, except under stress of extreme hunger or when driven before a "blizzard," while the less vigorous must find their subsistence within half that distance. But the permanent streams and water-holes upon the plains being often separated by stretches of dry land from thirty to sixty miles in width, where no domestic animal can slake its thirst, it follows that only a portion—though probably the larger portion—of the total acreage can be utilized even for grazing purposes. Hence there are left, here and there, in nearly every county, areas of diverse extent, but amounting in the aggregate to millions of acres, which are wholly useless for the purposes of any known industry. It was formerly hoped that some of these dry lands might eventually be utilized for purposes of stock husbandry, at least, by means of artesian wells. But the practical failure of the numerous and costly experiments in that direction, whether made by Government agents or private individuals, has shown the futility of that hope.

With these familiar facts in mind, it is easy to understand the past history and present needs of the two great industries of beef and wool-growing on these western plains. The earlier settlers here, of about a decade and a half ago—chiefly young men of the better class from the New England and Middle States—soon found that in point of business avocation the region allowed them virtually no choice. They must be stock-growers or nothing. True, they could elect whether to grow cattle, sheep, or horses; but stock-husbandry in some form was imperative if they would stay here and earn a livelihood; for to this one industry the availability of the region was found to be limited by fixed natural laws—as their costly experiments at farming only more and more clearly demonstrated. Simultaneously with this experience they discovered, inevitably, that the United States laws governing the sale of public lands, which had worked so admirably in their application to the rich agricultural lands of the Old and Middle West, with special reference to which they were originally framed, were absurdly inadequate to the needs of a settler upon these barren steppes, and in their unforeseen application thereto must wholly fail of their original intent.

Within that portion of the United States known (with any approach to thorough knowledge) by the framers of our land system, and to which it was especially intended to apply, the homestead gift of 160 acres, and the preëmption right to purchase 160 acres more, constituted a more munificent grant to the settler than would the gift and nominal sale of a tract twenty times as large within this arid region. For purposes of tillage 160 acres is land enough—more, indeed, than most men can successfully handle. But in a country where beef-growing, for example, is the only possible industry; and where, in order to turn off enough matured beeves annually to pay expenses and support a family, about one thousand head of cattle of all classes must be kept on hand; and where at least thirty acres of land must go to the keep of each animal—of what use are 160 or 320 acres, or even ten times that amount, if the settlers' right of pasturage be limited to that area? It would simply mean absolute prohibition to his settling in the country, or would work his speedy bankruptcy and exodus if he had already settled.

But with characteristic American faith in his Government doing the right thing at the right

time, our settler believes that as just and politic provision will eventually be made for his protection as was made for the benefit of settlers and emigrants further East, and proceeds to locate his relatively homœopathic right to purchase 160 acres upon some remote spring or "wet gulch," and herds his little "bunch" of cattle or sheep upon the adjacent public domain.

If he be a prudent man, with the qualities of thrift and ambition which help make a good citizen, he will soon see the need of securing some title to the water-holes or springs lying nearest him—both because the grass tributary to one watering-place will not carry enough cattle for the proper maintenance of a family, and because even that inadequate supply of grass may be lessened by some injudicious or unfriendly squatter claiming the adjacent water-hole, and turning out there another herd of cattle. The control of a second or even a third watering-place may be of the greatest importance to him—more essential to the maintenance of his home than is any part of his 160 acres to the Missouri or Iowa settler, beyond, perhaps, his first 40.

But how shall he acquire this control? Very likely the purchase of only 40 acres at each water-hole would cover all the water; and his 160 acres, properly divided, would thus be adequate to his needs so far as water is concerned. But this division the law forbids. He must expend his entire homestead or preëmption right upon one spot only, even though he acquire by it only a five-acre water-hole. True, he need not purchase more than 40 acres, but in doing so he exhausts all his "equities" under the law, as it now stands, and his right to the remaining 120 acres is thereby forfeit. Thus our settler finds that, however little aid he asks from them, these laws, wisely framed for totally different conditions and not undeserving in their proper sphere the praise bestowed on them, are to him, whichever way he turns, a delusion and a snare.

Frequently have settlers in this plight said to me, half by way of self-solace, half apologetically for Governmental shortcomings: "Of course this sort of thing cannot last! Government is bound to find out before long what a wicked and idiotic thing it is to apply these Eastern land laws to this country. They will soon give us a fair show." But pending the confidently expected reformation of the law, the settlers' only recourse for self-protection is to find some qualified pre-emptor or homesteader who, not desiring to hold land himself, is willing to use his "land-rights" in acquiring land for sale at a good profit, and to have him purchase from the United States the 40, 80, or 160-acre tract which embraces the needed watering-place, and afterward purchase the same from him—usually at a good round advance over the Government price—which indeed the preëmptor is justified in asking, as he can never preëmpt another tract.

This expedient, however, is attended with numberless vexations to the settler, involves a heavy, needless expense, and entails considerable waste. He must pay the preëmptor, in addition to his profits on the land, wages and subsistence for the period (never less than six months) during which he is compelled by law to live on the tract before he can preëmpt it; must purchase from him his dwelling-house and other improvements which he is required by law to erect thereon before preëmption, and for which the settler commonly has no use; and, further, he must take the risk of his preëmptor acting in bad faith and selling out the land to, perhaps, the very person or company whose coming the settler deprecated and sought to guard against, and whose larger herds are sure to "swamp" him—rendering all his labor and expenditure comparatively valueless, and compelling him to move further on into the wilderness.

All this, as the result of defective and inadequate laws, our settler justly feels to be a grievous and undeserved hardship, and, as compared with the aid and protection extended to the settler upon agricultural land, a gross injustice. Nor can the reality and weight of his grievance be denied, or the justice of his complaint impugned by one who has studied the practical operation of our public land system in its application to the two classes of land, agricultural and pastoral. Admirably adapted to the former, it breaks down and falls hopelessly short of its purpose when applied to the latter. Intended by its framers to place within easy reach of the industrious settler a sufficient tract of land for the maintenance of a family, and thus encourage the creation of homes, the development of our agricultural resources, and the rapid increase of national wealth, while discouraging and, so far as practicable, repressing land monopoly, it is found, when applied to these arid lands, to have precisely the opposite effect in every particular. It does not bring within reach of the herdsmen enough land, at any price, for the maintenance of a family, even after he has provided himself with the needed flock or herd; nor does it allow him the privilege of renting or enclosing the needed land. Hence, instead of encouraging the creation of homes, it has operated from the first as an effective menace and deterrent to all expenditure in that direction by men of ordinary prudence, and has kept the cattle and sheep business—two of our most important national industries—in the nomadic, half-barbarous condition which has become proverbial. Thousands of "cow-boys" and shepherds are living in tents and "dugouts" on these Western plains, without the society of woman or other civilizing influence, exposed to every hardship and inured to the worst vices, and in consequence breaking down early, both physically and morally, who, but for the lamentable inadequacy of our land laws, might be pursuing their vocation amid as comfortable homes and refining influences as fall to the lot of young men upon the farms of Kansas or Illinois—though of course amid a sparser population. Under the operation of a system of public land laws as wisely adapted to this region as are the existing laws to the regions they were framed for, we should soon see these desolate plains dotted (wherever "stock-water" could be found) with thrifty homes, and in a short time the church and school would not be far to seek.

A no less signal illustration of the maleficent working of our land system here is seen in the effective aid and stimulus it indirectly affords to the formation and growth of that very land monopoly which it was intended to discourage. Under any land system which allowed the settler to lease or purchase from Government sufficient pasturage for his flocks, the acquisition by foreign corporations of so much of our public land, to the obvious detriment of our national wealth (an acquisition still going steadily on) would hardly be possible; and if acquired at all under such a system, it could only be at a cost from five to ten times greater than at present—the difference going into the pockets of the settlers, our own citizens. But it goes here without saying among the parties interested that if Government were to come to the relief and protection of the average ranchman, by granting him the right to lease the grazing land tributary or adjacent to his "waterings," so as to control and, if he saw fit, fence it, then this process of acquisition and absorption must cease, for the smaller stockmen, being thus enabled to protect their holdings, would not be so frequently as now compelled to choose between the two alternatives, either to sell out or to be eaten out, blandly offered by the agent of the nearest "cattle king" or great corporation.

The average ranchman, however, now entertains but little hope that Government will ever come to his relief; hence the work of absorption goes on apace. Indeed, to his limited vision, it has sometimes seemed as if the powers that be, from whom he formerly expected final, though possibly tardy, justice, were wholly on the side of the larger herds—especially herds owned chiefly in some foreign country or represented by "My Lord So-and-So," or the "Hon. So-and-So." The methods and purposes of the few Government officials to whom he occasionaly musters courage to go with his grievances are to him mysteries past finding out; while the tricks and wiles of the astute "cattle kings," many of whom are shrewd and experienced politicians, baffle and silence him.

In illustration of this I need only refer you to the fate of the effort made something over a year ago by the smaller ranchmen and live-stock companies toward creating a public opinion in favor of leasing to each preëmptor and homesteader, or their assigns, upon these and public lands the pasturage which lay naturally tributary to his water-rights—believing that their only salvation against absorption by monopoly lay in securing such legislation. How this laudable effort was thwarted and, thus far, defeated is no secret to the few who were interested as victors or vanquished; but to the public at large it remains wrapped in the mists of chicane.

I have somewhere read that when the Jewish usurers of Hamburg, during the period of greatest Jewish unpopularity in the city, found that the petition of divers merchants for the repeal of certain obnoxious custom-dues and taxes in which the Jews were largely interested was likely to be granted, they did not openly oppose it, but boldly seconded the petition, and clamored more loudly than all the others for the dreaded repeal, shrewdly conjecturing that whatever a Jew vociferously demanded would certainly be refused; in which conjecture they were right, as the event proved. Whether our "cattle barons" have laid Europe under tribute for chicanery as well as capital I know not, but certain it is that upon the occasion in question the Hamburg tactics were repeated in Colorado, Wyoming, and Montana, and with equal success. No sooner had the stock-growers of moderate capital and the smaller ranchmen fairly begun to agitate the lease question than the agents of the foreign corporations and "bonanza cattle kings," descrying their danger, and rightly judging from the public pulse that any change in the land laws which they might seem to have proposed and to be clamorous for would at least be, *ipso facto*, looked suspiciously upon by the Eastern public, and, if offensively enough demanded, would surely come to naught, affected to make common cause with the ranchmen, only urging more strenuous action, and filled their organs and the mouths of their henchmen with loud and imperative demands for the speedy leasing of all the public domain.

What wonder if thereafter the men who seriously desired the enactment of an equitable lease law, and to whom its enactment, though a simple act of justice, would be less beneficial than to the public at large, were effectually silenced. Without effective organization, mouthpiece, or organs for influencing public opinion in the East, they feel that every element of strength is with their opponents, and that they would be inevitably worsted in any struggle with them for Governmental interference or recognition. But if the nation really desires to restrict land monopoly; to establish the great industry of live-stock growing upon a basis of permanent prosperity, insuring thereby an abundance of cheap meat and wool both for home consumption and export; to remove the greatest obstacle in the way

of making this "American Desert" all it is capable of being made both as an economic and social factor in the commonwealth; above all, if it desires to treat all its settler-citizens with equal justice, then it should not longer delay instructing its servants in Congress to prepare and put upon the statute-book a well-considered lease law, applicable to all the arid public domain.—Very respectfully, AN OBSERVER.

ESTES PARK, COL., August 17, 1885.

Notes.

'THE WIT OF WOMEN,' by Kate Sanborn, is in the press of Funk & Wagnalls. Lee & Shepard's fall announcements include 'English History for American Readers,' adapted by Francis H. Underwood; 'Young People's History of England,' illustrated, by George Makepeace Towle; and 'A Captive of Love,' adapted from the Japanese by Edward Greey.

Jansen, McClurg & Co., Chicago, announce a hand-book, 'The Standard Operas: Their Plots, their Music, and their Composers,' compiled by George P. Upton; and 'We Two Alone in Europe,' by Mary L. Ninde.

A new Life of General Grant, by E. E. Brown, will be speedily published by D. Lothrop & Co., Boston.

Fords, Howard & Hulbert announce 'Bryant and His Friends: Some Reminiscences of the Knickerbocker Literature,' by Gen. James Grant Wilson, illustrated with portraits and manuscript facsimiles; and 'Evolution and Religion,' Part I., by Henry Ward Beecher.

A new and cheaper edition of Martineau's 'Types of Ethical Theory' is in preparation for the American market by Oxford University. The publishers here will be Macmillan & Co.

D. C. Heath & Co., Boston, a new firm, of which the senior member was formerly of the firm of Ginn, Heath & Co., continues the publication of some of the text-books bearing the latter's imprint. They have also in preparation, in the same line, 'Studies in General History, 1000 B. C. to 1880 A. D.,' by Mary D. Sheldon; 'American History Readers,' edited by Edward Channing; 'A Select Bibliography of Ecclesiastical History,' with notes, by J. A. Fisher; Compayré's 'History of Education,' translated by Prof. W. H. Payne; 'Methods of Teaching and Studying Ancient Languages and Literature,' and 'Methods of Teaching and Studying Natural Science,' both edited by Prof. G. Stanley Hall; and translations of J. P. Richter's 'Levana' and Comenius's 'Didactica Magna.'

Quite in anticipation of the holiday season, E. P. Dutton & Co. produce an illustrated edition of Longfellow's 'Village Blacksmith.' We recognize it as a merit that they have not alleged 1886 instead of 1885 as the date of publication. For the rest, as usual in American works of this character, the landscapes surpass in quality the figure-pieces, though the best of these are not bad.

'Features of Society in Old and New England,' by Henry Mann (Providence: Sidney S. Rider), is a little book whose title was contrived to cover a reply to Mallock's reply to Henry George, with whom, however, Mr. Mann is not at all in sympathy. The author is a Scotchman by birth, long resident in this country, and we have found his observations on the elements of society in New England, the native farmer, small families, divorce, religion in New England, and spiritualism, sensible, dispassionate, and in the main just.

What may be called the literary or scholarly animosity fostered between the people of adjacent States is very amusing. The Rhode Island historical writer warms at the very thought of the vexation caused his ancestors by the arbitrariness and intrigue of the Bay authorities. Mr. Blaine, with his usual maladroitness, tried some years ago to revive the embers of discord between Massachusetts and Maine, on account of their territorial separation. Now, we have a little book called 'The Green Mountain Boys, or Vermont and the New York Land-Jobbers,' in which the story of Vermont's struggle to prevent absorption by "the Yorkers" is related in connection with the revolutionary exploits of Ethan Allen and his stubborn fellow-settlers west of the Connecticut. The author and publisher is Mr. Philip H. Smith, of Pawling, N. Y., author of a recent history of the Acadians. His own, also, doubtless, are the naïve woodcuts which sparsely adorn this curious production.

The *Illustrated Sporting World*, a new weekly paper issued in New York on Monday, is simply the well-known *National Police Gazette* of the previous Saturday under a new name. The illustrations and the reading matter are the same in both papers, except that in the *Illustrated Sporting World*, which makes a point of having no advertisements, the weekly page of advertisements in the *Police Gazette* is replaced by sporting and general news.

Only a mind that takes kindly to mathematics will enjoy reading the first number of the Proceedings of the American Society for Psychical Research (Boston). What sort of "revision" the Theosophists will give it passes conjecture. The results of the various experiments in guessing by color tests, dice tests, and number tests, and in pictorial thought-transference, were not positive enough to be stimulating, nor yet so barren as to be discouraging. So the work will continue, and it is clear that the directing committee has ingenuity enough to devise new methods for some time to come. Valuable seems Professor Pickering's discussion, in Appendix C, of the possibility of unconscious mental influence exerted under certain conditions on an astronomical observer by his recorder.

Mr. John T. Campbell, a civil engineer and land surveyor of nearly twenty years' standing, has a valuable article in the September *American Naturalist* on the age of forest trees. He lays down the law, which no one who has looked into the subject will deny, that the size of a tree is no criterion of its age; and he holds further, and as truly, that we cannot, from the width of the rings, draw any safe inferences as to the meteorological character of past seasons. He gives some very interesting examples of trees whose great antiquity he has determined.

The *Portfolio* for August (Macmillan) is much indebted to American art, having for its frontispiece an etching, by Stephen Parrish, of the town of Hastings, England, which the editor praises for its freedom from exaggeration; and ending with an article on "The Stones of Rome," composed in literary and artistic partnership by Mrs. Elizabeth Robins Pennell and her husband. The latter's sketches are of Roman monuments, mostly familiar, with here and there picturesque bits which are both new and suggestive.

Parts 9-13 of the fourth edition of 'Meyer's Konversations-Lexikon' (B. Westermann & Co.) take us to the title Armenia. The most characteristic articles are those which pertain to labor (*Arbeit*) in its various phases. That on the Argentine Republic is accompanied by a useful map of that immense country and its nearest neighbors. We remark also a map of Afghanistan, showing the disputed frontier, and one of Angra Pequena Bay. Some of the illustrations in the text are derived from that inexhaustible storehouse, the Germanic Museum in Nuremberg.

The second number of the New Guinea Company's bulletin, *Nachrichten für und über Kaiser-Wilhelms-Land und den Bismarck-Archipel*—names now applied to the northeastern shores of Papua and the adjoining archipelago recently taken possession of by Germany—contains extracts from the reports of the German explorer, Dr. Finsch, as well as communications obtained from British officers. Dr. Finsch has, since September, 1884, made repeated coasting voyages in the service of the company on board the steamship *Samoa*, discovering a number of bays, and here and there hoisting the German flag. Frequent coral reefs render the navigation dangerous. Probably the best and safest harbor in all the north of New Guinea is the newly discovered Friedrich-Wilhelms-Hafen, embracing many islands, and girt by virgin forests. A vast mountain range, visible from Astrolabe Bay, opposite the island of New Britain, about 5° south latitude, and rising to an altitude of perhaps 18,000 feet, was named Bismarckkette. Very few human habitations were seen anywhere.

The official report of the last census of the Turkish capital has been received by the ministry. According to it the total population of Constantinople, including the suburbs on the Bosporus, numbers 870,000. About one-half are Moslems; 112,000 are foreigners; 270,000 live in the Christian suburban district of Pera. Of the foreigners, three-fourths are males. The civil officials number nearly 25,000, of whom less than 1,000 are Christians—Armenian, Greek, or Catholic. Geographers will probably hesitate to accept the results of Turkish enumeration as definitive, and various estimates will still be indulged in. Lower figures are now generally preferred. In 1851 Bysantius reckoned the population at about 1,000,000—about 500,000 Turks, 250,000 Greeks, 100,000 Armenians, 70,000 Jews, etc. Nearly the same total was adopted by the 'Almanach de Gotha' as late as 1870. The 'Encyclopædia Britannica' in 1877 mentioned both the estimate of Bysantius and the official statistical returns of that year, "not exceeding 700,000." Jung's 'Lexikon der Handelsgeographie' (1882) has "*circa* 600,000"; the 'Almanach de Gotha' for 1885, "600,000 à 700,000"; and the latest material before us, vol. x. of Brockhaus's new 'Konversations-Lexikon,' "660,000."

Lately published partial statistics of the present Austrian Reichsrath show how widely different as to the avocations and social standing of the members, the Vienna Chamber of Deputies is from our own House of Representatives. Among the 353 Austrian Deputies there are 103, distinguished by the title of doctor, 5 princes, 1 landgrave, 37 counts, 32 barons, 47 knights, 2 Edle von, and 8 Herren von. The Chamber comprises 6 actual and 5 ex-ministers of state, 1 ambassador, 7 aulic councillors, 9 other councillors, 17 professors, 4 school directors, 24 clergymen (18 Catholic), 3 bankers, 3 writers, 7 physicians, 41 lawyers, 8 notaries, 4 merchants, 19 manufacturers, and 120 landed proprietors.

The latest and least of the French books about the poet is 'Victor Hugo devant l'Opinion' (Paris: Office de *La Presse*; New York: F. W. Christern). This is put forth by one of the many agencies which have sprung up lately to provide their subscribers with newspaper cuttings on any subject of interest. Thinking that the death of Victor Hugo was such for all Frenchmen, this press agency scissored out all the obituary notices it could find in European and American newspapers, translating those in foreign tongues, and it has reprinted them all in a stout volume of 400 pages, provided with a brief but adequate index of proper names. The book is of no great value, but it deserves to be noted as a curiosity of literature.

In the published results of the meteorological observations made by Mr. Omond on the summit of Ben Nevis, Dr. A. Woeikof directs attention to the exceedingly rapid decrease of temperature with elevation from Fort William to the Ben. In

middle latitudes the only near approach to this occurs on the Brocken, all high-level stations of the Alps showing a much smaller decrease. At the Brocken, as well as at the Ben, the great difference from the Alps does not occur in summer, but in the colder months of the year, the reason appearing to lie in the nearly constant winds, which bring air from below that is cooled by ascension. Dr. Woeikof considers that the point of greatest interest in the occupation of the Ben Nevis is the study of the meteorological phenomena near the centres of cyclones, for which no other high-level station in the world is so favorably located.

Following in the path trodden by several representative governments in providing their natural observatories with refracting telescopes of extraordinary optical power—the American Government at Washington, with a telescope of twenty-six inches aperture; the Austrian, at Vienna, of twenty-seven; the French, at Paris, of twenty-eight, and the Russian, at Pulkowa, of thirty inches—the report of the Astronomer Royal of England for the past year urges the need of the Greenwich Observatory possessing a refractor of much greater aperture than its largest telescope now has (about thirteen inches), which is too small to allow successful spectroscopic observation of any but the brightest stars. Mr. Christie proposes an object glass of twenty-eight inches aperture and twenty-eight feet focal length.

F. W. Christern has received the latest contribution to the history of one of Dr. Friedrich Kapp's heroes: 'Les missions secrètes du Général-major Baron de Kalb, et son rôle dans la guerre de l'indépendance américaine.' This work forms a single brief volume of 161 pp., 12mo, and is written by the Viscomte de Colleville.

—In a volume of twenty-five excellent heliotypes, Mr. Lockwood De Forest, of this city, calls attention to the carved work of Indian architecture. This, apparently, is by way of advertisement of work which he is himself prepared to undertake to have done in like style by native Indian workmen, but the plates are interesting enough to be of value for their own sake. Mr. De Forest is doubtless an enthusiast, and pleads in a short prefatory note against letting the Indian carver's art die out for want of encouragement. How far it is desirable to surrender our houses to this end is a question for philanthropy. The luxurious richness and delicacy of Indian decoration are fascinating, and chime in well with the present taste of our people, which sets in the direction of barbaric splendor. The charm of the carved work, albeit somewhat mongrel, is not to be denied. For isolated objects—screens, bits of furniture, and the like—it may well be popular. The real excellence of Indian art, however, is in its color rather than in its form. Its carving is a marvel of elaboration, but is apt to lack the higher qualities of form, and to run riot wherever it goes beyond a delicate surface enrichment. The trouble is, we are ourselves so far gone in elaboration and license that what we want now, especially in architecture, is chastening, not stimulus or new opportunities.

—The *Atlantic* for September opens with Mr. Henry James's new story, "The Princess Casamassima." It has been intimated that this fiction would differ from the author's previous works—we believe it was announced as "more ambitious"; but nothing could lessen the surprise at finding that the centre of events in the first three chapters is a "prostitute's bastard," and the relieving figures a "big and majestic" female turnkey and a disillusionized fiddler in a second-rate theatre who belongs in the despair division of the Socialists. This stirs curiosity, and Mr. James will find many lookers-on interested in its working out. The non-serial articles of the number are mostly literary, but, as is apt to be the case with such, remote. Mr. Howells contributes a paper on Leopardi, which conveys more pathos than instruction regarding that sorrowful poet, and seems to agree with those who depreciate his fame. Mr. Scudder continues his papers on "The Child in Literature," this time in the English; but by what perversity does he leave out the darling of the "Winter's Tale" when remarking on Shakspere's paucity of reference to children? On the whole, in all these papers there seems to be a rather narrow compass of information. Mr. Lawton, in a somewhat wandering article, declares against the theory that modern Greek is a good preparatory study for the Attic; and the number winds up with a very ineffective discussion of the poetic element in mediæval drama.

—In *Harper's*, Mr. Warner, whose attention of late has been particularly directed to the civilization of the South, gives his impressions of the state of social feeling as he observed it during the New Orleans Exposition. In effect, he merely adds one more authoritative witness to the fact which seems slowly becoming an article of Northern belief—that the negro problem is working itself out through social rather than political channels, and must do so; and that the sentiment of loyalty to the Union is growing in the centres of influence and intelligence at the South. Two articles of exceptional interest are the opening paper on Labrador, which gives distinctness of outline both to the country and people of that foggy land, and one on the first Ohio emigration, the Marietta colony, apropos of the approaching centennial celebration in 1888. The death of General Grant occasions some intercalated pages of reminiscences by General Porter. The elaborate paper is one, profusely illustrated with varied degrees of merit, on Barye. The number as a whole is exceptionally interesting, and contains an unusual number of cuts, including a portrait of Grant.

—*Lippincott's*, it must be confessed, is weak. The only contribution that lifts its head above the rest in public interest is a short discussion of spiritualistic phenomena, and this not by its own merit so much as by the commonplace character of the others. It would scarcely be worth noticing at all except as one of the many signs of a change of attitude on the part of the spiritualists or "psychical scientists," who are not so much aggressive as conciliatory. On all sides they seem to be seeking to induce a state of tolerance in the audience of the rational and intelligent portion of the community, preparatory to "moving for a new trial" of a cause which they suspect to be discredited rather by its witnesses than by its facts. To this end they continually catalogue the number of eminent or notable scientists or lawyers who have confessed their belief or inability to disprove the phenomena as facts, and they are interesting many persons in collecting evidence. The multiplication of the psychical societies is, however, some proof of their progress in obtaining a new hearing, and when a "science" is sufficiently advanced to have funds left for experimenting in its region, such as the Seybert fund at Philadelphia, it may demand, perhaps, more serious attention. This article is only one of many now appearing in numerous quarters, and they herald a new activity of speculation.

—The sum of $25,000, according to Professor Skeat, would insure the publication of an English Dialect Dictionary, toward which so much material has already been furnished by the Society bearing the same designation. The three publications which have been issued this year, as the work of 1884, are 'A Word-List illustrating the correspondence of Modern English with Anglo-French Vowel-Sounds,' by B. M. Skeat; 'A Glossary of Words used in the County of Chester, Part I.—A to F,' by Robert Holland; and 'Upton-on-Severn Words and Phrases,' by the Rev. Robert Lawson (London: Trübner). Mr. Skeat adds to his list and prefatory remarks an epitome of Mr. Nicol's article on French Phonology in the 'Encyclopædia Britannica,' and the little pamphlet will be found to repay study. A queer folk have evolved the Upton-on-Severn dialect, which is brimming with humor, not always of the conscious kind. Their phrases are particularly pithy, with a marked poetic quality, as, "at the edge of night," for 'just before dark,' and "by scowl of brow," for 'judging by eye and not by rule or measure.' "A good man round a barrel," they say of one given to drink, "but no cooper." They call an "adder" one who enlarges upon the truth. "High-minded" is alleged of a sermon shot over the heads of the hearers. "Disabills" is applied to working-clothes. For unwell "comical" is used: "'E seemed that comical as 'e couldn't eat no fittle." A child who resembles his parent becomes the very "moral" (model) of him. Some nouns which are general in our common speech take on a specific meaning, as "acquaintance" for 'sweetheart,' and "garment" for 'chemise.' So "haverdepage" (avoirdupois) is an adjective signifying 'in doubt, mentally on the balance.' "Frame" is used for 'skeleton'—"'Er baint no more nor a frame." We trace the origin of tramway in "tram," a framework, or a loose arrangement, of stout parallel rails on short legs, or blocks, for supporting casks. The Chester dialect recalls Yankeeland with its "by golly" and "by gum," "consarn ye," "darn ye," "chock-full," its game of "duckstone," etc. Exotic seem "algerining," 'prowling about with intent to rob,' and "bastyle" for 'workhouse.' Distinctly poetic is "eye-sarvant," said of a screw cheese-press which, if not constantly watched and turned, will not work. A pretty phrase also is that of "borrowed days," applied to the first eleven days of May, which in Old Style were the last eleven of April. The unseasonable weather which (*teste* Cowper) makes the English May as much a pious fraud of the almanac as our own, is accounted for by the Chester folk in this wise: "Well, you see, we 're only i' th' borrowed days yet." Our Indian summer is not unknown to them, and this they call the repaying of the borrowed days. Almost gone out of fashion, we are told, is the picturesque "bedgown" worn at work, and never in bed. And the grinning of a Cheshire cat is, we regret to report, an unsolved mystery. Mr. Holland's annotations make this Chester glossary one of the most readable of the series.

—For English readers of *Le Livre* the most attractive article in the July number is that by Jean Bernard, on the National Library during the Revolution. The men of '89, it seems, had, with regard to this institution, none of the savage hatred of the finest monuments of civilization which has since marked the pétroleur and the dynamiter. They were not above decapitating the librarians, but they spared the inestimable collections of coins, engravings, manuscripts, and printed works—for such were then the several departments of the Library. They found the hours of admission to be twice a week from ten to two, and they gave daily access. Moreover, they enriched the Library with the plunder of the châteaux and the convents, which had a priceless value, and they did this by means of a Fine Arts Committee, who selected what they deemed best from the *dépôts littéraires* in which the confiscated books were primarily heaped pell-mell. The Library profited similarly by the spoils of

foreign conquest, again systematically gathered in and forwarded by commissioners; but these had to be given up in 1815, when the scale turned and the victor became the vanquished. The Revolution also established the principle of depositing copies of every work published in France in the Library; but this was left optional with the author. Finally, the Library owes its "budget" to the Revolution, and the sum voted for its maintenance by the Convention in 1793 has been exceeded only by the Republic in our day.

—We recently summarized an article by Prof. Carl Vogt, in which he exposed some of the defects of German universities, especially with reference to the poor quality of the teaching material. Eduard von Hartmann who, though a philosopher, enjoys—as did likewise the Allah to whom he plays prophet, Schopenhauer—the proud distinction of *not* being a professor ("pas même académicien"), has since written on the same subject, and has proposed remedies as well as found faults. Now Professor Vogt, though he is ready enough to criticise, and that, too, in the plainest language, does not seem to approve the intermeddling, in what he calls "guild" affairs, of persons who do not themselves belong to it; at any rate, he has very little patience with Hartmann's "reforms." The latter thinks the competition for fees and for large audiences, as a claim for promotion, among the instructors leads them to popularize their teaching to an injurious extent, to remedy which he proposes that the instructors shall no longer be permitted to receive fees, and that different grades of salaries, by means of which the richer universities get the best men, and thereby cause a perpetual struggle among those who are awaiting preferment, shall be abolished. He would have uniform salaries, varied only by the supplementary sum common to all grades of the German civil service, to cover the difference in house-rent between large towns and small. All this seems to Professor Vogt absurd or worse. It is the system which has obtained in France for a century, and which keeps the French professors from rising above mediocrity. Once a professor, a French scholar knows he has nothing more to hope for. No discoveries or literary fame will add a penny to his income, nor will neglect of his duties, provided he observes the mechanical routine, lessen it. In Germany, on the other hand, there is everywhere competition, and it is the only element which prevents just such intellectual stagnation as (so far as the professors are concerned) reigns in France; it is, so to say, the yeast which causes the perpetual literary effervescence characteristic of Germany, and to which is due, along with a vast amount of useless writing, the most lasting works of German scholarship. Professor Vogt's article may be found in *Vom Fels zum Meer* for September (F. W. Christern).

PATTISON'S MEMOIRS.

Memoirs. By Mark Pattison, late Rector of Lincoln College, Oxford. Macmillan & Co. 1885.

PATTISON'S 'Casaubon' and Pattison's autobiography possess one common feature: each book, just because it is purely biographical, is also the best of pictures of a special society at a particular epoch. In his 'Casaubon' Pattison has revealed to many readers for the first time the inner workings of French Protestantism at the moment when the Protestants of France were yielding before the rising tide of the Catholic Reaction. In his own 'Memoirs' he paints the state of what we may now call "old" Oxford, and lets the world see, as they could hardly have seen in any other way, the curious conflict of feeling and beliefs of which the High-Church movement in England is the outward sign. Just, moreover, as Casaubon's faults, no less than his virtues, made the struggles of his private life an index to the difficulties of his age, so both the strength and the weakness of Pattison's character, as they stand revealed in his 'Memoirs,' make his career the reflection of the varied phases of opinion through which his university has passed during the last half century.

The point which every American reader should bear in mind is, that no one can enter into the spirit of these memoirs without also entering into the effect produced on more than a generation of Englishmen by their feeling toward Oxford. The influence worked sometimes by way of attraction, sometimes also on the very same person at a different period of his life by way of repulsion, but it was always powerful. Newman, Froude, the two Mozleys, Arnold, Lord Selborne, Gladstone, Pattison, and a score more of others, whose names will easily occur to any one who has studied the course of religious opinion in England during the last fifty years, differed in many things; their one common feature, which cannot escape any observer, is that they each and all of them have borne in different degrees the impress of their university. We can hardly conceive what any of these eminent men would have been had he not been trained at Oxford; and of all the distinguished persons whose memoirs have of recent days come before the world, there is no one so deeply tinged, in one way or another, with the quality of "Oxfordism"—if one might venture to invent a word—as Mark Pattison. As you read his 'Memoirs,' you hardly know whether he meant to give a picture of himself or a picture of the Oxford he had known. The two are blended together, and they ought not to be separated. To understand Pattison you must take account of the university environment in which he moved, and there is no better way of entering into Oxford as it was, or of understanding how it has become what it is, than to try to appreciate the character of one of the most noteworthy among its teachers.

The most salient peculiarity in the character painted with such painful care by Pattison himself, is the astonishing combination of a certain intellectual strength and greatness with a quality which one cannot call by any other name than weakness. For the proper understanding of the 'Memoirs,' the primary requisite is to appreciate the great and even noble side of their author's character. There is the more reason for insisting upon this because Pattison has not really done himself justice. His book is meant to describe the transition from a state of intellectual and moral darkness and unreason into the light of truth and reason. "I have really," he writes, "no history but a mental history. . . . All my energy was directed upon one end—to improve myself, to form my own mind, to sound things thoroughly, to free myself from the bondage of unreason and the traditional prejudices which, when I began first to think, constituted the whole of my intellectual fabric. I have nothing beyond trivial personalities to tell in the way of incident. If there is anything of interest in my story, it is as a story of mental development." This history of the turning from darkness to light—this account of the intellectual conversion of the soul—inevitably suffers from the fault constantly found in the narratives of all converts. The saint redeemed from sin exaggerates the wickedness of his unconverted days; the philosopher delivered from error overrates the darkness and stupidity of the time when he was a stranger to truth. In each case the convert, whatever his honesty of purpose, draws a contrast between the early and the later stages of his career far more marked than the facts warrant. This is certainly the case with Pattison. Take his words literally, and you would suppose that he was as a boy or a youth, and even as a man of thirty, inferior in ability and power of thought to the ordinary average of mankind. What he remembers of himself is his "hide-bound and contracted intellect." He contrasts with something even of bitterness Miss Martineau's appreciation of 'Paradise Lost' when a child of seven, with his own failure to enter into Milton when approaching manhood. He is forced to tell of his intense interest in natural history when still little more than a boy; yet he is careful to explain that his passion for natural history "was felt by me in its most childish form." He cannot refer to his early love of natural scenery without adding the warning words: "I see I am in danger of conveying an idea of myself as more advanced in intelligence, or power of perceiving beauty, than I was. I hasten to say that in these first years of the '30's there was nothing in me that could be called intelligence, nor any manifestation of sensibility of feeling."

So, again, his general rudeness of behavior and "acts of absolute selfishness" toward his sisters, his tactlessness, uncouthness, and shyness as an undergraduate, every intellectual mistake or supposed mistake in his course or mode of reading, the aid he did not get from his teachers, are all registered with the vivid minuteness of memory which, unfortunately for themselves, some men possess as regards every painful transaction of life, and in a manner which recalls at every turn the morbid exaggeration and onesidedness of religious biography. For if, instead of attending to Pattison's expressions, a critic looks calmly at the facts of his narrative, he will soon perceive that there was not in reality any such contrast as the late Rector of Lincoln draws between the intellectual stupidity of his youth and the intellectual eminence of his later manhood. It is as clear as day that Mark Pattison was, at least, as remarkable as a boy, if there had been any one to note his character, as he was when all who had felt his influence acknowledged him to be in many respects the greatest teacher who has been known in Oxford during the last forty years. That this is so will be clear enough to any one who candidly weighs Pattison's account of his boyish and youthful interests. One hardly knows what possible proof of true intellectual promise can be stronger than was the sort of interest with which natural history and chemistry inspired him. If any other evidence be needed of the difference between his intellectual condition when young and the flabby stupidity which characterizes the mind of the really dull boy, it may be found in the story of how he taught himself the art of fishing. But to say the truth, special proofs are hardly wanted of a power of mind which no one who knew Pattison when young could, it may be suspected, ever have denied to him, but which his language, though not the facts he tells, may conceal from a careless reader. Mill's training was as systematic and in its way as perfect as Pattison's was unsystematic and incomplete; but one may well doubt whether John Mill's autobiography gives one a picture of a boy half so much alive to intellectual ideas as was Pattison when he began his career at Oxford. It is clear enough that from his boyhood upward he was filled with a susceptibility to ideas; a sort of inborn passion for knowledge gradually developing into a passion for truth, such as seizes on but very few men in each generation. That even when he failed of getting his first-class he had read far more extensively than most of his companions, is patent. It is also clear that one hindrance to his success in an examination lay in his excessive desire to master and assimilate everything which he studied.

It is hardly a paradox to say that the failure which Pattison felt so keenly, was caused in great

part by that zeal in the pursuit of knowledge which formed his noblest trait. It was caused also in part by the weakness of a very peculiar kind which betrays itself at every stage of his life, as portrayed in his 'Memoirs.' Before going into his examination he consulted one of the most experienced "coaches" of the day. Mr. Wall was a man of shrewdness, and understood his trade of trainer for the final schools. His advice to Pattison was clear: "Yours is simply a case of neglect; had you come to me six months ago, you might have made your first certain. Could you not put off till November?" Pattison could have done so with ease, but he dreaded a disagreeable letter from his father, grumbling at the expense of prolonged residence at college. The blame would have been quite unjust; but the noteworthy thing is that Pattison, who was burning for university success, who knew that his career depended upon it, who felt disgraced by a second, and realized as keenly as a man could do the bitterness of disappointment which his failure would cause at home, rushed prematurely into his final examination rather than face a "disagreeable epistle" from his father. Contrast this with Macaulay's good-humored vigor in standing up for himself against that crabbed though admirable old Puritan, Zachary Macaulay. The comparison shows at once how much moral strength had to do with Macaulay's happiness and success, and how much moral weakness had to do with impairing the effect of Pattison's rare capacity and of his even rarer intellectual enthusiasm. That weakness was at every turn the cause of what was unhappy in his life is patent in the 'Memoirs.' Through it he lost a first on which his heart was set; through weakness he gave in in youth to the influence of men whom he rightly despised; through weakness, when past middle age, he brought on himself the great calamity of his loss of the election to the Rectorship at Lincoln. Readers may think it absurd to style the failure on the part of a man of Pattison's gifts to obtain in 1851 an office which he after all gained, with universal approbation, not much more than ten years later, "a great calamity"; but the expression is strictly accurate. When a man's career is ruined by a petty cause, the apparent triviality of the occasion adds to the misery of the mishap. To be rejected as a candidate for the headship by the ignorance and brutality of the Lincoln Common Room might to many men have been a very supportable stroke of ill-fortune, but to Pattison's peculiar nature it was a blow from which he hardly rallied; and to judge the whole matter only from his own version of a past and almost forgotten scandal, what gave the last sting to the bitterness of defeat was, that weakness of character led Pattison to place himself in a position which combined the pain of failure with the agony of discredit.

While, however, no one can fail to note a certain want of moral strength in Pattison's mode of conducting his life, critics must in fairness notice that a defect which one calls weakness was weakness of a very peculiar character. You cannot deny that the tenacity with which Pattison through life clung to the pursuit of knowledge and of truth, had in it an element no less of moral than of intellectual power. The weakness lay not so much in want of will as in overstrained and morbid sensitiveness. When the dread of a harsh letter from his father deprives a young man of the resolution necessary for taking the right steps by which to obtain a high degree, we can easily understand how the same man in later life constantly suffered pains which he was not called upon to endure, and in the contest for success succumbed to men whom he knew to be his inferiors, and, having been beaten, could not rally from the internal shame and vexation caused by his defeat. Still the defect which we have noted, miserable as were in some ways its results, almost sets off by way of contrast the great side of Pattison's character. The splendid passion for knowledge is sufficient to obliterate the memory of minor defects expiated by severe penalties.

It is, moreover (as has been already pointed out), quite impossible to separate Pattison's personal character from the history of the place in which from youth to age his life was spent. He came up to Oxford burning with the desire to learn. He had, like so many boys before and since his time, been trained up to feel that a career at the universities, leading to university distinction, and crowned by the acquisition of a fellowship, and that life-long pursuit of learning for which a fellowship seems to offer unexampled advantages, was the absolute ideal of human existence. Now the first and strongest impression made upon Pattison by actual experience of the universities seems to have been profound disappointment. It is a little difficult to persons now living who know well the modern state of Oxford, to realize the precise condition of the University in 1832. The place was really, though not in name, a clerical seminary; the influence of clergymen and of the Church was predominant. At a college so distinguished as Oriel, there were in Pattison's time only four undergraduates reading for honors. Of his associates the best were clever school-boys, who looked upon lectures and learning just as school-boys look upon lessons. It does not seem that there was a single man among Pattison's immediate acquaintance who entered into his intellectual aspirations. Perhaps he was unfortunate; his sensitiveness and his self-consciousness probably prevented him from making acquaintance. Still, when every allowance is made, any critic who studies Pattison's 'Memoirs' is forced to the conclusion that the Oxford of 1832 must, for the crowd of undergraduates, have been as poor a place of education as was compatible with the existence in the university of a spirit of improvement.

With this state of things the numerous abuses removed by the first University Commission had much to do. But the true cause lay deeper. The whole tone of the place was clerical; its most eminent men were clergymen in the first place, and only secondarily teachers. This consideration goes a great way to account for the badness of the lectures. Men like Newman, whose minds were filled with the importance of theological doctrines and of ecclesiastical influence, did not give their great intellectual powers to solving the difficult but to them comparatively insignificant problem of what might be the best manner of teaching Greek, Latin, or history. At the moment, moreover, when Pattison first reached the University, its most eminent tutors were organizing an ecclesiastical movement. The effect of this state of things on a student inspired with an ardent desire for learning, apt through life to be almost possessed by ideas, endowed by nature with morbid sensitiveness and a morbid desire for sympathy, and, moreover, brought up in an atmosphere of evangelical pietism, was much what any man with a perfect knowledge of Pattison's character might have predicted. There came first the stage of bitter disappointment with companions who gave no intellectual companionship, and with teachers who gave no intellectual guidance. Next, the character of the place, and the force of the youth's own passion for learning, asserted themselves. His reading may have been ill-directed, but critics of common sense cannot fail to see that Pattison, in spite of all his self-reproach and of all his alleged dawdling, always studied as only those few choice spirits do study who love learning for its own sake. To the stage of disappointment succeeded the stage of theological interest. The life of Oxford was not a life of learning; it was not intellectually or morally a very wholesome life. But the Oxford of the Tractarian movement was, after all, alive, and into this life, which was not the true intellectual existence suited for him, Pattison entered heart and soul. The question which neither he himself nor any one could solve is how far religious interests really occupied his mind. His diary betrays a morbid religiosity, but there are also signs, which possibly Newman perceived, that Pattison, even in the full fervor of a theological contest, never surrendered his intellect to his ecclesiastical leaders. At any rate, it was no mere accident that he found rest for his soul as a teacher at Lincoln, and not a proselyte at Rome.

To any one who can read between the lines, it is clear that the Rector of Lincoln first found his true sphere as a teacher in the college of which he was afterward the head. To any pupil who knew him in later life, it is easy enough to conceive how "magnetic" must have been the influence of the young tutor of Lincoln when he first discovered a fit place for the exercise of his talents. Then came the blow which for a time prostrated his whole nature. Strangers who read the pitiful, almost disgusting details of the intrigue by which Pattison not only lost the post for which he was fitted, but also was himself the means of placing at the head of the college a man utterly unfit to preside over a place of learning, may wonder that the late Rector of Lincoln should have perpetuated the memory of transactions of which the general world knew nothing, and of which modern Oxford retains but a vague tradition; and his admirers may join with us in regretting that he should of set purpose have left a record of deeds in no way admirable either on the part of the wrongdoers or of their victims. Still, there is something to be said on this matter which it is at any rate worth while to bear in mind. The iniquities of the Lincoln election did go far to wreck what promised to be a very noble career, and autobiography is nothing if it does not tell the true circumstances, great and small, by which the writer's fate was influenced.

The wrongdoing of the Lincoln Common Room, again, has an infinite importance as showing to what degradation places dedicated to learning may sink when the love of learning has left them. If, moreover, American readers find it hardly possible to understand why a man of recognized intellectual power, who attained years before his death to the position of honor which was his due, should dwell with unappeasable bitterness on his non-election to the headship of a college, they must remember that their real difficulty lies in understanding not Mark Pattison, but the world in which Mark Pattison lived at the time when a man's feelings or prejudices take their permanent set. Not a single one of the late Rector's early associates would, it may be suspected, find anything ridiculous in the supreme importance which he attached to everything connected with Oxford. Not so many months ago Cardinal Newman wrote indignantly to the papers to deny a statement that his pupils at Oriel did not treat him with all the respect due to his eminence as a tutor. The lapse of fifty years had not made him indifferent to the college gossip of 1834. Can one wonder that if a man of Newman's fame still resents the least slur cast on his position as a tutor of Oriel, Pattison, who passed his manhood and age in the University and occupied with the University, should have felt that the wrong he suffered at the hands of the Fellows of Lincoln had more than the merely local and transitory importance which would be attributed to it by an outsider? In nothing does Pattison more truly represent his generation than in his almost unconscious feeling that everything connected with Oxford has a world-wide importance. It is

hardly too much to say that to Newman's followers, and even to Newman's opponents, Oxford was a sort of holy city, which might well be ruined or laid waste, but which at all times deserved to command the attention of mankind. The Oxford of 1882 had, with all its shortcomings, the capacity for inspiring a kind of devotion among those capable of being influenced by the spirit of the University.

RECENT FRENCH BOOKS.

THE time has gone by when a book just published was really something new. Every fresh novel by Cherbuliez has before appeared in numbers in the *Revue des Deux Mondes;* every new work of M. Paul Bourget has been printed in the *Nouvelle Revue* or in the *Journal des Débats;* every new volume of Scherer is made up of articles contributed mostly to the *Temps*. Even Taine and Renan give the pick of the best chapters of their forthcoming works to some leading periodical or newspaper. Of many books of more erudite stamp the best pages will be found in the *Romania*, the *Revue Critique*, or the yearly more numerous *Annales*, *Bulletins*, *Annuaires* of the provincial towns of France. M. d'Haussonville was not too much of a *grand seigneur* to follow in the newly opened road of publicity. Fragments numerous and long of his father's memoirs have appeared in the *Revue des Deux Mondes*, in the *Temps*, in the *Revue Politique et Littéraire*. These are now collected, with a few additions, in a beautiful octavo volume, 'Ma Jeunesse—1814-1830: Souvenirs, par le Comte d'Haussonville de l'Académie Française' (Paris: Calmann Lévy; Boston: Schoenhof). The author begins by telling very smoothly and simply the story of his father's life; of his earliest recollections, the invasions of 1814 and 1815 (he was then five years old); of the first part he played in the world as youthful aide-de-camp on the occasion of the coronation of Charles X.; of his school days. In a perfectly unaffected way, frankly and honestly averse to any show of affection for republicanism, he lets us know that he is of a very ancient family that boasted thirty-two quarters of nobility on the paternal side and as many on the maternal, until they became allied to the Harcourts, who had in a sense lost caste by a marriage with a Louvois in the same way that the Bourbons did when Henry IV. married a Medici. While professing to have accepted unreservedly "the essential conditions of modern civilization and of the parliamentary régime," the Comte d'Haussonville never for a moment forgets this noble origin. His 'Souvenirs,' bearing as they do the stamp of a dignified truthfulness, present a picture rather agreeable than vivid of the state of the best society in France during the last years of the Restoration. They do not extend beyond 1830—that is, they stop just at the period when the very active political and literary career of the author was about to begin. He died a little more than a year ago, having read to some of his old friends the last fragment, relating to Talleyrand, only a few days before his death. He was an attaché at Rome in 1828-9 under Chateaubriand. The pages devoted to this personage are extremely interesting, with many little revelations, never indiscretions, in regard to the private life of this would-be hero of melancholy. The 'Memoires d'Outre-tombe' are thus corrected on several points, especially a few that concern Mme. Récamier. The long chapter on the Paris salons during the winter of 1829 and the spring of 1830 are full of new details about men and things of that period. The society of the Faubourg Saint-Germain opened its doors wide to young D'Haussonville. He there came in contact with many of the best people in France, both socially and intellectually, and he has many pleasant things to say about them. He does not have too much to say about himself, rather seeking to speak of persons whom he remembers and of events that occurred before his eyes; for, as he tells us: "It is not my memoirs that I am writing, but rather those of others."

The letters of Jules de Goncourt (Paris: Charpentier; Boston: Schoenhof) have been collected by his brother. They are preceded by a pretentious preface by M. Céard, but the letters themselves are in general free from the eccentricities of style which characterize the works of Edmond and Jules de Goncourt. Even though signed by Jules alone, these letters are to a great extent the production of the two brothers. During the whole time of their literary twinship it was the younger who held the pen, as the correspondent; but he spoke in the name of both, and it is difficult to accept the assertion of the survivor that "the form, the vivacity, the turn belong to Jules alone." The correspondence is varied, many of the letters being addressed to Gavarni, Aurélien Scholl, Flaubert, Sainte-Beuve, Zola. Those to Flaubert are among the best. Several will serve to show the genesis of some of the novels that have occupied public attention. There are compliments innumerable to favorable critics—to Paul de Saint-Victor, to Jules Claretie, to Sainte-Beuve. Exaggerated expressions of admiration for brother-authors are not wanting. The bits of novel information scattered throughout the volume will be nuts to the literary epicure. These are often in the notes added by Edmond, together with unpublished letters of George Sand, Victor Hugo, Sainte-Beuve. The vacillation of the great critic is well brought out, and also his final insuperable objections to any further favorable criticism of the manner and matter of the authors of 'Madame Gervaisais' and 'Germinie Lacerteux.' We also get glimpses of a certain literary *camaraderie*, in spite of the skilful omissions of the editor. The celebrated, and in certain circles notorious, dinners at Magny's are often mentioned. In a letter to Flaubert in 1866 we find: "On dîne toujours chez Magny, et c'est toujours violent. Nous faisons, à nous trois avec Gautier, le camp retranché de l'art pour l'art, de la moralité du Beau, de l'indifférence en matière politique, et du scepticisme en fait de blagues," which last word may mean to the writer many things to others holy and divine. The letters to the Princesse Mathilde are full of respectful tenderness. The two brothers were not Imperialists, but, as the survivor tells us, "affectionate and devoted Mathildists."

Under the general title, "Les Actrices du XVIIIme siècle," Edmond and Jules de Goncourt had early planned to write a series of lives, not only of the great actresses, but also of the great *danseuses* and singers. Later they limited themselves to eight, each representative in her way: Mlle. Lecouvreur, Clairon, Sophie Arnould, Mme. Saint Huberty, Camargo, La Guimard, Mlle. Contat, Mme. Favart. In 1857 they published the biography of Sophie Arnould. This is now republished as the first of the series, 'Sophie Arnould d'après sa correspondance et ses mémoires inédits, par Edmond et Jules de Goncourt' (Paris: Charpentier; New York: F. W. Christern). The first part of the volume is simply the life of a courtesan recounted in language that knows very little restraint. There is a brilliant chapter on "l'esprit et les bons mots de Sophie Arnould," also one on her much frequented *salon*, written in the scintillating, untrammelled and yet labored, skipping and yet heavy, French of the Goncourt brothers, full of all the pyrotechnics of style, braving usage, correctness, grammar, and all the proprieties. The documentary part of the work is not always attractive. The letters of Sophie Arnould herself are full of unexpected revelations, often Rabelaisian in tone—a mixture of exquisite touches of tenderness interspersed with words that might raise a blush in a guard-room.

MM. Lucien Perey and Gaston Maugras have published 'La Vie intime de Voltaire aux Délices et à Ferney, d'après des lettres et des documents inédits' (Paris: Calmann Lévy; Boston: Schoenhof). Lucien Perey is the pseudonym of Mlle. Herpin. The authors disavow in their preface any intention of attempting to write a new biography of Voltaire even during the years passed by him near Geneva. To the many original letters and other documents which they publish they have sought to add only such details as were necessary to connect and explain them. But in this manner they have made an extremely interesting story of the last twenty-five years of the life of Voltaire, and in connection with it a most vivid picture of society and manners during this period in Geneva and in Lausanne. The greater part of the hitherto unpublished documents are taken from family papers and private collections, a smaller portion from more public sources in Switzerland and Paris. There are more than fifteen letters of Voltaire himself among these, besides great numbers from his friends and from his enemies; for, with an impartiality worthy of all praise, they have not discriminated between the favorable and the unfavorable testimony of contemporaries. If MM. Perey and Maugras have nor evelations to make concerning the character and life of Voltaire, they have added an infinity of details to those already accessible, and they have left the *grand charmeur* not less but more attractive than he was before. Around the central figure they have gathered the charming women and the famous men who formed the society of the period in the austere city of Calvin—the Tronchins, most prominent among whom was the celebrated doctor, to be near whom Voltaire asserted that he chose his new residence when he first settled at Geneva; the Cramers, to whom he confided the publication of the complete edition of his works which he immediately undertook—young men of the highest rank in the republic, handsome, brilliant, gay, whom Voltaire consulted as critics as well as publishers; the Pictets, his nearest neighbors and friends at Les Délices; the picturesque chevalier Huber, soldier, artist, bel-esprit, and father of the great naturalist Huber; the Gallatins, and many others. All these delightful people wrote letters in which the whole life of the period is pictured. Among the most charming are those of the young Madame Constant, who was before marriage Mademoiselle Charlotte Pictet, and who continued to reside with her parents at a stone's throw from Les Délices. These letters of Mme. Constant to her husband (she wrote to him every day during his frequent absences) are filled with the most interesting details of the life at Les Délices and at Ferney.

Among the most interesting chapters are those describing the visits of Voltaire to Lausanne, and his connection with its society, spiritual and worldly. Its milder climate attracted him in the winter, before he had become accustomed to the severity of that of Geneva, and its less austere manners charmed him. Many of the principal families were descended from French *émigrés* of the period of the revocation of the Edict of Nantes, and they had preserved their ancestral traits, with an added charm derived from the simplicity of their new country. The young men had served in foreign armies, and distinguished themselves not only in the field, but in the courtly circles into which their rank introduced them; the young women were charming and beautiful; the pastors themselves were liberal in their opinions. Voltaire was delighted with everything. His passion for the theatre

could exercise itself here without the opposition it always met in Geneva. He easily organized an excellent company from among the best families of Lausanne, and, at first in his own house of Monrion and afterward in a little theatre that a friendly neighbor arranged for him at his château of Mon-Repos, he trained his actors and performed with them himself. According to the testimony of contemporaries, Voltaire was an excellent comic actor. The daughter of one of these amateur actors, in a journal she has left, says: "He played the part of *Trissotin* in 'Les Femmes Savantes,' and never did it excite more laughter and applause. In the dispute with *Vadius*, his fiery eyes seemed to consume *Fréron* with their lightnings. . . . After the performance the actors often went home with him to supper. His gayety, animated by satisfaction, made these suppers charming. He thanked and encouraged his actors in the kindest way." When his own plays were performed, Voltaire could never control himself. Once, when following from the side scenes a representation of "Zaïre," he was so carried away by the acting of M. and Mme. d'Hermanches that he kept advancing the chair in which he was seated, until, at the moment of the final dagger-stroke, he was exactly between *Zaïre* and *Orosmane* upon the stage, and prevented the catastrophe. Huber has reproduced this scene upon one of the panels still existing at Mézeri, the château of M. Victor de Constant. All the personages are exact portraits. What gave Voltaire the greatest satisfaction, however, was the presence at these representations of his friends the pastors. He neglected nothing to attract them, and he rejoiced to write to his friend Pictet: "Nous avons eu douze Ministres du Saint Évangile avec tous les petits proposants à la première représentation. Il faut avouer que Lausanne donne d'assez bons exemples à Genève."

If Voltaire met with little opposition to his theatrical projects in Lausanne, it was most persistent in Geneva. The amusing story of his long struggle with the *Consistoire*—his victories, his defeats, his despair, his exultation—fill the volume of MM. Perey and Maugras. It is the plot of the story; all besides is only incidental. It was for this that, after Ferney, he bought Tourney, where, just beyond the territory of the republic and the reach of its laws, he could have his theatre and invite his friends from twenty leagues around. When the beds of Ferney and Tourney and Les Délices were unequal to the demands upon his hospitality, he provided a sumptuous supper and music after the play, and the guests danced until eight o'clock the next morning; and Voltaire himself, before going to bed, found strength to dictate half-a-dozen letters to his friends, exulting over his success and exclaiming, "Je corromps la jeunesse genévoise, je fais jouer chez moi des fils de syndics!"

Hetzel (New York: F. W. Christern) has recently published in two volumes a number of hitherto uncollected writings by Turgeneff, together with the very interesting study upon his life and works contributed to the *Revue des Deux Mondes* by the Vicomte Melchior de Vogüé. The first of these volumes is called 'Souvenirs d'Enfance,' though it includes the "Mémoires d'un Nihiliste" and the charming little comedy, "Trop menu, le fil casse," neither of which has anything childlike about it. The second is called 'Œuvres dernières.' All the charm of Turgeneff is in these two little volumes—the revelation of another race and life than ours, with its constant surprises and shocks to our every-day feelings and opinions; the tender pathos of his love for his own land and for its people; above all, the poetic and the tragic power with which he speaks, and the ideal perfection of the form in which he reveals his thought. In nothing Turgeneff has written are his most characteristic qualities better displayed than in the very dissimilar works here collected. "Un désesperé" and "Le chant de l'amour triomphant" are the most striking. The first recalls the "Réliques vivantes" in its tragic simplicity; the other is a marvellous fantasy, remote with more than the remoteness of Italy in the sixteenth century, and near with the reality of all ardent poetry.

Several years ago the 'Memoires d'un Nihiliste' appeared in the *Temps*, preceded by a letter from Ivan Turgeneff. This was generally understood to be one of those literary artifices used among authors to give an additional air of reality to a work by attributing it to the apparent writer. Turgeneff was generally understood to be the real author, and Hetzel has not hesitated to place it among his undoubted writings in the 'Souvenirs d'Enfance.' A paragraph has recently appeared in the *Temps*, however, saying that the letter of Turgeneff stated the real fact, and that he was only the editor of the 'Mémoires.' The author is said to be a young Russian writer named Paulowsky, in whom Turgeneff was much interested.

Berthold Auerbach. Briefe an seinen Freund Jakob Auerbach. Ein biographisches Denkmal. Frankfurt: Rütten & Loening. 2 vols. 8vo.

AUERBACH is one of the most familiar names in contemporary literature, and though it is improbable that his reputation is a lasting one, he enjoyed such a popularity during his lifetime as has fallen to the lot of no other German author while living. His books were read by nearly all the princes, great ladies, and scholars of the time, and they not only read what he wrote, but took the trouble to express their opinions thereon at length, and to treat the writer with the greatest consideration. An entire collection of his letters, including those written to him, would form an almost complete chronicle of the literary and social history of Germany for half a century, but we have reason to be grateful for the present collection, though it includes only the letters written to a single correspondent, and though these have been subjected to a rigorous excision of almost everything that related to the writer's private life, or that might cause annoyance to living friends. It was always Auerbach's intention to crown the edifice of his literary productions with an autobiography, which, of course, would have had a literary finish, as well as a calmness of judgment, necessarily lacking in letters. But this series of letters is a better substitute for an autobiography than any other we are familiar with, not only because of the length of the period which it covers, but because it is really a diary, in the preparation of which the writer was encouraged by the constant sympathy and interest of such a confidant as few men have had—such, indeed, as few men *could* have, since few could pour out their hearts with the abandon which characterized Auerbach.

Natures like his are subject to opposite valuations even when the appraisers are agreed as to the facts. He seems to have been a man of childlike simplicity, and those who wear their hearts on their sleeve receive many blows which they would escape if that organ were kept in discreet retirement. The naïve openness with which he appreciated praise, his excessive sensitiveness to injustice and misconstruction, were regarded by some merely as manifestations of vanity. His life was full of pin-pricks, but then the thorns implied the roses—it was his need of sympathy which brought it.

The situation was complicated by the fact that he was a peasant and a Jew, as well as a poet. Most writers of our time, especially of Auerbach's race and country, are (or aim at being) either men of the world or Bohemians; but he was as far removed from the one as from the other. There was no tendency with him to become the latter, because, to the end, he remained a peasant, though a glorified one; while, as to the first, he twice declined offers which would have afforded him an agreeable sinecure for life (viz., to become librarian, first to the Grand Duke of Weimar and afterward to the then Prince Regent of Prussia), because unwilling to subject himself to the social restraints of these positions. And though he lived, for many years at a time, in Dresden, Berlin, and other cities where he found the intellectual ozone which, by his own account, he had not sufficient strength of will to be able to dispense with, he never felt at home except among the peasants of the Schwarzwald. His genius, evidently, was not of the kind which creates its own atmosphere. He could not live in his native forest, yet he had regularly to return to it, as a whale to the surface of the water, to get the breath of life. Berlin was his abode for thirty years, yet he never was able to feel at home there, though he was most cordially, almost affectionately, treated at court, as well as on the best of terms with nearly all the literary world. In spite of this, eight months in the year—often six months—was the utmost he could endure of Berlin life, and, as he annually travelled southward, every mile of distance lessened the burden on his spirit. In his hither and thither, he perceives with ever renewed force the difference between North and South—in the one, quick wit, self-control, erect bearing, sobriety, an ever-present lookout for the main chance, absorption in self, indifference to the feelings and comfort of others; in the other, less practical ability and intellectual acuteness, but gayety, generosity, neighborliness, sympathy—all in fact, that, in his eyes, made life worth living.

His want of sympathy with the practical side of life, and of adaptability to it, he felt most seriously after he had accepted the offer of Keil, the enormously successful publisher of the *Gartenlaube*, to edit a semi-political weekly. "I perceive now," he writes, "the difference between literature and journalism. Art, literature, produces its effect without striving for it: it is its own end and aim; while journalism strives only for the immediate effect, knowing there can be nothing permanent about its productions." After a year of this, he withdraws from the undertaking: "A paper is an inn; its frequenters want highly-seasoned dishes, vegetables out of season. I will not cook these, for I believe them to be unwholesome; consequently, the public stays away."

Every book—and Auerbach's books, though short, were many—is discussed in these pages; but nothing could be more different than the light in which his productions appear to him and that in which the fictions of Balzac or Trollope, for instance, were regarded by them. On his home visits he is continually meeting, not the originals of his characters, but persons of whom he never heard, yet whose lives, in all essentials, corresponded to those of the creatures of his imagination. And, apropos of the completion of successive tales, the same thought is several times repeated in the letters, without his being aware, apparently, that he had had it before—that "it seemed to me [on reading the proofs], not as if I had written the book, but as if it had come into existence in some way unknown to me": a recurring consciousness that his individual self was but the organ of a separate entity, his genius.

Auerbach's interests were extraordinarily few, and correspondingly deep; it may, indeed, be

said that only three sentiments seriously affected his life—reverence for the memory of his first wife (his relations with his second, who survived him, seem to have been very strained), an instinctive enjoyment of woods and mountains, and an all-absorbing interest in human progress. "From my point of view," he remarked to the Grand Duchess of Baden, "people are divided into two classes—those who believe in the perfectibility of mankind and those who do not." His politics and his religion were but phases of this feeling. He believed as little in dogmatic Judaism as in any other faith, but he had a traditional and sentimental reverence for it, with which was combined what might be called a strictly party feeling, that was quiet enough ordinarily, but which burst into a flame whenever there was a fresh outbreak of Christian intolerance. His real religion, as he frankly enough says, was Spinozaism, or pantheism. Till late in life he seems to have cared almost nothing for art, or music, or even literature—with the exception of Spinoza and Goethe, who were his constant companions. He had strong opinions about a few others—Richter, for instance, whom he despised, all the more, perhaps, because certain critics, not altogether without reason, persisted in seeing a strong resemblance between Richter and his own more ambitious work, as in the 'Landhaus am Rhein.' As compared with Goethe, whom he held to be the pure well of truth, Jean Paul he calls a mess of stale punch. Heine he abhorred because he thought him willing to sell his soul for a joke. "He was a thorough poet and a thorough rascal in one," he says; and to his influence, combined with that of Schopenhauer and Wagner, he attributes the contempt for ideal beauty, the indifference to progress and the welfare of humanity, the content with the pleasures of the hour, which, he thought, characterized nearly all his juniors in literature.

The best proof of Auerbach's worth as a man may be found in a list of the friends whom he made and retained. His opportunities for increasing the number of these were unusual, for he lived a year or more in almost all the larger cities, not to mention the months passed every year at Carlsbad, Tarasp, Baden, or some other health resort. Of the second volume of these letters, almost half is occupied with recollections of old friends, whose dropping off, one by one, is a constant theme for sad reflections. Next to his cousin Jakob, his nearest and dearest was the poet Otto Ludwig; but he stood on terms of affectionate intimacy with Uhland, Freiligrath, Strauss, Jacoby, Lasker, Friedrich Kapp, and others still living, such as Spielhagen, Mommsen, and Du Bois-Reymond, of whom, for this reason, less is to be found in these pages.

New Light on Mormonism. By Mrs. Ellen E. Dickinson. With introduction by Thurlow Weed. Funk & Wagnalls. 1885.

"New light" in books concerning religion is generally of a professedly spiritual kind; in this case it is purely historical. The fresh rays are shed on the obscure and vulgar origin of the most impressive of modern superstitions, and in particular on the alleged fact that the narrative portions of the Mormon Scriptures were incorporated from a manuscript romance in which an eccentric and impractical minister, who enjoyed considerable leisure in a frontier Ohio settlement, developed in Biblical language the idea of the Jewish derivation of the American mound-builders. Abundant evidence is given to show that, on the first appearance of the 'Book of Mormon,' numerous independent and competent witnesses noticed the similarity between the volume and the manuscript they had heard read some years before, in the matter of original proper names and the style and general conception; and it is further shown with sufficient probability in what manner Sidney Rigdon, the printer-preacher credited with the authorship of the 'Book of Mormon,' met with the manuscript and had opportunity to appropriate its contents. The fact that the old romance is now irrecoverable and the last copy of it passed by trickery into Mormon hands and disappeared, does not materially affect the evidence. The entire historical question has been exhaustively investigated and the meagre result written down by the author, who is a grand-niece of Solomon Spaulding, the clerical romancer; and any who are interested will find little difficulty in coming to the conclusion that the New England minister who innocently wrote stories instead of sermons, and could find no publisher for his *magnum opus*, was, by the dictation of the obscure and humorous fates, the composer of the only modern mythology—at least in part; for he would be bold indeed who would assert that this mild-minded and reverent Calvinist had the audacity of imagination to conceive the idea that Christ, after his resurrection, instead of ascending to heaven went to America.

The interest of this volume, however, which is as badly written, as ill-arranged, excursive, and involved as other works on the subject, does not lie in this contribution to history, for those who do not believe in the human origin of the Mormon books are not likely to be persuaded by historical evidence; nor in its exposition of Mormon doctrine and the Edmunds Bill, which make its padding. But the author does give, however imperfectly and with tedious repetition, an account of the early days and strange leaders of a faith which, with all its impositions, had the elements of success, and is already so inveterate that the civilization and conscience of the nation feel bound to attack it by exceptional measures; and, lying as it does within the clear light of history, the origin and growth of it may be of great value to the student of society.

It is no part of the reviewer's function to enter on so extensive a subject, or to do more than advert to the wonder that a vagabond of superstitious parentage and a tramp-printer, meeting, by the agency of a peddler, in the pioneer country, and helped by the forgotten and rejected romance of a frontier minister of the Gospel, originated a religion and founded a social community which from its start has been eminently characterized by industry and thrift, has successfully passed through violent and bloody persecutions, has been competent to great sacrifices, and at last built up in the desert a prosperous state which looks back on its martyrs and its hegiras as a glorious past, and commands many thousands who are at once citizens and worshippers. Mormonism was always vulgar; else how could it have succeeded? But it inculcates many practical virtues; and if its theology is a vagary notable even among absurdities, if its mythology is a crude and patently modern historical theory even if some of its doctrines, such as that of atonement by the shedding of innocent blood, are barbarous, and its government by a priesthood which undoubtedly comprises the shrewdness and intelligence of the community, is arbitrary, yet might not one of the faithful justly ask against which historical religion, except some of the modern forms of Christianity, the same or similar charges are not brought? In these counts there is nothing incompatible with what has gone under the name of religion in past time; at the most they show to the student that much in Mormonism is an anachronism. Furthermore, it is not a faith of alien birth; its early converts were of New England descent, its originators and its leaders are of our own English blood. Polygamy, with which in the popular mind it is confounded, it must be remembered, is an excrescence, not a natural outgrowth and necessary part of the doctrine, and has been from the first a source of weakness, a breeder of sects, schisms, and apostates. Even with this retrogressive and disintegrating dogma it would be hard to prove Mormonism an unmixed evil; it has given abundant food and clean lodging to many thousands of the lower class of emigrants, has conquered an arid desert and enforced habits of industry and thrift upon its people. Particularly, its people has the distinction, alone of white communities, of having lived in amity with their Indian neighbors.

Such unnoticed considerations as these, and the corollaries from them, is what makes "the remedy," with which the latter pages of this volume are concerned, so difficult. The nation, at a great distance from its centres of civilization, is attempting to enforce the conscience of those centres on an unwilling people without the intelligence and bringing-up of which that conscience is the result. The law is passed and the courts are to execute it; but it is as truly repressive legislation as any passed for Ireland, and it does not contain a single remedial feature. Add to the courts the surveillance of a national police and the soldiers in barracks, and the parallel will be complete. The annals of repressive legislation are dreary reading; what is the warrant for hope of success in this case? After all our evasive measures, must we not come back to the historic truth that a pagan or other incompatible community must either be exterminated or converted? that the Mormons must either be forced into Mexico as they were into Utah, or some means more rational than repressive legislation, backed by physical force, be adopted to change their belief or at least their social organization? Or may the middle and safe course be found in schemes to shift the social forces in Utah so as to give men of our civilization such predominant power that the State may be left to its own salvation with security—schemes of colonization, of school-law, perhaps of land confiscation? Such schemes would be new to our polity, but local self-government, the second essential element in our social constitution, has broken down in that Territory in the most hopeless way. This is but speculation; yet to read this book, or any book on Mormonism, much more to see the beautiful and smiling valleys where it has built, by valuable qualities of character in its people, what seems likely to prove its third Acadia, to talk with and observe its inhabitants, forces upon the mind the conviction that the Tory cry, "Enforce the law," is a poor watchword when the task is one of moral regeneration and social revolution. The rod may be good for the child, but on the back of a people it has always meant fire and sword.

Old Times: A Picture of Social Life at the End of the Eighteenth Century. By John Ashton. With 88 illustrations. Scribner & Welford. 1885. 8vo, pp. 354.

Of all Mr. Ashton's works that have fallen under our observation this seems to us the best, because the scheme of it is most suited to his paste-and-scissors talent. Briefly described, it is this: he has eviscerated the London *Times* in particular from 1788 to 1799, and arranged his selections under the several headings, Men's Dress, Women's Dress, Navy and Army, Social Economy, Gaming, etc., the Theatre, Opera and Ballet, Masquerades, Concerts, etc., Monetary, Laws and Police, Political, Royalty, Varieties. An Introduction gives the general political physiognomy of each year in chronological order. For illustrations the compiler resorts as usual to the caricatures of the day, and as usual prefers his own insipid and inartistic copies to photographic

facsimiles. "That they are faithful reproductions of the originals," he says naïvely, "I can guarantee, for I drew them all myself." This little trait evinces that lack of humor which always prevents Mr. Ashton from making the most of his materials. A certain disorder is equally characteristic of him, and he is extremely careless about naming the designers to whom he is indebted.

With these reserves, we can commend this large and handsome volume for random reading in odd moments. It is a mirror of England, and in especial of its metropolis, at the time of the French Revolution, and is calculated to give rise to abundant reflections on a century's growth in civilization. The open traffic in Government offices by advertisement in the public prints is one of the most striking signs of the corruption then existing in the civil service, while the gift to minors of offices in the army and the sale of commissions mark the scandalous condition of that British bulwark. "The Duke of York," says the *Times* of March 20, 1795, "has ordered circular letters to be sent round to the Colonels of Regiments, desiring a return to be immediately made to his Office of the number of Captains in each Regiment under *twelve* years of age, and of Lieutenant-Colonels under the age of *eighteen!*" Shocking, too, are the stories of kidnapping and crimping for recruits. A few weeks before, the same paper had to tell of riots growing out of a sergeant's having "two women of the town genteelly dressed up for the purpose of inveigling young men into the house, which they styled their lodgings, where the deluded were instantly handcuffed, and, about 3 or 4 o'clock in the morning, sent off in coaches, hired for the purpose, to the country." Similar atrocities on behalf of the navy made life and personal liberty insecure to all found abroad by the press-gang. Sailors were made so scarce by being taken from incoming and outgoing ships, often by riotous boarding, that on January 7, 1794, "upwards of 60 sail of merchant ships, bound to the West Indies and other places," were detained in the Thames. At Bow Street, a year later, a master bricklayer "brought his apprentice before the sitting Magistrate on a charge of having stolen a scaffolding board, value under *ninepence;* he had his choice, either to enlist as a soldier or to be sent on board the fleet, to both of which he objected. The Magistrate then ordered a letter to be written to the Regulating Captain, Tower Hill, to have him sent on board the Navy." At this time Mr. Pitt's plan of manning the navy was to have the magistrates "take cognizance of all idle and disorderly people, who have no visible means of livelihood.'

BOOKS OF THE WEEK 203

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, *Box 794, New York.*

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,700 copies. The Subscription List is always open to inspection.

*** Copies of THE NATION may be procured in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

School Agencies.

The Union Teachers' Agency.

1. Provides School Boards and Principals with Teachers. 2. Aids Teachers in obtaining positions.
Apply to A. LOVELL & Co., Managers,
16 Astor Place, New York.

BROCKWAY TEACHERS' AGENCY, Times Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

*J. RANSOM BRIDGE & CO., 110 TRE-*mont St., Boston, Mass.—A reliable teachers' agency. Schools and Committees promptly supplied. Interview or correspondence solicited with qualified teachers looking for positions. School properties for sale.

SCHOOL AGENCY.—OLDEST AND best known in the United States.
J. W. SCHERMERHORN & Co., 7 East 14th St., N. Y.

Wants.

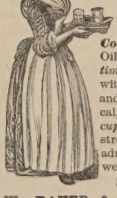
EXPERIENCED SCIENCE TEACHER wanted to instruct children how to observe and draw out of doors. Must know plants and birds or insects, and give a known naturalist as reference. Compensation, a pleasant home for vacation.
Box 298, Newburgh, N. Y.

*EXPERIENCED TEACHER OF LAN-*guages, Literature, and Philosophy wanted immediately. Must know ancient and modern languages and refer to some well-known philologist. Compensation, good board (without lodging) in a kind family for the remainder of the vacation. Box 450, Newton Centre, Mass.

*MRS. HAMILTON LIEBER IN-*tends going this autumn to Dresden for two (2) years to educate her two daughters, and would take with her four young ladies between the ages of 12 and 18, to reside with her and avail themselves of such educational advantages as their parents or guardians may desire, including summer trip to Switzerland or elsewhere. Applications for terms, etc., accompanied by references, to be addressed to her, No. 69 Rhode Island Avenue, Newport, R. I.

TO INVALIDS.—A Physician, long in practice, having partially retired, residing in an ideal town in Massachusetts, with unsurpassed railroad facilities, telegraph and telephone communication, will take charge of three or four invalids who need pure air and water, combined with a fair amount of exercise. Terms moderate. Address, for further particulars,
MEDICUS, *Nation* Office.

*WANTED.—A COLLEGE INSTRUC-*tor in Latin and French. Must be a man of complete classical training, with a good speaking knowledge of French. Address, with references, X. Y. Z., *Nation* Office.



GOLD MEDAL, PARIS, 1878.
BAKER'S
Breakfast Cocoa.
Warranted *absolutely pure Cocoa*, from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup*. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.
Sold by Grocers everywhere.
W. BAKER & CO., Dorchester, Mass.

MINERALS, LARGE FOSSILS, SIOUX Indian Buckskin Relics. College collections a spec. alty. 4 pp. List. L. W. STILWELL, Deadwood, D. T.

Scribner & Welford's

NEW BOOKS.

The First Three English Books on America.

[? 1511]—1555 A. D.

Being chiefly translations, compilations, &c. By Richard Eden, sometime Private Secretary to Sir W. Cecil, afterward Lord Burghley. From the writings, maps, &c., of Pietro Martire of Anghiera (1455-1526), Apostolical Protonotary, and Councillor to the Emperor Charles V.; Sebastian Münster, the Cosmographer (1489-1552), Professor of Hebrew, &c., at the University of Basle; Sebastian Cabot, of Bristol (1474-1557), Grand Pilot of England: With extracts, &c., from the Works of other Spanish, Italian, and German Writers of the Time. Edited by Edward Arber, Editor of *English Reprints*, etc. 4to, cloth, $8.00.

Whist Developments:

AMERICAN LEADS AND THE PLAIN-SUIT ECHO.

By "CAVENDISH,"

Author of 'The Laws and Principles of Whist,' &c. Now ready. 8vo, handsomely printed in red and black, cloth gilt, extra, $2.00.

FREE TRADE IN LAND. By Joseph Kay. With Preface by Hon. John Bright, and a Review of Recent Changes in the Land Laws of England by Hon. G. O. Morgan. 12mo, cloth, 60 cents.

*PAYING THE PASTOR UN-*scriptural and Traditional. By James Beaty, ex-Mayor of Toronto, Canada. 12mo, cloth, $1.00.

FIVE YEARS OF THEOSOPHY. Mystical, Philosophical, Theosophical, Historical, and Scientific Essays Selected from the *Theosophist*. Crown 8vo, cloth, $3.00.

AMBUSHES AND SURPRISES: Being a description of some of the most famous instances of the leading into ambush and the surprise of armies, from the time of Hannibal to the period of the Indian Mutiny. By Col. G. B. Mulleson. 8vo, cloth, $7.20.

NEARLY READY:

*MICROCOSMUS: an Essay concern-*ing Man and his Relation to the World. By Hermann Lotze. Translated from the German by Elizabeth Hamilton and E. E. C. Jones. 2 Vols., thick octavo, cloth, *net* $10.50.

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELINA. 1 Vol., Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S AIDS TO REFLECTION. Confessions of an Inquiring Spirit, and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected, a Life of the Author, and Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. III., containing The Citizen of the World, Polite Learning in Europe. *Now ready.* $1.40.

GILBART'S HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

PLUTARCH'S MORALS: Theosophical Essays. Translated by C. W. King, M. A., author of 'The Gnostics and their Remains.' $2.00.

GOETHE'S EARLY AND MISCELLANEOUS Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS TRAVELS, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

*LESSING'S WORKS. Translated from the Ger-*man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI-*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

**** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also one devoted to Music and Musical Literature, will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

POPULAR BOOKS.

WITHIN THE CAPES. By Howard Pyle. 1 vol., 12mo, $1.00.

"Mr. Pyle, who is well known as an artist, deserves to be better known as a writer of fiction. . . . The book indicates a reserve of power which the author may use in more ambitious works of fiction. But this one is so thoroughly good as to satisfy all readers."—*Philadelphia Bulletin.*

ACROSS THE CHASM. 1 vol., 12mo, $1.00.

"The anonymous writer has a delicate hand. Nothing can be more freshly and prettily written than the last few pages, when Louis and Margaret meet and peace is made. It is a little idyl of its kind. . . . 'Across the Chasm' not being an impalpable story, but having a live young woman and a live man in its pages, deserves hearty commendation."—*New York Times.*

PROSE WRITINGS OF N. P. Willis. Selected by Henry A. Beers. 1 vol., 12mo, $1.50.

"The selections have been made with admirable judgment, and they give the reader a very good idea of what Willis was at his best."—*Boston Courier.*

RUSSIA UNDER THE TZARS. By Stepniak, author of 'Underground Russia.' Rendered into English by William Westall. 1 vol., 12mo, $1.50.

EXTRACT FROM THE PREFACE:

"*I READILY COMPLY WITH THE KIND DESIRE OF MESSRS. CHARLES SCRIBNER'S SONS, OF NEW YORK, IN DECLARING THAT I AUTHORIZE THIS AMERICAN REPRINT OF MY 'RUSSIA UNDER THE TZARS.'*"

"Stepniak's new book is a terrible indictment of the Government of Russia. . . . The readers of the *Times* do not need to be told that when Stepniak makes a charge he supports it with an impressive array of facts and a vigorous simplicity of style."—*London Times.*

OBITER DICTA. 1 volume, 16mo, with an American preface, $1.00.

"Something pleasant to read and delightful to own; a bit of literature to be brought out frequently and read to an old friend, but to lend with caution. The author perfectly preserves the spirit of his title; his criticism is enjoyable less because it is so keen than because it is so careless."—*The Critic.*

THE RESCUE OF GREELY. By Commander W. S. Schley, U. S. N., and Prof. J. Russell Soley, U. S. N. With maps and numerous illustrations. 1 vol., 8vo, $3.00.

"This is an admirable record of one of the most thrilling episodes of Arctic adventure. . . . In every respect the narrative is a model of good taste."—*New York Tribune.*

A CHILD'S GARDEN OF VERSES. By Robert Louis Stevenson. 1 vol., 12mo, $1.00.

"Mr. Stevenson's book deserves to have plenty of readers, both young and old."—*The Saturday Review.*

"His 'Treasure Island' is the delight of all children, big and little, who love adventure in its simplest and vivid forms; and he has just proved in his 'Child's Garden of Verses' that he understands equally well the imaginative world of children still smaller than those for whose delight 'Treasure Island' was probably written. . . . Those of his poems which give the force of mature vision and emotion to childish feelings will be as popular with children as even his romance of piracy itself."—*The Spectator.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 3, 1885.

The Week.

HARDLY anything could be more empty and inconsequential than Senator Sherman's speech at Mount Gilead, Ohio. This is the first time, we think, that the Ohio Senator, when opening a campaign in which he had a deep personal interest, has not presented to his hearers some ideas that have a bearing upon the stirring issues of the day. His ideas have been often faulty, according to our conceptions, but they have always been relevant to something going on in his day and generation. They have commonly hit the average thought of his constituents, and to this faculty must be ascribed his strong hold upon the people of Ohio, unbroken for a period of more than thirty years. We have never looked for striking originality in Mr. Sherman, but have always expected, and usually found, in what he had to say, some material for either approbation or controversy. In his speech at Mt. Gilead we find nothing of the sort, but in its place a harvest of fallen leaves and dried husks too meagre for criticism. It would be well if this were all that need be said. But it is not all. Mr. Sherman's allusion to the Roach failure is not an honest statement of facts. The assignment of Mr. Roach he ascribes to the action of the Government, which is a creditor of the failed firm, and stands as such in the schedule of assets and liabilities—a creditor independently of any claim asserted by the Attorney-General. Mr. Roach failed in spite of the Government's advances for the new cruisers, and not on account of them. Yet Mr. Sherman has the hardihood to say that the Administration "forced Roach to stop his works," thus causing a loss of employment to thousands of workmen. The significance of such a speech, coming from the mouth of a party leader, is that the want of political issues amounts to a famine.

Mr. Sherman's exploration of the chambers of the past is melancholy in the extreme. The appointment of ex-Confederates to office, the display of a flag at half-mast for the death of an ex-Secretary of the Interior who joined the rebellion, the bulldozing of colored voters, all the dreadfulness of the Solid South—these faded themes make up the bulk of the discourse. The country having accepted all these evils with deliberation last November, the enumeration of them is a task for census-takers, the makers of catalogues, and the compilers of dictionaries. Criticism stands baffled before Mr. Sherman's industrious collection of Southern grievances, and turns with relief to his remarks upon a subject of which he is really a master, although not always a safe guide—that of national finance. Here we find scarcely more satisfaction. The change in the monthly debt statement is condemned because it omits fractional silver from the list of available assets. The recent transaction between the Secretary of the Treasury and the New York banks is criticised because it is an exchange of money forbidden, in Mr. Sherman's opinion, by the Sub-Treasury Law, and because it tends in his opinion to discredit silver. But as to any measure for repairing the discredit of silver or for dealing with the silver question in any of its aspects, Mr. Sherman is as silent as he is respecting civil-service reform or the tariff on wool. The Ohio Democrats fell considerably short of the needs of the hour when they attempted to define the issues of the campaign, but Mr. Sherman has given them the appearance of liveliness by contrast.

The Republicans of Iowa have made a diligent search after the principles of the party, but have made no discovery of any unless their resolution on the subject of soldiers' pensions can be regarded as such. Upon this point their deliverance is up to the most advanced standard of profligacy. They demand "such modification of the pension laws as shall secure equal treatment to all soldiers entitled to pensions under such laws, by commencing pensions from date of disability." The point of this demand is, that the Arrears Bill, which was passed during President Hayes's term and with which the Treasury has been struggling ever since, dated the pension back to the time of death or discharge from the service—the preëxisting law dating from the time when the application was passed upon and the pension granted. The demand of the Iowa Republicans is that the date shall be carried back one step further, and embrace the time between the disability and the death or discharge, during which time, of course, the soldier was receiving his pay. They also demand an increase of widows' pensions by 50 per cent., and pensions to all soldiers who are now disabled from securing support by their own labor, and to those who served in the war with Mexico. The innovation suggested in the last proviso is an important one, since it seeks to introduce the principle that disability from any cause, whether arising from military service or not, should entitle an ex-soldier to a pension. It is easy to see how disabilities would multiply under such a law. The discovery of bad colds arising from wet feet and ending in disabling complaints fifteen years later was a natural consequence of the Arrears Bill, which promised a large lump sum to the fortunate possessor of such an ailment. A supplementary law dispensing with the formality of tracing the connection between disability and the service would reach the real intentions of the promoters of the Arrears Bill. Of course, every soldier becomes disabled at some time in his life. The measure proposed by the Iowa Republicans is, therefore, to put all persons who have served in the army on the pension list sooner or later. As there is an enormous sum of money in such an enterprise, it may be assumed that the resolution is not a mere bid for the soldier vote, but is intended to be pushed in dead earnest. Of course, the Congress that enacts it will be compelled to impose new taxes, and very large ones, to meet the requirement.

Public sentiment in Iowa is evidently gravitating toward a practicable solution of the liquor question. The Democratic Convention, instead of vaguely declaring against all "sumptuary laws," pronounced in favor of a license system, with a fee ranging from a minimum of $250 as high as $1,000. The Republican Convention went no further in defence of the prohibitory system than to demand "a fair and thorough trial of the law, that it may have time to demonstrate its efficiency or prove its inefficiency," while about a quarter of the delegates sustained a substitute which recognized the fact that in many communities the enforcement of the present law is entirely impracticable, and favored such legislative action as would enable these communities to control the traffic by means of a license system. These are signs that before long a majority of the voters will get together upon the platform of a high-license law, which will put an end to the present reign of free rum in the cities under nominal prohibition.

The Pennsylvania Democrats have nominated for State Treasurer Mr. Conrad B. Day, a man who furnishes a complete contrast to the extraordinary candidate presented by the Republicans. Mr. Day is, according to the leading Republican organ of the State, the Philadelphia *Press*, "a business man of good repute, against whom nothing can be said, and for whom nothing of special personal or political force can be mentioned." Nobody would be able to say that of the Republican candidate, Colonel Matt Quay. His only business for years has been politics of the worst sort, and there is very little in his record which his most devoted friends would think of speaking of as being of "good repute." Between him and Mr. Day no honest voter in the State could hesitate for a moment if fitness were the only question entering into the decision. As we understand it, the Republicans are not urging Quay's election on the ground of fitness, but are supporting him because he is the party nominee, and because Pennsylvania, being so loyal a Republican State that it gave Blaine a majority of 80,000, can be depended upon to elect the regular candidate, no matter what his record may be. We doubt if there is any other State in the Union in which the party could be safely put to such an extreme test as this.

The platform adopted at Harrisburg shows signs of a severe struggle in construction, so far as the endorsement of the national Administration is concerned, but it is a decided advance in heartiness over the Ohio declaration. It favors "an honest and efficient civil service," and "cordially approves the Democratic reform Administration of President Cleveland and his Cabinet," recognizing in their official acts a "resolute determination to vindicate the pledges upon which the President was elected"; and it affirms with great vigor the President's "clear and indisputable right to promptly remove officials who have prostituted the public service to partisan and personal ends." There is another clause also favoring "that thorough organization of the civil service which will effect an honest and

efficient administration of the Government." It is very easy to see that while the Democratic heart in Pennsylvania yearns for a reform which puts Republicans out and Democrats in at a more rapid pace, it is willing to bow to the pressure of public opinion and give a formal approval to the President. The other parts of the platform are skilfully drawn, and the issue which is made on the constitutional provision forbidding the consolidation of competing railway lines, while it savors somewhat of clap-trap, is likely to play a very important part in the campaign.

Mr. W. L. Trenholm, of South Carolina, has written a very forcible letter to the Charleston *News and Courier* on the silver question and the duty of the South in regard to it. He points out the fact that the South is responsible for the continuance of the coinage, since her votes in Congress are sufficient, in the divided state of public opinion elsewhere, to decide the question. In fact, if the South had not been very nearly unanimous at the last session in favor of silver, the coinage would have been suspended by the adoption of Mr. Randall's amendment to the Sundry Civil Bill. There is good reason to believe that if Mr. Cleveland's letter on the subject had been published before instead of after the taking of the vote, the Randall amendment would have received a majority in both the House and the Senate. Mr. Trenholm's letter presents one view of the question which has not, so far as we have observed, been brought to the attention of the Southern people by any of their public men, viz.: that no possible multiplication of silver dollars under the existing law will enable any debtor to get one for less than a dollar's worth of his own labor or property. The Government coins silver dollars on its own account and makes what it calls a profit on the operation, but it does not allow any debtor to have one for less than 100 cents in gold. Even if the silver standard were forced upon the country so that the "debtor class" might really get 85-cent dollars for 85 cents each, they could realize this boon only by taking 85 cents where they now get 100. As for the grasping creditor class, Mr. Trenholm points out very clearly that, since they hold most of the gold in the country upon which it is proposed to establish a premium of 15 per cent. by way of relieving debtors, they will not be particularly losers by the operation.

The most hopeful social event that has happened in the South since the close of the war is recorded in a telegram from Atlanta describing the "adjustment" of a personal difficulty between Mr. Gantt, the editor of the Athens *Banner*, and Mr. Connell, a member of the Georgia Legislature. The trouble began in an inconsequential incident, as most "affairs of honor" begin. It reached in due course the stage of vituperation, where Mr. Gantt said that Mr. Connell was "unfit to be at the end of a tenth-class minstrel troupe," and Mr. Connell retorted that Mr. Gantt was "a liar, villain, and scoundrel who ought to have been hanged ten years ago." Both parties prepared for fighting, chose their seconds, and left town. The Legislature and the community were expecting to hear of the death of one or both of the principals, when it occurred to the seconds that possibly the killing of Gantt or the maiming of Connell would not establish the truth or falsity of their sayings concerning each other, and that this end might be reached by referring the subject to a committee of disinterested persons and meanwhile keeping their powder dry. It is gratifying to know that such a committee could be found. They met and weighed the points of difference, and, finding them susceptible of adjustment, decided that Mr. Gantt's attack upon Mr. Connell exceeded the bounds of legitimate criticism, and that Mr. Connell's reply was improper and uncalled for. The award was signed by the seconds and then signed by the principals. Mr. Gantt published it in his newspaper and Mr. Connell read it in the House. We have yet to learn whether the public are satisfied with this ending of an affair that gave such high promise of bloodshed and future battle among the relatives and descendants of Gantt and Connell.

A notable contribution to political discussion is the letter which Mr. John E. Russell has addressed to the Massachusetts Democrats. Mr. Russell, who is one of the most highly respected members of his party, was invited to preside at the approaching Democratic Convention, but declined because he holds a State office and does not think it would be in accordance with civil-service reform principles for him to serve. He improves the opportunity, however, to give his party associates his views concerning their action in the Convention, which should be pondered by Democrats everywhere. He reminds them that three years ago they adopted a platform pledging themselves to the support of the reform law, and declaring that fitness, not favor, should be the passport to the public service, and that there should be no removals of employees before the expiration of their terms except for cause; and demanding a "system of civil service consistent with the nature of our Government, established by law, protected by law, that, like the Government itself, it may be the agent of law and not of men, to the end that it may be kept free of all corrupting dependence upon political power and patronage." Now, says Mr. Russell, the Democrats who formulated and endorsed this excellent theory are called upon to sustain it in practice; they have the great opportunity of reforming the very abuses they have so long denounced.

Whether the Massachusetts Democrats will have the courage to follow this advice, remains to be seen; but we agree entirely with Mr. Russell when he says that it will not have the slightest effect upon the President's course if they decline to sustain him. "We nominated Mr. Cleveland," he says, "knowing him to be a conscientious and bold reformer. His election was secured by the assistance of independent voters upon the issue of civil-service reform in large part. The voters find that the Administration is what we promised that it should be. If any convention or body of voters are not satisfied, they cannot change the position The constant quality of the President's mind will not be affected by any attempted discipline. He will show to selfish and ambitious politicians, who would make him a party servant, that he is their master." That corresponds with our view of the President exactly.

Two of the many eminent Republicans whose names have been mentioned for the nomination of Governor, Levi P. Morton and Cornelius N. Bliss, announce that they are not candidates, and ask to have their names withdrawn from consideration. Judge Andrews, in a very sensible statement, withdrew his name several days ago. He said he interpreted the action of the people in electing him, as the nominee of both political parties, to the bench of the Court of Appeals, as an indication that he could serve them better there than in any other capacity. It would be an excellent thing for the bench if the judges in all our courts took as sound a view. A judge who performs his duties with one eye constantly fixed upon the possibility of securing a political office is usually a pretty poor judge, and when he gets into politics, as is often the case, he is seldom a success there. We believe there are several other judges who are Republican candidates at the present time, and the strongest endorsement which we have heard of their candidacies came from an eminent lawyer, who said the other day: "I do hope they will nominate Judge Blank." "Why?" asked his friend. "Because we shall get rid of him from the bench."

There is one phase of the New York Republican State Committee's action in inviting the Mugwumps back into the party fold which we should like to see thoughtfully discussed. A great deal was said last fall after election about the penalties of "recreancy" to the party, and about the bad policy of condoning it in any way. It was held that if a man were allowed to desert the party and vote against it, to become, in short, a "traitor," and then was to be taken back into the fold, the influence upon party discipline would be very disastrous. It seems to us that the Committee's invitation not only condones "recreancy," but even encourages it. If the Mugwumps had stayed in the party, they would not be sought for at all now—would be ordinary voters of no particular consequence; but because they were "traitors" we have both great parties in fierce pursuit of them, and the Republicans so eager to catch them that they set their trap two days in advance. This is simply putting a premium upon recreancy, and we should like very much to have the *Tribune* tell us what it thinks about it.

Brooklyn was the first city in the country to apply the competitive principle in the selection of subordinates in its civil service, and the system has been tried there under the most favorable circumstances. How satisfactorily it has worked appears from the just published report of the Police Commissioner, who thus summarizes the results:

"The operation of the civil-service regulations in the matter of appointments and promotions relieves the Commissioner from a vast deal of pressure on behalf of a great number of candidates for appointment, and thus affords him more time for other official duties. Furthermore, it gives to all who aspire to become policemen an equal chance of appointment, without regard to political influence, and secures to the city the best qualified of those who do apply."

The essentially American character of the merit system has seldom been more clearly defined. It has always been the boast of this country that it gives every man "an equal chance" of making his way in the world. But it was the chief characteristic of the spoils system that this otherwise universal rule did not hold in politics. All candidates did not have an equal chance of appointment, but the prizes went to the men who could muster the most political influence. The result was the establishment in a democratic country of an office-holding class, into which merit alone would not admit the most deserving applicant. Civil-service reform abolishes this system of privilege, and restores the rule of equality.

The New York Custom-house is the place above all others where the efficacy of the Civil-Service Law and the intentions of the Administration must be put to the proof. It is here that the spoils system has most run riot in the past. It is in this place that the Government collects the larger share of the money by which it is kept going. Upon this great office, more than upon any other, the eyes of all persons disposed to criticise the new President and his methods are fixed. Therefore the treatment of a gauger whose name even is unknown to the public, becomes as important as that accorded to the most important personage in the land, since the principles illustrated in his case are taken to be exemplary and indicative of the spirit governing the heads of the Custom-house, and in a measure the Administration itself. It is certain that if the friends of civil-service reform discern an intention to make the Custom-house subservient to the ends of politicians of any stripe, they will cast their votes in a way to rebuke the backsliders. Mr. Eaton's letter to the *Herald* supplies the only official information that has been given to the public concerning the drift and leanings of the Custom-house with respect to the Civil-Service Law. The impression we gain from it is that Surveyor Beattie is not much in favor of the law, but that he has not violated it in such a way that he can be called to sharp account. He has refused to appoint a gauger who had passed his examination, served his probation, and proved himself well qualified for the position. Instead of making the appointment, Mr. Beattie required reëxamination on elementary subjects, and, having decided that the result was unsatisfactory, he declined to make the appointment. This proceeding, Mr. Eaton says, does not meet the approval of the Civil-Service Commission, and will be resisted if the Surveyor, contrary to his expectation, persists in it. This is the only point in the Custom-house controversy sufficiently well defined to furnish ground for intelligent discussion.

We hesitate to believe that the interviews attributed to Mr. Keiley in the morning papers are authentic. As our readers are aware, we have not an exalted opinion of Mr. Keiley's perspicacity, but we are not prepared to think him capable of saying that his rejection by the Austrian Government "affronts the United States and insults the nineteenth century." It does not do that, and even Mr. Keiley must know it does not. Neither does it mean, as Mr. Keiley is represented as saying, that Austria has so weak a government that its chief thought is not to offend but to placate Italy. The meaning of it is much more simple, and was perceived plainly by everybody except Mr. Keiley before he sailed for Europe. It is that no government wishes to receive as a diplomatic representative a man whom another government has declined to receive, especially for such good and sufficient reasons as Italy had in this instance. The great reason, which Mr. Keiley still apparently clings to, that he had sold his house and must go somewhere, was not sufficient to enable Austria to overlook this objection.

Whether the increase of crime keeps pace with the growth of population, is one of the most interesting and vital of all questions. We believe that most candid men who have lived long in New York city would agree that they see less evidence of crime, proportionally, now than used to come to their notice twenty-five or thirty years ago. We refer more especially to cases of drunkenness, disorderly conduct, and breaches of the public peace such as are thrust upon a man's attention every day. The police statistics go to sustain this impression that crime is less prevalent of late years. The whole number of persons arrested and arraigned in the police courts during the year ending October 31, 1884, was 74,647, which was 10,174 less than the number for the twelve months ending with October 31, 1874—an absolute decrease of 12 per cent. in arrests, although the population had meanwhile increased fully 25 per cent. The statistics of Brooklyn for the same period show a like tendency, the arrests for offences of all sorts in 1884 being but 26,119, against 26,263 in 1874, which means that the proportion of arrests to population has sunk in the decade from one in every nineteen people to one in every twenty-four. In both these cities the police service is more efficient, and offenders are more likely to be apprehended, now than ten years ago, so that it seems clear that the smaller proportion of arrests is really due to a distinct improvement in morality.

The exports from this country thus far in the present year show no marked changes from the figures for 1884. Only about half as much cotton was sent off in July, 1885, as in July, 1884, but the total value of this export for the eleven months ending with July this year was $195,396,939, against $193,950,307 for the eleven months ending with July last year. The exports of wheat since January 1 exceeded by less than 160,000 bushels those in the first seven months of 1884, but the lower prices this year make the value only $31,034,006, against $36,196,601 last year. The total value of all breadstuffs sent abroad during the first seven months of 1885 was $85,558,982, against $80,546,131 in the corresponding period of 1884. The number of cattle exported in the same months fell off about 7 per cent. as compared with last year, while the number of hogs more than doubled, and the amount of pork products showed a considerable increase. A trifle less fresh beef was sent across the ocean, but the quantity of beef salted, pickled, and otherwise cured almost doubled, reaching 41,724,892 pounds; cheese fell off, but butter gained. The total values of all beef, pork, and dairy products thus far this year aggregate $56,904,369, against $54,311,766 for the same time last year. As a whole, therefore, the export trade shows hardly any change.

The seal is coming to be "an issue" on the Pacific Coast. The animal has always been found around the harbor of San Francisco, but of late has appeared to be more common than formerly. A commission was recently appointed to investigate whether the diminution of fish in the waters of the bay and harbor approaches might not be due to this fact, and their report sustains the theory. They estimate that there are 4,000 seals in the immediate vicinity, and that they consume 120 tons of fish a day, or 43,800 tons a year, which exceeds the weight of all the fish brought into the San Francisco market for consumption in the city and all the suburban towns. As the seal respires above water and can only stay under a short time, he makes no impression on deep-water-fish, like the cod, rock and sea-bass, but preys exclusively upon salmon, shad, herring, and other kinds of fish which feed along the shore and in harbors and rivers where there is only a moderate depth of water. The salmon fishermen suffer most severely, the seals swarming around their nets by night, biting large holes and stealing great numbers of fish in this way. The evil is already serious and threatens to grow worse if the intruders are really multiplying, as is generally believed. There is a growing opinion that the seal must go, but the practical difficulty is how he can be made to leave. The seals about San Francisco are of an inferior sort, and it is doubtful whether their skins and oil would pay for the trouble of killing them, if the old prohibition upon their slaughter should be repealed. Fears have sometimes been expressed that the more valuable seals in the Alaska waters were in danger of extermination through the activity of hunters, but the San Francisco papers say that, though an immense number have been killed since the industry sprang up, there is as yet no perceptible decrease.

Mr. Parnell's Dublin speech has overtopped even Mr. Chamberlain's Socialistic campaign as a subject of political interest in Great Britain. He has "thrown off the mask" again—it is astonishing how many times he has accommodated his enemies in this particular—by substituting Irish independence in place of home rule. It is gratifying to know that he cannot throw off the mask any more, for the Repeal of the Union is the last expression of the forces that Mr. Parnell controls and serves. Such a consummation is as abhorrent to Englishmen as the dissolution of the Union was to the North twenty-five years ago, or as it would be now. Since Ireland could not successfully assert her independence even if she were united and armed, the point of immediate interest is the effect which this speech may have on parties in England. It can hardly be otherwise than adverse to the Salisbury-Churchill Government, which came into power partly through Mr. Parnell's coöperation, though not by virtue of any alliance between himself and the so-called Tory Democracy

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 26, to TUESDAY, September 1, 1885, inclusive.]

DOMESTIC.

SENATOR SHERMAN opened the Republican campaign in Ohio at Mt. Gilead last Thursday. In his speech he said: "I acknowledge the good intentions of Mr. Cleveland, but he knows as well as I do that the hungry and thirsty crowd who are howling for the removal of every Republican office-holder, must in a short time prevail, and all pretence of the observance of the law will be abandoned." Again, in referring to the same subject, he said: "It is but fair that in my criticisms of this Administration I should say of the President that I believe he has endeavored to check, as far as he could, the disregard of the Civil-Service Law and the Tenure-of-Office Act; but in spite of it removals for purely partisan reasons are now being made by the heads of departments, mainly by the Postmaster-General, at the rate of 200 a day. Hundreds of Union soldiers have been discharged without the slightest complaint, except to give place to Democratic partisans." The Senator held that in condemning Mr. Roach's despatch boat, the *Dolphin*, the Government had struck a blow at American shipbuilding.

The Prohibition State Executive Committee of Ohio has sent a communication to the Democratic State Executive Committee, challenging Governor Hoadly to a discussion with Doctor Leonard, the Prohibition candidate, of the question of Prohibition vs. the License of the Liquor Traffic. It is understood that he will accept if Judge Foraker, the Republican candidate, will consent to take part in the discussion.

The Pennsylvania Democratic Convention has nominated for State Treasurer Mr. C. B. Day, a business man of Philadelphia, of high personal character, who has never held a public office. The platform favors "an honest and efficient civil service," approves the Administration of President Cleveland and his Cabinet, and says: "We recognize in their official acts a resolute determination to vindicate the pledges upon which the President was elected. To this end we affirm his clear and indisputable right to promptly remove officials who have prostituted the public services for partisan and personal ends." The platform also says: "We denounce, as in flagrant violation of the Constitution, the attempt to consolidate the South Pennsylvania and Beech Creek Railroads with the Pennsylvania Railroad Company, and we heartily approve the proceeding of the commonwealth through the Governor and Attorney-General to protect and preserve the rights of the people under the Constitution."

Senator Edmunds, in an interview, expresses faith in President Cleveland's sincerity as a civil-service reformer, but thinks he will not be able to carry out his views through lack of sympathy with them among his advisers.

In Cassia County, Ida o, last Saturday, Chief-Justice Hayes affirmed the constitutionality of the Territorial Election Law prescribing the anti-polygamy test oath. This will largely reduce the Mormon vote.

Last winter Edward J. Haskell, Republican member of the Assembly from Madison County, voted at the organization for George Z. Erwin for Speaker and for Levi P. Morton for Senator and against several reform measures, claiming at the time that he was representing his constituents. Mr. Haskell now wants to be State Senator, but at a caucus of his town last week he got only 82 votes to 326 for J. E. Smith.

In the State, War, and Navy Departments not a single partisan change has been made since March 4. In each, Republican chief clerks of acknowledged efficiency and long service are still at work. In the State Department Secretary Bayard has retained the two Assistant Secretaries whom he found on duty, and his law officer has been the only change. In the Navy Department there has not been a change. In the War Department the Republican chief clerk is acting as Secretary. In both War and Navy Departments the private secretaries appointed by Messrs. Lincoln and Chandler continue under the new Cabinet officers.

The only result accomplished by Minister Keiley's visit to Washington last week appears to have been the settlement of his accounts, and his assurance to Secretary Bayard that he was desirous of closing his diplomatic career. Mr. Keiley is said to have been informed that the State Department fully approved of his course in all respects, and was willing to contest his rejection by Austria to the extent of endeavoring to compel his recognition, or to ignore the fact of his rejection, on the ground that, reasons having been intimated for refusing to receive him, they must be such as the United States Government could countenance. Mr. Keiley's reply was that he was satisfied with his position before the Department and the country, and was not desirous of any further action.

In the report of the South American Commission prepared for Congress on their visit to the Argentine Republic, they say: "On the leading question, How can better relations, friendly and commercial, between the Republic and the United States be established? both the President and the Minister of Foreign Affairs returned the same answer: Create frequent steamship communication. They expatiated at some length on its benefits to both sides. They saw in it a better acquaintance on their own part and that of their leading men with the habits and policy of our country. They believed that their own people would take on broader and more generous views when once they came into close and business contact with our own land. They claimed that if the United States thoroughly comprehended the vastness of the undeveloped wealth of this region, its money and sons would flow here in streams of profit to each side."

Pension Commissioner Black has telegraphed Drs. Layton, Russell, and Czarnowski to consider the letters dispensing with their services as Pension Examining Surgeons at New Orleans null and void, and to continue to act as the Board of Examining Surgeons until further advised. He continues: "The published change of the Board was effected through the instrumentality of forged telegrams."

There has been a recent reduction in the force of inspectors of foreign steam-vessels. The records of last year's service are said to show that there were only 7 days on which all of the force were employed, 14 days on which the services of two-thirds of the inspectors were required, 57 days on which one-third performed service, and 279 days on which none were called upon.

The former administration of the Appraiser's Office in San Francisco will, it is said, be made the subject of official investigation. It has been discovered that large quantities of opium and other valuable merchandise have been systematically stolen from the stores by persons having access to them. Many of the charges are alleged to be of the most serious character, and include the undervaluation of invoices.

A meeting of prominent manufacturers of Rhode Island in Providence on Monday passed a resolution protesting against the reopening of the tariff question by the next Congress.

Senator Gibson, of Louisiana, in a long letter to Gen. Allen Thomas on the use of the Federal offices says: "In my judgment the Democratic party, both in our own State and in different parts of the Union, should draw a lesson from the history and fate of the Republican party. If it expects to enjoy success it must deserve success. It must turn resolutely away from the fatal allurement of the 'spoils system.' What is the gain to the country if the last campaign shall prove to have been not a contest for principles but a mere scramble for the offices? Democracy stands for more than the offices, or it stands for nothing. The sturdy Democracy of Louisiana will not divide into warring factions on a mere question of patronage or to satisfy personal resentments or ambitions, any more than they will tamely suffer their office-holders, whether Federal or State, to improperly interfere or in any manner tamper with their elections, or submit to those Republican methods for conducting elections that brought the blush of shame to every honest man in her borders. But, united and devoted, they will join their Democratic brethren throughout the Union in upholding the President and the Administration in their efforts to bring the Government back closer to the people, to reduce unnecessary expenditures, to correct false systems of revenue and finance, to abolish old abuses, to carry forward the beneficent work of administrative reform, and to restore confidence and prosperity once more to the country."

The census of Dakota, just completed, shows a population in round numbers of 415,000, of which South Dakota claims 263,000. The total number of farms is 80,000, varying in area from 6,000 acres down.

The New York Yacht Club Committee have announced formally that the *Puritan* has been selected to race with the English cutter *Genesta* for the *America's* cup.

Frost was reported in many places from Virginia to the North last Wednesday. In parts of Pennsylvania there was a flurry of snow.

A scheme to float $300,000 of counterfeit Brazilian bank notes has been unearthed in St. Louis. The order to the engravers was for cigar-box stamps, but the stamps were to be bank notes. One side of the notes was to be printed in St. Louis and the other in New Orleans.

Ex-United States Senator Edgar Cowan died at his residence in Greensburg, Pa., last Saturday, after a lingering illness.

FOREIGN.

The excitement in Spain over Germany's threatened occupation of the Caroline Islands continues. At a public meeting in Barcelona, on Sunday, the populace demanded that the Spanish flag be hoisted on the Government Building, and became enraged when the authorities refused to comply with their demand. The main door of the building was set on fire by the mob, and the military had to be called out to restore order. Only military precautions by the Government prevented a threatened renewal of the anti-German demonstration at Madrid the same day. Seven of the Opposition papers in Madrid have been seized for assailing Germany. It is rumored that King Alfonso has sent an autograph letter to Crown Prince Frederick William asking him to mediate, but Germany is said to refuse arbitration. Don Carlos is said to have offered the Government the services of 100,000 Carlists to vindicate Spanish honor against Germany. Count de Benomar, Spanish Ambassador to Berlin, telegraphs that Germany states that she declared a protectorate over the Caroline Islands believing they were unoccupied, and that before doing so she informed Spain that Germany was willing to discuss the question of possession with Spain, or, if necessary, to submit it to arbitration. The Cologne *Gazette* hints that a quick and friendly settlement of the dispute will be effected in favor of Spain, but that the latter will be the ultimate sufferer for bearding Bismarck.

Germany's action in regard to the Caroline Islands has created an uneasy feeling among the smaller nations of Europe. Holland, especially, sees in this step a dangerous precedent. For while Spain, by her geographical position, is comparatively independent, if Germany should fall foul of some eastern island now under the nominal sovereignty of Holland, the latter would be absolutely powerless to oppose her.

There were 3,669 new cases of cholera and 1,120 deaths from the disease reported on Monday throughout Spain, 25 deaths in Marseilles,

and 13 in Toulon. The disease has broken out in the province of Genoa, Italy.

The increasing cholera mortality having driven most of the wealthy residents from Almeria, in Andalusia, Spain, a large number of poor people were deprived of employment. This desertion on the part of the rich employers incensed the laboring people, and the feeling of indignation culminated in a riotous outbreak. Many of the houses of the wealthy were wrecked by the mob. The soldiers were called out, and in the conflicts that ensued eight persons were killed and twelve others wounded.

Mr. Foster, the United States Minister to Spain, has spent a fornight at the royal palace of La Granja de San Ildefonso. He had frequent interviews with the Spanish Minister of Foreign Affairs on the subject of a proposed new commercial treaty between Spain and the United States. It is understood that, though a treaty was not signed, an agreement was reached between the representatives of the two Governments by which the reciprocity provisions contained in the former treaty were abandoned. The new treaty is confined to reforms in the Cuban customs laws. Spain accepts the interpretation of the *modus vivendi*, signed in February, 1884, which was contended for by the United States. The settlement of the claims of American citizens against the Spanish Government arising from the insurrections in Cuba is provided for.

The meeting of the Czar of Russia and the Emperor of Austria took place at Kremsier last week without any disturbance. Its political results, if it had any, were well concealed. The accounts are filled with details of personal appearance, dress, ornaments, and menus; who killed the most stags, which Empress was the more beautiful, and how often the Emperors exchanged kisses. The police precautions were more extraordinary than ever. During the preparations an inspector was stationed in every room, and there were police huts every few yards in the park. A week was spent beforehand in what the police called "expurgating" the place. The Czar owns a large mastiff, possessed of uncommon strength and intelligence, which has been carefully trained as a body-guard, and, as is well known in St. Petersburg and Moscow, watches beside his master's couch every night. This dog accompanied the Czar to and from Kremsier. The *Journal de St.-Pétersbourg*, commenting on the conference, says the absence of the Emperor William and Prince Bismarck does not signify that there is any slackening of cordialty among the members of the triple alliance.

An expulsion of Polish subjects from Austria has begun. All classes alike are expelled. Subscription lists have been opened throughout Galicia for the benefit of the Poles exiled from that province. Great animosity is displayed toward Prince Bismarck.

The Prussian Government has ordered all Russians and Austrian Poles to quit Danzig before October. Many old-established merchants and tradesmen come under this order. The decree exempts settlers previous to 1843, temporary sojourners, and those who have served or whose sons have served in the German army.

The Russian Government has issued a decree making the Greek Church the established religion of the Baltic provinces. Protestantism will only be tolerated. Children born of mixed marriages are to be trained in the Greek Church. The decree is certain to excite great discontent among the German settlers.

The *Börsen-Courier* has a despatch from Constantinople which says that Russia is making overtures for an alliance with Turkey, holding out as an inducement a prospect of Turkey's recovering possession of the Balkan passes and fortresses. The Turkish Ministers, the despatch says, are divided as to the acceptance of the proposal.

Sir Henry Drummond Wolff, the special British Envoy, had an interview with the Sultan on Sunday, and read a personal message from Queen Victoria, expressing her best wishes for peace and friendship. The Queen says she hopes to help the Sultan to establish a government in Egypt conducive equally to the Sultan's rights, the happiness of the Egyptians, and the interests of England and the Powers, and that this will be the basis of Sir H. D. Wolff's efforts. The Sultan replied that he valued the friendship of Queen Victoria and an alliance with England. The Sultan objected to the clause in the message stating that the "coöperation" of Turkey in Egypt was desirable, and another word was substituted. He added that he would designate persons to confer with Wolff respecting Egypt, and would grant a further audience on the subject. Telegrams from Conservative sources admit that Sir H. D. Wolff has a difficult task.

Count Kálnoky has returned to Vienna from Varzin. It is learned that Prince Bismarck maintains the conviction that protection alone will save German industries. The German Chancellor urged Count Kálnoky to adopt the strongest protective measures for Austria-Hungary.

It is almost certain that peace between England and Russia on the Afghan question is now completely assured. The two Governments are busily engaged in arranging the last details of a mutual understanding, and the negotiations are proceeding rapidly and harmoniously.

The English Boundary Commissioners are irritated at the Governor of Herat, having discovered him tampering with letters addressed to members of the Commission, and committing other offensive acts. The British have requested the Amir to reprimand the Governor.

Mr. Parnell made a speech in Dublin last week which has caused great excitement in English political circles. He practically declared for Irish independence. He demanded a settlement of the land question according to the National League programme, and a restoration of prosperity to the towns by high, and especially anti-English protection. "It is not now the question," said he, "whether the Irish people will decide their own destinies and their own future, but it is a question with our English masters—I am afraid we cannot call them masters any longer—it is a question with them how far off the day they consider so evil shall be deferred." His last words, which were received with the greatest enthusiasm, were: "I feel assured that the Irish party will be assembled in such strength and under such conditions in Ireland and in Westminster as will insure that it shall be the last Irish party in England, and the first in the restored Irish Parliament." Resolutions adopted at a Conference held in Dublin pledge the whole Irish party in the next Parliament to vote as a unit, and require candidates to give a written promise to resign if they fail so to vote.

The London press comments on Mr. Parnell's speech are very outspoken. The *Times* says: "Mr. Parnell demands the repeal of the Union. So the Irish question is no longer a question of local self-government. This latter might be acceded to by England, which will never listen to a plan for the separation of Ireland." The *Standard* (Tory) says: "Mr. Parnell has declared war. It will be a shame and a disaster if English statesmen of both parties fail to baffle him. We do not pretend to ignore the danger to which the imperial unity is exposed. Mr. Parnell now holds a strong hand. If both the Whigs and Tories make it clear from the outset that his demand for home rule will be met with firm opposition, his influence will be doomed." The *Telegraph* speaks of these persons calmly plotting the disruption of the British Empire.

The Marquis of Hartington, speaking at Lancashire on Saturday, said that Mr. Parnell undoubtedly would be able to cause the British Parliament much inconvenience, but that the time would inevitably come when, in consequence of such action of the Irish party, any minor political differences among the parties of this country would be comparatively obliterated, and means would be found by which practically a united Parliament, representing practically a united people, would impose a firm and decided veto upon proposals which in their nature are so fatal and mischievous to the integrity of the empire and the prosperity of its people.

The Earl of Devon has offered to sell his Irish tenants their holdings under the provisions of the Land Purchase Bill. The tenants will hold a meeting to consider the offer.

A magistrate and 100 policemen went to Ballyfarrissey, County Kilkenny, Ireland, last week, to evict some tenants. When they arrived the chapel bell was tolled, and 2,000 persons assembled and attacked the officers, preventing them from accomplishing the evictions. The police were compelled to charge the mob with bayonets, and fierce encounters ensued. Agrarian outrages are increasing in Kerry County. Every day cases of moonlight work, of incendiarism, and of houghing or hamstringing cattle are reported. The Earl of Carnarvon, Lord Lieutenant of Ireland, threatens with condign punishment the rioters who recently interfered to prevent evictions at Mullinavat.

Irish agricultural statistics show that there are 5,000,000 acres of land under crops in Ireland, an increase of 81,000 over the acreage of 1884; that there are 10,250,000 acres of grass land, a decrease of 200,000 acres; and that bog, barren, and mountain land has increased 27,000 acres.

Mr. Bradlaugh has issued a campaign manifesto to his constituency in Northampton, urging his majority to continue sending him to Parliament, despite the refusals of the House of Commons to permit him to take his seat, until the Commons shall be shamed or compelled by popular feeling to accord him his rights.

Tennyson is about to publish another volume of poems.

It appears to be certain that, as a result of the telegraph conference, the great cable companies will reduce their tariffs 20 per cent.

M. Jules Ferry addressed an audience of 4,000 persons at Bordeaux on Sunday. He opposed abolition of the religious budget and revision of the Constitution. He said he believed that Tonquin could pay the expenses of occupation. France was respected because she was strong, and she must have confidence in herself and respect for the rights of others.

The Sultan of Turkey, in a private interview accorded to Minister Cox last week, presented the Minister with a set of valuable Turkish jewelry, and gave him a number of rare Oriental books for Mr. Abram S. Hewitt, and a set of others for the National Library at Washington.

Details of the destruction in Canton, China, and its vicinity by the great rainstorm there in June have been received. The flood was the most serious which has visited Canton in thirty years. More than 10,000 persons lost their lives, and a far greater number are left in a starving condition. Entire villages were engulfed, and the rice and silk crops in the vicinity were almost ruined. The price of rice has been raised 18 per cent.

There is much dread of the smallpox spreading into Ontario, and if the Montreal authorities do not consent to strict measures for isolation of cases, and also for the prevention of convalescent persons who have had the disease working in factories, the Ontario health authorities threaten to stop all trains after crossing the boundary between the two provinces, examine passengers, vaccinate them if thought necessary, detain all factory-made goods for disinfection, and disinfect the mails.

It is stated that the situation at Arequipa, Peru, is becoming daily more gloomy. Of the Cacerist garrison, two battalions have revolted and dispersed, only 150 men remaining in that city. Many reports of outrages by Cacerist troops have been received.

MR. WARNER'S "SILVER COMPROMISE."

From time to time the public has been favored with Mr. Congressman Warner's notion of what would be a fair compromise of opposing views on the silver question. Since Judge Buckner declared himself in favor of a suspension of the silver coinage, Mr. Warner has been the recognized leader of the silver men in Congress, and his ideas are consequently entitled to consideration as probably representing the present inclinations and conceptions of the majority of the Democratic party. The compromise measure which is associated with his name proposes that the United States shall receive silver in any quantity at the mint at its value in gold, to be ascertained by the Secretary of the Treasury on the first day of every month, and issue certificates therefor, which certificates shall be legal tender to and from the Government, except where coin payments are specifically provided for, and that thereupon the coinage of silver under existing laws shall cease.

We judge that the intention of Mr. Warner is to introduce the silver standard by this measure, but we can see in it nothing but a requirement that the United States Government (and its creditors) shall assume from month to month the risk of any depreciation in the market price of silver. The gold standard is recognized, and therefore maintained, as the standard of commerce by the fact that the value of silver is to be reckoned in gold and all transactions at the mint regulated by it. It is only during the interval of thirty days that its price may range more or less. If silver declines during this interval, the loss is to be borne by the note-holders. If it advances, nobody will bring silver to the mint till the next monthly announcement of the price. The Government thus insures the producers of silver at the beginning of each month that their product shall not decline till the beginning of the next month. This insurance extends to all producers of silver bullion in all parts of the world, and will doubtless be thankfully received by them, as it is to be extended gratis. The production of silver in all countries in the year 1882 was estimated by the Director of the Mint at $109,000,000, of which our own mines yielded $46,000,000. Under the Warner bill the monthly silver insurance written by the United States would extend to foreign producers as compared with our own people in the ratio of 63 to 46.

The measure does not, we believe, propose to make these silver certificates legal tender between individuals, but only between the Government and its creditors and debtors. As regards trade and commerce, it adds a new kind of currency to the various sorts now circulating, namely, a warehouse receipt available for paying taxes and customs, and for all Government disbursements except interest on the public debt, which the recipients can sell for what they will bring—that is, at about the current price of silver. The process of getting the Warner currency into circulation would be in this wise: A. B. brings 1,000 ounces of silver to the mint. The Secretary of the Treasury having ascertained, for instance, that silver is worth in the market at the beginning of the month one gold dollar per ounce, the mint takes the silver and issues certificates for $1,000, which are receivable for Government dues. The holder sells them to a broker, who has the option of receiving the deposited silver, or of selling the certificates to an importer in payment of duties. In the latter case, the Government pays them out for salaries, pensions, and all obligations not specifically payable in coin. The receivers may pay them to anybody willing to receive them, but will probably sell them to brokers for legal-tender money. They may be at a discount when sold, or they may be at a premium, depending upon the price of silver from day to day during the month. Of course, the brokers must make some profit on the operation; therefore the chances are that the certificates would sell at something less than the market price of silver, but not much below it.

At the beginning of the next month, to continue the illustration, 1,000 ounces are brought to the mint, the price of silver having fallen to 99 cents in gold per ounce. The holder of this silver receives $990 in certificates and these go through the same process. There are now outstanding $1,990 in certificates, against 2,000 ounces of silver. The certificates ought in such a case to be worth 99½ cents per dollar, but the bill provides that the Secretary of the Treasury may redeem them at par in lawful money, or at his option may deliver silver for them at its then market price. In the former case they would be worth 100 cents and in the latter 99. The Secretary of the Treasury would be bound to exercise his option in favor of the Government by redeeming at par when silver was worth more than the face value of the certificates and by turning over the silver when it was worth less. There is no objection to that part of the arrangement.

The whole scheme is so fantastic that, if offered on its own merits as a warehousing and monthly insurance bill for silver miners and bullion brokers, it would never rise to the dignity of general contempt. It would pass into the category of the goloid dollar and a hundred other whimsies as inconsequential and short-lived as snow-flakes on a river. But it comes before the public as an alternative to the existing Bland bill—the two million-per-month act, whose end is certain disaster at no distant day. Mr. Warner's bill is certainly better than Mr. Bland's, and if the choice is presented to us of taking the one or sweating longer under the other, we should much prefer the former to the latter. The Warner bill at least adheres to market value, follows it wherever it leads, and thus obeys economic laws, which the Bland bill sets at defiance. The existing stock of eighty-five cent dollars can be carried somehow, either in the currency or in the Treasury. Whatever disposition is ultimately made of them, nothing is so important as to stop the further production of them.

THE ENGLISH LAND QUESTION.

Mr. Joseph Chamberlain, in his recent notable speech at Hull, advanced the proposition that the land tax is really a rent paid to the State—and a very inadequate one. Although he did not elaborate the idea, the inference is natural that he believes the State must own the land, and that he drifts more and more toward an acceptance of Henry George's theory regarding the land question. However this may be, there is abundant evidence that a reform of the land laws in Great Britain is one of the issues which must before long be fought out, and the struggle promises to be one of the most interesting in English history.

The world is familiar in a general way with the anomalous character of the land system in Great Britain, yet there is always a fresh interest about any new presentation of the subject by a competent hand. Such a presentation is to be found in a little book entitled 'Free Trade in Land,' by the late Joseph Kay, which was originally published in 1879, and has recently been brought out in paper covers for circulation by the Cobden Club. Mr. Kay came of an old Lancashire trading family, and, having received an appointment as "travelling bachelor" after taking his degree at Cambridge, became so much interested in the working of the land laws on the Continent that he thereafter devoted a large share of his energies to the advocacy of land reform in his native country. There was nothing of the agrarian or socialist about Mr. Kay; he had no patience with the folly of demagogues on this question who talk about dividing the land among the people. All that he contended for was that the law should no longer interfere to prevent the sale and breaking-up of the great estates, and thus concentrate possession of the soil in the hands of a petty fraction of the population. His lucid presentation of the subject is the more impressive by reason of the moderation of his aim.

Everybody knows that a small number of men own the bulk of the land in Great Britain, but there is always something startling about the figures. The total area of England and Wales, after deducting the metropolitan area of London, is 37,243,859 acres, or about that of New York, New Jersey, and Delaware combined. Of this a single person owns 186,397 acres, or a two-hundredth part of the whole; a second, 132,996 acres, and a third 102,785 acres. 66 persons own 1,917,076 acres, which would be equivalent to Delaware and the three lower counties of New Jersey; 280 own 5,425,764 acres, which is a tract considerably larger than the whole State of New Jersey; 874 own 9,267,031 acres, at which rate 1,000 persons would own a full third of New York State. A body of men which does not exceed 4,500 owns more than one-half of all England and Wales. In Scotland the situation is still worse. The area of that country is 18,946,694 acres, which is a little more than that of Rhode Island, Massachusetts, New Hampshire, and Vermont together. One man owns 1,326,000 acres, which is as though a single individual owned a tract as large as Rhode Island and all of Massachusetts from Fall River to the end of Cape Cod; two others own 431,000 and 424,000 acres respectively, or between them more than enough to make another Rhode Island; 24 men own 4,931,884 acres, which falls but little short of the area of Massachusetts; 12 persons own nearly one-quarter of Scotland; 70 persons own about one-half of it, and nine-tenths of the whole coun-

try belongs to fewer than 1,700 persons. Ireland contains 20,159,678 acres, which makes it not quite the size of Maine; one person owns 170,119 acres; 292 hold about one-third of the island; 744 hold about one-half of all the land. Two-thirds of England and Wales are held by only 10,207 persons; two-thirds of Ireland by 1,942, and two-thirds of Scotland by but 330.

Moreover, there is a steady tendency toward the aggregation of more land in the hands of this small body of people. Of the one-third of the land still left in the charge of the general public a large part will, at the termination of the leaseholds for the present remainders of the original terms for ninety-nine years and upward, revert to these great owners, with all the improvements made upon them by the expenditure of the leaseholders. Mr. Froude, although defending the present system of land laws, has admitted that two-thirds of the whole area of Great Britain really belongs to great peers and commoners, and that "their estates are continually devouring the small estates adjoining them." Lord Derby, one of the largest land-owners in the kingdom, and so naturally inclined to put the best face upon the situation, was forced to admit years ago that "it was true that the class of peasant proprietors formerly to be found in the rural districts was tending to disappear." In Scotland great tracts of country have been depopulated in order to create deer forests for the amusement of wealthy followers of the chase. A careful authority estimates that much more than 2,000,000 acres—that is to say, a region as large as two Long Islands would make—have been cleared of the sheep which they used to support by hundreds of thousands, and of the thousands of families which sheep-raising formerly maintained, merely in order to secure better deer preserves.

Mr. Kay showed very clearly how the laws of primogeniture and entail, and the system of leases for terms reaching even to 999 years, strengthen this tendency toward making the owners of land fewer and fewer; how "the dead man's hand" keeps its grip upon an estate for generations; how the system of marriage settlements ties up a great part, if not the greatest part, of the land of Great Britain and Ireland for many years, and renders it incapable of being sold, or seized, or divided, however expedient such a process might be; how it becomes every year more and more hopeless for a peasant either to acquire land or even to rent a small farm; in short, how the whole drift of the vicious system is to render the possession of a little home an impossibility for the overwhelming majority of the population, and thus to lower the condition of the masses by removing that incentive to thrift which is always found in an ownership, however slight, of the soil of one's country.

All that Mr. Kay demanded was "free trade in land"—meaning by that term such changes in the laws as will prevent an owner from tying up his estate for long periods of time. Without interfering at all with present ownership, he would do away with the system of primogeniture, entail, marriage settlement, and all other devices which render land incapable of being sold, and trust to the divisions which would naturally occur, but for these obstacles, ultimately to right things. As Mr. John Bright put it in his preface to the volume, the author only "seeks to give that freedom to the soil which our laws have given to its produce, and which they give to personal property of every kind; he would so change our laws as to give to every present generation an absolute control over the soil, free from the paralyzing influences which afflict it now from the ignorance, the folly, the obstinacy, or the pride of the generations which have passed away."

MINISTERIAL "PUBLICITY."

THOSE of our readers who have been kind enough to follow our articles on the subject of the Cottager and the Summer Boarder have perhaps noticed the omission of any special reference to "Cottage City"—which, by the way, is not a city, but a town—a remarkable municipality, quite as exceptional and well worth studying as the republics of San Marino and Andorra, the principality of Monaco, or the empire of Hayti, or the kingdom of Corea. Like those *sui generis* communities, it must be seen to be appreciated; and we fear that our remarks, based on literary information and the accounts of travellers exclusively, will fail in due appreciation of its merits. It is situated on a bluff in Dukes County, Massachusetts, on an island generally known as Martha's Vineyard. This name was originally given by Bartholomew Gosnold to an adjacent islet, now called No Man's Land. It looks very much as if the second Martha's Vineyard would soon have to be No Man's Land also, as far as privacy is any element of individual ownership. The final cause of Cottage City appears to be not exactly "every man for his neighbor," which would be too much like old-fashioned Christianity, but "every man his own neighbor," which is an advance even on Harrisonian or Eliotic Altruism.

The Cottagers of whom our previous articles have spoken, have endeavored to perpetuate the pernicious and unreal notion, derived from the effete aristocracies of the Old World, that the proper enjoyment of vacation involves considerable privacy and retirement; that living in the presence and eye of the public is a disagreeable necessity of the working months. They have, indeed, not hesitated to maintain the perfectly obsolete doctrine that a reporter was not wanted during their summer sojourn. The inhabitants of Cottage City are a living protest against so un-American and unsocial a view. Their life may be described as a perpetual interview. They would not perhaps go so far as to say that every action of a man's life is suitable for a reporter to know, but such actions as are not so suited are equally unsuited to Cottage City. It may be truly said that with them nothing happens; it all transpires. Privacy is a part of the miscries of the ten working months.

There has been, in less progressive communities, a theory that an individual amuses himself in conjunction with his family and immediate friends. At Cottage City such an antediluvian doctrine is quite exploded. We have before us the newspaper report of a letter addressed to a Boston minister by the "general committee chosen to entertain the people at Cottage City during the season." This season ends, it seems, on Saturday, September 5th, "on which day we have our annual illumination, and we think it only proper to end up the festivities of the season with something substantial on the Lord's Day." Let no profane one suggest that this means a general roast-beef dinner. On the contrary, the earlier part of the letter shows that the Committee "are in quest of an able man to deliver a discourse on the Sabbath day, September 6." To this end, the Committee seem to have entirely passed over Mr. Beecher, Mr. Talmage, Dr. Newman, Dr. Robert Collyer, and all other divines of any Christian denomination familiarly known in the United States, and have addressed the Rev. W. W. Downs, pastor of the Bowdoin Square Church in Boston, asking for his "terms," and assuring him that they will "deem it an act of generosity on his part if the people of Cottage City can be favored with his presence on this occasion."

Now we hope, but without much assurance, that some of our readers are as ignorant of the existence of the Rev. W. W. Downs as they were three weeks ago, and will wonder why on earth he has been selected to "end up the festiviti s of the season with something substantial." The fact is that the Boston newspapers, and the Boston despatches and correspondence in other newspapers, have been largely occupied for the past two weeks with the progress of a controversy between Mr. Downs and a member of his parish, who charges him with improper relations with his wife, and, to prove his charges, broke into her room with a couple of friends at a time that Mr. Downs was there also. The case has not yet come into court. Meanwhile Mr. Downs firmly asserts his innocence in a cheerful and even playful manner, eminently proper if he is innocent, as we earnestly and sincerely hope he can prove he is. We are not of those who take any satisfaction in seeing the Christian religion disgraced in the person of its ministers. But to the stay-at-home population of Boston in the dull season the unsavory charge has been a real "find." The Bowdoin Square Church has been crowded by those who come not exactly to scoff nor yet to pray, but simply to look—to look at the man whose only distinction above other preachers, whose churches are either closed or one-quarter filled, is that he is accused of adultery, and that the accusation does not appear to disturb him. In short, Mr. Downs is the present sensation, and as such Cottage City wants him.

The committee to entertain the people, who have the best interests of Cottage City at heart, appeal to him to come, "knowing your publicity, ability, and future acquittal." If they know his future acquittal, they must be divinely-inspired prophets, and hence much better qualified to give their fellow-cottagers "something substantial" than any minister that has ever lived since Gosnold first descried their island. But his "publicity"! Not celebrity, nor yet notoriety; no, but something between the two. The fact that he is the man who, for a reason which is utterly disgraceful to somebody, whoever it may prove to be, is in the papers more than any other minister—this determines him to be the divine to give Cottage City something substantial. Who shall say our summer resorts are not religious?

A STUDY OF CHILDREN'S COLLECTIONS.

MISS SARA E. WILTSE, who has been for several years a systematic observer of childhood, has lately sent to the writer, along with a mass of other valuable but as yet undigested material, the answers of 227 Boston school-boys of fifteen and sixteen years of age to a short set of questions about their collections. Of this number only nineteen had never made collections they deemed worth reporting. One hundred and forty-four reported collections of two kinds of objects, ninety-five of three kinds, twenty-eight of four kinds, and a few of five and more kinds. Stamps were most frequently collected; then followed, in order of frequency, coins; marbles, sometimes to the number of several thousand; advertising or business cards; pictures; stones, ores, minerals, and sometimes even bits of brick and chalk; woods, leaves or flowers, insects, eggs, shells; scrap-books of all sorts (generally funny stories), imprints of the die of local post-offices, riddles, autographs; buttons, nut-galls, birds'-nests, smooth or colored stones, and even toadstools, peachstones, lists of names, tools, and many other things. Of the three most common collections, that of marbles nearly always comes first, and begins, on the average, very soon after the beginning of public-school life, and lasts from three to six years. The passion for stamps comes later, and coins later yet; the average interval between the latter, as well as their duration, cannot be inferred from the data. These collections have been made quite independently of school work, and, so far as can be inferred from the writing, spelling, and syntax of the written returns, the brightest boys have made most collections, and in each of these respects the nineteen boys who have no collections to report are below the average, though by no means always the worst.

Several observers have sent in returns from school-girls of equal age to similar questions, but as yet the returns are too few and too imperfect to have much statistical value. It appears, however, that the passion for collections is less strong in girls, and the objects most often collected are different. Little girls often collect bows from adults, keeping tally on bits of paper, and older girls collect flowers, cloth and paper patterns, bric-à-brac, keepsakes, etc., as well as in many cases making the same collections as the boys. It is evident that more data are wanted for both sexes before the effects of age, temperament, locality, conditions of life, sex, etc., can be determined, and it is to be hoped that teachers or superintendents who have superior facilities will address themselves to further studies of this important topic.

It seems already plain, however, that this instinct is a strong and almost universal force in human nature, which the school should study and use more than it does. It is one of the chief juvenile expressions of the instinct on which the induction and specialization of natural science rests. Museums of all sorts and sizes, literary collections, and even the gathering of the above data about this instinct rest on it. In fact, almost any and every interest may prompt collections, and be made the nucleus of scientific culture sometimes for the very boys who get least from the ordinary school. There might easily be in most country towns, if not in each school building, small working collections, made largely by the children themselves, illustrating local geology, woods, plants, birds, and animals, mounted or put up in the most educational way, and, with a few pictured books, made the basis of general or of class exercises. This, we believe, may at least be suggestive in solving the great question how more and better natural science may be taught in schools of the lower grades. Teachers of literature, also, even in lower grammar-school grades, have induced their pupils to gather from many sources, by scrap-books and otherwise, literary specimens which especially interested them, and thus, as it were, to make individual reading-books—their own in a sense which is of great educational significance.

But if data like the above show the force, they do not suggest the danger attending this passion, viz.: that it degenerates toward the blind mania for collecting objects (*Sammeltrieb*) seen in certain forms of mental disease, and even in some species of animals. Our returns show scores of boys who collect stamps or coins with very little of the knowledge of the geography and history needful to give a rational interest to their collections; who gather blindly and mechanically large numbers of eggs with no knowledge of the species, or merely the tails of birds or squirrels, with not only no knowledge of their characteristics or manner of mounting, but without even the most common hunter's knowledge of their habits. When we reflect how much might be taught incidentally by the rapid way of suggestion, if given while these interests were at their hottest, and put tactfully, perhaps in the form of directions for improving collections already begun, we can realize how considerable is the educational loss.

And yet correctives are not so easily made effective as would at first seem. Collections do not always imply the knowledge or even the high degree of mental curiosity they are wont to suggest. Museum values and scientific values are often divergent, and may be almost opposite. Much might be written of the cases in which undue haste to catalogue or to collect had robbed objects of scientific worth. How often, again, do we see in our laboratories even advanced students making and mounting histologic sections day after day, to get good collections of slides, in a thoughtless and mechanical way, or even in original research repeating observations and enlarging protocols without so carrying everything in mind that each product is subjected to the highest degree of scrutiny it is capable of as they go along, and thus lose time under the illusion that they are doing real scientific work. It is such hard work to think, and there are so many proxies and simulacra of thought that deceive even well-trained men—it is so much easier to get ready to think, as the miser hoards in order to get ready to live—that the way of true science is indeed straight and narrow.

All this, nevertheless, does not make us for a moment doubt that this is an educable instinct, and that it has head enough, wherever it is wisely turned on to school mechanism, to quicken especially all those elements of school work that are associated with Comenius, Locke, object-lessons, and science-teaching. It is not ready-made, purchased, but individual collections, with the sense of personal ownership on the part of those who made them in no wise relaxed, but used in a way to make the school-house interesting, because reflecting at the same time the local characteristics and local pride, that we need. How each of the above kinds of collections and others can best be utilized in or by the school, is a problem which only the experience of the practical teacher can solve; and when it and the other unfinished questions above suggested are determined, it will make, if we are not mistaken, a valuable as well as for the most part a new chapter in pedagogy. G. S. H.

TURGENEFF IN HIS LETTERS.

SHORTLY after the death of Turgeneff, the St. Petersburg Society for Aid to Authors and Scholars, of which he had been one of the founders and always the warmest supporter, determined to honor his memory by the establishment of a special fund bearing his name, the income only to be perpetually used in the charities of the society. As a contribution to this fund, there has been published what is called "A First Collection" of Turgeneff's letters. Although the editors state that they have used but a small part of the whole number remaining in the hands of his friends, there are about five hundred, dating from 1840 to 1883, the last within two months of his death. A few had already been printed in various reviews, but the most are copied from the original texts, which were lent by their present owners for this purpose. Their range is very wide—from the Tzesarevitch (afterward Alexander II.) to the humble people on his own estate; from his dearest friend to the total strangers who were always appealing to him for help. Mainly addressed to friends in Russia, there are few political comments. These will be found, if anywhere, in the papers bequeathed to Mme. Viardot, which are to be edited by his friend Annenkoff. Still, the letters are often frank enough to surprise those who suppose that the censorship survives in the rigor of the days of Nicholas. Some will hereafter always make part of the history of Russia; others are mere trifles, but not the least of them fails to throw its light upon Turgeneff's large and generous nature. Many letters deal with people and subjects (even literary) too intimately Russian to be understood here, but the comments upon his own work, or upon the few men whose names are familiar to our world, are full of interest.

After himself, Tolstoi is the author best known to English readers—the literary leader, now, in Russia. So early as 1854, Turgeneff wrote: "I am glad of the success of 'Youth.' God grant that Tolstoi may live. I firmly believe he will one day astonish us all. His talent is first-class. . . . When this young wine has worked, there will come a drink worthy of the gods." Two years later to Tolstoi himself he wrote: "If you do not turn from the right path (and there seems no reason to forebode that), you will go very far. I wish for you health, activity, and freedom—freedom of spirit." A little later he warns him against indifferentism: "At your age, only enthusiastic natures influenced me. Still, you are another man than I, and the times perhaps are other."

Their early friendship was sadly broken off by some incident which occurred while Tolstoi was visiting Turgeneff at Spassköe. The latter frequently alludes to it with deep regret, always blaming himself; but almost twenty years passed before the reconciliation. In 1878 Turgeneff replied to a letter from Tolstoi:

"Beloved Leo Nicolaevitch—Your letter greatly rejoiced and touched me. With the greatest pleasure I am ready to renew our former friendship, and I closely press your hand stretched out to me. You are perfectly right in not ascribing to me any unkindly feeling toward you. If there were any, it disappeared long, long ago, and there remained only the memory of yourself as of the man to whom I had been fondly attached, and of the writer whose first steps it was granted to me to welcome earlier than others, whose every new production woke in me the liveliest interest. I am heartily glad of the clearing up of the misunderstanding between us."

In 1878 he wrote to him:

"You have probably received from my friend Ralston, an English man of letters and a lover of our literature, a letter in which he asks you to give some biographical details of yourself. I hope you will not refuse him, as he is a fine and serious man, not at all the correspondent or the feuilletonist.

"You know your 'Cossacks' has appeared in an English translation, and, as I hear, with great success; and Ralston intends to write a long article on 'War and Peace.' 'The Cossacks' is already out in a French translation in the *Journal de Saint-Pétersbourg*, for which I am a little sorry, for I was preparing to translate the book myself with Mme. Viardot this autumn. . . .

It would be very pleasant to me to make known to the French public the best novel written in our language. . . . The English translation of 'The Cossacks' is trustworthy, but dry and 'matter-of-fact.'"

In the same letter: "I have been in England with a friend whose estate lies between Oxford and Cambridge. I visited both universities; most wonderfully contrived affairs these English educational institutions are! And how well they hate us!"

Under date of January, 1880:

"Most beloved L. N.—I copy for you with diplomatic exactness an extract from a letter of M. Flaubert to me. I sent him a translation of your 'War and Peace':

"'Merci de m'avoir fait lire le roman de Tolstoï. C'est de premier ordre! Quel peintre et quel psychologue! Les deux premiers volumes sont *sublimes*, mais le troisième dégringole affreusement. Il se repète! et il philosophise!! Enfin on voit le monsieur, l'auteur, et le Russe—tandis que jusque là on n'avait vu que la Nature et l'Humanité. Il me semble qu'il y a parfois des choses à la Shakespeare! Je poussais des cris d'admiration pendant cette lecture, et elle est longue! Oui, c'est fort! bien fort!'

"I think that, *en somme*, you will be satisfied."

Yet Turgeneff's love for the man never blinded his critical judgment. Of 'Anna Karenina' he wrote: "Tolstoi's talent is above comparison, but in this he, as they say here, *a fait fausse route*. It is the influence of Moscow, of slavophile nobility, of old orthodox maiden ladies, of personal isolation, and of the want of true artistic freedom. The second part is simply tedious and *trivial*. What a pity!"

The last letter of this collection, written in pencil and left without signature, is to Tolstoi. The date is June 28, 1883. Turgeneff died August 22:

"Beloved and dear Leo Nicolaevitch—it is long since I wrote to you, for I have been and am, rightly speaking, upon a death-bed. Recover I cannot, it is not to be thought of. I write now to you, especially, to say to you how glad I have been to be your contemporary, and in order to express to you my last fond wish. My friend, return to literary work!—for that is your vocation over and above all others. Ah, how happy I should be if I might think that my prayer could have any effect upon you!! I am myself a *finished* man—the doctors do not even know what to call the disease—*nevralgie stomacale gouteuse*.* Not to move, not to eat, not to sleep—but! It is a pity to repeat all that! My friend, the great writer of the Russian land, give heed to my prayer. Let me know if you receive this note, and permit me once more, closely, closely to embrace you, your wife, all yours. I can no more——. Tired out!"

Of other notices of contemporaries perhaps that of George Sand is most remarkable. It ranges from the enthusiasm of early youth to the personal lament fit her death:

"To my lot fell the good fortune of a personal acquaintance with George Sand—pray do not take this expression as the ordinary phrase; whoever saw closely that rare nature might well call himself fortunate. . . . We shall not see that kind face again, that heart of gold beats no more. The mourning for her will be deep and long, but I want that they should not fail to talk of her goodness. Rare as is such genius, such goodness is still rarer. One might learn a little of the goodness—genius, one cannot—and therefore it should be talked of, this goodness, be praised, be pointed out. This real living goodness attracted to George Sand, bound to her, the many friends who were unchangingly true to her to the end, and who came from all classes of society. . . . Believe me, George Sand is one of our saints."

There is room for but few of the comments on his own works. There is not a breath of complacency, or of consciousness even, that he was himself a great man; great not only in Russia, but in Europe—the world. He was the most modest of men: "Some merchants of Orel have offered me in an album 6,000 silver rubles! It is something inconceivable—preternatural! And what have I done for these merchants?"

"I do not wonder that Bazaroff [in 'Fathers and Sons'] is an enigma to many. I myself cannot well make out to myself how I wrote it. There was about it—please, do not smile—some fate, something stronger than the author himself, something independent of him. I only know no predetermined thought, no tendency, was in me then; I wrote unconsciously, even wondering myself at what came from me. . . . Do you not yourself feel that he is the most sympathetic of all my figures. But I am ready to admit that I had no right to give our reactionist crowd the chance to gather in a clique round a name. [He refers to *nihilist*, first used in that book.] The author in me should have made this sacrifice to the citizen—and therein I recognize as just the alienation of our youth from me, and all their reproaches. The question to come out of it was more important than artistic truth—and I ought to have known that beforehand."

To a lady in 1874:

"You say you look for Bazaroff in real life and you do not find him; I can at once tell you why. The times have changed; now Bazaroffs are not needed. For the present social work no special talents are needed, not even special intelligence—nothing finely elaborated or too individual. There is needed the love of hard work, patience; it is needful to be ready to sacrifice one's self without any show or any sound—needful to humble one's self and not be worn petty and lowly, and at the same time vital, work. I use the word 'vital' in the sense of simplest, truest. What can be, for example, more vital than to teach the peasant reading and writing, to help him on, to build hospitals, etc.? What is talent or even learning here? Only heart is needed, the capability of sacrificing one's own egoism—it is no use to talk even of a vocation. The feeling of duty, the noble sentiment of patriotism in the true sense of the word—that is all that is needed.

"How? You say that in Bazaroff I wished to present a caricature upon our youth. You repeat this (pardon the unceremoniousness of the expression) senseless reproach! Bazaroff, my beloved child, for whose sake I broke with Katkoff, on whom I lavished all the colors at my disposal; Bazaroff—the wise man—the hero—a caricature? Plainly—you yourself do not think so! . . . I cannot agree with your 'old woman'—be she the critics or the public—that even 'Toc-Toc' is nonsense. What is it then? you ask. This: a general study of Russian suicide, which rarely presents anything either poetic or pathetic, but is almost always the result of self-love in a narrow nature, with a mingling of mysticism or fatalism. The old woman also reproaches me with want of convictions. For this must serve as answer all my thirty years of literary activity. Not for one line written by me have I had to blush—not one to take back. Who else can say the same? For the rest, let the old woman babble on! I have never yet paid any attention to her. I shall not begin now!

"Dostoyevsky came to me five years ago at Baden, not to repay money he had received from me, but to fall upon me for 'Smoke,' which, in his opinion, deserved burning at the hands of the hangman. . . . His present talk would be downright slander—if Dostoyevsky were not insane, of which I have not the least doubt. But, my God, what petty wranglers!

"My tale ['Spring Floods'] may not please: it is a simply-told story of people about whom there is nothing of social or political or of contemporary interest. If I am not mistaken, so much the better . . . I read it to no one, and so far have heard no opinion; an author himself, you know, is a poor judge—especially in the first days. He sees not only that which he has done, but, further, that which he desired to do; and the public, perhaps, will see nothing.

"There is not the slighest doubt that if for 'Fathers and Sons' they lashed me with whips, for 'Virgin Soil' they will beat me with clubs, and from both sides. Still, if war comes they will not stop to talk. I think it all runs off from me like water from a goose. . . . Not one of my longer works was written so quickly, so easily (in three months), or with fewer erasures. The idea had been long turning in my head, I had several times thought of working it out, but at last I wrote the whole thing, as they say, from the shoulder. . . . I agree with you that the chapter about Thomushka and Thimushka is out of place—it was my caprice—I remembered such an old pair that I knew somewhere. . . . Whatever may be the final judgment upon 'Virgin Soil,' it is my last independent literary work; this determination of mine is irrevocable—my name will not appear again. I could have wished my last word to meet a more kindly reception, but that it is the last, of that you may as little doubt as—well, as of my friendship for yourself. There is no more to be said."

To another friend:

"I have firmly resolved to write no more, and to lay down the pen which has served me for more than thirty years. It is time for the retired list with the veterans.

"The story of Clara Militch, even to her relations with Aratoff, was conceived, so far as it is a type, in the time of my youth, and kept in memory."

To the statement that some of his sketches were originally written in French or German, he replied with some indignation: "*I have never in my life anywhere printed a single line not in the Russian language;* if I had, I should not be an artist, but simply a good-for-nothing! How is it possible to compose in a foreign tongue—to express in it the figures, the thoughts, etc., learned in one's own from birth?"

The son of a friend having received as a subject for examination at school "Turgeneff's Views of Art and Life," she asked in jest if he had anything to say on the subject. He replied:

"To turn off such a question with a refusal or a laugh would be easy and natural. Not less natural and right would it be to say, The Lord only knows. I do not know my own face. But as I do not wish to grieve your son (though, frankly, I cannot but wonder at the tasks set by the teachers of our lower schools!), I will say briefly that I am before all else a realist, and most of all I am interested in true living beings; to everything non-natural I am indifferent, nor do I believe in any absolute systems—I love, most of all, freedom. Everything human is dear to me; slavophilism alien, as well as everything *orthodox*.

"I know very well that my present stay abroad harms my literary work, so much that it may even put an end to it; but to change is impossible. Inasmuch as I, in my author's career, have never started from the *idea*, but always from the *object* (even for Potughine there was a real object as foundation), from the more and more obvious lack of *objects* my muse has not wherefrom to draw her pictures."

"The Living Relics," one of the 'Sketches of a Sportsman,' which cannot be read without tears, he called "an example of the long patience of the Russian character," little thinking that he himself would one day be remembered by his friends as a miracle of patient endurance under extreme suffering. So early as 1863, at the very height of his brilliant fame, it became evident that the disease which then began to show itself, however inexplicable it might be, was hopeless. To Polonski, the most intimate, the most personal of his friends, he wrote: "The dark cloud, which for every man hangs on the horizon, has spread round me its overshadowing arms. There is nothing to be done but to say nothing about it."

Bit by bit the active life in which his vigorous frame delighted was given up:

"In foreign journals there actually sometimes appear very flattering notices of me. An American review [*Atlantic Monthly*] has even brought me forward as a genius!! To say that this does not touch me would be untrue; but it would be just as false to declare that it greatly pleases me. All that is 'shadow of smoke.' For a few weeks of youth—the most foolish, impulsive, reckless, but youth—I would give not only my reputation, but the glory of being an actual genius, if I were one. What would you do then? you ask. I would be off with a gun for ten hours on the stretch, without stopping, after partridges. Ah! that would be worth while—and that for me now is not to be thought of."

Five years later:

"I copy for you a few lines from my journal: Midnight. I sit again at my table, but in my soul it is darker than the dark night. The grave, as it were, hastens to swallow me. Like a moment each day flies, empty, aimless, colorless. You but look around: again you throw yourself upon the bed. There is no duty in living, no joy in it; nothing more to do, nothing to expect, nothing even to desire."

* For fourteen years it had perplexed and baffled the most skilful physicians in Europe. An autopsy revealed caries of the spine.

Family troubles were added to the burden of illness, requiring the sacrifice of his beloved pictures, his carriage, and all the greater luxuries of life; but the only word is, "It is my duty," and the injunction to patience for himself and others recurs again and again. "Meanwhile I wish you courage and peace of mind and patience, which is so needful to every one—especially to us in Russia—most of all to the young. La patience doit être chez vous et chez moi à l'ordre du jour."

His annual visit to Russia was made with difficulty in 1881. The next summer he meant to spend at Spassköe, his family estate, but it was impossible. At his earnest entreaty his friends, the Polonskis, went thither without him. He wrote to them most minutely about the arrangements for their comfort and pleasure, and about the necessary changes on the estate. Though never so hopeless, the tone is cheery. "You are tired after your walk to the pond. To me that walk seems a feat of which only Hercules or Achilles, swift of foot, could be capable! . . . You can sleep when you like: I cannot close my eyes without morphine. . . . I can neither stand nor lie down. I sit here like the Prisoner of Chillon—and have not even the consolation of knowing that Byron will sing of me, and Zhukovski translate. (The second consolation is a poor one.)" And he signs himself "The old mollusk, named Iv. Turgenëff."

To Mme. Polonski he writes: "Send me some syringa blossoms from Spassköe." And again: "Greet lovingly for me the house, the garden, my young oak; greet the home of my birth, which I, truly, shall never, nevermore see again." One cry of irrepressible anguish breaks forth: "I long for Russia!! not only I long, but I am torn in pieces with my longing for Russia!"

The last year was one long agony, but his unselfish spirit never failed in its thoughtful, delicate kindness. To an editor in St. Petersburg he wrote:

"You will receive directly a manuscript, a very well-done translation of a story by Geize, 'Getheiltes Herz.' It is not at all needful that you should put it into your magazine if it does not suit you; but write me that you have read it and some time will publish it, and also that you are ready to send on the money. All this has been contrived by me for a Russian living here, who lies in the hospital not incurable, but dying—he cannot survive six weeks. It goes without saying, he has not a farthing, but he is proud (he is a fine fellow) and will not accept any help. So I have contrived this *pia fraus;* I shall give him the money as if received for the translation, but you, please, on your side, do not betray me, but consent to play your part in my small and sad comedy. Write that you give 200 francs. Fully relying on your good heart, I have contrived this as a means *in extremis*. The story may be printed somewhere yet, but the affair is not at all in that, but in the possibility of sending money to the dying man."

So tenderly could he care for another upon his own deathbed. The letter closes: "For myself, I am only not quite stricken out of life. . . . The disease in the opinion of medical experts is of the order *incurabiliun*, which I can confirm by my own experience, and to which I, further, am entirely reconciled. Only it tries me sorely that I, perhaps, shall never more see Russia."

The Spassköe peasants, once his serfs, sent him a letter full of loyal affection, to which he replied, after thanking them:

"The report has come to me that for some time past there is much less drinking among you. I am very glad, and I hope that in future you will abstain from it; for the peasants drunkenness is the worst misery. But I am sorry that, according to the same report, you send your children very little to school. Remember, in our time, a peasant who cannot read and write is like one blind or without arms. After the example of former years I give you a piece of standing wood in the place which Nicholas Alexandrovitch will choose and mark out for you. I trust that you will do no harm to my house, my garden, or any part of my estate; in this I rely upon yourselves.

"I send greetings to you all, Spassköe peasants, and I wish you every happiness. Your old master."

The final letter, that to Count Tolstoi, has been already quoted. The last to Polonski is dated some days earlier: "The suffering is constant, unendurable—in spite of the most magnificent weather. Hope is nought—the thirst for death ever increases. There is only left for me to beg you that you, on your side, will desire the realization of the longing of your unhappy friend. I embrace you all."

MAZZINI AND VICTOR EMMANUEL.

PARIS, August 12.

In a famous novel Disraeli has represented the Congregation of Jesus on one side and the Revolution on the other, as the two opposite poles, the two contrary motive powers, of the nineteenth century. In 'Lothair,' the hero, a generous, noble-hearted, impulsive, and somewhat stupid young man, is placed between these two opposing forces, and moves about like the needle during a tempest. It is so with the Catholic nations of Europe, and it has been especially so with Italy. It is not difficult to say what the Congregation of Jesus aims at: its object is clear and precise, if it is unattainable. It is more difficult to give an exact definition of what goes under the vague name of the "Revolution." What is the Revolution? Shall we represent it to our minds in the words of the great Catholic orator, Donoso Cortés, "moving about like the ancient furies, with her head crowned with serpents"? In one of the last little stories, just published, of Ivan Turgeneff we are made acquainted with one of those votaries of the Revolution who live in the faubourgs of Paris, who are always ready for a fight against any established government. The oldest among the men who fell during the Commune had made barricades in 1830, they had made barricades in 1848, they had fought in every insurrection; they considered themselves the soldiers of the "Revolution," and obeyed its call, without reasoning, without flinching. Few among them could have said what they were fighting for. They did not fight against monarchy alone; they rebelled under the Republic in 1849, and again in 1870. They are what Jules Vallès, one of their leaders, called "the party of hunger." They do not trust the middle classes any more than kings and emperors; they are rebels, and when they have made some coarse idol with their own hands they break it to pieces. They are a living protest against a social system which creates perpetual inequalities; they detest wealth as much as heredity; they are the victims of the old "sic vos non vobis." The Revolution is their god, their "Deus ignotus"—the terror of the bourgeoisie, of the privileged classes, the hope of all sufferers, the mysterious ally, the hidden and irresistible power before whom all must fall.

Such has not been, and such is not, the character of the Revolution in countries which have been struggling for national independence. In those countries the Revolution has had the most exalted allies. I have before me a little volume called 'A King and a Conspirator: Victor Emmanuel and Mazzini—their Secret Negotiations and their policy,' by Auguste Boullier. The author is a Conservative, but he cannot help standing by Victor Emmanuel, and admiring the energy, the audacity, the perseverance, the prudence, of the King who accomplished the great work of Italian unity, sometimes working with Napoleon III. and England, and sometimes with Garibaldi and Mazzini.

Mazzini lived in London, but he often made short visits to Lugano, to Milan, to Como. He had devoted adherents, and could defy the police of Austria. He directed all the movements of the Revolutionary party. After the death of Cavour, this party felt the necessity of action. Mazzini entered for the first time directly into communication with persons belonging to the *entourage* of Victor Emmanuel. M. Diamilla-Müller, an engineer who enjoyed the confidence of Mazzini, played the part of go-between. He was in relations with the advocate Pastore, who was charged with the private affairs of the King, and whom Mazzini calls "the little Talleyrand" in some letters published not long ago in Turin, in a volume entitled 'Politica segreta italiana.' In 1863 Serbia was in a state of great agitation, and Victor Emmanuel had some communication with Prince Michael. Mazzini wrote to Müller:

"In your conversations with the little Talleyrand, tell him that if Victor Emmanuel, instead of conspiring with Prince Michael, came to an understanding with the chiefs of the national Serbian party, he would have their support immediately; that, however, the King of a nation of twenty-two millions of men cannot decently pretend that the initiative should come from a country of two millions and a half; that Italy must begin, attack first; that the King certainly cannot take the initiative, and that nobody pretends that he should do so, but if he is sincere, he must let us act, and keep ready to follow. He will be authorized to do so by the initiative taken in Venetia and by the fermentation which will follow in all Italy. You must add that, having become incredulous by a long experience, I wish to make no stipulations with the Crown, but that the accord would arise from the mere fact that full liberty of action was left to us, and that no measures would be taken against our friends. As for the political question, nobody can think me so stupid as to wish to proclaim the republic at the foot of the Alps. If I had to formulate a *mot d'ordre*, as I will not bind myself for the future, I would give no other than 'Live Italian Unity!' But the King knows very well that the country, needing now the army, would add, 'Live Victor Emmanuel!' I should content myself by not joining in this last cry."

This is the programme which Mazzini had made for his party, and he never changed it. It is the most extraordinary mixture of prudence and of audacity; it is a treaty of alliance between the King and the Revolution. The Revolution gave the signal, tore the letter of all treaties, made insurrections; the King had then to step forward in the name of order, and to reëstablish peace in the interests of Italy. The critics have accused this policy of a double hypocrisy, as the Republicans, like Mazzini, seemed to work in reality for a dynasty, and the King, who always condemned the Revolutionary party officially, always used it in reality as an ally. The excuse of both parties must be found in the end, which was the deliverance of Italy; and when we now see Italy united, free, and happy, from the Alps to the Adriatic, from the valley of the Po to the Island of Sicily, we cannot feel much severity toward the men who were the instruments of this national resurrection. Mazzini did not exaggerate the importance of his own party, and did not try to diminish the importance of Piedmont. In a letter from London, written on November 15, 1863, he says:

"If those who wish to make war on Austria know me and believe in my honor, I declare that I do not consider as possible a definitive victory without the regular army and without the intervention of the Government; that I do not think, even if I could do so, of proclaiming the republic in the Venetian States; that, as we abstain, in conscience and in dignity, from speaking of our political programme, and content ourselves with the cry, 'War on Austria! help to our brothers!' we will accept the programme formulated by the Venetians themselves. The Venetians, who have need of the army and of Italy, as it is now constituted, will infallibly pronounce in favor of the monarchy. The King can rest easy. I am republican, but it would be, in my opinion, a crime to raise the political question in face of Austria, when Venetia is in question."

Mazzini, when he gave these assurances, answered also for Garibaldi: "Garibaldi is the soul of the expedition of volunteers. Nobody can doubt his adhesion to the declaration which I have made in this letter." He merely asks for general freedom of action. He asks also that Victor Emmanuel will not again tie himself to Napoleon III. in a new war against Austria: "We are absolutely opposed, we say frankly, to any intervention of France in our war, as well as to any intervention of Italy on the Rhine."

The letters of Mazzini were placed under the eyes of Victor Emmanuel by Count de Savoiroux, one of his officers. The King was patriotic, shrewd, and practical; he saw at once the importance of the concessions made by Mazzini, but he was afraid of Napoleon III. Mazzini had been accused of complicity in the assassination plot of Greco, and was condemned on March 30, 1864, by the Court of Assizes of the Seine. The King of Piedmont tried to gain time; he was not ready for an immediate war, he did not much believe in the distant alliance which was offered to him by Mazzini—of the Poles in Galicia, of the Hungarians, of the Serbians. Mazzini on February 17 asked for a war ministry, an immediate march on Venice, aided by a number of insurrections, even in Friuli. The King did not much believe in all these revolutionary movements; he felt that if he attacked Venice alone he would bring a new Novara on his country. He tried, however, to maintain Mazzini in his attitude and not to discourage him too much. He went so far as to give to M. Diamilla-Müller on February 28, 1864, a note, written in his own handwriting and thus conceived:

"Pastore transmitted my words inexactly. I never said that I had induced or concluded an understanding with the person [Mazzini], or that the person had with me. I only said that I had been lenient toward this person in various circumstances which she ignores, that I left her very quiet in Naples, while she in her writings had always shown herself ungrateful and unjust toward me. I said that it was inadmissible that the party of action should take the initiative in the events which are to be produced, and that if it tried it would be repressed by force.

"I say now that if this party renounces taking the initiative, I am disposed to come to an understanding, but always assuming for myself and my Government, as soon as there is a shadow of possibility, the glorious work of undertaking, with all the forces of the nation, the achievement of our country. I have the same impetus, the same desire, as the person in question. I judge things for myself, with a manly energy, not through the timid impressions of others. But the person ought to be persuaded that the circumstances are grave, that they must be judged with a calm spirit as well as with an ardent heart; that if I wish, if we all wish, to finish as soon as possible the great work of unification, woe to us if we show ourselves unequal to the task; and if, led away by an impetuous and unseasonable frenzy, we only plunge our country again into her old condition. The time is not yet come. Soon, I hope, God will aid our country."

This is certainly a remarkable declaration, and it does credit to the great heart of Victor Emmanuel. He was a King, and wished to increase his kingdom; but he was even more an Italian, and he wished that the new kingdom should be called Italy. The correspondence went on, and it must be read in its entirety. It is creditable to both parties—Mazzini always insisting that the initiative should be given to Garibaldi, to the men of action; the King wishing to use the men of action and their moral influence, but to keep them subordinate to a general policy, directed and inspired by himself and by his Government. Mazzini was sometimes angry: "The House of Savoy cannot renounce diplomatic intrigue." "If the King does not feel that we can act alone—that, in order to make war on Austria, we can make a concert with Hungary, with Poland, with Serbia—we shall never understand each other." Mazzini wished to treat for the Revolution—to have the Revolution, so to speak, recognized. The King could not do it—he preferred war to revolution; Mazzini preferred revolution to war. Events have justified the King. What has become of the allies which Mazzini offered to Victor Emmanuel? Austria has not fallen, as he prophesied, into dissolution; she is hand-in-hand with the most powerful empire of the Continent. Hungary is an essential part of the *Oesterreich*. Poland is an historical name. Serbia is ignored, and, let us hope, contented with her fate. Nothing permanent could have been accomplished if the programme of Mazzini had been followed to the letter, and if it had not been corrected by Victor Emmanuel.

Correspondence.

LIFE OF FREDERICK DENISON MAURICE.

To the Editor of The Nation:

Sir: Through the courtesy of Col. Maurice, I am allowed to explain a paragraph in his recent biography of his father. In vol. ii, chapter xi, we read:

"A short time before the breaking out of the Civil War in America, the State of Maryland, fired by the passionate pro-slavery spirit which the excitement connected with the approaching struggle engendered in some of the Southern States, passed a law the practical effect of which was to enslave the whole free black population of the State. It happened that at the moment a considerable portion of my father's property was invested in the State funds. He was so horrified at the iniquity of the decree that he immediately had the money sold out, thereby, as it turned out, on very unbusiness-like principles, saving the whole of it from absolute loss."

The interest with which this book is read will warrant a brief reference to Maryland history.

Two notable efforts were made in Maryland for legislation to restrict the liberty of the free blacks. In 1842, a slaveholders' convention, held at Annapolis, recommended new and more severe legislation; but the bill introduced in the Assembly called forth opposition from all parts of the State, and was defeated. In 1860, the Committee on Colored Population in the Assembly advised a new policy toward the free blacks. Of the many suggestions of this committee, one bill was passed, providing for a compulsory servitude of the free blacks of eleven counties—Baltimore City, which had a quarter of the free black population of the State, not being included. *But*, the act was first to be accepted by a majority of voters in these counties at the Presidential election of that year. The result was that in ten counties it was rejected, in most of them by overwhelming majorities, while in the eleventh county, though accepted, it was never enforced. A careful study shows that these attempts at unwonted severity on the free blacks were discouraged by the people of Maryland.

As to the financial history of Maryland, that State never repudiated its debt. About 1840, there was a large debt, owing to the system of internal improvements, and for a time the interest was not paid; but reform measures were taken, and by 1848 the State credit was well reëstablished. The crisis of the Civil War was also safely passed, the yearly reports of the Comptroller assuring the credit and resources of the State.

But, however much Mr. Maurice may have been misinformed, the value of the paragraph quoted remains the same, in showing how he regulated his monetary affairs "on what seemed to him," writes Col. Maurice, "great principles of right and wrong." So strong was his hatred of slavery in every form that he sold his Maryland securities, though, at the time, the credit of the State stood high and promised well. Besides, "there was something very characteristic of him," continues Col. Maurice, "in the satisfaction with which he recorded the worldly success of his act. . . . My father looked upon an act of what seemed to him iniquity as perpetrated by a State, as a warning from the highest heaven that evil must follow in its train." The story helps us to read "the intense earnestness and devoted character of the man"—though the free blacks of Maryland were in no way enslaved, nor was the credit of Maryland lost!

Very respectfully,

Jeffrey R. Brackett.

22 Cathedral St., Baltimore.

AN UNPUBLISHED LETTER OF ANDREW JACKSON'S.

To the Editor of The Nation:

Sir: I have just copied from the original manuscript now before me, by permission of its custodian, a letter from President Andrew Jackson to Governor Breathitt, of Kentucky. I am informed that this letter has never before been published, and, as it has an historical interest, and throws a ray of light upon the sentiments of gratitude of the author, as well as on his opinion of the Resolutions of 1798 and 1799, I take pleasure in availing myself of the privilege accorded me, of giving it to the public through your columns. In copying, I have aimed to preserve the writer's punctuation and abbreviations. The cane, I may add, as also the letter and proclamation, is in possession of Mr John Breathitt, a grandson of Governor Breathitt, who lives here.

Respectfully,

J. P. Strother.

Marshall, Mo., August 28, 1885.

Washington Jan'ry 18th 1833.

My Dr Sir. Our friend Genl. McColla being about to depart for Kentucky, I embrace the opportunity afforded to send you a hickory cane and a copy of my proclamation, which some of my fellow-citizens, because of their appreciation of its sentiments, and kind partiality for me, have had printed in gold letters, and I beg that you will accept them as a testimonial of my high regard & esteem.

I have received & read with pleasure your excellent message to the Legislature on the subject of proceedings of South Carolina. It is in fine contrast with that of the Governor of Virginia, and derives additional interest from the fact that Kentucky was the decided advocate of the resolutions of 98 & 99; the principles of which are now so grossly misrepresented by the *politicians* of the present day.

With great respect believe me

yr friend

Andrew Jackson.

Gov Breathitt, Kentucky.

OUR POSTAL SYSTEM NOT YET COMPLETE.

To the Editor of The Nation:

Sir: It is full time that our postal system should be amended in two points in which it is far in arrear of the English and of most of the Continental systems.

1. Postal Savings Banks. It is impossible to overestimate the importance of placing within the reach of every industrious man and woman the means of laying money by with absolute security. Nothing tends so much to make good citizens, to check dissolute habits, and to discourage socialism, as this facility. In its absence, the money that would have been deposited is either lightly spent or else hoarded. The hoarding of money removes it from circulation, and, worse still, is a constant incentive to robbery, sometimes accompanied by murder. It may be said that there are already excellent institutions for depositing savings. This is true, but there

are also many that are not reliable, and it should not be forgotten that the poor have not the information necessary to enable them to discriminate. It consequently follows that many will not use them, doubting all; others trust those that are not fit to be trusted, and lose their economics. A Government institution is instantly and wholly trusted, and it may be said with truth that a Government has few more important functions than that of giving to the thrifty poor an absolutely safe depository for their economies. It is much to be regretted that this provision should have been so long delayed.

2. Registration of Letters. The charge for registering letters should be reduced one-half—in fact, it should never have been over five cents—and much greater facilities should be given for registration. In England the charge is but five cents, and, if I am not mistaken, that charge carries a letter to any country of the Postal Union, unless possibly the United States, which has always been behindhand in postal reform. Even in Spain letters can be registered for the United States for five cents, whereas here we pay ten even for the shortest distances. Then, in the large cities, the places at which letters can be registered should be greatly more numerous. In London there are probably a hundred offices where registration can be effected: an enormous convenience compared with our system.

In these two matters, therefore, savings banks and registration, we are not only not in advance, but greatly behind many other countries. The need for postal savings banks is especially urgent, and Congress at its next session should not fail to provide for their creation. M. C. L.

LEOPARDI AND PLOTINUS.

To the Editor of The Nation:

Sir: In a paper on Giacomo Leopardi in the September *Atlantic*, by Mr. W. D. Howells, is the following paragraph: "At the age of sixteen he [Leopardi] presented his father a Latin translation and comment on Plotinus, of which Sainte-Beuve said that 'one who had studied Plotinus his whole life could find something useful in this work of a boy.'" Mr. Howells will doubtless oblige others besides myself, if he will kindly give his authority for this statement. I think that an investigation will show that Leopardi translated and commented on Porphyry's 'Life of Plotinus.' This is very different from writing a commentary on Plotinus himself. It is almost unnecessary to add that Sainte-Beuve's judgment on Plotinian matters is of little or no value; and that Leopardi at the age of sixteen could not have apprehended but superficially the singularly profound philosophy of Plotinus.

Thos. M. Johnson.

Osceola, Mo., August 22, 1885.

PSYCHICAL RESEARCH.

To the Editor of The Nation:

Sir: About two weeks ago, in speculating on the evanescence of newspaper notoriety, the thought suddenly occurred to me, Would a certain Frau Obrist, an attempt on whose life created an extraordinary sensation in Vienna (my native city) twenty years ago, receive even a passing newspaper notice to-day in case of her death? I cannot now remember why she presented herself to me as a proper example in this connection, but I am quite confident that I had not seen her name mentioned in the Vienna newspapers, of which I am a pretty constant reader, in many years. The event itself, however, most likely had been recalled on several occasions by crimes similar to that of which Frau Obrist nearly became the victim. To-day, on looking over the *Neue Freie Presse* of August 12th, I read the following notice:

"Frau Obrist, the jeweller's widow, an attempt on whose life in her shop in the *Freihaus* created such a sensation in 1865, died to-day in her summer home at Baden, near Vienna."

Now, I venture to communicate this coincidence not because I consider it at all a remarkable one (I have experienced others of a more striking nature), but because I cannot help thinking how much superstitious persons might be inclined to make of it, and because I have at least one friend—who very recently became a member of the London Society for Psychical Research—who, I am confident, would consider my case a fit subject of research and comment. May I not conclude that much time and thought are wasted on the investigation of similar "phenomena," whose supernatural character lies simply in the imagination of their narrator? G. P.

New York, August 24, 1885.

THE COAST SURVEY INVESTIGATION.

To the Editor of The Nation:

Sir: Allow me to call your attention to a grave mistake in your editorial of August 20th, on "Political Scientists."

The recent investigation of the Coast and Geodetic Survey, it is true, was so far secret that the public was excluded, but those accused were confronted with the evidence taken in support of the charges. Instead of its being true that the examination "avowedly does not rest on sworn evidence," the fact is that the testimony of every witness was reduced to writing in the form of a deposition, subscribed by him and sworn to before the Chairman of the Commission, who is by statute authorized to administer oaths in the prosecution of an investigation which he is detailed to assist in making. With three exceptions—due to their absence—every person criticised in the report, either by name or in the recapitulation of proven facts, was called before the Commission, advised of apparently compromising evidence, invited to make his statement, and also examined under oath precisely as the other witnesses were.

The inference that a scientific bureau of the Government would attain to a higher standard of honor and efficiency under military or naval than under civil control, seems hardly justified by the results of several recent investigations of somewhat prominent officials of the War and Navy Departments.

Your criticism of the "political scientist" is timely, pertinent, and unanswerable, and I concur so heartily with it that I did not wish the one lapsus to stand uncorrected.

Very respectfully, E. J. S.

Washington City, August 25, 1885.

GEORG CURTIUS.

To the Editor of The Nation:

Sir: The death of this eminent philologist brings sorrow to not a few cis-Atlantic scholars who have enjoyed his instruction and personal acquaintance. It was my good fortune to be a member of his classes when he was at the height of his power, and occasionally to enjoy the *gemüthlich* society of his home.

Curtius had nothing of the traditional German professor, who is more or less out at heel and elbow, eschews the society of his fellows, and berates his rivals in sonorous Latin. The *cleanest* lecturer in Germany," was the unanimous verdict of foreign students. And this was true in a double sense. He excelled in the care and skill with which he presented his subject-matter. It was said that few, if any, German professors bestowed so much effort upon the preparation of their lectures. There was a crystalline clearness in his presentation that had a peculiar charm. His enunciation was remarkably distinct. It was a common remark among the foreign students that if one wished simply to learn to speak and to understand the German tongue, there was no practice so helpful as to attend the lectures of Curtius. He was the prince of lecturers.

Without detracting from his merits as a scholar and investigator, it will not be disputed that Curtius was above all a *teacher*. Facts and theories possessed for him their chief value not so much intrinsically as practically—to the extent that they seemed available to fit into a system or were easy to be handled. I do not mean to assert that Curtius essentially lacked the true scientific spirit, though he may not always have resisted the common temptation to make the facts square with the theory. But his theory was not likely to be fanciful and over-ingenious. His sober sense never deserted him in his speculations. He was at one time conservative, at another radical; but his conservatism was not blind, and his departures from the beaten paths were the result of candid investigation. Few scholars knew so well how to make the right use of the results attained by the study and research of others.

But it is not my purpose to characterize the work of Curtius for the science of philology, nor to discuss the points at issue between him and *die jungen Grammatiker*. So much, at least, may be said in general—that Curtius never lost sight of the aim of his academic life, which, in his inaugural address delivered in 1862 on assuming his professorship in the University of Leipzig, he expressed to be "the endeavor to place classical philology in living correlation with general philological research." The services of Curtius in applying the results of comparative philology to the teaching of Greek and Latin grammar must always receive recognition.

The personality of Curtius was so attractive to young men that, had the special bent and direction of his scholarship and teaching not made him the head of a school, he would still have been the chief of a guild of scholars. So far as my observation goes, few of the German professors were so ready to aid their pupils privately. His urbanity and kindness, manifest even in the lecture-room, were patent in all his personal intercourse with his pupils. The discussions of the *grammatische Gesellschaft*—often sharp and warm—could never wax bitter under his genial direction. On one occasion the Herr Professor rebuked a too zealous disputant with the remark: "No one can hope to be a philologist who cannot learn to control his temper." Unlike many of his countrymen, Professor Curtius was always ready to recognize the merits of scholars of other countries. He had an especially warm regard for some of our American philologists, and was always glad to welcome students from this country to his lecture-room and to his home. A manly scholar, with no petty jealousies to nurse; a self-contained man, yet without vanity; an inspiring teacher and wise counsellor—no pupil of Curtius, however much he may learn to doubt the soundness of his principles of etymology, or drift away from the moorings to which he anchored, will ever forget the evident sincerity, the generous candor, the urbanity, that characterized the man who for more than twenty years was one of the chief attractions of the University of Leipzig, and *facile princeps* of the German lecturers on philology. M. L. D'O.

Ann Arbor, August 24, 1885.

THE *PALL MALL GAZETTE* AND THE "REVELATIONS."

To the Editor of The Nation:

Sir: Will you permit one of your English readers, who has observed with the greatest pleasure the attitude which you, in your editorial capacity,

have taken with regard to the so-called "revelations" recently published by the *Pall Mall Gazette*, to offer a few criticisms on the letter dated London and signed "Y.," which appeared in your issue of the 30th of July? I ask this favor because it appears to me that "Y." claims to represent opinions generally prevalent among the more cultivated part of the English public, and, in my opinion, misrepresents them so seriously as to make it desirable that the American public should understand that there is another side to the question.

"Y." says, in effect, that "the first impulse was one of condemnation," but that when sufficient time had elapsed for cool reflection, "a sensible change of view took place," and it came to be, if not the prevalent, at least a very general opinion, that the proprietor and editor of the *Pall Mall Gazette* had acted a righteous and courageous part, and that the consequences of their publication were likely to be more beneficial than pernicious.

My view—which I believe, for reasons some of which I propose to state, to be far more general than that described by "Y."—is that reflection and events subsequent to the original publication have only served to develop the "impulse of condemnation" mentioned by "Y." into a matured conviction, on the part of the bulk of the public, that the publication in question was the most abominable outrage against decency and morality which the civilized world has ever seen, and was prompted by either wicked or foolish motives.

Let me first take the question of the Criminal Law Amendment Act. "Y." attributes its passing to the publications by the *Pall Mall Gazette*. I believe that it would have been passed in the same form if those publications had never taken place. It had three times, in slightly different shapes, passed the House of Lords, which is a Conservative body. It had undergone a good deal of criticism, and was a bill in which many people took a good deal of interest. It was just that kind of bill calculated to deter criminals from the commission of distinctively immoral acts, and to improve the moral condition of the people, to which the Conservative party has always been specially addicted. It has always been their boast that, in such matters as the housing of the poor and the domestic welfare of the people, they have been peculiarly active. In particular, Sir Richard Cross, the present Home Secretary, has throughout his public career paid much attention to questions of this nature. It was not a long or a very contentious bill. In fact, it seems to me reasonable to conclude that if there was any bill which the Conservatives in any case would have done their best to pass into law during the late session, it was the very bill which is said to have been passed only because of the excitement created by the publications of the *Pall Mall Gazette*.

But I am quite willing to grant, for the sake of argument, that in this contention I am wrong, and that "Y.'s" estimate of the effect of the publications is correct. Assuming that it was so, did the publications do more good than harm? The Act is really of merely secondary importance. It contains no new or drastic provisions, and consists merely of amendments in detail of the existing law. It is exactly described by its name. The only provision of any real importance in it is the section which provides that in prosecutions for rape or indecent assault the consent of the girl shall not be a defence if she is under sixteen, whereas, before, the age was thirteen. I do not myself believe that there will be many prosecutions for such offences against girls under sixteen. If the girl happens to be virtually an adult woman, as a considerable number of girls under sixteen are, juries will simply refuse to convict; and if they did convict, judges would inflict nominal sentences. But I am willing to grant all the importance that can be justly claimed for the Act. What are the best results that can ensue from it in comparison with the injury done to thousands upon thousands of adolescent men and women, whose minds have been poisoned, and their morals corrupted, by reading of filthy acts which the most ingenious imagination could hardly have conceived for itself? Every man of the world knows that filthy talk or printed matter excites filthy emotions wherever there is the least disposition to them. And we have now a frightful example of this truth. Since the publications of the *Pall Mall Gazette*, the charges in the police courts for crimes committed against children—the vilest and most hateful crimes with which lawyers ever have to deal—have increased twentyfold. I say this advisedly, for it so happens that I have had means of testing the truth of the assertion. It is not simply that the conscience of the police has been awakened. They have always, to my knowledge, been ready enough to prosecute these abominable offences, which have invariably excited the keenest indignation in the limited circle in which they were known. Such offences form part of the regularly recurring crime of the country, as every one concerned with the administration of criminal justice knows perfectly well. But just at this moment they form a far larger part of it than they ever did before. This is the direct consequence of the action of the owner and editor of the *Pall Mall Gazette*, and, in my belief, the only substantial result that that action will ever have.

Every one whose business it was to know, knew before the publication was made everything that was true in what it told them. For the rest it was a terrible misfortune to know it. The sort of people who go to meetings and make a disturbance, can no more put down secret and infamous crime than they could build a house. For either purpose organization and experience are required. These are provided by the regular police force of the country, which could have dealt unaided with the crime of the country all the better if the *Pall Mall Gazette* had refrained from increasing its bulk.

These are some of the opinions which I hold in this matter, and I maintain that they represent a far larger body of public opinion in England than those to which "Y." has given expression. In such a question it is impossible to lay anything like complete proof before your American readers, but there are some indisputable considerations which support my assertion. The principal one is the conduct of the other English newspapers. "Y." observes that the rest of the English press "absolutely ignored" the publications in the *Pall Mall Gazette* for a long time after they were made, and it is usual with the small but noisy section of the public who are still keeping up an agitation in the matter, though with what professed object I cannot understand, to complain of a "conspiracy of silence" whereby reports of their meetings are not published, and they and their proceedings are treated as if they did not exist. It has, of course, been suggested that this reticence or silence of the whole respectable press of London, and in a lesser degree in the provinces, is due to jealousy of a successful fellow-journalist. To any one who has any practical acquaintance with the way in which English newspapers are managed, this suggestion appears simply ludicrous. When a newspaper takes some departure which excites the interest or meets with the approval of the public at large, the movement is taken up readily enough by its contemporaries. An instance of this was what was known as the Bulgarian atrocities in the autumn of 1877. The story was first told by the *Daily News*, but the agitation which followed was reflected in the columns of every newspaper in England. The fact is, that editors are not more jealous of each other than rivals or contemporaries in professions or in trade generally are. Neither do they endeavor to mould public morals or public opinion except in the most indirect way. They are before everything else men of business. It is their business to know what their customers will like to read and to give it to them. They have for the most part acquired very great skill in this sort of divination. It is perfectly certain that if any London editor had thought that his readers would have liked him to plunge into the foul discussions initiated in the *Pall Mall Gazette*, and that by doing so he would increase the sale or reputation of his paper, he would have done so. The fact that not one of them did is the strongest possible evidence—to my mind it is conclusive proof—that the real opinion of the English public is the opinion which I have expressed in this letter.

If a further proof of the public taste is required, I should advise any one who can get trustworthy information to ascertain what was the circulation of the *Pall Mall Gazette* before the publications in question, and what is its circulation now. He will then discover that though there are, no doubt, a large number of people, including the two Archbishops and several clergymen, and capable of holding meetings and making a considerable disturbance, who hold the views of "Y." about the *Pall Mall Gazette's* venture, yet that venture has greatly displeased a large proportion even of those who might naturally have been expected to sympathize with it—I mean the people who, up till the "revelations" began, had gone on reading the *Pall Mall Gazette*. In a very big country it is easy for a very small minority to pose as the representatives of the people, because the majority has no collective existence, and cannot give authority to any one to speak on its behalf.

"Y." does not discuss, in the letter to which I am referring, the questions whether the statements made in the *Pall Mall Gazette* were true. I will therefore content myself with observing under this head that one of the most detailed and the most shocking cases described has been investigated; that suspicions arose that a child had been abducted for the purpose of concocting the story in question; that the Home Secretary has given instructions to the Attorney-General to take the matter into his consideration; that the most prominent members of the "Salvation Army" admit that the child is in their custody and has been removed to a foreign country, and have offered no explanation of circumstances within their knowledge, of which the gravely suspicious nature has been openly and repeatedly pointed out in the press; and that it is an open secret that the editor of the *Pall Mall Gazette* is intimately connected with, if not an "officer" in, the "Salvation Army." If the true history of the "boom" in indecency ever comes to be written, it will probably be found that it is in the "Salvation Army" that the motive force should be looked for.—I am, sir,

Your obedient servant, H. S.

The Temple, London, August 15, 1885.

To the Editor of The Nation:

Sir: As one of your London correspondents has given you a sketch of what a small section in London thinks of the painful efforts of the *Pall Mall Gazette* to create an epidemic of indecency in this country, perhaps you will pardon one who has been for many years a reader of the *Nation* if he sets down a few facts with regard to the "revelations," which both we and you have heard too much of, as seen by a resident in a large English provincial town.

My first impression was that the "revelations" might do some good by arousing public attention, but I have been forced to the conviction that the enormous, unchecked, and indiscriminate circulation of the "revelations" is calculated to work infinite harm. I know most of the large towns in the English midland counties, and during the last month I have been pained to see and hear boys and girls shouting out the "revelations" for sale, with such additions to the original title as their fancy might suggest—some of these additions, as you may easily imagine, not being particularly decent additions either. I have been more pained to see boys and girls buying these "revelations," and, knowing what the "revelations" contain, I cannot believe that literature of that kind placed in young hands can do good.

I live on a quiet street, not far from the Great Market Place. Going home a few evenings ago, I overtook two young girls walking slowly, giggling, reading the "revelations," and apparently not so much appalled by them as some persons would wish me to believe.

Apart from the unprecedented sale and circulation in the streets, I regret to say that there has been a large circulation through the post. More than a dozen persons, three of them clergymen of the Established Church, have told me that they have received copies of the "revelations" by post. One person, a gentleman with a family of nine children, four of them girls between fourteen and nineteen years of age, was horrified, on coming down to breakfast one morning a few weeks ago, to find a copy of the "revelations" on the breakfast-table. It had been sent to him through the post by some well-meaning, but, as I think, misguided person. My friend said that it was by the merest accident he chanced to be at home on that particular morning. Had he been absent, as he might have been, his innocent and pure-minded daughters would have opened the newspaper and been brought face-to-face with the horrible filth it contains. Were I not likely to weary you by telling over again a nauseous tale, I could give you other instances, coming under my own observation, of the culpable and indecent recklessness, to call it by no harsher name, with which, in the supposed interests of virtue, the beastly rubbish has been circulated.

My present conviction is that a reaction is setting in against the "revelations"; that the conduct of the Archbishop of Canterbury in having anything to do with them has been almost unanimously condemned; that the plain common sense of the country has come to the conclusion that although a small—very small—section of infamous men and women have been guilty of crimes for which no punishment could be too severe, still the moral tone of the English people is far sounder than the detractors of the English name would care to own.

As you do not know me, it may be useful to add that I am a married man of twenty years' standing, and that I have boys and girls of my own whom I wish to keep, if possible, untainted by the flood of filth which threatens to overwhelm us.—Yours faithfully, AN ENGLISH FATHER.

NOTTINGHAM, ENGLAND, August 19, 1885.

THE WHITE CROSS SOCIETY.

TO THE EDITOR OF THE NATION:

SIR: There is no doubt that truth looks a great deal more true in print than in manuscript; and will you not allow a thoughtful well-wisher to the human race to protest in your columns against some of the publications of the "White Cross Society," which, though put forth with good enough motives, seem to the experienced mind primarily adapted to the working of mischief not contemplated by the women whom duty or profit induces to write them?

Next, perhaps, to literature which makes game of his personality, the devil can rejoice in nothing so much as in pamphlets for general distribution which convey a delicate *nuance* of suggestion to the educated and sensitive youth of our century. We may all deprecate, if we choose, the calling a spade a spade, but let none of us who know better countenance the ignorant virtue that maintains an evident spade to be no spade at all.—Yours respectfully,

A SUBSCRIBER.

August 25.

Notes.

GEORGE J. COOMBES, No. 5 East Seventeenth Street, will shortly publish 'Vanity and Insanity of Men of Genius, from Pindar to Dickens,' by Miss Kate Sanborn; and 'That Very Mab,' a satire on English society, to which Mr. Andrew Lang furnishes an introduction.

Thomas Whittaker issues this month 'Pastime Papers,' being essays by Frederick Saunders, author of 'Salad for the Solitary.'

'What the Temperance Century has Made Certain,' by Rev. Wilbur F. Crafts, is in the press of Funk & Wagnalls.

'Due South; or, Cuba, Past and Present,' by M. M. Ballou, is announced by Houghton, Mifflin & Co.

D. Appleton & Co. will publish during the present season Admiral Porter's 'Anecdotes and Incidents of the Civil War.'

Of the two London translations of the 'Memoirs of Karoline Bauer,' Roberts Bros. have followed the one in two volumes octavo, compressing it into a single volume, certainly not very elegant. They guarantee it as an exact reprint, and in any case offer an abundance of entertaining reading, much of it (of good quality) about the stage, and of course a great deal about the future King of Belgium and Baron Stockmar.

Incongruous typographically is the volume just issued by Messrs. Harper containing George Eliot's Poems in a very small letter, and the two short stories of "Brother Jacob" and "The Lifted Veil" in a disproportionately large one—certainly reversing the perspective in which the authoress wished either her poetry or these particular tales to be viewed.

The self-styled New York Shakespeare Society has published two papers—one, "Venus and Adonis: a Study in Warwickshire Dialect," by Appleton Morgan, apparently intended to question the authorship of this poem as well as of the plays we call Shakspere's; and "Ecclesiastical Law in 'Hamlet': The Burial of *Ophelia*," by R. S. Guernsey, which is a perhaps more covert contribution to the Baconian theory. Brentano is the publisher.

A large and important class of trained men is now provided with an annual directory in the 'American Engineering Register,' edited by Lewis M. Haupt, C. E. (Philadelphia). Tables and formulæ, with lists of railroads, of technical schools, and of engineering societies, increase the utility of this book.

In remarking on the frequency with which American books were reprinted and American authors pirated in England, the *Saturday Review* recently cited "the announcement of an oddly named 'Britannia Series of Cheap Popular Books,' of which the first eight numbers were all stolen from American authors—and as yet the series only extends to the eighth number." This is far from being the only English series which the American author furnishes forth. In the *Athenæum* there appeared not long ago the advertisement of a certain "Rose Library—Popular Literature of all Countries," and a catalogue was given of its twenty-nine numbers, twenty-seven of them being from the pens of American authors.

Science of August 28 borrows, of the Messrs. Harper, Stanley's map of the Congo to accompany a review of his latest book on that region. It also furnishes a new "composite photograph," derived from seventeen officers of the American Association for the Advancement of Science for 1884. This abstraction is an amiable and inquisitive gentleman, full-bearded and almost bald. A college class of young ladies, we believe, has set the good example of making the "type" of the class, as obtained by Galton's process, a souvenir.

In the September number of her *Magazine of American History* Mrs. Lamb enumerates the historic associations which cluster about Claremont and Riverside Park, the burial-place of General Grant. Washington's headquarters were near by, during the Revolution, and he often visited the site of the tomb for purposes of military observation. The drive, too, along the river was a favorite with him.

The fourth volume of Quantin's handsome *édition définitive* of Flaubert's complete works is just issued. It contains the first volume of 'L'Éducation Sentimentale,' the only work of this author which justifies classing him as of the school of Balzac. Of his earlier writing every page has unmistakable individuality and originality. That many pages of 'L'Éducation Sentimentale' should be "after" Balzac, is a curious freak of arrested development.

We have already described at some length the scheme of the authoritative but popular abridgment, 'Allgemeine Weltgeschichte,' edited by Flathe, Hertzberg, Justi, Pflugk-Harttung, and Philippson (Berlin: Grote; New York: Westermann). Parts 10-22, just received, conclude the first volume of Justi's ancient history of the Oriental nations, and the second of Hertzberg's history of ancient Greece. The notes, which are grouped together at the end, refer to books and periodicals as late as the close of 1883. The illustrations are profuse and of a high order, very many being from photographs, and some being colored.

Westermann & Co. also send us two more parts of Droysen's 'Allgemeiner Historischer Handatlas' (Leipzig: Velhagen & Klasing), which forms an admirable companion to the foregoing work, while having a text of its own. The maps are beautifully engraved and colored. A single sheet, No. 81, illustrates the entire Eastern Question, in six maps, ending in one of Plevna. Similarly, No. 84 shows the territorial growth of the United States in five maps, ending in one of the seat of war about Richmond. Curious on No. 1 is a reduced copy of half of an itinerary map painted in the thirteenth century from some old original, and now preserved in the Vienna Hofbibliothek. It is a sort of bird's-eye view of Italy, France, and the north coast of Africa, very much distorted.

The last annual report of the Geographical Society of Metz has an interesting paper on the movement of population in that city. According to it, the majority of marriages there within the last few years have been entered into by German immigrants, including the garrison. Mixed marriages between Germans and Alsace-Lorrainers formed 13 per cent. of all the marriages in 1884. Instances of natives marrying German women are gradually increasing in number. On the other hand, marriages of the French among themselves have sunk from 23 per cent. of the total of marriages in 1882 to 18 per cent. in 1884, connections between Frenchmen and Lotharingian women especially becoming rarer. In 1884 the German element entered into almost three-fourths of all the marriages concluded. This

being the aspect of the social movement fifteen years after the conquest, the Germans naturally expect a speedy Germanization of the city.

Théophile Desdouits, Professor of Philosophy at the Lyceum of Versailles, has, in a work entitled 'La Légende tragique de Jordano Bruno,' made the attempt to save the honor of the Roman ecclesiastical tribunal to which Giordano was delivered up by the Republic of Venice, by denying the fact of his execution at the stake (February 17, 1600), and endeavoring to prove that he died a peaceable death at a Dominican convent. The generally accepted contemporary account of the philosopher's tragic end—the letter of Sciopius to Rittershusius—he rejects as a forgery. This whitewashing enterprise is treated with scorn by Moritz Carriere, in a communication to the Munich *Allgemeine Zeitung*. The German philosopher—one of the great authorities on Bruno as a thinker—points to the fact that documentary and other conclusive evidence of the execution, drawn partly from the protocols of the Roman Inquisition itself and partly from a manuscript diary preserved in the Vatican library, has been published by Domenico Berti, the Roman statesman and writer.

—Apropos of the impending race between the *Puritan* and the *Genesta*, a correspondent, who belongs, as he says, to the aquatic or finny tribe, writes us as follows, with some reserves as to the accuracy of details:

"When the *America* beat the British fleet, some of us more practical sailors and ship-owners tried to get something more than a play race out of it, and we challenged, in *Bell's Life in London* (copied into the American papers of that day—see Coffin's little history of the *America* and other racing yachts) the British ship-owners or builders to race a clipper ship of (I think) 1,000 tons, tea loaded, for a prize of £10,000, from China to Cowes. The challenge was made by a club formed for the purpose. I won't tell you how small it was, nor how little constitution or few by-laws it had. It was, I think, called the 'New England Ship-owners' Club,' and the challenge was signed by Daniel C. Bacon, President of the club. It was never accepted nor much noticed in England. They were too much demoralized by the *America's* victory to risk another defeat. We had all our plans laid to build a clipper ship to combine speed and commercial capacity, and to put Capt. Phil. Dumaresque, the prince of clipper captains, in command. Dumaresque afterward, in the California excitement, commanded the clipper ship *Surprise*, of 1,500 tons, built for him by Daniel C. Bacon and others, and, in a race with the famous clipper *Staghound* from Boston to San Francisco, beat her in the shortest passage ever made between the Atlantic and Pacific ports. The *Surprise* was built at Samuel Hall's shipyard, East Boston, and the *Staghound* by Donald McKay. Both ships were wonderful combinations of speed and carrying capacity, and their race was better worth recording than any little yacht race ever made, as they were full of cargo at about $40 per ton, and were kept at racing speed day and night for the ninety days or so which I think they took, or one of them did."

—The printer's error of changing dodo to dado in Mr. Crawford's article in the *Nineteenth Century*, which we chronicled a fortnight ago, is matched by the remark of a lady to a friend of ours, that she was having her hall repapered in the latest style, with a dodo running around the bottom. The error, moreover, was not a whit worse than Mr. Crawford's own mistake of alluding to the steinbok as an *extinct* animal. What feats this author is capable of in logic and in English style, we have already indicated; but his mathematical idiosyncrasies are still more deserving of wonder and admiration. 'Mr. Isaacs' contains the following passage:

"Consider the theories of Darwin, for instance. What are they but an elaborate application of the higher calculus? He differentiates men into protoplasms, and integrates protoplasms into monkeys, and shows the caudal appendage to be the independent variable, a small factor in man, a large factor in monkey."

The great learning of Ram Lal is evidenced by the fact that he knows all about "functional gamma." This is very much the same thing as if a person who was not very familiar with the word bedpost should speak of it by accident as a postal bed.

—The diplomatic and journalistic organs of Spain and Germany are patriotically taking opposite and very positive views on the question whether the former country does or does not legally possess the Caroline Islands, over a part of which the German flag is said to have been recently hoisted. It is, therefore, not uninteresting to see what undiplomatic and unbiassed geographers, statisticians, etc., have to say on the subject. Their views will be found reflected in the following extracts, which cover a period of publication embracing more than a quarter of a century. The fourth edition of 'Pierer's Universal-Lexikon' (vol. iii, 1857) mentions the discovery (properly rediscovery) and naming of the islands by a Spanish navigator in 1686, but contains no allusion to Spanish occupation or possession. Guibert's 'Dictionnaire Géographique et Statistique' (1863) says: "In 1686 the Spaniards . . . gave the archipelago the name it bears in honor of Charles II., and took possession of it, but limited themselves to the sending thither of missionaries." Keith Johnston's 'Dictionary of Geography' (1867): "The Carolines were discovered by the Spaniard Lopez de Villalobos, in 1543, and they were so named [later] in honor of Charles II. These islands nominally belong to Spain, and form part of the Government of the Philippines, but the Spaniards have no settlement upon any of them." Dr. Daniel's 'Handbuch der Geographie' (1870): "In recent times the Spaniards have laid claim to the Carolines." The 'American Cyclopædia' (1873): "Nominally they belong to Spain, . . . but they have no Spanish settlements." 'Ritter's Geographisch-Statistisches Lexikon' (1874) mentions the Spaniards only as discoverers. The 'Encyclopædia Britannica' (1876): "The Carolines were probably first visited by Alvaro de Saavedra in 1528." "By the Spaniards, who lay claim to the whole [archipelago], they are divided into the Western, the Central, and the Eastern Carolines." Kolb's 'Handbuch der Vergleichenden Statistik' (1879) enumerates some groups of the Carolines, comprising seventy-six square leagues, among the colonial possessions of Spain. 'Lippincott's Gazetteer of the World' (1880) says the archipelago is "claimed by Spain, but practically independent." Dr. Jung's 'Lexikon der Handelsgeographie' (1882), under "Mikronesien," gives the Carolines "politically" to Spain, but weakens the claim in our eyes by simultaneously assigning the Gilbert Isles to the United States. Brockhaus's 'Conversations-Lexikon' (1883) says the Spaniards do not hold the islands *de facto*, but claim a right to them. Brachelli's 'Die Staaten Europa's' (1884) and the 'Almanach de Gotha' for 1885 mention them among the colonies of Spain.

—Within the last three or four years we have received at least two French books in which the present state of the French laws in regard to theatres is fully set forth, and now we have a similar work from an English writer: 'The Law of Theatres and Music Halls,' by W. N. M. Geary, with an historical introduction by James Williams, B.C.L. (London: Stevens & Sons; New York: Scribner & Welford). Mr. Williams's historical introduction is of unusual interest. It traces the slowly improving legal status of the player from the beginning of the sixteenth century. Stage-right is not considered either in the introduction or in the text; but the censorship of the stage, never as severe in England as in France, is treated historically in the introduction and legally in the book itself. It is notable that two works of Fielding's—the political satire 'The Golden Rump' and the magisterial pamphlet called an 'Inquiry into the Causes of the Late Increase of Robbers'—should have been the exciting cause of two important acts of Parliament, both of which are embodied in the existing legislation of Great Britain after nearly a century and a half has elapsed. One act, it is true, was intended to curb the dramatist, while the other gave effect to the suggestion of the magistrate. In an appendix Mr. Geary gives the full text of the five British statutes governing the theatres, the regulations of the Metropolitan Board of Works, and a collection of varying local acts and regulations of the chief English cities. In the main, of course, the theatrical law of Great Britain is the theatrical law of the United States, but we should like to see a philosophic American text-book on the subject. In its historical portion it could not fail to be interesting. In his picturesque paper in the July *Century*, Dr. Edward Eggleston showed the hard struggles of the earliest American actors. A history of dramatic censorship in the United States would be useful, and it would not so nearly resemble the famous chapter on snakes in Iceland as many might think.

—M. Camille Sabatier makes in the *Revue d'Anthropologie* a curious synopsis of the ethnological changes of Northern Africa, in which he finds an alternation of periods of invasion and of consolidation. Our earliest information is of invasions from Asia, whose traces disappeared in the long period of rest during which Herodotus visited Egypt. With Marius and Cæsar begins the second period, by the Latin invasion from Europe. Asia replied with the Berber invasion, about the Christian era. Europe rejoined with the Vandals and an attempt of the Greeks. Asia's surrejoinder was the Arabic incursion, the most successful and extensive of all. This closes the second period of invasions, and the period of unification lasts till 1830. Then commences the third era of invasion, first of the French, then of the English, and soon, no doubt, of the Italians, all from Europe. It is now Asia's turn. The late Mahdi called in vain upon India; but the real danger is from the Chinese. "They have already invaded frozen Canada, they will not recoil before burning Ethiopia. They will find the great route through Bab-el-Mandeb and the southern Sahara open as it was to the Iberians before them. Then let England defend Egypt, and France Marocco. And let them call upon all their neighbors to assist. The coming century will see the United States of Europe, federated not from any philanthropic motive, but driven to it by terror of the Mongols. In the meantime, let France be on her guard, let her occupy and fortify the fatal route by which the South has always sent her hordes, the inevitable route of the invasions of the future, the Oued Messaoura. And let the rallying cry of the old European race be 'War to the Yellow Race. Let us unite!" The mild countrymen of Confucius have a marvellous power of disturbing nervous temperaments. It will be seen that M. Sabatier alters the cry of the California hoodlum. Instead of "The Chinese must go," he shouts "The Chinese must not come!" If there had been no war in Tonquin, he would not have shouted at all.

—The second part of the sixth annual volume (1884) of the *Jahresbericht über die Erscheinungen auf dem Gebiete der Germanischen Philologie* has just appeared, completing the volume. In addition to the sections heretofore included, one has been inserted on the sixteenth century, so that the work now presents a complete annual bibliography of all works, dissertations, periodical essays, and book-notices that appear in the department of Germanic philology to the sixteenth century inclusive. The present volume, with the registers of names and subjects, com-

prises 418 pages, of which the section appropriated to English covers 59 pages and 259 titles, embracing the following sub-sections: General Works, Lexicography, Phraseology, Etymology, Dialects, Scottish Text Society, History of Language and Grammar, Metre, History of Literature, Chrestomathies, Special Works: (a) Old English, (b) Middle English. This section is edited by Dr. J. Koch. In addition to the German journals, the *Academy*, the *Athenæum*, and the *American Journal of Philology* have been examined for essays and book-notices, so that the bibliography may claim to be the most complete published, and can be cordially recommended to students of Germanic philology in all of its subdivisions. To those who have not access to the German philological journals, it is very useful in giving a summary of what has been published, with a brief abstract of contents, and of the opinions of reviewers. The price, too, is moderate, being eight marks in the bookstores; but to members of the Society for Germanic Philology the volume is sent for six marks, postfree. The treasurer of the society is Karl Kinzel, Friedenau bei Berlin, to whom subscriptions should be sent. The volume aims to include all works that appear from one October to the next, and the manuscript of the present volume was closed May 12, 1885. The deficiency of such bibliographical works in English, few of which pretend to include the German philological works that are so abundantly produced every year, makes English students dependent upon German publications. Excellent bibliographical lists, to be sure, are published annually, or less frequently, in connection with several German journals, but they do not include the articles and book-notices of all the periodicals, as does the *Jahresbericht*, which deserves more extended circulation in this country.

—Jens Jacob Asmussen Worsaae, whose death occurred in Denmark on August 15th, was not only one of the most famous Danes, but also one of the greatest archæologists of our day. He was born in Veile, Denmark, March 14, 1821, and was at the time of his death Director of the several royal museums and of the archæological monuments of Denmark. The Museum of Northern Antiquities in Copenhagen was established by the very clever archæologist, C. J. Thomsen, who may almost be called the founder of northern archæology, and, when he died in 1865, Worsaae became his successor in office as Director, and also his undisputed heir as authority in this field of research. Around Thomsen gathered a group of young students who vied with their master in their zeal for collecting and investigating, but Worsaae was the most brilliant among them. Thomsen was not a writer, and it fell to the lot of Worsaae to publish in books for a wider circle Thomsen's and his own views in regard to the prehistoric ages of Europe, particularly of the North. His theory that there were two or possibly three iron ages, a bronze age, and then two stone ages before the introduction of bronze, has been already presented in these columns. In 1843 Worsaae published his first work, 'Danmark's Oldtid' (The Primeval Antiquities of Denmark), which popularized the results of Thomsen's indefatigable labors. The book attracted general attention both in Scandinavia and abroad, and translations soon appeared in English, German, Russian, and in other tongues. It established the author's reputation; and, more than that, it opened a new epoch in antiquarian researches the world over. Of Worsaae's critical talent many examples might be furnished if we had the space. We can only allude to his exploding the national belief in the discovery of the body of the royal mother Gunhild, Erik Bloodaxe's queen; and to his demonstration that the marks on the famous Runamo Rock, at Blekinge, in Sweden, on which Harald Hildetand, according to Saxo Grammaticus, was said to have chronicled the exploits of his father, were produced by the action of the weather. One of his latest achievements was his successful interpretation of the inscriptions and figures on the celebrated golden horns, of which we have also given an account. During the past few years he had been engaged on a *magnum opus*, which was to contain all the results of his antiquarian researches, and to supersede, as it were, his previously published books and essays. Arrangements had been made for its simultaneous publication in German and English, the latter translation being assigned to Prof. R. B. Anderson, now Minister Resident in Copenhagen, at whose disposal the author placed his manuscript. Unfortunately this work was only half completed when Worsaae suddenly died of apoplexy, and it is doubtful whether Denmark has a scholar who is capable of carrying out his ambitious plans.

VON HOLST'S HISTORY OF THE UNITED STATES.

Verfassungsgeschichte der Vereinigten Staaten von Amerika seit der Administration Jackson's. Von Dr. H. von Holst, Professor an der Universität Freiburg. Dritter Band: Vom Kompromiss von 1850 bis zur Wahl Buchanan's. Berlin: Julius Springer. 1884.

The Constitutional and Political History of the United States. By Dr. H. von Holst, Professor at the University of Freiburg. Translated from the German by John J. Lalor. In two volumes. 1850-1854, Compromise of 1850—Kansas-Nebraska Bill. 1854-1856, Kansas-Nebraska Bill—Buchanan's Election. Chicago: Callaghan & Co. 1885.

WITH this volume, which is really his fourth, Dr. von Holst enters on the pregnant decade beginning with 1850. It closes the period during which men looked upon the Constitution as some heaven-descended palladium, under whose protection public affairs would go rightly and safely of themselves, and contains in itself the germs of the coming consciousness that the Constitution is a living thing, whose growth needs to be watched and tended as carefully and anxiously as that of a child. The political history of this period has been hitherto almost a blank. Embarrassed by the abundance of the materials, by the complication of their tendencies, and by the great questions to which they relate, historical writers have looked upon this decade as a dangerous region, from which they would do well to escape with the least hazard of exposure. The materials for history exist in *Globes*, in newspapers all over the country, and in scattered volumes of speeches, biography, or reminiscences; but the task of reducing this chaos to order has stopped any competent hand at the beginning. All the histories treat the period in a perfunctory and stereotyped fashion, hurrying from the solid ground of 1850 to that of 1860. We know from them that Pierce was elected in 1852 and Buchanan in 1856; that the Whig party died of an attempt to swallow the Fugitive Slave Law; that the Kansas-Nebraska Bill was alleged and denied to be a repeal of the Missouri Compromise; that the new Republican party came near electing Fremont in 1856; that there was a brutal and awkward attempt to make Kansas a slave State; and that the Supreme Court decided something or other in the Dred Scott case. These texts, with the enlargements natural to the latitude of each writer, form the constitutional history of 1850-60 as we have hitherto had it. We have now a *history* of half the decade. Most readers will agree with the conclusions which it draws from the facts presented, though some may disagree in particular cases; but none will deny that it is a history of high type and enduring value.

The burden of the volume is, of course, the story of the struggle against slavery and its extension, a struggle unparalleled not only for its length and bitterness, but for the steady protests of almost all the actors in it against the struggle itself. Never has a conflict between irreconcilable elements been so irrepressible. It is often almost painful to mark the unanimity and enthusiasm with which a great people declared and believed that the question of slavery could not, would not, and should not again intrude upon their peace; to see them busily caulking every cranny in the sides of the ship to keep out discussion of slavery, while all the time the bottom itself was all but ready to give way beneath their feet; and to learn once more from history, strongly and fearlessly written, the impotence of man when he undertakes, not to guide and obey, but to defy and obliterate, the elemental forces of his nature. If slavery were not fundamentally and necessarily wrong and destined to extinction by the laws of its own being, it is absolutely impossible to suggest a reason why discussion of it did not come to an end in 1850. There was hardly a voice raised in opposition to the declaration that the compromises of that year were a "finality." Congress said it; the President said it; the politicians said it; all the conventions and organs of the great parties said it; and all the people cried Amen. Even circumstances were in favor of the "finality." When the long struggle of 1850 was at an end, there was not a square foot of territory in the United States in which the slavery question had not been put to rest, either by constitutional guarantees or by law, and he who proposed to reopen the discussion of slavery was met on the threshold by the triumphant and apparently unanswerable question—Where do you propose to begin?

The successive and rapidly increasing answers to this preliminary question make up the mass of this volume. Every chapter shows some new phase of public or private interest, or of the natural ambitions of men, which sapped some part of the sand wall and opened a new way of entrance for the old subject. Men might cry "Peace! peace!" but there was no peace, and could be none, so long as the attempt was continued to prohibit discussion of that which millions of persons were thinking about. A single step into this forbidden field, even to make the "finality" more binding, involved the rush in of countless others to reinforce or overwhelm the first comer, every newcomer of course multiplying in his turn the provocations to others to join him in disregarding the "finality," and renewing the discussion of slavery. Even supposing that the mass of this renewal of slavery discussion were purely academic, that it referred solely to the right or wrong of slavery, that there were no effort to disturb the accomplished compromises, how long could it continue before it would be reflected in actual legislation on some point which, however indifferent in itself, should touch the omnipresent interests of slavery at a tender spot? The two irreconcilable systems of free labor and slave labor had developed so many and so great interests, had ramified so minutely and in so many different directions, that it had become practically impossible to legislate on any subject without aiding or thwarting one or the other, and thus reviving the fundamental struggle. Even the most purely theoretical discussion thus became a preparation for the alignment of sides in a future political contest. This neglected phase of the struggle of 1850-60, this refusal of the Abolitionists to abandon hope even after the notice to abandon hope had been formally nailed up over the doors of legislation, finds exhaustive study in this volume, of which a few sentences

from the notice of 'Uncle Tom's Cabin' will give an example:

"Here were no constitutional heresies, and not a word was dropped summoning the Federal authorities to take the field with the weapons of the law against this 'remnant of barbarism.' But the horror which took possession of the readers of the book in the free States, the blood that coursed hot to the head, and hotter still back to the heart, and the tears that stole into many an eye, were a working force which had to be taken into account. It mattered not how often people repeated to themselves: 'So wills the Constitution; so the laws declare; both parties have pledged themselves to the finality of the Compromise.' Could the Constitution, the laws, and the resolutions of the national conventions drive that horror, that 'fanatical' and 'rebellious' blood, and those tears out of the world? And, if they remained in the world, how could they be prevented, some time and somehow, from creeping into the Capitol at Washington, and even from finding their way to the cotton and sugar plantations?"

In his previous treatment of such phases of the struggle, Von Holst has been reproached for a tendency to look at the Constitution and laws, not as they were, but as in his opinion they should have been, thus failing to represent with any sympathy or exactness the difficulties which beset a law-loving and law-abiding people. It is perhaps for the benefit of this class of critics that he has stated in this volume an explanation of the transformation of the struggle from an ethical into a political form, which was hardly to have been expected from the general tenor of his previous work:

"Yet, if the [universal] ethical condemnation [of slavery] were wrong, the question would still have been, Can the slavocracy, relying on laws which it has succeeded in passing under an artificial and forced interpretation of the Constitution, and with the connivance of a subservient minority of Northern politicians, bid defiance in the long run to the moral consciousness of the people, backed by the moral consciousness of the foremost civilized nations—that is, to the *Zeitgeist*?"

In other words, leaving the "higher law" for the time out of the question, the Constitution itself held two doors open, one of which was desired by the moral consciousness of the mass of the people, while the slave power, by trick and device, had turned the whole course of legislation into the other. It was impossible, then, but that the time should come when the majority of the people would recover control of the Constitution's machinery, and turn legislation, as it had a right to turn it, back to the other door. This is a soothing and comfortable way to look at the case; but a further look at the fugitive-slave clause of the Constitution itself, a remembrance that the "moral consciousness" of the majority of the people could only be satisfied by a violation of a constitutional duty either of the Federal Government or of the separate States, must bring a doubt of its correctness. It would seem more correct if the author had held tenaciously to the ground, for which the preceding volumes had prepared us, that the struggle was not so much to get rid of an "artificial and forced interpretation of the Constitution," as to abolish an ethically monstrous provision of the Constitution itself. Every theoretical discussion of slavery did its individual service by bringing into plainer view the fundamental difficulty in the organic law of the country. Even without the intervention of the suicide of slavery by secession, the question would finally have been, How far can the dead hands of Constitution-makers tie down coming generations in the forms of law so that they shall always be compelled to stifle in an atmosphere of ethical abomination? Every step toward this ultimate question was largely as unconscious and as inevitable as the rush of the suffocating for the window in the Black Hole of Calcutta, and it was as little likely in the long run to stand on constitutional or legal questions, on forms or precedents. The explanation of the struggle is not in constitutional or legal questions, but in what Von Holst has elsewhere well called "the frightful untruthfulness of the situation, produced by the linking together of the opposed principles of freedom and slavery."

The peril to the "finality" of the Compromise of 1850 did not consist merely in the repulsion felt for it in the "moral consciousness" of the mass of the people; the politicians themselves, North and South, never understood the word "finality" in its ordinary sense. Von Holst states one "confirmation" of it after another by Congress, the President, and the parties, all clouding the finality by the inuendo that it is to be final until it be found necessary to "perfect" it in any of its details—that is, anti-slavery is to ask no more forever, while slavery is to ask no more until it wants something. Hale so stated the case, in effect, in debate at the time; and the "loud laughter," without contradiction, which followed from the majority of the Democratic Senate, showed that the substantial accuracy of the statement was simply notorious. Here was a standing temptation to Northern politicians to find something which the South wanted or ought to want, and to incorporate that also in the "finality." Von Holst compares the process to the "last appearance" of a theatrical troupe, to be followed by a "very last." and that in due course by a "positively last" appearance. The finality of 1850 was to be supplemented by additional finalities, until Douglas opened the door of a bottomless abyss for his party by developing the final finality, the Kansas-Nebraska Bill of 1854.

The story of the inception of the Kansas-Nebraska Bill, as studied and told in this volume, may be briefly summarized, and reflects very small credit on Stephen A. Douglas. The state of the Democratic party in the State of New York is first examined. It had split into two factions, the Softs and the Hards. The Softs had much of the old Free-Soil Van Buren element in their organization, and many of their leaders, such as Fenton, afterward fell naturally into the new Republican party. The Hards were as distinctly the opposite wing on all matters connected with slavery. Pierce had made William L. Marcy, a Soft leader, Secretary of State, and, in the distribution of Federal offices in the State, had given the Softs at least their fair share. The only result was to anger the Hards, who still retained a precarious control of the State "Machine," and to perpetuate the division of the party in the State. New York having thus been lost to the party, the brilliant idea occurred to Douglas to form a new line of resistance, to "get up a row on the slavery question" (in the words of one of his own party), to unite all the States of the South with Pennsylvania, Indiana, and Illinois, and thus elect a President in 1856 without New York. It is impossible here to detail the various events by which Von Holst makes clear the essential hollowness of the Democracy's wonderful victory of 1852, in which it had, in true barbarian fashion, not only killed but eaten its great antagonist, the Whig party; the fact that before the end of the year 1853 its leaders were reduced to such shifts for bare existence, is enough.

The precise shape in which Douglas should begin his "row on the slavery question" was a matter of little importance; it is not at all probable that he himself foresaw any large part of the consequences that were to flow from his action. Any action was of the last importance. The condition of affairs was as nicely balanced as is sometimes the case in the Alps, where a sharply-spoken word brings down the avalanche. Douglas spoke the word, and its consequences were instantly beyond the control of him or any one else:

"The moment Douglas had taken the first step, he was no longer master of his movements. He had to go forward as soon as any one went beyond him, or he not only forfeited all that he had hoped to obtain for himself, but the plan of campaign so skilfully laid would become a chaotic struggle, in which the party, without a leader and without a programme, would go to pieces, and chance would become the ruler of the country until 'grinding necessity' should enable the people to find a way out of their confusion."

Thus Douglas, beginning with a simple bill for the organization of the Territory of Nebraska, containing only the provision that it was to be admitted finally as a State, with or without slavery, as its people should then desire, thought it sufficient to insert a remark in the report of the Committee that "it is a disputed point whether slavery is prohibited in the Nebraska country by valid enactment." This vague hint was to be enough to satisfy and unite the South; it proved to be the knife that was to cut the ship of state from her moorings. A running fire of amendments followed; Douglas was compelled, in order to retain leadership, to adopt more and more violent alterations; and the outcome was the repeal of the Missouri Compromise, leaving the status of slavery in the Territories all at sea, never to be settled but by civil war and the abolition of slavery itself.

The features incidental to the great struggle—the era of filibustering and the Ostend Manifesto, the brief career of the Know-Nothings, the development of the new and aggressive slavery school, with its inevitable ultimate demand for the reopening of the African slave trade, the struggle for Kansas, and the election of Buchanan, accompanied by the rise of the new Republican party as a death's-head for the Democratic banquet—are treated in a manner which makes the volume fully equal to any of its predecessors. The peculiarities of Von Holst's historical clinics are, first, the multitude of side-lights which he throws on them from every quarter, and, second, the remorseless pertinacity with which he follows up every nerve and muscle to its end. The student may sometimes doubt or disagree as to the direction or even the existence of the nerve, but he has at least as clear a view and as good opportunity as the demonstrator himself to form his judgment. If the demands of the anti-slavery men are at any time illogical, ill-advised, or unwarranted, the condemnation is not mitigated in the least by any general sympathy with their purpose. His historical judgments will therefore always command respect, even where they fail to meet sympathy. Preston S. Brooks himself, if he were still living, and should read the statement of the circumstances under which Sumner's speech on "The Crime against Kansas" was delivered, might very well join in admitting, as a naked historical verdict, that the source and secret of the wrath against Sumner is correctly stated as follows:

"The Sewards and Hales, the Fessendens and Trumbulls, the Wilsons and Wades, did not handle the majority with silk gloves when they spoke of slavery; but it never before had had the feeling that it was subjected to morally running the gauntlet before the eyes of the whole world."

The translation gives us generally good but occasionally hazy English. It seems to be a hastily performed task. It would be unjust, in any criticism of a translation of Von Holst, to blink the difficulties which sometimes meet the translator. The eager flow of language occasionally hurries the author into confusions of metaphors which could find an adequate rendering only from the genius of Sir Boyle Roche. He remarks, for example, that, in spite of the Whigs' promises of reform and retrenchment made before election, they had turned out as bad as their

opponents—"sie sich als Wölfe in Schafskleidern entpuppt hatten," they had burst forth from the cocoon as wolves in sheep's clothing. In this case, the translator discreetly omits one of the irreconcilable figures. Discretion is not, however, the characteristic quality of the translation. Bulky as is the volume in the original (798 pages), it is still more so in the translation (951 pages in the two volumes). Most of the increase is due to inexplicable carelessness. A comparatively simple phrase, "die rücksichtslose Durchführung des Spolienprinzips bei der Aemtervertheilung," becomes in the translation "the carrying out of the principle of the spoils in the bestowal of public office, regardless of the consequences flowing therefrom." Such a method, steadily pursued, could not but result in an unconscionable increase of bulk. The case is made worse by the continual recurrence of examples of an opposite nature, the omission of words which seem to give difficulty in translation. "Durchgreifende Reformen" is not the easiest of phrases to translate; the translator solves the difficulty by omitting the troublesome word, and translating simply "reforms." So "eine Buss- und Reformpredigt" is simply "a sermon." So numerous are cases of this kind that, after nearly fifty of them had been noted by us, further note-taking was abandoned. The counterbalancing weight of this great mass of omissions makes more evident the pervading fault of the general method. As a draft, the translation is a good beginning; as the final form which Von Holst is to take in our language, it is unfortunate.

The punctuation of the translation is execrable. It is so bad as to provoke the suspicion that the publishers have economized by dismissing their proof-reader. Commas are in some places almost unused; in others they are scattered with the most lavish profusion, as witness the following sentence:

"History has already, and with undoubted decision, given its final judgment to the effect, that people were not urged by a constitutional discovery honestly made, to a change of policy; but because they were resolved to break with the policy of the fathers, the constitutional discovery necessary thereto, was made."

Some may think, with Lord Timothy Dexter, that punctuation is entirely a matter of taste; but none will dispute the essential importance of accuracy in figures. Here the presumed absence of a proof-reader has wrought the worst damage. The numbers of the Senate in 1853 are stated as 35 Democrats, 122 Whigs, and 5 vacancies; and a subsequent vote in the same body is given as "90 to 10." Both the incorrect figures are of course given correctly (22 and 30) in the original; but the school-boy knowledge of the number of States necessary for the instinctive detection of such blunders, ought to have been provided by the publishers. Minor errors are numerous; votes and days of the month are incorrectly transferred, and it would be safe to say that there is not a trustworthy Arabic numeral in the translation—not one which the reader may rely on without confirmation by comparison with the original or with some other authority. It would be very advisable for the publishers to engage a proof-reader at once, and have the plates revised.

RECENT ECONOMIC WORKS.

The Socialism of To-day. By Émile de Laveleye. London: Field & Tuer

Working People and Their Employers. By Washington Gladden. Funk & Wagnalls. 1885.

The Present Position of Economics. By Alfred Marshall. Macmillan & Co. 1885.

Arbitration between Capital and Labor. By Daniel J. Ryan. Columbus, O.: A. H. Smythe. 1885.

THE distinction that M. de Laveleye has attained arises from two causes. He has a good heart, and he expresses himself with an agreeable facility. It may be thought that a firm grasp of the principles of economic science and a mastery of inductive logic should be expected of an economist, but there is little evidence to support this theory. This is a practical age: it holds that books are made to be read, and must therefore be readable. Whoever would reach many minds must descend to the average level; and even if his subject is one that can be understood only by severe application, he must be superficial if he would be popular. For work of this kind M. de Laveleye is admirably qualified. His writings are permeated with the spirit of benevolence, and he thus wins the sympathy of his readers, while their interest is secured by the clearness and eloquence of his style. He would make a charming biographer. He excels in narrative and delights in description. No matter how insane the theories or how savage the disposition of the subject of his sketch, his serene amiability is never disturbed, and his severest condemnation is pronounced with a benign recommendation to mercy.

We had occasion, not long since, to point out the merits of a work upon this subject by Mr. John Rae, and we do not hesitate to say that it is in almost every respect superior to the present treatise. The treatment in both is identical. There is an introduction upon Socialism generally, followed by essays upon leading Socialists and the movements that they influenced, and a concluding essay on Socialism in England, the latter being appended to M. Laveleye's book by its English translator. But Mr. Rae's work is philosophical; his analysis is keen, and his criticism often masterly. The Belgian professor, on the other hand, seems to have no comprehension of economics as a science. We are at a loss to know whether he is a Socialist or not, and we come to doubt whether he is not equally at a loss. In his criticism he says the same thing over and over again; and as there is generally nothing original in it in the first place, the repetition becomes insufferably tedious.

The most conclusive proof of his incompetency as a critic is to be found in his failure to discriminate between the reasoned conclusions of great thinkers and the wild theories of crack-brained enthusiasts. He dismisses with equal flippancy the judgments of Adam Smith and the visions of Pastor Stöcker. Upon the whole, he seems to be most in sympathy with the Socialists of the Chair, as the following passage indicates:

"Neither the classical economy nor Socialism can serve as a guide in the difficult work of bettering the condition of the laboring classes, and in gradually introducing a more equitable distribution of wealth. . . . In order to arrive at a better order of things the men who are called to establish and maintain it must themselves be made better, and the first step is to purify and elevate current ideas as to duty and right. This is a work of long duration, reserved for the Socialism of the Chair. It will undertake it, armed with an accurate knowledge of the facts proved by history and statistics, and animated with the desire to aid in establishing among men that reign of justice and that kingdom of God of which Plato caught a glimpse, and which the prophets of Israel and Jesus have announced to the world."

Would that the confidence of our amiable author might be justified! His own account, however, of these same professors does not encourage us to look for much unanimity among them upon any subject. We fear that many of them would repudiate any alliance with "the prophets of Israel."

Although we cannot commend M. de Laveleye's book to those who have that of Mr. Rae, it is upon many points fuller, and, in its condensation of the theories of different writers, often extremely happy. We cannot vouch for the exactness of the translation, but the merits of the author's style have been admirably preserved, and the concluding essay by the translator is at least of equal merit with those that precede.

We confess to a preference for having our preaching kept separate from our political economy, and on that account we like Mr. Gladden's book better than M. Laveleye's. It is true that Mr. Gladden discusses questions that belong to political economy, but it is professedly for a moral purpose. He dislikes the stern aspect of some of the economic laws, and endeavors to show how they may be modified so as to increase human happiness. It seems to be impossible in these discussions, for those who are shocked by the inequalities of this world, to refrain from imputing blame to those who point out the laws which regulate these inequalities. Accordingly, Mr. Gladden indulges in a little fling at the much-abused wages-fund doctrine, which "probably is true if men are not moral beings; if the doctrines of materialism or of high Calvinism are true, and if the actions of men are determined by forces outside of themselves." But there is no particular harm in this kind of writing in sermons, we suppose, and these sermons are so full of good sense and good feeling that we cannot help giving them our hearty commendation.

Mr. Gladden seems to us to be setting an excellent example to the clergy in his clear and emphatic recognition of the great truth that the ills of society are chiefly due to the immoralities of its members, and in his plain language concerning the immoralities of employers as well as workmen. By lessening their extravagance capitalists would undoubtedly be able to allow better wages to their employees, and the latter by greater providence would make their wages go further. In enforcing this lesson and others like it, Mr. Gladden adopts a plain, straightforward manner, that ought to secure him the attention of intelligent workingmen; and those who believe that the future of the country is largely in the hands of this class, will do well to extend the circulation of this book as widely as possible.

Professor Marshall, who succeeds the lamented Fawcett at Cambridge, begins his inaugural lecture with a just and touching eulogy of the dead master. Passing to his subject, he shows with a few broad and sweeping touches how the economic theory of the time of Ricardo was affected by the predominance early in this century of the mathematico-physical group of sciences. The unchanging subject-matter of these sciences enabled theorists to establish precise results, and economists were unconsciously influenced by this method of reasoning in their conclusions. They regarded human nature as something fixed and unvarying, and their deductions were therefore of a somewhat rigid character. The recent advance of biology has had an opposite effect. Man is now looked upon as a varying, developing being, different at different times and in different occupations, and hence few general propositions as to human nature can be safely laid down. In short, Ricardo reasoned as if all men were like city-men, and city-men always alike, whereas Professor Marshall denies both these assumptions.

The chief work of Adam Smith, according to this writer, was to indicate the manner in which value measures human motive. "The outward form of economic theory has been shaped by its connection with material wealth. But it is becoming clear that the true philosophic *raison d'être* of the theory is, that it supplies a machinery to aid us in reasoning about those motives of human action which are measurable." This is certainly a pregnant statement, and it is unfortunate that Professor Marshall's space does not allow him to bring out its full content. We ap-

prehend that he is in some danger of effacing the boundaries between psychology and economics, although we fully recognize the necessity of a psychological basis for economic theory. The essay is on the whole very thoughtful and suggestive, although in the endeavor to cover so wide a field and to take such broad views, the author's powers of generalization seem to us occasionally a little strained.

'Arbitration between Capital and Labor' is a plea for the introduction of boards of arbitration for the settlement of disputes between employers and workmen. The author reasons, from the accounts that have been collected concerning the results of strikes, that they have been almost invariably unsuccessful. In one sense this is true, for the men employed have generally suffered more than they have gained; but, in our judgment, the cause of labor could have been advanced only by these warlike measures. No war pays a profit to those that carry it on, but war is the only argument that is conclusive with nations. The very qualifications that make men successful business managers, make them arrogant and dictatorial. No manufacturer wants his men to tell him what he shall do, or will disclose to them of his own accord the secrets of his business. Strikes and trades unions have put laborers in a position where they can compel employers to listen to them; and when the parties are thus brought to a certain equality, arbitration becomes possible. The author shows that statutory arbitration is a comparative failure, and that it is better to trust to the intelligence of the parties for the application of satisfactory methods. He has, however, prepared a bill, which has been enacted by the Legislature of Ohio, for the establishment of tribunals to which parties may resort, but which have no power to enforce their mandates. Due praise is given to Mr. Mundella for his great work, but the value of this praise is somewhat lessened by the naïve statement that "if a comparison should be wanted in American public life for Mr. Mundella, no character would be better suited for that purpose than Thaddeus Stevens."

A NEW INDUCTIVE SCIENCE.

Shakespeare as a Dramatic Artist. A Popular Illustration of the Principles of Scientific Criticism. By Richard G. Moulton, M.A. Oxford: At the Clarendon Press. 1885.

Is criticism one of the inductive sciences? The affirmative of this proposition is maintained by the author of this volume, and he illustrates the method of criticism for which he pleads by an examination of five of Shakspere's plays. His book naturally falls into two parts—one, a comment on Shakspere; the other, a new view of the office of criticism. A new view, we say, although the author goes back to Aristotle as the pioneer, and admits that even among English writers there have been a few who have incidentally criticised in the vein which he thinks correct. At the start he makes the point that criticism has been unable to deal successfully with new authors—Shakspere, Wordsworth, Keats—and from this incapacity he infers that something is wrong; he thinks the trouble has been that criticism has not been "scientific." It has been "judicial"; and the judge gives sentence by laws formulated from past literature, and is limited in his appreciative powers (though it is not quite clear how), because he cannot make use of that great talisman of interpretation, sympathy. Criticism that is not "judicial," it seems, merely examines the literature before it, analyzes it and names the parts found; it knows nothing of "merit," of "faults," of any higher or lower, better or worse, useful or harmful—it is, like the inductive sciences, an affair of "classification"; it is itself an inductive science. Its result is a tabular view, as follows:

THE MERCHANT OF VENICE.

AN ACTION-DRAMA.

Scheme of Actions:

Main Plot.	First Main Cross Nemesis Action: Story of the Jew: complicated and resolved.	Under-plot.
	Sub-Action to First Main, also Link-Action: *Jessica* and *Lorenzo*: simple movement.	
	Comic Relief Action: Launcelot: stationary.	
	Sub-action to Second Main: Episode of the Rings: complicated and resolved.	
	Second Main Problem Action: Caskets simple movement.	Story:

External Circumstances: The (rumored) Shipwrecks. Etc., etc., etc.

This is not, perhaps, so entertaining as Sainte-Beuve; is it more useful, is it the first note of the criticism of the future, the harness into which our young Swinburnes, Leslie Stephens, and Arnolds must get?

What first strikes one is its limited scope. True, its sponsor declares its subject-matter is "literature," and literature is a large word. But when his illustration of the new science in the remarks on Shakspere which make the body of the book, is read and digested, it is seen that he deals only with the structure of the plays; he has analyzed their form, their connections and transitions and climaxes, whether of action or emotion, and he has named their parts; he has attended, as a craftsman would say, to their technique solely, and thus his conclusions are valuable to the craft, but to men at large are valuable only as knowledge loosely related to life, such as conchology or botany. The reason is near at hand. Literature is an art, not a science; and when an art is itself made the subject-matter of a science, that science can be concerned only with the classification of methods—in this case, of literary methods. That there may be a "science of criticism" in this sense, a science that analyzes, names and classifies the details of the methods of authors, the similarities and dissimilarities of their technique, their ways of conducting plot and story—in a word, their *art*—no sane man will contest; but though its workers are rare, it is no new science. If one wishes to put it off by itself in a little corner among the inductive sciences, by all means let no one obstruct the transfer; hitherto it has abided very quietly and contentedly in its place as a modest part of criticism in general. It is, in fact, necessary to the critic whose knowledge is complete respecting what he judges—the competent critic must understand the methods of authors, the laws of creative composition practically exhibited in novel and drama and poem; but his work does not end there—it is carried into wider fields. An understanding of the formal part of literature, of its mere structure, would be of use to those who are novices and to critics who discuss the form as well as the matter of works submitted to them; hence this author and all whom he can convert should be bidden god-speed. But criticism can ill afford to abdicate its present provinces and withdraw into the limits of one of its petty though aristocratic principalities, where truly only its subtlest minds, its poets, have hitherto been delegated to do service. In the new science, we may be sure, there will be few experts; for it takes fine senses to detect the mystery of the creative art.

This strict limitation of the inductive science of criticism to the formal part of literature is very plain, and is to be observed on every page of the present treatise. Nevertheless, there is a certain plausibility in the plea made against "judicial" criticism which may be worth a moment's detention. It is true that criticism has often failed to recognize new authors at once, and in proportion to the originality and power of the new genius its failure has been more humiliating, more conspicuous, and more complete. Is this because it is unscientific? The natural conservatism of literature is very great. The critics have already formulated the laws of the art by induction from the literature of the past; they assert these as canons—that is, as universal laws; and they judge new works in error if these canons are violated, and generally they are right in such judgments. But literature not being extinct, the induction is incomplete, and a genius may arise in whose case new facts are to be observed; and if, by haste, or ignorance, or incapacity, they do not take account of these fresh phenomena, and thus come to see the inadequacy of the former canons to this case, they fail. But is it otherwise with the history of science? Has not science likewise its conservatism, its universal laws accepted conditionally until new facts appear at variance with them, its convenient body of accepted knowledge applicable in ordinary cases, and its failures likewise when the stupendous exception did arise to force violent modifications? Was Newton's Law accepted so much more easily than Shakspere's romantic drama? or Darwin's doctrine of variation and descent with less difficulty than Wordsworth's pastorals? Was not the information that the blood circulates considered as unimportant as that John Keats had written a poem? Man is an animal slow to learn; and it is not in literature alone, but in science, in politics, in finance, in all large departments of thought, too, that new truth finds cold reception. The inductive science of criticism would probably be as much wedded to its past as any other science, as loth to modify its old generalizations in the future as, under a less haughty name, it has been in former days.

Similarly, in regard to a second plausible observation, closer inspection makes the glamour vanish away. It is said repeatedly that criticism should become "scientific"; all things that are respectable are becoming scientific now—it is the spirit of the age; and if criticism lags behind, it is *ipso facto* something to be condemned. The same plea or hortatory advice has been long addressed to poetry, but the poets do not seem to mind. Perhaps the critics, being by profession a serious and sober race, should have more care, and ought to "join." So runs the propagandist circular of science. But is it true that criticism has been so unaffected by the spirit of the age as is represented? To state in a few words the course of criticism is not easy, but by using some definition-phrases it may be briefly suggested. When the author of this volume calls criticism "judicial," he has in mind as his type the earlier critics who derived their canons largely from France—the standards of "one, Boileau"; and he blames them for the mistakes they made in applying "rules" to literature. At that time criticism was, to borrow Spenser's phraseology, statical; commonly the critics looked on works of literary art as constructed mechanically, like a Chinese puzzle, and they wrote about poems and dramas as things complete in themselves, and they measured them by the so-called rules. Such was the attitude of their minds and the duty of their office. But now the works of literary art are contemplated as growths, and the critic regards them more with respect to their origin and fruits. To use the companion phrase, criticism has become dynamical: it asks how the work under review came into existence, and is not satisfied until the personality of the author and the character of his age have been exhaustively treated. Criticism has thus developed, and is now almost wholly made up of biographical, historical, and social studies. To refer much to "rules" denotes a writer of old-school traditions. An essay on Byron is a chapter in social evolution; one on Keats is an attempt at psychological dissection; and so far has this gone, so powerfully has the spirit of the scientific age worked on criticism, that any work on literary

art, such as the present, revealing a care for the formal side of literature, is a very rare exception. On the whole, criticism seems to have become "scientific" enough, and one would hail a writer of the old fashion, who should be content with examining the intrinsic worth of a classic, with a good deal of satisfaction.

We cannot further discuss the "new view" which the author promulgates as the chief distinction of his work. He shows no reason why the old notions—such as that literature is an art, that its function is to please, and that taste is the arbiter of pleasure—should be given up; and these being still true, criticism of literature must still find its highest work in discussions of success and failure to give pleasure, of kinds and qualities of the pleasure given, of standards of taste in the region of intellectual delight, and of the higher and lower, better and worse, useful and harmful of all literature that deals with or affects the moral life of man. It cannot restrict its name to the analysis and nomenclature of literary structure, as if books were only shells or fossils. As before, all that may be written of formal art will belong in its province; all the formulas of knowledge it arrives at, it will reach by the inductive method; and in rendering justice it will be as free from prejudice against new men, new ideas, and new forms of expression as the conservative nature of the trained and enlightened and balanced man will allow.

To our thinking the most valuable part of this volume is the Shaksperian criticism, which, independently of its connection with any inductive science, is well worth consideration. It is concerned, as has been said, only with the structure of the plays, and its point is to show that Shakspere, so far from being the careless workman he is alleged to have been, was one of the subtlest artists. It is only by the old canons of "the unities" that his work is termed formless, but the genius of the romantic drama was exactly one of those seemingly preternatural phenomena that remain monstrous until the new classification is made to include them. The unity of Shakspere's dramas is Mr. Moulton's theme, and he illustrates their unity until the hardest head must get some glimmering of the truth. The peculiarity in Shakspere, as compared with the ancient classics, is, that his dramas are so complex in their composition, their unity is the oneness of so many and diverse parts, that to men used to the simplicity of the Greek structure it looks like confusion. The difference is the same as that between a highly organized being and one of lower grade. The work of the critic in this case was to find out, to trace and explain the relation of the parts, the interplay of the forces, or, stated exactly, the links of the story and the development of the passions involved. This has been done, for the five plays taken, with great clearness and precision, and with the slightest admixture of what might be regarded as fanciful and far-fetched. The case might have been put more absolutely by dwelling on the specially organic perfection of these dramas, on the fact that each part, speaking generally, is not only related to another, but to all others, and that this relation of each single member to the whole is a necessary relation. Of course it is not meant that Shakspere's construction was ideally perfect, but that each drama has a unity of its own which results from all its complex interests; and on the artistic side this is the marvel of Shakspere's genius. The success of the classical writers in their simpler forms was not finer than Shakspere's in the multiple and involuted forms of the romantic spirit. Even now this characteristic of Shakspere is little recognized. The English sense of form is slight, and in Shakspere passion is such a fusing force that the intellectual sense, to which form usually appeals, is evaded and put to the fault until attention is given to the emotional analysis. The unity is there, however, and does not lose its effect whether it be perceived or not. In time the statement that Shakspere was lacking in pure art, a happy-go-lucky workman, a deft 'prentice-hand vamping old stories, will surely become antiquated; and with it will go, it may be hoped, that other current superstition, that heaven gave him all gifts except the faculty of invention. He stole all his stories; but the power he shows in dealing with them, his rearrangement and subordination of incident and event, his moulding might, are strong as proofs of Holy Writ to show that the faculty of invention was there in all its fulness.

On this we do not dwell because the author does not touch it in his discussion, nor will we examine his own suggestions in detail. Other critics of Shakspere have analyzed the character, passion, plot, and other elements of the plays, but it is the distinction of Mr. Moulton to have seen and shown how all these elements are blended by Shakspere so as to give to his works that unity which stamps all work in any art as of the highest genius. This is a real distinction and service, and if a more tolerant reception of the science of inductive criticism were likely to encourage more such thinking and writing, we should be tempted to cancel what we have written; but, as it is, the fault of the volume is in that superficial parallelism to science which it affects, and the consequent tedious nomenclature and tabulation of which an example has been given.

The Life and Letters of Emory Upton, Colonel of the Fourth Regiment of Artillery, and Brevet Major-General United States Army. By Peter S. Michie, Professor United States Military Academy. D. Appleton & Co. 1885.

It was eminently fitting that the memoir of General Upton should be written by a fellow-cadet, himself now the oldest and most distinguished professor at the Military Academy; for Upton's success was preëminently the result of his West Point training, and it is a most interesting study to watch the development of his character and the unfolding of his career as told by his own letters, and interpreted by one whose life is devoted to the perfection of that training. Upton came to West Point, in 1856, a raw country lad, with correct principles, fair talents, no little ambition, and a nervous, restless energy. Five years later he graduated, at the outbreak of the war, with a mind well trained and disciplined, stored with the rudiments of knowledge, but not over-burdened with details, confident in himself, proud of his profession, and ardently devoted to the cause of the Union. He went almost from West Point to the field of Bull Run, and, once engaged in the fighting, he never left it, except when disabled by wounds, until the war was over. In little more than a year he had a regiment, in less than two years a brigade, and at the end of three years a division; and he commanded them all with great skill and the utmost gallantry. He was one of a distinguished group—including Mackenzie, Merritt, Wilson, Kilpatrick, and Custer—sometimes called the "boy generals," who attained the rank of general officer before they were twenty-six years of age, and had been less than three years graduated from the Academy—whose career added a new verse to an old cadet song:

> "And when we've been out of here just two years
> We're Brigadier-Generals of Volunteers."

From his experience in the command of all three arms, artillery, infantry, and cavalry, in the midst of most active service, Upton evolved and elaborated his system of tactics, which absorbed his entire attention for the first few years after the war, until they were finally adopted by the Government. He was then ordered to West Point as Commandant of Cadets, and after five years' service in that capacity he made a somewhat remarkable tour of the world as the head of a military commission charged with examining the organization of foreign armies. On his return he published the result of his observations in 'The Armies of Asia and Europe,' and then immediately engaged in a comprehensive study of the military history of his own country, with a view to embodying his conclusions in a large work to be called 'The Military Policy of the United States.' Upon this, and upon a revision of his Tactics, he was engaged at the time of his death, in 1881.

In the twenty-five years of his military career there was hardly one idle moment. Thrown from West Point into the midst of the great war; engaged in more than a score of great battles, besides countless minor actions; attaining suddenly to high rank and command at the outset of his career, and devising an entirely new system of tactics for his profession, it was natural that he should take nothing for granted, and should refuse to accept anything of which the reasons were not evident to his critical mind. A natural tendency to iconoclasm was somewhat increased by the circumstances of his career, and in this spirit he took up the study of the military policy of his country, which in his view is, and has been for more than a century, radically, fundamentally, and almost wholly wrong. It may be doubted whether his training or abilities fitted him to deal with so comprehensive a subject, though no one else has ever collected so many data concerning it. This critical tendency also led him to form hasty instead of well-matured judgments, as when at the age of twenty-five he formed the opinion that "some of our corps commanders are not fit to be corporals"—the officers in question being Hancock, Warren, Sedgwick, and Wright! But his critical nature never led to any meanness or to any jealousy. He was at all times the soul of honor, free from vanity, and possessed of deep religious convictions, which formed the standard of his life in practice as well as in theory. His private life, his marriage, his religious sentiments were pure and noble. The tact, the tenderness, and the good judgment with which this part of his life is treated by his friend and biographer are deserving of the highest praise. Whether Upton's opinions on military policy are well founded or not, time will show. His chief title to fame is his service during the war, his attainment of high command at so early an age, and his successful use of it.

An Inglorious Columbus; or, Evidence that Hwui Shan and a party of Buddhist monks from Afghanistan discovered America in the fifth century A. D. By Edward P. Vining. D. Appleton & Co. 1885. 8vo, pp. 788.

This is the old story of the discovery of Fusang by a party of Buddhist priests, A. D. 458, and our author's object, in reviving it, is to show that the country which they are said to have visited was Mexico, and that the account given of it by a "probable" member of the party "in nearly all its details, as to the route, the direction, the distance, the plants of the country, the people, their manners, customs, etc., is true of Mexico, and of no other country in the world."

In the slang of the day, this is a big contract, and those of us who know the doubt and uncertainty that hang over almost everything connected with the origin and development of the aboriginal civilization of America, and who recognize the fact that, up to a certain point, there is more or less resemblance among all primitive peoples, not only in their manners and customs

but also in their methods of thought, will not be surprised at our author's failure to make good his proposition. Indeed, there is scarcely a single particular in which he can be said to have been entirely successful. The route—via the Aleutian Islands—by which the old monk is made to travel, both going and coming, is pronounced "not feasible" by no less an authority than Mr. Dall; the direction—east of Alaska and also east of China—can hardly be said to describe the geographical position of Mexico, nor can the two statements be made to agree; and the length of the Chinese *li*, like the *lieu* of the early French "Relations," is altogether too uncertain to be used as the basis for a calculation of distances in a case where accuracy is desirable. So, too, the identity of the Fusang tree with the Agave, affirmed (p. 403) by our author, is denied (p. 195) by M. Godron, a French botanist, and we are very sure that, whatever may have been the case in Central America, there are but few archæologists who will, in the face of recent investigations, venture to assert that Mexico is, or was at the time of the conquest, without "the least trace of an enclosure, of an adjoining defence of any kind, or even exterior fortifications."

These are some of the objections that may be urged against our author's theory, and, serious as they are, they are not more so than is the free and easy manner in which he explains away such portions of the original account as happen to militate against his views. As an instance of this, take the way in which he deals with the assertion that the people of Fusang, among their other worldly possessions, had "horse-carts, cattle-carts, and deer-carts." The statement, it will be observed, is positive; it is made by one who came from Afghanistan, and must have known a horse or a cart when he saw one; and, sandwiched, as it is, between references to other animals, we may fairly assume that it was intended to be taken literally, as was unquestionably the case with the statements which precede and follow it. To admit this, however, is to deal a heavy blow at the theory of the identity of Fusang and Mexico; and hence the necessity of explaining it so as to make it harmonize with the fact that there were neither horses nor carts in this latter country when the Spaniards first landed there. Accordingly, we are told that this portion of the account is not to be taken literally, but that it is an allegory, and that what the old missionary "probably" intended was, to refer to the "three vehicles" or "three carts, a term used by the Buddhists . . . to shadow forth the three degrees of saintship . . . and for three developments of Buddhist doctrine." In other words, we are called upon to believe that this party of priests found Buddhism already flourishing in the country in which they are said (p. 299) to have been the first to make it known.

For these reasons, among others, we cannot accept this story as authentic, and are constrained to class it with Plato's account of the lost Atlantis and the poet's dream of a region lying beyond Thule. But while our opinions on this point are somewhat decided, we do not wish to be understood as denying the possibility of such intercourse between the people of the two continents. Indeed, so far are we from doing anything of the sort that we frankly admit that the evidence seems to point the other way. This intercourse was probably neither frequent nor regular, and, in the case of the Chinese and Japanese junks stranded on our shores, it must have been both involuntary and all one way; but of the fact of its existence, at least, during historic times and via Behring Straits, there cannot, we imagine, be any doubt. How long it has been going on and what influence, if any, it had upon aboriginal Mexican civilization, are questions which we are not now called on to discuss.

The Common Sense of the Exact Sciences. By the late William Kingdon Clifford. New York: Appletons. [International Scientific Series.]

IT was in 1875, when Clifford was in fairly good health, that he dictated the whole of three chapters and part of another for a projected book to be entitled 'The First Principles of the Mathematical Sciences Explained to the Non-Mathematical.' Three years later, shortly before his death, he expressed the wish that the book should be published only after very careful revision, and that the title should be changed. It has certainly not received the sort of revision that Clifford desired; for as published it abounds in errors, and contains several quite anti-Cliffordian views. For instance, he says that if a point on the surface of a sphere is brought into contact with a point on the flat face of a cube, "we cannot move the sphere ever so little without separating these points." This is erroneous, because we can spin the surface about the point of contact; but although the passage has passed under the hands of two successive mathematical editors, neither has seen, what the course of reasoning shows, that Clifford in dictating said "move" when he meant *roll*. He wanted to show that all surfaces would fit together at any points where they are not broken by edges or corners, much as a ball may fit into a cup, only that the fitting is confined to a single point. Now surfaces that fit together may or may not be capable of being slipped or spun one on the other, but they cannot be rolled one on the other. A rolling motion, therefore, was the only one which had to be considered. Again, he defines a surface as the boundary between two portions of space which it separates absolutely. Now, without speaking of spirals, which obviously do not separate space into two parts, the most familiar of all surfaces, the plane, does not do so (according to the conception of the modern geometrician). Two planes will separate space, and one of these may be the plane at infinity; but a single plane does not. For if a point (say the focal point of a lens) be carried off with sufficient acceleration from one side of a plane, it will come back on the other side. Every surface may, it is true, form a part of the boundary between two regions of space. But even so modified, the definition is hardly satisfactory; for the calculus requires us to suppose that a solid body may approach indefinitely near to being a surface, which it certainly could not do were the two objects essentially disparate in their nature. Clifford here says:

"The surface of a thing is something that we constantly observe. We see it and feel it, and it is a mere common-sense observation to say that this surface is common to the thing itself and to the space surrounding it." "The important thing to notice is that we are not here talking of ideas or imaginary conceptions, but only making common-sense observations about matters of every-day experience."

But, as the editor, "K. P.," remarks, "we are compelled to consider the surface of the geometer as an idea or imaginary conception, drawn from the apparent (not real) boundaries of physical objects." The truth is, that the geometrical conception of space itself is a fiction. The geometer thinks of space as an individual thing or (as Mr. F. E. Abbot expresses it) a receptacle of things having an existence as something individual. If this were so, absolute position in space (independent of other bodies) and absolute velocity would have a meaning; but, in fact, they appear to have none. What is true is, that rigid bodies in their displacements are subject to certain laws which are the principles of geometry; and we have an instinctive acquaintance with these positional laws, which makes it easy for us to imagine the fictitious receptacle in which these laws are embodied. Thus, space only exists under the form of general laws of position; there is really nothing individual about it. And easy as is the geometer's conception, it is by no means born in us. The natural man knows of space only as a synonym for "air." Kant is responsible for the perpetuation of the erroneous conception of space which Leibnitz had escaped. It is impossible to have clear ideas concerning the non-Euclidean geometry, space of n dimensions, and such matters, without a proper understanding of this.

The main fault of the whole plan of the book is, that while it gives no adequate explanation of many mathematical conceptions interesting to a large body of non-mathematical minds—such as the square root of the negative, multiple algebra, space of n dimensions, the mathematical conception of the Absolute, non-Euclidean space, invariants, Riemann's surfaces, etc., conceptions perfectly susceptible of clear and interesting explanation, without too severely taxing the powers of the non-mathematical—it does suppose a reader whose interest in the logical *enchaînement* of mathematics is exceptionally great. Nine persons out of ten will read the chapter on number and exclaim, "This is nothing but what we learned at school," thus missing the whole argument, which will fly over their heads unperceived. The book has something of Clifford's style and traces of his power, but only faint ones. It will be of some service, but not very much. The parts added by "K. P.," one chapter and a half, bear comparison with those written by Clifford; it is a pity that the revision of the latter has not been more minute and accurate.

Cattle-Raising on the Plains of North America. By Walter Baron von Richthofen. D. Appleton & Co. 1885.

STILL another book on the Western cattle business is from the pen of an ex-Prussian officer, who, having made his home in Colorado, and feeling that there exists a demand for exact information upon this subject which is not yet filled, devotes a hundred duodecimo pages to supplying it. His little work seems to have been compiled with care, and is more business-like and statistical than those of its class that have already appeared; but the author takes such a roseate view of the whole subject that we cannot but feel that, in spite of the saying that "figures cannot lie," his readers, if intending to embark in the business, should not have a too implicit faith in being able to accomplish all that his calculations promise. The story of the Irish servant girl whose employer, being unable to pay in cash the $150 wages due her, gave her instead fifteen cows with the right to let them run on his range and increase as long as she wished, and who, ten years after, sold out to him for $25,000, has a certain flavor of the Western fertility of imagination, which is doubtless engendered by the large percentage of ozone in the atmosphere. We are disappointed to find in Baron von Richthofen's pages no statistics in regard to the amount of land controlled by the titled nobility of Europe, to which class he may doubtless be considered to belong. We understand that not many years ago, having lost by bad investments most of the property he had brought with him from Europe, he was glad to accept a position as engineer and draughtsman at $125 per month, and he probably does not realize what a danger to the free institutions of the country his title constitutes.

BOOKS OF THE WEEK.

Stokes, Prof. G. G. On Light as a Means of Investigation. Macmillan & Co. 75 cents.

The Encyclopædic Dictionary. Vol IV. (Part II.). Cassell & Co. $3.

Taylor, G. L. Ulysses S. Grant. An Elegy, and Other Poems. Funk & Wagnalls. 25 cents.

Thompson, Maurice. By-Ways and Bird Notes. John B. Alden.

Tyler, L. G. The Letters and Times of the Tylers. Vol. II. Richmond, Va.: Whittet & Shipperson. $3.

Still One More School-History of the United States, but One Not Like Any Other.

A HISTORY OF THE UNITED States for Schools. By Alexander Johnston, author of 'A History of American Politics"; Professor in the College of New Jersey, Princeton. With numerous Maps and Illustrations. 12mo. $1.40.

This book is a History of the United States, and not, like other school histories, principally a history of the colonies from which the United States sprang. It is not a story book or a picture book. It simply tries to teach boys how to vote, and does not try to teach them how to fight Indians, or each other, or how to become President or Commander-in-Chief.

A copy will be sent to any teacher for examination, on receipt of 70 cents.

Have You a Collection of Books?

The Library Catalogue and Index is intended for private collections. It is arranged so that any book can be entered under author and title of work. Highly approved by those who have used it. The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

SHEPARD & JOHNSTON, 146 Monroe St., Chicago, Ill.

Houghton, Mifflin & Co.'s
NEW BOOKS [READY SATURDAY].

UNCLE TOM'S CABIN. By Harriet Beecher Stowe. An entirely New Edition, from new electrotype plates. With an Introduction by Mrs. Stowe, stating the circumstances under which the story was written. With a picture of Uncle Tom. 12mo, cloth, $1.

THE SCARLET LETTER. By Nathaniel Hawthorne. New Popular Edition. 12mo, cloth, $1.

HOUSEHOLD ALDRICH. The Poetical Works of Thomas Bailey Aldrich. New Household Edition, carefully revised and rearranged with Poems not included in previous editions of Mr. Aldrich's Poetical Writings. With a fine Portrait. The Full Gilt Edition has a Portrait and Eleven Illustrations. 12mo, cloth, $2; cloth, full gilt, $2.50; half calf, $4; morocco, or tree calf, $5.

DUE SOUTH; OR, CUBA PAST and Present. By M. M. Ballou, author of 'Due West,' 'A Treasury of Thought,' 'Notable Thoughts about Women,' etc. 12mo, $1.50.

During the winter of 1884-85 Mr. Ballou made an extended visit to Cuba, and observed carefully its industrial, political, and social condition, and also studied its history. The results of his studies and observations are included in this volume, as well as a chapter of equal value and attractiveness on the Bahama Islands.

DUE WEST. By M. M. Ballou. *Fourth Edition.* $1.50.

*** *For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the Publishers.*

HOUGHTON, MIFFLIN & CO.,

Ornamental Friezes, Headpieces, Tailpieces, etc.

MALTHUS AND HIS WORK. By James Bonar, M.A., Balliol College, Oxford. 8vo, $4.

"It is to present the man and his work that Mr. Bonar has written the present work. He seeks to show what manner of earnest man Malthus was, what it was that he taught, and what ground he had for his convictions. In brief, he seeks to give the public a second-hand knowledge of Malthus which shall at least be fair and unbiassed by prejudice, and in the attempt to do that he has produced a work of unusual interest and no little value."—*N. Y. Commercial Advertiser.*

SOUVENIRS OF SOME CONTINENTS. By Archibald Forbes, LL.D, 12mo, $1.

THE LIGHT OF ASIA AND THE Light of the World: a Comparison of the Legend, the Doctrine, and the Ethics of the Buddha with the Story, the Doctrine, and the Ethics of Christ. By S. H. Kellogg, D.D., Professor in the Theological Seminary, Allegheny, Pa., late Missionary to India, &c., &c. 12mo, $2.

AMERICAN JOURNAL OF ARCHÆOLOGY

AND OF THE

HISTORY OF THE FINE ARTS.

Advisory Editor, CHARLES ELIOT NORTON, of Harvard College; Managing Editor, A. L. FROTHINGHAM, Jr., of Johns Hopkins University; assisted by a number of Special Editors.

The *Journal* is published quarterly, at the subscription price of $3.50, forming at the end of the year a volume of about 400 pages, with numerous plates and figures. It is devoted to the whole field of archæology—Oriental, Classical, early Christian, Mediæval, and American—and gives a summary of archæological periodicals and societies, and of investigations and discoveries in all parts of the world. Detailed circulars can be had by applying to the Managing Editor,

Dr. A. L. FROTHINGHAM, JR.,
Baltimore, Md.

HARVARD UNIVERSITY,

CAMBRIDGE, MASS.,

Lawrence Scientific School.

Four years' courses are given in I. Civil Engineering; II, Chemistry; III, Natural History (Biology or Geology); IV, Mathematics and Physics. The degrees given are Civil Engineer and Bachelor of Science. Graduates of colleges can enter with advanced standing of one or two years.

Persons who are not candidates for a degree may enter the School as Special Students at any time, without examination, and pursue any of the courses of instruction for which they are found competent. Address the Dean of the Lawrence Scientific School.

Mackaye's School of Acting

AND

EXPRESSION IN ART.

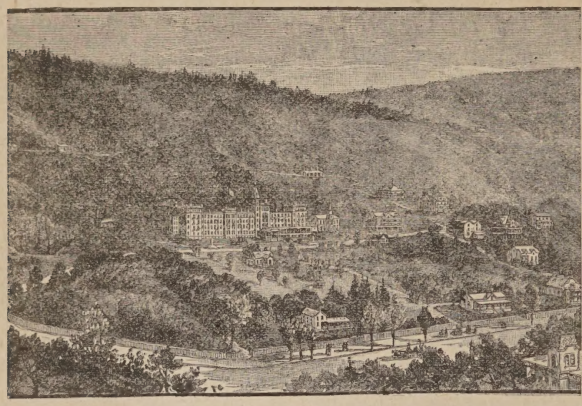
The Sanatorium, Dansville, N. Y.



[Long Known as Our Home on the Hillside.]

An institution for the scientific treatment of chronic invalids, as well as for rest and recuperation of those who are tired out. It is under the management and personal care of a corps of regularly educated and experienced physicians devoted to their work. Massage, Electro-Massage; Doctor Taylor's Swedish Movements; Electricity (Galvanic, Faradic, and Franklinic, the latter from most approved Holtz machine); inunction; and all forms of baths, including the Moliere Thermo-Electric, Turkish, Roman, and Russian, are employed according to individual needs. The plan of treatment comprehends proper regulation of daily life, including diet, exercise, etc., together with cheerful and helpful social and religious influences. The comforts and pleasures, without the cares of home; entire freedom from taxations of fashionable life; and opportunities for recreation and amusements under reasonable regulation are enjoyed. Thoroughly skilled attendants administer to every want.

The Sanatorium consists of a main building and nine cottages located on an eastern mountain slope overlooking the town of Dansville, and 1,200 feet above the level of the sea. For beauty of scenery, healthfulness of climate, and purity of air and water, it is unrivalled. Winters exceptionally mild for this climate. *Malaria utterly unknown.*

The main building, occupied since 1883, is 300 feet long, five stories high, of brick and iron construction, and

ABSOLUTELY FIREPROOF.

It is constructed to meet every need of the invalid or seeker of rest and quiet, and is complete in minutest sanitary details. Among its attractions are light, airy rooms, ventilated after the best plan, and heated by steam; open grates in public and many private rooms; safety elevators; electric bells in every room; spacious halls and corridors, kept at uniform heat; perfect sewerage (closets in annex, separate from building, but connected by warmed corridors); best modern appliances in culinary department; abundant, varied, and well-prepared dietary; extensive apartments for treatment, arranged to secure entire individual privacy, etc.

Autumn and winter months are considered most favorable for treatment. Throughout the entire main building a uniform and agreeable steam heat is constantly maintained, and this, with the perfect ventilation, induces many to prefer a winter residence here to one in a tropical climate.

Special rates to clergymen and physicians. Dansville is accessible from all quarters by Del. & Lack. and by the Erie R. R. For illustrated descriptive pamphlet, circular, and other particulars, address

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

The Old Doctor:

A ROMANCE OF QUEER VILLAGE. By JOHN VANCE CHENEY. 16mo, paper cover. Price, 50 cents.

'The Old Doctor' is written in a fresh vein, and consists of a careful study of life in an old and out-of-the-way New England village. It contains some original and striking sketches of character, the old doctor specially being a figure likely to fill a permanent place in the gallery of ideal portraits.

II.

Why We Believe the Bible.

AN HOUR'S READING FOR BUSY PEOPLE. By J. P. T. INGRAHAM, S. T. D. 16mo, cloth. Price, 60 cents.

The dedication to this manual indicates briefly its purpose: "To the Jews, from whom the Bible came; to the Gentiles, to whom it came; and to all who would like to confirm their faith in the Bible, but who have no leisure for large volumes, this book is respectfully inscribed."

III.

The Study of Political Economy.

HINTS TO STUDENTS AND TEACHERS. By J. LAURENCE LAUGHLIN, Ph. D., Assistant Professor of Political Economy in Harvard University. 16mo, cloth. Price, $1.00.

"The existence of this little book is due to an attempt to convey, by lectures to students, an understanding of the position which political economy holds in regard, not merely to its actual usefulness for every citizen, but to its disciplinary power. . . . The interest which the public now manifests in economic studies led me to put the material of my lectures into a general form, in order that they might assist inquirers in any part of the country."—*From Preface.*

IV.

Cheap Popular Edition of 'The Money-Makers.'

The Money-Makers: a Social Parable.

A NOVEL. New cheap edition. 16mo, paper cover. Price, 50 cents.

"A brilliant and in many respects a remarkable book. . . . Sure of a wide circle of readers. It is by no means a faultless work of fiction, but it may be confidently asserted that its 300 and odd pages contain more strength and material than go to the making of three ordinary novels."—*Chicago Tribune.*

V.

A Vagrant Wife.

A NOVEL. By FLORENCE WARDEN, author of 'The House on the Marsh,' 'A Prince of Darkness,' etc., etc. 12mo, paper cover. Price, 25 cents.

*** *For sale by all booksellers; or any work will be sent by mail, post-paid, on receipt of price.*

1, 3, & 5 Bond Street, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 10, 1885.

The Week.

SOME of the provisions of the Warner bill, so far as they have been disclosed, will require very careful attention. It is proposed, for instance, that the bullion certificates may be deposited by the national banks for the redemption of their circulating notes. This contemplates a permanent holding of a fluctuating commodity, and will therefore not be acceptable. The persons interested in the security and permanent value of national-bank notes are not the bankers, but the note-holders—that is, all the people of the United States. It is not likely that they will accept any lower form of security than United States bonds so long as bonds can be obtained in sufficient amounts. Under existing law the Treasury is required to redeem all the notes of failed banks, but it does this out of the security in its possession and not out of the proceeds of taxation. If the national Administration is disposed to favor the Warner bill as an alternative to the Bland act, the subject becomes one of exceeding interest, and it is to be hoped that the text of the measure in an authentic form may be given to the public at an early day.

We presume that a desire to secure a little free advertising is the real motive for the suit which has been brought in the United States Circuit Court to test the constitutionality of the Civil-Service Law, but we are very glad that the step has been taken. There can be no doubt about the issue of the case if it is ever pushed to a trial. Nobody really believes that the law is unconstitutional. The "Jeffersonian Democrats" who have been pretending for the past five months that they doubted its constitutionality don't believe it, but the President's course in standing by the law so inflexibly forced them into that position as their last ditch. If they have had a hand in bringing this suit, they have made a serious blunder. So long as the constitutionality of the law had never been formally decreed they could keep on talking, and would possibly find some comfort for themselves in that exercise; but from the moment that the law is decided to be constitutional even this poor pleasure will be removed. Every assault which they have made upon the law heretofore has resulted in demonstrating its wisdom and efficiency, and so it will be to the end of the chapter. We hail every new attempt to overthrow it, therefore, with positive delight.

The begging circular which Mr. Cooper, the phenomenal Chairman of the Pennsylvania Republican State Committee, has sent to the employees of the Land Office and Pension Bureau at Washington, is an astonishing piece of impudence and folly. Not only is it contrary to law, but from the nature of the case it was foreordained to be fruitless. There is no reason why a Government clerk should consent to be "bled" now for the Grand Old Party. Fears of Democratic supremacy and threats of Republican wrath can no longer terrify him. Neither do we believe that there is in all the departments one man who can be moved to contribute a dollar by Mr. Cooper's statement that, "if the Republicans of Pennsylvania win a decisive victory this year, it will prevent any agitation or disastrous change of the tariff by the incoming Congress, and pave the way for the overthrow of the Democratic State and National Administrations." The election of Colonel Matt Quay to the Treasurership of Pennsylvania, in spite of the belief of every honest man in the State that he is unfit for the office, will mean something very different from that. It will not affect the tariff question at all, but it will show the depths of moral degradation to which blind worship of the protection fetish has brought the Republican party of Pennsylvania.

The Ohio Republican campaign has had a discouraging start, and the outlook is by no means so good as it was a few weeks ago. Senator Sherman's and Judge Foraker's combined "opening-gun" was too heavily loaded with the sectional issue, and had no effect whatever in arousing the voters. In addition to this, the Republican County Convention in Cincinnati, which met last week, nominated a thoroughly worthless ticket, with a notorious saloon-keeper in a prominent place on it. This was so bad a proceeding that even the *Commercial Gazette*, which usually takes any kind of a party ticket without wincing, squirmed perceptibly in accepting this one. The editor was forced into the old position of last year, and agreed to support the ticket, not because it was a good one, but because it was preferable to any which the Democrats could put forward. It is evident that this attempt to keep the party alive because of the "general cussedness" of the Democrats is going to be very hard work. The party in Ohio is visibly suffering under the process, and unless some man capable of taking the leadership with new issues appears soon, the present drift toward dissolution will become too rapid to be checked.

According to Secretary Endicott, the long contest over the Postmastership of Augusta, Me., is not to end in the appointment of Mr. Morton, the editor of the leading Democratic newspaper of the place, who has been making such determined efforts to secure it. The chief objection to Mr. Morton was that in the last campaign he republished in his paper an old and vile scandal about Mr. Blaine. It is said and generally believed that Mr. Blaine asked the President as a personal favor not to appoint Mr. Morton because of this act, and the President has been from the outset inclined to grant the request. He has examined all the evidence, and has had a personal explanation from Mr. Morton. The result, as given by Secretary Endicott in a recently reported conversation in Boston, is as follows:

"You may be sure of one thing: the President would not appoint Mr. Morton if every Democrat in Maine requested it. He does not question Mr. Morton's Democracy, but he does question his manliness. He is willing to allow a newspaper great latitude in a political campaign, but when an editor parades a vile scandal against a candidate before the people of his own city for the purpose of outraging the feelings of his own family, the President regards such an individual as less than a man, and would not appoint him to office under any circumstances."

There is a spirit of Roman heroism in Senator Hoar's speech at the Essex Club on Saturday evening which ought to excite the highest enthusiasm. He drew a moving picture of corruption at Washington, as illustrated in the appointment of Pillsbury and the pardon of Mullen, and then declared that if only two other men could be found in the length and breadth of the land to fight against such iniquity, he would be one of a party of three "to labor until we have convinced the American people that it is their duty to return to the old policy." The old policy is of course the policy which prevailed when no bad men were appointed to office and no rascals pardoned out of the county jail. This is a worthy purpose, and we shall be glad to find it supported by a party of three, which will certainly be the maximum number of educated and impartial men whom Mr. Hoar will ever be able to convince that President Cleveland in appointing Pillsbury and pardoning Mullen had a design to overturn the ballot-box and undermine the purity of elections.

The State Department continues to be consistent in the application of civil-service reform principles to the consular system. During the last few days Secretary Bayard has given assurances that several more Republicans in the consular service who have good records shall remain undisturbed. The Washington correspondent of that Stalwart Republican organ, the Chicago *Inter-Ocean*, cannot be suspected of any partiality in favor of the present Administration, and his testimony is therefore of much significance. He says that "Secretary Bayard is trying to give the Government the benefit of the best men, whether they are in or out of place. He believes that the consular service should be permanent, and will make changes only where he thinks it can be improved. Notwithstanding the extraordinary pressure upon him for places, he resists the demands of his party." The consular service has always heretofore been conducted upon the spoils basis, and no branch of the Government will be more benefited by the application of business principles.

The Iowa prohibitionists met their worst defeat a week ago in a judicial decision against them of far-reaching importance. Proceedings were recently instituted against some saloon-keepers in Dubuque, where saloons have been more common since the Prohibition Law was passed than ever before. Their counsel asked for a removal of the cases from the District Court of the county to the Federal courts, on the ground that the State law is in violation of the Civil Rights Acts of Congress. Two sections of one of

these acts, it will be remembered, were declared unconstitutional by the United States Supreme Court a couple of years ago, but that decision only annulled the provisions of the act of March 1, 1875, intended to secure negroes by Federal law equal accommodations in inns, public conveyances, and places of amusement. The following section, passed by Congress April 20, 1871, remains in force:

> Sec. 1979. Every person who, under color of any statute, ordinance, regulation, custom, or usage, of any State or Territory, subjects, or causes to be subjected, any citizen of the United States, or other person within the jurisdiction thereof, to the deprivation of any rights, privileges, or immunities secured by the Constitution and laws, shall be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress.

The attorneys for the saloon-keepers took the ground that the selling of liquor is one of the "rights, privileges, or immunities secured by the Constitution and laws," and that the State of Iowa, after encouraging men to settle within its limits and build breweries, cannot justly enact a law which makes their property worthless. Counsel for the prohibitionists opposed the transfer of the case with all their might, realizing that it meant a long delay pending a final decision by the Supreme Court of the point at issue, and that meanwhile the present difficulties of enforcing the law would be vastly increased. The County Court rendered its decision on Thursday, and granted the request for a removal of the cases to the Federal courts. It is somewhat remarkable that, despite the prolonged litigation over the liquor question in different parts of the country, the vital point here involved has never been carried up to the highest judicial tribunal for a final decision, and the result will be awaited with great interest.

The first hanging in Minnesota for nearly a score of years occurred a fortnight ago. In 1868 the Legislature repealed the old law which made execution the penalty for murder, and enacted a compromise substitute, which left the jury to decide whether the punishment should be death. This system resulted in a practical abolition of the death penalty, since few juries were ready to assume the direct responsibility for taking life, and in aggravated cases a criminal could always escape the extreme penalty by pleading guilty, and thus preventing his case from going to the jury. After fifteen years of this divided responsibility, public sentiment revolted against the immunity which murderers had come to enjoy, and the Legislature of 1883 sought to restore the death penalty by lodging the decision of the question whether or not a man should be hanged with the court instead of the jury. But this did not work well either, and so the last Legislature restored the old rule that conviction of murder in the first degree carries with it the punishment of death. There appears to be general satisfaction with the restoration of the gallows, and it does not seem likely that any agitation for the abolition of the death penalty will gain much headway in Minnesota for a long time to come.

The New Hampshire Legislature has succeeded in thoroughly demoralizing the fire-insurance business in that State in very short order. One of the last acts which it passed was what is known as the "valued policy" law, which forbids any outside insurance company to apply for the removal of a suit to which it is a party from the State to the Federal courts, on penalty of a revocation of its license, and provides that in any suit brought in the State courts against an insurance company to recover for a total loss sustained by fire or other casualty to real estate or to buildings on the land of another, the amount of damage shall be the amount expressed in the contract as the sum insured, and no other evidence shall be admitted on trial as to the value of the property insured. Valued-policy laws have been passed in Wisconsin and Texas, and it is alleged that the result has been a great increase of incendiarism. It seems reasonable to expect such a result, since the system appears to put a premium upon over-insurance, with a view to fraudulent profit by incendiarism. It is true that the New Hampshire act provides that the new rule shall not be construed to prevent the admission of testimony to prove over-insurance fraudulently obtained; but the insurance men argue with a good deal of force that this is only locking the stable-door after the horse has been stolen. While the bill was pending, the outside companies agreed that they would withdraw from the State if it became a law, and they have been as good as their word. This upsets the whole system of fire insurance in the State, and the bad consequences threatened are so serious that there is already talk of an extra session of the Legislature to repeal a law which it was a piece of great folly ever to enact.

There was little that was especially new in Ferdinand Ward's testimony last week regarding his remarkable transactions with Mr. Warner, but what he revealed will stimulate the already keen desire to fathom the mystery which lies at the bottom of the transactions of the two men. Warner, who, by general consent of himself and all his friends, was a poor man when he began to operate with Ward, became rich in an astonishingly short period. Ward's figures show that, starting with $6,400, Warner invested in the contract business during seventeen months nearly $14,000,000, on which during that time he drew out a profit of nearly $3,000,000. There were held by him at the time of the failure unmatured obligations amounting to over $2,000,000 more, so that his profits, if all his transactions had been carried out, would have reached nearly $5,000,000. This was doing pretty well on an original capital of $6,400. Warner's customary profit was 20 per cent. a month, which was usually made on money which he hired at 2 per cent. a month. Of course there was some powerful reason why Ward allowed him to make such generous profits and actually get away with as much money as he did. Most of the investors in the "contracts" were induced to "reinvest" their fabulous profits, and these with their original investments were all swept away by the failure. Warner was more fortunate. What was the reason?

The announcement in the Newport news of one of our morning contemporaries, that "the cottagers gave considerable attention to the progress of the yacht race between the *Genesta* and the *Puritan*," shows that the Cottagers are by no means high and mighty persons, lying "in the hills like gods together, careless of mankind," as some Boarders try to persuade us. On the contrary, there is abundant reason for believing that they share the hopes and fears and tastes of humbler people. It is a cheering circumstance that they should have given any attention to the yacht race. It shows that the bridging over of the chasm which in America separates class from class, the Cottager from the Boarder, is not so hopeless as some people imagine. It will be a happy day when the Cottage and the Boarding-house thrill with the same emotions, and perhaps this international yacht race will do something to hasten it. Who knows?

Whatever interest Mr. Parnell's recent speech may have excited in England, it seems to have produced small effect in this country. There are no signs, either among the Irish-Americans themselves or in their newspapers, of anything like excitement about it. Toward this and all other phases of the Irish question there is at present among the Irish-Americans an almost unwonted attitude of indifference. The *Irish World's* efforts to arouse some of the old zeal are all failures. Here is the Emergency Fund for last week, for example, limited to a single contribution of $3 38. For two weeks an effort has been made by the same paper to start a Mrs. Parnell Testimonial Fund, and the total receipts are $21. It is evident that the capacity of the Irish of this country to contribute to "funds" has been pretty well exhausted for the present, at least, and it is a wonder that the bottom was not reached sooner. Why people should contribute their money to a paper which never rendered anything like a strict account of it, and which collected some of it with the distinct understanding that no questions should be asked about its use, always was a good deal of a mystery.

The proceedings against Mr. Stead and his co-laborers of the Salvation Army, in the Armstrong case, have opened in the London Police Office, and the probabilities are that the defendants will be committed for trial. The charge is, that by way of illustrating the "revelations" made by the *Pall Mall Gazette*, they got a reformed procuress, a Mrs. Jarrett, to obtain a young girl from her parents on false pretences, and then produced her as a "specimen." The true inwardness of the whole matter will probably only come out in the jury trial. Stead is rapidly acquiring, in the eyes of the English public, the character of a well-meaning "crank." The earlier suspicion of his enemies that he was engaged in a money-making enterprise is giving place to this view in many minds. But there is now a pretty general agreement as to the awful effects of the countenance and encouragement at first given to his exposures by many moralists and decent people. The rising generation of Englishmen and women will probably never get over the beastly reading with which these wretched fanatics have furnished them, while the Criminal Law Amendment Act, for which this

monstrosity was perpetrated, will probably work as all such laws usually work—that is, it will probably now and then save a girl from ruin out of the tens of thousands who every year "go to the bad" under the influence of vi[illegible] literature. The "director" of the *Pall Mall* investigations was in court, and looked, it is said, as one might expect a man to look who protests publicly against legal interference with prostitutes over sixteen, on the ground that their trade is a "vested interest."

According to general report, and to a distinct though not official statement of Lord Randolph Churchill, the Afghan difficulty has been completely settled by an amicable arrangement between Russia and England. Russia renounces her claim to the Zulfikar Pass, including, we presume, the hills which dominate it—for it was these which she contended for in the last stage of the protracted discussions. Churchill claims credit for the Conservative Cabinet on the score of this diplomatic achievement, and the Russian Foreign Office may actually have been influenced in its determination by the Tory menace of an alliance with China and Turkey, which might have placed Russia on the defensive in the Amoor Land, in Turkestan, in Armenia, and in her Black Sea coast-lands. But the concession which the Czar has made for the sake of peace is a mere trifle. The Zulfikar Pass is not the gate to Herat, nor is Herat the key of India, all Mr. Marvin's declamation to the contrary notwithstanding. When Russia has completed her Trans-Caspian railway, and quietly amassed enough troops and armaments at Krasnovodsk, Kyzyl-Arvat, Askhabad, Merv, and Panjdeh, Zulfikar will be no Thermopylæ in the way to Herat, if a march on that city be determined upon. Herat, however, which may prove a Kars or a Plevna, is not likely to be the next objective point of a Russian advance against Afghanistan. It is Afghan Turkestan—Maimene, Balkh, Khulm, etc.—which is destined by its geographical position (on the north side of the Hindu-Kush) to fall a prey to the power of the White Czar. The arrangements for an insurrection against the Amir and for the "unavoidable" intervention of a Komaroff will not long be wanting, and the new boundary treaty has opened to Russia at Panjdeh and Merutchak the high-road to Maimene and further east. Russian military chauvinists may dream and talk of Herat, Candahar, and the Indus, but Russia's natural and safer advance is not southward, but eastward. Nor will Tory diplomacy or threats check it.

The question whether distant colonies are a desirable appendage to any strong Power has been much discussed in England of late, and the judgment of her most enlightened statesmen and publicists is strongly adverse to any new responsibilities of the kind. The recent experience of France in Tunis, Tonquin, and Madagascar is full of warning against colonial adventures. Germany took up the fashion as it was beginning to die out elsewhere. The choice parts of the uncivilized world had been picked up by Great Britain, France, Spain, Holland, and Portugal centuries ago. Consequently the new-born ardor of Germany finds nothing to work upon but [illegible]ding coasts in Africa and the m[illegible]nds of the sea, where, according [illegible]ce, the toil of generations of white [illegible] needed to make the land yield as [illegible] expended upon it. Such expenditure [illegible] dispersion of the national forces. The g[illegible]ness of Germany has been gained in quite other ways. Her standing among the Powers has been due preëminently to concentration, to the husbanding of her whole strength in her own territory. When she goes abroad into the Southern Pacific and the Indian Ocean to establish colonies, she sends a part of her power of offence and defence in each outward-bound ship. It was inevitable, moreover, from the beginning, that colonization could not be pushed without breeding irritation among peoples with whom Germany desires to be at peace. It is not long since her relations with Great Britain were strained by the Angra Pequena affair, and those relations have not been improved by the German occupation of the territory adjoining the Sultan of Zanzibar's dominions. These difficulties have been allayed, but they have left behind a feeling of coolness and suspicion which nobody can fail to discern in the tone of the English press. But it is commonly the unexpected which happens in colonizing exploits, and nothing could have been more unexpected than the rupture with Spain which has actually occurred. It is of little consequence, in the larger aspects of the dispute, whether Germany or Spain is in the right. The fact remains that the good understanding with Spain is broken, and that the game has not been worth the candle.

The *Independent* calls attention to the fact that the United States have really larger interests in the Caroline Islands than any other nation. There are twelve American missionaries resident there now engaged in educational work, supported by funds from this country. The only steamboat at the islands is o ned by Americans. There are 500 of the islands with a population of 100,000, half of whom have been induced by the American missionaries to give up paganism. There are five languages, or, we presume, dialects, in the group, and the New Testament has been translated into three of them. These things, and others of the same kind, lead the *Independent* to observe that if the islands need a protectorate at all, it ought to be an American protectorate. We have, however—luckily, we think—no machinery for anything of the kind, and it will be time enough to make offers of this kind to foreigners abroad when we are able to protect innocent foreigners at home like the Chinese from massacre and pillage. But there is no doubt the *Independent* is right in preferring German to Spanish protection for the islands. German protection means civilization and progress; Spanish, corruption and anarchy, with occasional intervals of orderly violence.

The *Oesterreichische Eisenbahn-Zeitung* for August 9 has an interesting article on "Railroads and Commercial Policy," showing the effect of the protective-tariff system upon railroad profits. The railroads of Central Europe have not been subjected to the same disastrous influences which have been felt in America during the last three years, or which were felt in America and Europe alike in 1873. There has been no reckless railroad speculation and over-construction in Germany and Austria. The passenger traffic and passenger receipts have decidedly increased. The number of tons of freight handled has also increased; but the freight receipts have greatly diminished, and this diminution is in large measure due to the fact that the average length of haul is much less than it was a few years ago. Local business has developed; through business has been checked. When a low-tariff policy prevailed, the international freight movement was relatively large. The change toward higher tariffs in the years 1876–1880 did not at first make any great difference. The railroads lowered their through rates in order to prevent the long-distance traffic from slipping out of their hands. They thus did a great deal to neutralize the Government's tariff policy. This was really one of the main reasons which led the States of Central Europe to control the railroads more actively than ever before; where nothing short of State purchase and management would give them the necessary power, they were ready to go to that length.

The late interview of Count Kálnoky, the Austro-Hungarian Minister of Foreign Affairs, with the German Chancellor at Varzin, had for its leading subject the adjustment of the international basis for commercial relations between the two empires, and it is curious to notice the extraordinary change of disposition toward Germany which has come over Hungary since Prussia's triumph over Austria. Some decades ago, when Austria, through the Federal Diet of Frankfort, still lorded it over the Germanic Bund, acted the great German power, and pursued a policy of Germanization wherever and whenever that was possible, nothing was more repugnant to the Hungarians than any step leading toward a closer connection with German interests. Now, they are anxious for a customs union with the German Empire, though knowing that the Zollverein was, in the last half century, Prussia's main instrument in paving the way for political annexations. All parties in Hungary are reported favorable to a union, and Kálnoky is said, with the approval of M. Tisza, the Hungarian Premier, to have made overtures in that direction to Bismarck, which the latter, however, declined from regard for the non-Hungarian interest and sentiment in Austria. The fact is that Sadowa upset all former relations and calculations in those quarters. The Hapsburg dynasty, ousted from all connection with non-Austrian Germany, pursues now a policy diametrically opposed to Germanization, and the ambition of the Hohenzollerns, the Hungarians clearly see, will in its boldest flight stop at the Leitha. Hence they discard their former antipathy to German connections, and coolly and resolutely consider their economic interests. It is the Slavic national sentiment in Bohemia, Moravia, and elsewhere which is now chiefly opposed to German influences, and Bismarck, who seeks in it a useful counterpoise against Russian Panslavism, is not inclined to wound it.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 2, to TUESDAY, September 8, 1885, inclusive.

DOMESTIC.

PRESIDENT CLEVELAND arrived in Washington on Monday morning, very much refreshed by his vacation in the Adirondacks. He immediately resumed work.

The members of Congress, bankers, and others who have made anxious inquiry as to the course of the Administration on the silver question, are no longer in doubt about the general policy to be pursued. Conferences at the Treasury, inquiries addressed to Secretary Manning, etc., have elicited the information that ever since the Warner compromise measure was proposed, representatives of the Administration have been endeavoring to perfect a plan by which the opposition of the silver men to a suspension of the coinage can be overcome. It is learned on the highest authority that the Administration has abandoned hope of the passage of a bill simply stopping the coinage of standard dollars or leaving this coinage discretionary with the Secretary of the Treasury. While it is believed that the opposition to silver in the South and some other sections would render the prospect of such a bill at the next session better than at the last, the President came to the conclusion that success was too uncertain, and that the only practicable method was to secure a compromise which representatives of all factions would be pledged to support before it was introduced in Congress. A prominent representative of the Administration is authority for the statement that such a measure is being rapidly put into shape, representatives of all factions being consulted. The central idea is the suspension of the coinage of silver dollars, and in its place the deposit of bullion.

It is understood that Congressman Hewitt is again engaged in the preparation of a bill removing the duties on raw materials, and that he has great confidence in the passage of such a measure by the next Congress. An earnest attempt will be made, it is said, to secure a bill meeting the ideas of Speaker Carlisle and other prominent Democratic members who have never heretofore fully united in any plan of tariff reduction.

Senator Kenna, of West Virginia, has prepared a bill providing for another Cabinet officer, to be known as the Secretary of Industries, under whose charge would come the Agricultural Department, the Bureau of Education, the Bureau of Statistics, the Geological Survey, and the Census Office.

United States Treasury officials are well satisfied with the financial showing for the month of August, during which the debt was reduced $2,879,052. They say that all the figures are indicative of a revival of business, and that the prospect is now brighter than at any time within the past year. From the point of view of public revenues the showing is equally good. There has been a general upward tendency, and the gold fund has slowly but steadily increased.

A gentleman who has recently communicated with Secretary Manning on the subject, says that the Administration will not take any action tending to bring the question of amending the Civil-Service Law before Congress.

Circulars sent to Government employees at Washington by Chairman Cooper, of the Pennsylvania Republican State Committee, asking for political contributions, have been referred to the Civil-Service Commission to see if sending them is not a violation of the Civil-Service Law.

A motion was made before Judge Wallace, in the United States Circuit Court on Friday, by James W. Hinckley, as relator, for a writ to compel Dorman B. Eaton and the other Civil-Service Commissioners to show cause why they should exercise the functions of a Civil-Service Commission. Mr. Hinckley sets forth in his complaint that the Commissioners are usurping the powers of the President in regulating the appointment of people to office, and are therefore violating the provisions of the Constitution of the United States.

Chang Yin Huan, the Chinese Minister about to start for this country, is described at the Chinese Legation in Washington as one of the most prominent and progressive statesmen and diplomats of the Celestial Empire. He is of middle age and of unusual attainments as a scholar. He has held various positions of honor, travelled largely in Europe, and is progressive in his ideas, and an admirer of American principles and institutions.

Since the adjustment of the difficulties between the sheet rollers and the iron manufacturers, all the mills in Pittsburgh are working to their utmost capacity, and everything points to a season of decided prosperity. James M. Swank, the Secretary of the American Iron and Steel Association, having just returned from a trip through the iron region of Pennsylvania, writes encouragingly in the *Bulletin* of the Association, not only of the iron trade but of the business outlook in general.

The Knights of Labor and the Wabash Railroad managers have reached a settlement, and the managers have issued the following order: "In filling vacancies caused by the discharge of men for incompetency or by their leaving the service, give the old men the preference over strangers or new men, asking no questions as to whether they belong to the Knights of Labor or any other organization."

A Rock Springs (Wy.) despatch on Wednesday said that the white miners in the Union Pacific Railroad Company's coal-pits rose and with pistols and guns drove all the Chinese, to the number of 500, from the camp into the mountains. Fifty houses in Chinatown were burned to the ground. The mine is the largest in the West. About fifty Chinamen were killed. On Friday United States troops were ordered to the scene of the disturbances, and order has been maintained.

A hail storm in Charles County, Maryland, on Saturday damaged crops to the amount of $100,000.

The Galveston (Texas) *Daily News* asserts that the school fund of the State has been defrauded of 12,459,000 acres of land, worth $25,000,000, by mismanagement (or worse) of the State land affairs.

Mr. Henry F. Spaulding has submitted to the American Committee on the Bartholdi Statue a report of the disbursements at Bedloe's Island from the beginning of the work to August 15. They amount to $248,058 98, the principal items being $93,830 94 for cost of foundation mass, and $90,426 65 paid to D. H. King, jr., for cement, according to agreement.

The American sloop yacht *Puritan* made an effort on Monday to try conclusions with the English cutter *Genesta* in a twenty-mile beat to windward and return, it being the first of the races for the *America's* cup. At no time, however, was the wind sufficient to enable either vessel to complete the task inside of the seven hours which was fixed as a limit. The start was made at 1:30 P. M., and at 6:40 P. M. the judges decided to declare the race off, the *Puritan* then leading the *Genesta* about two miles. The largest number of vessels ever congregated in these waters was present. On Tuesday the breeze freshened and there was every prospect of a good race. About 11:34 A. M., when both boats were sailing to cross the starting line, the *Puritan* fouled with the *Genesta*, carrying away the latter's bowsprit. A hole two feet in length was torn in the *Puritan's* mainsail at the lower end. This put an end to the racing for that day. The *Puritan* frankly accepted responsibility for the collision, and the race would have been awarded the *Genesta* if she had simply sailed over the course. Her owner magnanimously declined that privilege. The first race will be sailed on Friday, September 11, after repairs have been made.

William McKendry Gwin, the first United States Senator from California, died at the New York Hotel on Thursday afternoon. Mr. Gwin was born in Sumner County, Tennessee, in 1805, and studied medicine. His first official post was that of private secretary to President Andrew Jackson, and in 1833 he was appointed United States Marshal. In 1848, upon the discovery of gold in California, Dr. Gwin was one of the first to yield to the gold craze. In 1849 he was elected one of the delegates from San Francisco to the Constitutional Convention, and when the first State Legislature met in January, 1850, he was elected United States Senator, his colleague being General John C. Fremont. When the war of the rebellion broke out, the Southern sympathies of Dr. Gwin prompted him to oppose the Federal Government, and he was imprisoned for disloyalty in 1861. After two years he was released on parole. In 1864 he organized a scheme for colonizing Sonora with people of Southern birth. It was at this time that he became known throughout the country as the "Duke of Sonora." Gwin remained in Sonora only a short time, and early in 1865 he went to the Eastern Peninsula of Virginia, remaining there until after the surrender of Lee, when he left the country, and lived for a time in Europe. After the reconstruction period he returned to California, and began business as a mining operator.

The Rev. Dr. Stephen H. Tyng, sr., died at his home in Irvington-on-the-Hudson just before midnight of Thursday. His death from weakness and old age has been expected for some months. As the rector of St. George's Parish in this city from 1845 until 1878, Dr. Tyng worked for the third of a century with unflagging zeal on behalf of his church and of the community in which he lived. Dr. Tyng's published works include 'Lectures on the Law and Gospel,' 'Recollections of England,' 'Family Commentary on the Four Gospels,' 'History of Ruth, the Moabitess,' 'Esther, the Queen of Persia,' 'Forty Years' Experience in Sunday-schools,' and 'The Child of Prayer'—the last-named volume being a memorial of his son, the Rev. Dudley A. Tyng, whose violent and untimely death many years ago dealt the father an almost overpowering blow. He was eighty-five years of age.

Major Aaron Stafford, the last surviving officer of the war of 1812, died on Sunday at his residence in Waterville, Oneida County, N.Y., in the ninety-ninth year of his age, having retained his mental faculties to the last.

Judge George W. Clinton, Vice-Chancellor of the Board of Regents, was found dead in the Rural Cemetery at Albany on Monday afternoon, where he had gone botanizing. He was a son of Gov. De Witt Clinton, and was born in this city in 1807. For forty years he was a leading citizen of Buffalo. In 1838 President Van Buren appointed him Collector of Customs at that port. From 1847 to 1849 he was United States District Attorney for the Northern District of New York. In 1854 he was elected Judge of the Superior Court of Buffalo, and held the position until 1877, when he was retired on account of his age. He was an active member of the Constitutional Convention of 1867.

FOREIGN.

A sensation was created in Madrid on Friday evening and Saturday morning on the receipt of important news from the Caroline Islands. The Spanish war-ships reached Yap, one of the islands, on August 21, and prepared to occupy it in the name of Spain. The Spanish officers were dilatory in landing troops, and on the 24th a German gunboat arrived. Although it was seven o'clock in the evening, the German commander instantly landed a body of marines and sailors, and hoisted the German flag over the island. The Spanish officials made an energetic protest against the action of the German commander, and on the latter's refusal to recede from the position he had taken, telegraphed to Madrid for instructions. A conflict between the Germans and Spaniards at Yap was feared. The Council of Ministers immediately met, and Alfonso started for Madrid, where he arrived

on Saturday and was received with tremendous enthusiasm.

The excitement in Madrid on Friday evening was intense. The people seemed mad with rage. A large crowd gathered in front of the German Embassy, attacked the building, and tore down the coat-of-arms and dragged it through the streets to the Puerta del Sol, where they burned it in front of the office of the Minister of the Interior amid yells of "Down with Germany." After venting their spleen there, the mob proceeded to the French Embassy and cheered frantically. The crowd had by this time grown to considerable proportions, and, fears being entertained of a serious riot, troops were ordered out to clear the streets. The crowd slowly retired before the military. 184 of the leaders of the mob were arrested before the crowd retired.

The Council of Ministers on Saturday adopted a proposition to court-martial the Governor of Yap and the commander of the two Spanish war-ships which arrived there on August 21 for neglect of duty, the latter in not immediately garrisoning the island with Spanish soldiers on their arrival there, and the former in not hoisting the Spanish flag and proclaiming the suzerainty of Spain over the island. In Paris it was believed that war was inevitable. Spain, it was asserted, had absolutely declined arbitration.

An important meeting of leading Liberals was held in Madrid on Saturday at the residence of Señor Sagasta. After discussing the Carolines question it was resolved that the occupation of the island of Yap by a German gunboat should be considered equivalent to a declaration of war; that if a crisis in the Government should occur and the Liberals be called into power, they would withdraw Count de Benomar, the Spanish Ambassador at Berlin, and hand Count Solms Sonnewalde, the German Ambassador at Madrid, his passports. The resolutions also declared that the Liberals would order the Spanish authorities at the Philippines to recover the territory in the Caroline Islands taken possession of by Germany, and to use force, if necessary, to regain it. Their adoption created a great sensation.

On Monday morning it was rumored that the Spanish Council of Ministers, with the sanction of King Alfonso, had framed and despatched to the German Government an ultimatum, requesting Germany to evacuate the Caroline Islands. Spain in the meantime would refrain from a material occupation of the islands, and thus afford a basis for further parleying. This rumor was not confirmed. On the contrary, a Berlin despatch on that morning said: "Count Benomar, the Spanish Minister here, has expressed to the Government Spain's regret at the insult offered to Germany by the populace of Madrid, and has promised on behalf of his Government that the leaders of the mob shall be punished, and that Spain will do her utmost to prevent a repetition of the insult. This statement is regarded as terminating the incident."

This report of Spain's apology to Germany, however, was premature. The despatch to that effect was sent on Tuesday. Emperor William has written a most favorable and friendly despatch to King Alfonso, offering to yield Spain all her rights in the Carolines.

Prince Bismarck has offered to withdraw the German forces from Yap, provided Spain will not occupy it pending a diplomatic solution of the question as to Spain's claim over the island. Germany will acknowledge Spanish occupation of Yap, provided Spain proves that the Spanish flag had been hoisted on the island before the German gunboat had arrived in the harbor. The excitement in Madrid over the affair has quieted down.

An authorized report was published in Madrid on Tuesday, to the effect that at the Cabinet Council Señor Canovas del Castillo told King Alfonso that unless he trusted the Ministry he would summon Señor Sagasta, whose energy would probably bring about a rupture with Germany ... the popularity of King Alfonso ... to without hesitation decided ...idence in Señor Canovas's ... ould maintain it in preference ... with the people at the expe... ed. His Majesty was con... peror William would meet him ... desire for peace. King Alfonso ... Count Benomar, the Spanish Am... Berlin, accordingly. Court and ... circles are confident that by means either ... an arbiter or of negotiations Spain will retain possession of the Caroline Islands. There are fears of a Spanish revolution in which Alfonso will lose his crown.

Lord Randolph Churchill, Secretary of State for India, delivered an address at Sheffield, England, on Thursday evening, at the cutlers' dinner, in the course of which he said that there was no reason as yet to regret the absence of coercion in Ireland. He was glad to announce that the Afghan frontier question had been settled, Russia having largely modified her claims. He referred to Baron de Staal, the Russian Ambassador to England, as a most cultivated and accomplished gentleman. The Liberals, the speaker said, had left the Afghan negotiations in a deadlock. The last despatches before the retirement of the Liberal party from power were stern and uncompromising. Lord Dufferin and Colonel Ridgway, he said, had agreed to the new frontier line, which gave the Amir full command over Zulfikar. The Government was hopeful that by moderation and perseverance an agreement would be made with Russia to give to the present state of affairs permanence and security. Lord Randolph Churchill spoke again on Friday evening at Sheffield. He declared that the Tories had decided not to coerce Ireland even before they had entered office. He contended that Lord Hartington in his inmost heart leaned toward the Tories.

Mr. Parnell in a speech at Dublin recently ridiculed the theory set up by Englishmen, that the Tories and Liberals would drop their party differences in order to unitedly combat the Irish party in Parliament in their struggle for Irish independence.

Mr. Chamberlain, the English Radical, in a speech on Tuesday announcing the programme of his party, said they would oppose Mr. Parnell tooth and nail, because the granting of Home Rule to Ireland would mean the destruction of the British Empire. The platform of the Radicals, besides the local government and land planks, advocates free schools, a revision of taxation, game laws, and mineral royalties, and declares that if the appropriation of certain land is necessary for the public good, the rights of property owners must go to the wall.

Archbishop Walsh arrived at Dublin on Friday and was given a most enthusiastic welcome. Replying to the addresses of the municipal authorities, he said that he had a deep and settled conviction that the only remedy for the grievances which Ireland had long labored, with partial success, to remove was the restoration of the rights of which she had been deprived a century ago by means as shameful as any that the records of national infamy could disclose. He rejoiced with them that the flag which fell from the hands of the dying O'Connell had again been boldly uplifted, and he prayed that it would never be refurled until the Irish Parliament was restored. When he entered his carriage the enthusiastic crowd removed the horses, and dragged the carriage to the archiepiscopal residence.

Mrs. Jarrett was taken into custody in London on Wednesday, on the charge of abducting the Armstrong girl, who was the "Lily" of the *Pall Mall Gazette's* revelations. General Booth, of the Salvation Army, surrendered Mrs. Jarrett to the authorities after having several conferences with them during the past few days. Summonses were granted for complicity in the case against Mr. Stead, General Booth, and others. Mr. Stead immediately telegraphed from Switzerland that he alone was responsible in the case, and that Mrs. Jarrett was an unwilling agent. He started immediately for London.

Mr. Stead, editor of the *Pall Mall Gazette*, Mrs. Jarrett, Bramwell Booth, Mrs. Coombe, Mr. Jacques, and Mme. Maury, the defendants in the Eliza Armstrong abduction case, appeared at the Bow Street Police Court, London, on Monday, in answer to the charges against them. Mr. Stead conducted his own case, while counsel represented the others. The excitement in the court-room and in the vicinity has seldom, if ever, been equalled. The Crown Solicitor demanded the committal of all the defendants for trial. The child, Eliza Armstrong, told the story of the wrongs she had suffered. The defendants indicated that they would contest the accuracy of many of the girl's statements. They were all released on bail. At the continuation of the hearing on Tuesday Eliza Armstrong made very contradictory replies, and her mother admitted that her own character was not good.

Sir Henry Drummond Wolff, Special British Envoy to the Porte, expresses satisfaction with the result of his conference with the Sultan. During the interview no allusion was made to the subject of an alliance with England. Sir Henry assured the Sultan that England wished to settle the Egyptian difficulties in concert with the Porte. The Sultan disapproves of the occupation of the Sudan by Turkish troops, and also regards with disfavor the project of an Anglo-Turkish occupation of the whole of Egypt.

The attitude of the French Embassy at Constantinople regarding the mission of Sir Henry Drummond Wolff is aggressive. Further advices confirm the statement that France will not recognize any settlement of the Egyptian question which fails to satisfy French interests in Egypt.

It is reported in Vienna that the Government of India has arranged a convention with Beloochistan, by the terms of which the latter is to assist Afghanistan with 30,000 troops in the event of a Russo-Afghan war. In return Beloochistan is to be subsidized equally with Afghanistan, and the Quetta Railway is to be connected with Kelat, the capital of Beloochistan.

Queen Victoria has granted pensions of $500 each to the four sisters of John Leech, the artist.

Sixty thousand pounds' worth of bullion was bought in the open market in London on Monday for shipment to the United States. This will be the first of several shipments to be made to this country.

Five thousand workmen employed in Sir William George Armstrong's machine and gun works, near Newcastle, struck work on Wednesday because their employers refused to dismiss two managers who had made themselves obnoxious to the employees.

A fire in Barrow-in-Furness on Wednesday destroyed the works of the Barrow Shipbuilding Company, causing a loss of $1,000,000 and throwing 2,000 men out of employment.

The cholera in Spain is decreasing. There were only 619 deaths on Sunday.

A bitter spirit of hostility is manifested between the Germans and Czechs in Bohemia, and outbreaks are continually occurring. At the military camp at Pilsen, a riot broke out between the German and Czech soldiers, and many persons were injured. The Austrian Government has decided to institute martial law if the riots do not soon cease.

Count Tolstoi, the Russian statesman and author, has been declared incurably insane and confined in an asylum.

Hostilities have been suspended at Kassala. The garrison still holds the town and is fed by friendly tribes.

It is asserted in Tokio that the Japanese Government will withdraw paper money in 1886 and introduce silver currency, retaining gold currency.

SIX MONTHS.

Six months have elapsed since Mr. Cleveland was inaugurated. The first half year always strikes the tone of a new Administration, and the occasion suggests a review of what has been accomplished between the 4th of March and the 4th of September.

First and most important of all, it has been demonstrated, to the comprehension of even the blindest partisan, that the public interests are as safe in the hands of one party as in those of the other. The superstition which had come to possess a large proportion of Republicans, that the accession of the Democracy to power would involve the ruin of the country, has been forever dispelled. It seems almost incredible now that, only a few months ago, there were hosts of men who fully and sincerely believed that the election of Mr. Cleveland meant the bankruptcy of the Federal Treasury by the payment of "rebel claims," the "loss of all the fruits of the war," and such a general political, financial, and moral upheaval as would "set the nation back twenty years." Popular government is a failure if a party which comprises a majority of the people cannot be trusted to govern the whole people. Six months ago a considerable percentage of the public held this most discouraging view of the result of a century's trial of the American experiment. To-day the man who should begin ranting about the country's going to ruin because the Democrats were in power would simply be laughed at, even by the Republicans whom he formerly duped most badly. To have thus restored faith in government of the people, whatever servants they may employ to do their work, is in itself a great achievement.

Next to the dread of national ruin was the apprehension of a "clean sweep" of the office-holders, and the consequent demoralization of the civil service. Six months have sufficed to remove this apprehension. One-eighth of Mr. Cleveland's term has expired, and only about one-eighth of the Republicans whom he found in place have been succeeded by Democrats. The Civil-Service Law has been maintained in spirit as well as in letter, and among the 14,000 positions which it covers, in the departmental service at Washington and the large custom-houses and post-offices throughout the country, removals have, as a rule, been made only for cause—the few exceptions having aroused such criticism that the performance is not likely to be repeated. Among the chiefs of division and heads of bureaus, whose places do not fall within the "classified service," a very large proportion of the experienced and efficient incumbents have been retained. Not one change has been made among such officials in the State, War, or Navy Department; only fifteen new appointments have been made to these positions in the Treasury, with over seventy such places, and nearly all of these changes were demanded for the improvement of the service; removals have been rare in the other three executive departments. The Bureau of Engraving and Printing, which has more places not subject to the civil-service rules than all the departments combined, and which has been a sink of patronage ever since its establishment some twenty years ago, has been committed to a pronounced civil-service reformer, who has cut off sinecures right and left and thus reduced its running expenses one-half, while he has increased its efficiency. The State Department made no more changes in consulates under Mr. Bayard during the first four months than under Mr. Blaine during the same period preceding Garfield's assassination, and changes have been even slower in the last two months. A considerable number of consuls appointed by Republican Presidents, whose records are found to justify their retention, have been assured permanence, and Secretary Bayard has made it understood that fitness rather than political influence is to govern the filling of Government places abroad. The most important post-office in the country has been continued in the hands of the man who brought it to its present high state of efficiency, and many hundreds of Republican incumbents in other lucrative post-offices are serving out terms which run well into the future. There are about 2,300 post-offices which are filled by nomination of the President and confirmation by the Senate. As all such offices have a term of four years, appointments to the whole 2,300 must be made in the course of four years by reason of the expiration of term alone. Appointments to fill vacancies caused by death, resignation, or removal for good reason would carry the average number of normal changes in this class of offices during a half year up to fully 300. Mr. Cleveland has made only 524 appointments of postmasters. There are about 49,000 fourth-class offices filled by the Postmaster-General, and, under Arthur, appointments to these offices were made at the rate of nearly 12,000 a year, or almost 6,000 in six months. Since the 4th of March changes have been made in 6,309 of these offices, the Republican average not having been maintained while Mr. Hay had charge of this business, although it has been much exceeded by Mr. Stevenson during the last few weeks. It is thus clear that in an eighth of a Presidential term only about an eighth of the offices have been changed. In other words, so far from a "clean sweep," the changes have not been very much more numerous than has been the rule when the same party remained in power. The new appointees have been almost exclusively Democrats, although there have been notable exceptions to this rule outside the cases of Messrs. Pearson and Graves. The Commissioner of Pensions has made changes in about a quarter of the 2,200 examining surgeons, but he has given the minority one member of each board of three, although his predecessor appointed only men of his own party. The high average of the new officials as a class is most clearly shown by the iteration of the bad points of a few, like Higgins, Pillsbury, and Troup, upon which the Opposition press perforce concentrates its criticism.

The check which it has put upon the spoils doctrine is the chief merit of the Administration thus far. But while the disposition of the offices has naturally occupied the larger share of their time, the President and his Cabinet have already done enough to establish the character of the new régime in its other relations. Its distinguishing feature is the conduct of public affairs upon business principles. The various branches of the Government are being overhauled with a view to the suppression of wasteful methods, the abolition of sinecures, the reform of abuses. The wisdom of a change has already been vindicated by the discovery that under the unquestioned rule of one party the public service had fallen into ruts, lapsed into shiftless habits, and even degenerated into corruption, which nothing short of a revolution in control could overcome. In its relations with the Indians, its dealings with the trespassers upon the public lands, its treatment of naval contractors, the Administration has introduced new rules of action, based upon adherence to law and regard for the public interests, rather than upon the consideration long shown to political favorites and powerful financial interests. The strongest impression which it makes upon the public mind is that of a body of men who, though strong partisans, are making a sincere effort to redeem all their pledges. The Administration has made blunders and been justly criticised for them; indeed, no Administration ever found the people in so critical a mood. But the verdict of all candid men must certainly be that it has made a good start in its first six months.

A NEW POLITICAL GENERATION.

The recent death of William M. Gwin illustrates how completely a new political generation has succeeded to the one which occupied the stage when the war of the rebellion broke out. Gwin was a Senator from California in the decade preceding Lincoln's inauguration, and was an influential leader in the Democratic party during that period. In 1885 he had come to be a mere reminiscence, only interesting because of the somewhat picturesque career that lay behind him.

Along with Gwin have disappeared from the scene of action nearly all of his former associates in public life. The roll of the United States Senate of 1860 is now largely a death-roll, crowded with names like those of Stephen A. Douglas, William H. Seward, Charles Sumner, Henry Wilson, William Pitt Fessenden, Andrew Johnson, and Joseph Lane. The few survivors, such as Simon Cameron and Hannibal Hamlin, Jefferson Davis and Robert Toombs, are scarcely less dead to the politics of the present day. Not one of the whole sixty-six is now more than a relic. The list of Representatives who then sat in the other end of the Capitol first challenges attention by the number and prominence of its dead. The House of 1860 contained many of the men who were conspicuous leaders in Congress during the era of war and reconstruction, but Thaddeus Stevens, Henry Winter Davis, Schuyler Colfax, Clement L. Vallandigham, Owen Lovejoy, and Reuben E. Fenton are only a few of the dead, while the political retirement of Elihu B. Washburne, Galusha A. Grow, and a host of others is absolute. Several Representatives of 1860 are Senators in 1885, but two of them, Morrill, of Vermont, and Dawes, of Massachusetts, are aging fast, and a third, Pugh, of Alabama, is only slightly known to the general public. Of all who sat in the Thirty-sixth Congress, only three are to-day political leaders—Senators John Sherman and John A. Logan and Secretary Lamar, all of

them then members of the House. Death and decay have done their work quite as thoroughly outside Congress. The Supreme Bench of 1885 contains not one judge who sat upon it in 1860. Nearly all of Lincoln's Cabinet have followed him to the tomb. Only three or four of the "war Governors" survive.

The change among the voters is no less marked than that among those who formerly appealed for their suffrages. The youngest man who went to the polls in the Presidential election of 1860 is now completing his forty-sixth year. The youngest man who will vote next November was not born until four years after the Lincoln-Douglas-Breckinridge-Bell contest. The census statistics regarding age clearly demonstrate the transformation which comes over the body politic in a quarter of a century. In 1880—and the proportions hold equally true in 1885—it was found that there were in the country 8,270,509 native white males who had reached the age of 21 years. Of this total 5,959,804, or nearly three-quarters, were between the ages of 21 and 45 inclusive, and only 2,310,705 were above 45. In other words, of every 100 men of the voting age this fall only 28 were old enough to cast their ballots in 1860. That is to say, the overwhelming majority of our present voters are men who were only boys when the war broke out. Nearly one-fifth of the whole number, 1,546,703, were not born until after the firing on Fort Sumter. So great are the ravages of death among the elders that this aggregate of the men who are twenty-one, twenty-two, twenty-three, and twenty-four years old exceeds the number (1,503,076) of those who have survived their fifty-second year. Each year increases largely the ratio of voters to whom the slavery contest and the war are but matters of ancient history, known to them only by reading, or, at best, by vague recollections of early childhood.

The control of the country to-day is in the hands of men who have no political associations to link them with the ante-war period and the sectional controversy which culminated in the rebellion. Men of this class are already becoming conspicuous figures in our politics, both North and South. E. M. Boykin, whom the new Administration has made United States Marshal for South Carolina, was only nine years old when his State seceded. Seth Low, who, as Mayor of Brooklyn, has been the pioneer in applying the principles of non-partisanship to municipal administration, is as young a man. Grover Cleveland, with the exception of General Grant, the youngest man ever elected to the Presidency, belongs to the generation which has put the past behind it. This generation does not insist upon youthfulness in its leaders, provided they share its impulses, but no record of past service, however honorable, will reconcile it to reactionism on their part. Even family affection will not keep the sons in the footsteps of the fathers when the fathers stray aside, as George F. and Rockwood Hoar, of Massachusetts, learned last fall when they ridiculed independence, and sought to elevate party above progress.

The new generation holds the key to success in our future politics. The voters who constitute the active force of the nation to-day have no relish for the discussion of antediluvian questions. Their eyes are fixed upon the future, and they cannot be made to face backward. The public man who continues to harp upon the worn-out issues of the past will find himself relegated to the cemeteries, where alone can be found the bulk of his former followers. That party will succeed best which is quickest to relax its hold upon the old issues and to take a firm grasp upon the new.

CHURCH INFLUENCE ON SOUTHERN SENTIMENT.

The recent discussion of the Southern Methodist Church as machinery for massing public opinion, which was caused by our review of Bishop McTyeire's 'History of Methodism,' gives a timely interest to the facts in the case. In the eight principal Southern States—Virginia to Louisiana—the Methodists and the Baptists together have very nearly a monopoly of church membership. In Alabama and Mississippi the members of these two sects constitute 95 per cent. of the total church membership; in Georgia, 94 per cent.; in Florida, 93; in South Carolina, 91; in Louisiana, 90; in North Carolina, 86; in Virginia, 81. Throughout the whole Union the Methodist and Baptist churches comprise only a trifle more than 47 per cent. of the whole church-membership. In the South these sects, therefore, have at least twice as great relative strength as they have in any other part of the Union. In the North and in the West the church-membership is so divided among orthodox and non-orthodox, liberal and conservative, sects that no one or no two could exercise a controlling influence on all church sentiment. But in the South it is clear that the Methodists and the Baptists dominate ecclesiastical opinion.

And they dominate other than ecclesiastical opinion. On education they have had an influence which, if it is not as great proportionately as their numerical strength, has at least been controlling. Their colleges and preparatory schools are in every part of every one of the States, and until the public-school system was established they had done the burden of the educational work. Their colporteurs of the last generation carried very nearly all the books to the homes of the common people that found their way there. In the lack of libraries and lyceums and the scarcity of educating periodicals, these churches and schools and colporteurs cast very nearly the whole educational machinery in ecclesiastical moulds. The statistics of Southern colleges confirm this view. Of all the collegiate students at institutions in these eight States in 1880, 16½ per cent. were students of theology; but in the whole United States theological students were but 9 per cent. of all the collegians. In North Carolina, to take one State for more specific examination, the ratio of students of theology to the whole population in 1880 was .006 per cent. At the same time the ratio of students of scientific subjects to the whole population was only one sixth as great, being .001 per cent. Nor is it only the preponderance of theological over other training that indicates the church influence on education; it is shown also by the preference for training at colleges under ecclesiastical dominance. The five highest institutions for the education of white youth in this same State had a total attendance in 1882, according to the report of the Commissioner of Education, of 766 students. Of these, 190 attended the State University, and 576 the sectarian colleges. The University that year received $7,100 in tuition fees, and the sectarian colleges received $15,300. It is not mere charity educational work, therefore, that the churches do, nor the mere training of men for the pulpit, for their colleges receive a much larger and more profitable patronage than the State University. At each one of these institutions every instructor is required to be a communicant of the sect under whose patronage the school exists. Every one of the principal schools for girls, too, is under sectarian control; and so strong is the sectarian hold on education that the University itself selects its faculty with reference to an equal representation of the religious denominations.

It is plain, then, that the churches control the educational work in the South, and that the Methodists and the Baptists control the church sentiment. These two sects thus have in the South the most powerful machinery that exists in this country, except the Roman Catholic Church, to mass public sentiment. While the Methodists and the Baptists differ, sometimes even fiercely, about special doctrines, they occupy common ground in their ultra-orthodoxy, and, in the South, in their excessive conservatism on all subjects. The slow development of scientific or even practical thought, as well as the slow growth of liberal ideas in religion, is in great measure attributable to their excessive conservatism. If, then, there should be any subject as to which Baptists and Methodists were agreed and had occasion to exert themselves, they would control public sentiment.

One such subject there is, if no more, and on that their ultra-conservative influence has borne with full weight. After the war there was a church division on the color line. The blacks went out of the galleries in the churches where they had sat as slaves, into churches of their own, to hear chiefly their own preachers. This church division made wider the general race division that has given so much trouble in politics and has appeared socially as "civil rights." It confirmed the notion, which the Southern Methodists formulated ecclesiastically when they rent their church asunder before the Union was rent, that the negro is a different being from the white man. By encouraging or even by suffering such a division, the vast ecclesiastical machinery of the South—controlled by the Methodists and the Baptists who agreed in this policy—fashioned public sentiment more strongly against the negro than would otherwise have been the case. The colored and the white churches have maintained amicable formal relations, but the Methodist and the Baptist churches of the South have as churches spent more money to reclaim the heathen in Asia than to build up the freedmen spiritually. Their contributions have been inconsiderable in comparison with the contributions made by the Northern churches, and much less than they would have been but for this color line in the church.

This same machinery, however, is likely to be as strong for good in the future as it has been for misfortune in the past. As the bitter-

ness of the race-feeling abates, the whites are taking a greater interest in the churches of the blacks. Southern men—Episcopalians chiefly—now teach theology to negro students, and Southern women instruct classes in black Sabbath-schools. No Southern man or woman, however, has taught negroes in other schools without loss of position in society. The church sentiment allows the teaching of the A B C in Sabbath-school. It forbids the teaching of the same A B C to the same pupils in other schools. When this distinction without a difference disappears, philanthropic Southern women will become educational missionaries among the blacks. Then the negro problem will be a long way nearer solution than it now is. As good an indication as could be given of the tendency now discernible to use this ecclesiastical power more liberally, is the willingness of the Southern people to discuss it. At the point where free discussion begins bigotry disappears.

THE LITERARY WORK OF INVALIDS.

In one of Hood's letters he says: "I one day overheard a dispute between Tom and Fanny [his children] as to what I was. 'Papa's a literary man,' said Fanny. 'He's not!' said Tom. 'I know what he is.' 'What is he then?' 'Why,' says Tom, 'he's not a literary man—he's an invalid.'" How many men have played this double rôle, and have a double claim to distinction from the manner in which they have sustained both characters. It is not perhaps recognized as much as it should be, how many famous persons of great influence and importance have been men and women of feeble health; and though it is unquestionable that the work they have accomplished (whether it be literary work or other achievement) has often been injuriously affected by their infirm physical condition, yet there is a peculiar interest, an exhilarating, an ennobling interest, in observing how their minds, escaping from the imprisoning body, have received "the freedom" of the whole world and of all after-time, and have asserted "their right to conquer difficulties, to do work, even to feel gladness."

"Sæpe, itaque, in promptu corpus quod cernitur ægret, cum tamen ex alia lætamur parte latenti."

The great armies of Literature and Science have had many high and renowned officers who, looked at closely, are found to be crippled in foot or palsied in the hand—every way disabled, save not blind nor deaf nor dumb in soul. Among them is Mr. Darwin, who, preeminent in so many other respects, was preëminent also in ill-health. An endless sea-voyage on stormy waters (to speak in a figure) was the form his life-long malady assumed, and let those who suffer at sea vividly conceive, and others estimate as well as they can, the force of indomitable energy of mind indicated by his persistent and profound researches. He was an invalid; and nevertheless it was he who fought, as Mr. Huxley said the other day, in presenting to the English nation, on behalf of the whole world, his Memorial Statue—who "successfully fought the hardest intellectual battle of these days."

The feeling one entertains for him and for all men who to the world are admirably other than to themselves, resembles what Sainte-Beuve expressed after reading a volume on the health of Louis XIV.: "The general effect which on reflection I gather from these pages, with regard to the Prince who, so worn upon inwardly, so disturbed by bodily disease, was yet obliged so often to don his public demeanor, and wore it so steadfastly, so uniformly, and so nobly—the last impression which endures and rises uppermost is . . . respect. The real man was often ill, the King always appeared to be in good health." When this can be said of the thinker—that the "man" was ill, the "thinker" in good health—it is high and rare praise: a sound mind in an *un*sound body is perhaps the noblest height of virtue; but too often the decrepitude of the one creates imperfection in the other. Let us consider the vigorous writers who have been sick men.

Shall we begin with Rousseau or Doctor Johnson? Swift, or Heine, or Pope? Leopardi, or De Quincey, or Scarron, or Pascal, or Cowper, or Collins, or Gray? Scott's last years of heroic failure? Coleridge's early years of miserable distress? Carlyle's immortal dyspepsia? George Eliot's eternal headaches? Mrs. Browning or Miss Brontë? Green, the brilliant historian, or Clifford, the eminent mathematician? "What wouldn't I do," exclaims Hood, seven years before his death, "if I had health and bodily strength! Pray for that when you pray for me, for without it what a clog to one's wheel!" Perhaps we shall most clearly perceive how great a clog it is if we compare some of these authors with other writers who have had no physical ailments to contend against. Forced here to do this but hastily, our readers will perhaps follow up in their own minds our necessarily very imperfect suggestions.

But a mere name suggests so much! Gibbon. His "infant existence" (can any one imagine the *infant* Gibbon?) was so feeble as to be exceedingly "precarious"; but after the age of sixteen, he himself assures us, "few persons have been more exempt from real or imaginary ills." And the quality of his History testifies to this. Such pages were never written in suffering; while, on the contrary, Carlyle's genius in every part, his philosophy and his style, seems the outcome of the persistent pain in which and with which he wrote.

Against Rousseau let us set Goethe, and see how evident it becomes at once that the twist toward insanity of all Rousseau's passionate and poetic good sense and high feeling was caused by the perturbations of his poor body, and that Goethe's heroic serenity of physical organization sustained and supported his wisdom. Goethe himself says:

"I often think of Rousseau and his hypochondriac miseries; and it is quite comprehensible to me how so fine an organization (*so schöne Organization*) became deranged. Did I not feel such a keen interest in real things, and did I not see that in the seeming confusion a hundred observations may be harmonized and classified, . . . I should often deem myself out of my head (*ich hielte mich oft selbst für toll*)."

And what gave him his keen interest and power of classification but vigorous health?

Burns and Keats we need only name together, and call to mind the bodily presence of each, to read the whole story of the causes of the difference in their lives, in their verse, in their hold upon succeeding generations: the one full-blooded and warm with human sympathies; the other emaciated with the insatiable longings, and fevered by the ideal excitements, of an impoverished physique.

Or, taking men of different nationalities, both creators in the most impersonal form of literary art, both great masters of character-drawing—Dickens and Flaubert—do not their works declare of themselves the athletic-like powers of endurance of the Englishman, the agility which his body communicated to his mind, the gayety of perfect digestion, the fresh humor consequent on sound sleep, the superficial moralities of a genial social existence inducing a universal popularity and world-wide fame; and, on the other side, the Frenchman's scholar-like habits, the unpliability of his whole nature, the immense nervous exertion and effort necessary for achievement, the constitutional irritabilities and depressions of a morbidly-acute perception and a too subtle intelligence, the profound seriousness of his cynical sadness, arising from the lonely contemplation of unanswerable moral questions—all these qualities, resulting from ill-health, giving the ability to produce a *chef-d'œuvre* which the world will forget, the inability to touch any popular chord?

Against whom can we weigh Swift? He stands alone, and must be judged alone—strongest of pitiable men. One thinks of him as of some mighty, almost colossal dwarf, or some beastly demigod; with infinite compassion for the cruel confusions of his life, for his coldness of nature and harshness of speech, so clearly explained by the madness and idiocy of his last days. Swift's powers were all his own; and this, it is to be observed, is markedly true of most of the men of whom we are speaking. Ill-health and originality seem to be closely connected.

If in Pope and Heine—lesser men but greater artists—we find traits akin to Swift's coarseness and vindictiveness, both, nevertheless, carried their burdens of disability in a more humanizing spirit; and, spite of their thin skins and bitter blood, are companionable to their fellow-men. The courageous gayety with which Heine treated his tortures, harmonizes well with the astonishing force of spirit with which he retained his activity of mind through his eight interminable years of dying agony, and went on composing with undiminished fire to the last, desiring to be called "a brave soldier in the Liberation War of Humanity." But would we once more see the difference between the work of illness and the work of health, consider the genius, the influence of Heine in comparison with the genius and influence of Wordsworth. Heine may be said (by the great English critic) to be "incomparably the most important figure in the European poetry of that quarter of a century which follows the death of Goethe," but Wordsworth's "incomparableness" is not limited by any twenty-five years.

Another invalid of genius, who has vividly impressed a few minds in every country by his writing, and the reports of his conversations, though he cannot be called a great author, is Joubert. It is idle to question whether he would have been more or less remarkable had his body been other than it was. But it is worth while to remember that a man of whom it could be said that "his soul had for its basis of operation hardly any body at all" was capable of inspiring from his illuminating power so permanent an interest. Mr. Arnold finds points of resemblance in Joubert to Coleridge—one far more wretched than he in being subject to the body of this death with all the anguish of impotent struggle. Yet, whether when victimized by his body or feebly commanding it at last, Coleridge's intellectual powers cannot be denied. They were indeed so remarkable, so exceptional, that, recalling Dean Stanley's remark, "How different the fortune of the Church of England might have been if Newman had been able to read German," it may be said, "How different the condition of English thought might have been if Coleridge had been a *sound* man." And in some measure this applies to most of the men we have been considering.

But in another article we propose to do honor to two authors whose weaknesses never mastered their strength, rather indeed ministered to it: the one, he who some three-quarters of a century after his death was styled by one of the most famous of his countrymen, in our day, "the Prophet of the English; the man by whose light the English people, in public and in private, more than by any other man's, have guided their

existence"; the other, he whom one of the most famous of *his* countrymen, of this generation, has called "le Français le plus sage qui ait jamais existé."

THE PARLIAMENT OF 1880—CAUSES OF ITS FAILURE.

LONDON, August 27, 1885.

THE expiration of a Parliament usually marks an epoch in the history of a nation, and most so when it coincides with the introduction of a wider franchise and an immense change in the arrangement of constituencies. But it is not only because the end of the present assembly is the end of the old system of representation, not only because it is a milestone on the road along which England is travelling toward full-blown democracy, that the death of this Parliament of 1880 is a memorable moment, but also because the history of the six sessions it has seen is so full of matter for surprise, for reflection, for alarm.

Never did a Parliament open with fairer promise of an honorable and useful life. There was an overwhelming majority in favor of one party, the party whose very name makes it the advocate of progress. This majority included an unusually large number of men of talent and energy, and was led by a Ministry strong in capacity, in experience, in character, in authority, at whose head stood a statesman equally popular in the House of Commons and in the country, not less famous for legislative skill than for oratorical power. The work that lay before the assembly and its chief seemed just the work for which they were fitted. There were heavy arrears of domestic legislation, much of it non-contentious legislation, reforms in the law and its administration, improvements in the condition of the poorer classes, reductions of taxation, the creation of a better system of local government, the reconcilement of Ireland, the settlement of the licensing question. These matters, with many others of less note, had been neglected by the previous Ministry, preoccupied as they were with foreign troubles; and it was confidently expected that the new Ministry and new Parliament would deal promptly and vigorously with them. Nor were hopes less bright as to the conduct of foreign and colonial affairs. The Government of Mr. Disraeli had alarmed most of the European Powers and outraged the moral sentiments of the English people. Mr. Gladstone's was commissioned to restore friendliness and tranquillity; to inspire confidence by the justness, and respect by the firmness, of its policy; to undo the mischief its predecessors had worked; to extricate England from troublesome engagements, and limit her efforts and responsibilities to obviously necessary objects. The whole Liberal party was full of buoyancy and hope: they talked as if a golden age were opening.

Seldom has a bright dawn been followed by a stormier day or a gloomier evening. The Parliament of 1880 has despatched few of the tasks expected from it. Taxation and expenditure have risen; land-law reforms, local government, and the licensing question have not been touched; the anti-British party in Ireland is stronger and fiercer than it was. Instead of the quietly progressive domestic legislation that was hoped for, there has been a succession of angry party conflicts, an incessant triangular duel between Liberals, Tories, and Irish Nationalists, in which even non-partisan measures have been obstructed or defeated lest the Government should gain credit by them. Foreign and colonial affairs have engrossed nearly as much time and caused as much irritation as under the restless and aggressive hand of Lord Beaconsfield. Instead of peace, we have had war in Egypt and the Sudan, war in South Africa, imminent risks of war on the frontiers of India; instead of shaking ourselves clear from entangling obligations, we have sunk deeper than ever in the Serbonian bog of Egypt, and see the horizon thick with troubles in Afghanistan, in South Africa, perhaps also in Siam and the Pacific. The Liberal majority has not broken up, but it dwindled down from 130 to 14, and suffered itself at last to incur a defeat which brought the all-powerful Ministry of 1880 to the ground. It is now chiefly anxious to forget its recent history, and seeks to win the new electors, not by appeals to past services, but by vague promises of future benefit.

What has been the cause of these failures and disappointments? It is perhaps too soon to give an adequate answer to the question, which is, nevertheless, so sure to press upon the minds of American observers that some answer must be attempted.

It is not that the intellectual ability of the House of Commons has proved inferior to the estimate formed of it, for this has been rather above than below the average of former Parliaments. It is not that the majority has been restive, or disloyal to its leaders; for, though there have been, as there always must be, some desertions, the party as a whole has clung to Mr. Gladstone, even when secretly disapproving of the conduct of his Cabinet.

It is not that Mr. Gladstone has lost his eloquence or tactical skill (though this explanation naturally occurs to those who think only of his age, now nearer eighty than seventy), for he has displayed both qualities in as high a measure as ever before.

It is not that the confidence of the country has been withdrawn—for England and Scotland are apparently as liberal now as in 1880; nor that the House of Commons has been confronted by questions on which it had no mandate from the people when elected, for the only new questions, those of Irish Land Tenure and the Redistribution of Seats, are just the two questions it has successfully dealt with, while the conduct of foreign policy, which was the issue chiefly argued and declaimed about at the election of 1880, has been the sphere of its most conspicuous failures.

What, then, are the causes? Some of them are the errors of the Ministry—errors rather of the Ministry than of the House of Commons, faults rather of the rider (so to speak) than of the horse. Others, and these are graver causes, lie deeper, and are due to dangerous conditions of our political life, which have been long ripening, but whose magnitude and potency for mischief have only now been fully seen.

The Ministry committed a serious fault when they trifled with the Bradlaugh trouble in the first session of this Parliament. They would not grasp their nettle, so it stung them again and again, led to the loss of much precious time, and exposed them two years later to a damaging defeat.

They made a worse mistake when they allowed Parliamentary obstruction to grow to such formidable proportions before attempting to deal with it, and when they carried through such halting and inadequate reforms in the procedure of the House of Commons. Weeks and months of precious time have been wasted, owing to the wretched rules under which the assembly even now works; and these might have been much amended had the Government shown more firmness, and shown it earlier.

Of those deeper sources of trouble which are chargeable rather on the time, on the conditions of Britain and her Empire, than on Mr. Gladstone's Cabinet, three may be singled out for mention.

One is the position of the House of Lords, an irresponsible body, permanently hostile to every Liberal Ministry. Its rejection of the Irish Compensation for Disturbance Bill in July, 1880, after the Ministry had declared such a measure absolutely needed for the preservation of order in Ireland, gave occasion for the agrarian outrages of the following winter, Mr. Forster's Coercion Bill, and all the troubles that followed. The knowledge that it was ready to carry out the will of the Tory party led the latter in many instances to maintain an obstructive opposition in the House of Commons to bills approved by the majority there, in order to facilitate their ultimate maiming or defeat. This is a flaw in the British Constitution which often demoralizes the Commons, and balks their good intentions, and it is one the Ministry of the day cannot be blamed for.

A second source of mischief has been the attitude of a majority of the Irish people, represented by a large and growing body of Irish members. Now Irish misery and discontent were not chargeable on the Gladstone Government, nor, indeed, on any Government in particular: they had been coming to a head for many years, owing to the ignorance and heedlessness of all English ministers and parties. Mr. Gladstone had done, not, indeed, enough, but more than any one else, to alleviate or remove them. His late Cabinet and the Liberal majority in Parliament erred seriously in their dealings with Ireland: they ought never to have passed Mr. Forster's Coercion Bill of 1881, as everybody, except, perhaps, Mr. Forster, now admits. But the situation was perplexing and errors natural; perhaps no Cabinet would have done better. Ireland certainly has had her revenge. More than anything else, the Irish difficulty has wrecked this Parliament and Government. The whole session of 1881 was consumed by the Irish Coercion Bill and the Irish Land Bill; virtually the whole session of 1882 by the Irish Crimes Bill and the Irish Arrears of Rent Bill. When three sessions had passed, the House of Commons felt already old, disappointed, demoralized, in no mood for settling down to quiet, useful work, but rather wishful to play some winning political card before it died. Such a card was the Franchise Bill, which consumed the session of 1884.

Finally, the Gladstone Cabinet of 1880 has been since 1882 much discredited, and the House of Commons of 1880 sorely worried and often paralyzed by difficulties of foreign policy which were not of their making, but due to forces and circumstances beyond their control or provision. Doubtless the Cabinet fell into mistakes, and indeed bad mistakes, in their handling of Egypt and the Sudan, of the Transvaal Boers and other South African problems. But remembering the mistakes of former Cabinets, one cannot set down this one as worse than its predecessors—indeed, it has not rivalled the folly and perversity of the Beaconsfield Government when it feebly tried to back up Turkey in 1877-'78, and attacked Afghanistan in 1878. The truth is that England has so much to look after, all the world over, that her Ministers, with the cares of home administration, Irish disaffection, and Parliamentary management on their hands, are not capable of giving due attention to foreign policy, while the Parliamentary system of government is ill suited to the successful conduct of a firm, bold, and consistent line of policy. Hence troubles that produce Parliamentary debates which occupy the time so much needed for domestic legislation and the oversight of domestic administration. The Parliamentary failures of the last three sessions are very largely due to the unhappy turn which affairs in Egypt took, giving a pretext for repeated votes of censure, and taking the spirit and hopefulness out of the Liberal majority, which saw its leaders doing, and apparently forced to do, the same kind of thing

it had so vehemently condemned in 1876-'80 when done by the Tory Ministry.

On the whole, therefore, our conclusion will be that, although a more united Cabinet (for the late Cabinet was torn by divergent tendencies which Mr. Gladstone with difficulty controlled) and a more despotic Prime Minister (for Mr. Gladstone seems to have frequently waived his own opinion, which later events have shown to be the right one) might possibly have made more out of the Parliament of 1880, still the disappointments that have marked its career and the despondency which clouds its close are mainly due to large historical causes, which have more or less tried all later Parliaments and Ministries, but by some spite of fate fell in an unhappy combination upon this particular Parliament. It is a combination not unlikely to recur, and each of the sources of trouble may well become even graver than at present. Any one who did not realize the soundness of the English and Scottish people, their patriotism, their courage, their resources, and, above all, the absence of serious class hatreds among them, might well feel uneasy regarding the future of a state pressed by so many troubles.

There are only two measures by which the Parliament of 1880 will be remembered—the Irish Land Act of 1881 and the Redistribution Act of 1885. On neither of these can a judgment be now passed, because we have not seen the effects of either. They are both great measures. But the former would never have been passed but for the terrible disorders of Ireland in 1880-81, forcing even the English landed party to yield to necessity; and the latter could not have been passed except by a compromise between the leaders of the two parties Neither, therefore, reflects any great credit upon the machinery of our Parliamentary Government. Y.

THE DOCTOR JOHNSON CLUB.

LONDON, August 30.

PROBABLY few people are aware that there is in London a Doctor Johnson Club. It is of comparatively recent origin, and its membership list, which is limited to thirty persons, was immediately filled up. There can be no doubt that it exists for the purpose of keeping green the memory of Doctor Johnson, and of conducting occasional special investigations into comparatively unknown places and matters with which he was connected. It has no local habitation, however, and the members seem to be rather sceptical concerning the existence of any constitution and by-laws, but they are naturally willing to accept instead the certainty of the good time which they have when they meet together every two months. It is their custom on these occasions to visit one of the neighborhoods specially identified with Johnson's life, and to dine at the inn, and if possible in the same room, which the great lexicographer was wont to frequent. Their proceedings consist of a simple dinner or supper of steak and ale, and long clay pipes afterward, a ten-minute paper on the subject of their excursion, and a few remarks from each member of the club. Their proceedings are chiefly remarkable for informality and good-fellowship. Mr. T. Fisher Unwin, the well-known publisher, is the President, or Chairman, or Prior of the club. The Vice-President, or Sub-Prior, is Mr. F. W. Chesson, the well-known Secretary to the Society for the Protection of Aborigines, and colaborer in almost every reform in London for the last quarter of a century. Mr. Chesson's name should be known in America, too, for his connection as honorary Secretary with the Committee formed to prevent the recognition of the Confederacy by the British Government, and many other similar international movements.

The Club's last excursion was in a special carriage to Rochester and back, where they had supper at the famous Bull Inn. The paper on this occasion was read by Mr. Chesson, on "The Association of Samuel Johnson and Charles Dickens with Rochester." Before dinner the club visited Dickens's house at Gadshill, and the cathedral and castle at Rochester. The cathedral, it will be remembered, furnishes a good many of the scenes in the unfinished novel of 'Edwin Drood,' and one amusing incident occurred in connection with this book. On filing into the crypt past the old verger, who was holding open the door, one of the members remarked, "This is Edwin Drood's crypt, I suppose"; and the old man replied, with a dignified gesture, pointing to himself, "Yes, sir, and this is Tope." Mr. Chesson showed how Rochester could be delightfully described from the pages of Dickens: "A monotonous, silent city, deriving an earthy flavor throughout from its cathedral crypt, and so abounding in vestiges of monastic graves that the children grow small salad in the dust of abbots and abbesses, and make dirt pies of nuns and priors." Who that knows the place at all, said Mr. Chesson, does not recognize the well-known massive gray square of our old cathedral, the vineyard once belonging to the monastery, the nuns' house with its odd angles and jutting gables, and "Minor Canon Corner," whose "red brick is harmoniously toned in color by trim, straight-rooted ivy, and in whose stone-walled gardens annual fruit yet ripens on monkish trees"? Mr. Sapsea, the writer pointed out, was a well-known citizen of Rochester, or rather he was two citizens rolled into one, and Mr. Tope still acts as ecclesiastical showman. The novelist also here made the acquaintance of Durdles, who was perpetually engaged in sounding his hammer on places likely to conceal a dead body, and was especially interested in the remains of bishops, or, as he called them, "them old 'uns with a crook." Dickens's last visit to Rochester, Mr. Chesson said, was made chiefly for the purpose of studying the external features of the old ivy-clad Restoration House in which Charles the Second was lodged after his return from the Continent. His intention was, the essayist believed, to introduce it into an unwritten chapter of 'Edwin Drood.' Dickens once expressed a wish to be buried in the little graveyard opposite the great west door of the cathedral, and, referring to this, Mr. Chesson said: "One may, I think, without depreciating the claims of the venerable abbey to receive the dust of our great men, express regret that his desire was not complied with, and that he was not permitted to sleep in the old city which he loved so well, and in that little garden of the dead which had struck his poetic fancy."

The connection of Doctor Johnson with Rochester is not of a specially definite kind, but Mr. Chesson succeeded in discovering a good many incidental references to the place, showing that the venerable doctor must have been familiar with it. One of these tells that Mr. Langton and he, having gone to see a Freemason's funeral procession when they were at Rochester, and some solemn music being played on French horns, Johnson said, "This is the first time I have ever been affected by musical sounds," adding that the impression made upon him was of a melancholy kind. "The men who played the French horns," added Mr. Chesson, "little knew that they had awakened for the first time a responsive note in the brain of a philosopher whose ear up to that time had been impervious to all sweet sounds, and that more than a hundred years afterward a little party assembled in this ancient city would recall the incident with pleasure, and in imagination seem to catch the echo of that far distant strain." It was also Miss Jane Langton, aged seven, of Rochester, to whom the Doctor addressed a charming and thoroughly characteristic little epistle on May 10, 1784. "My dearest Miss Jenny," he wrote, "I am sorry that your pretty letter has been so long without being answered, but when I am not pretty well I do not always write plain enough for young ladies. I am glad, my dear, to see that you write so well, and hope that you mind your pen, your book, and your needle, for they are all necessary. Your books will give you knowledge and make you respected, and your needle will find you useful employment when you do not care to read. When you are a little older I hope you will be very diligent in learning arithmetic, and that above all through your whole life you will carefully say your prayers and read your Bible. I am, my dear, your most humble servant, Sam. Johnson." Mr. Chesson's paper and those read at the other meeting of the Club will probably be preserved in a little volume of "Papers of the Dr. Johnson Club." H. N.

Correspondence.

SECRETARY ENDICOTT'S ORDER.

TO THE EDITOR OF THE NATION:

SIR: In your issue of the 13th instant, you give unqualified praise to the order of the Honorable the Secretary of War, insisting on a four-year rotation of detail to the choice billets of the army. Most rigid and sweeping rules are crude: simplicity is their virtue and their fault. This order in question will have the virtue of ending favoritism, and the fault of not recognizing exceptions as proper as the rule

For example, the law gives to general officers certain aides-de-camp. A full staff every general officer has at his headquarters; for special work he can detail special officers temporarily. All these he leaves behind him when he moves. But his aides are his military family. They are selected for all the confidential and congenial elements incident to the relation and varying with each general. Their duties are innumerable, requiring practice as well as tact. They follow wherever he may go. The order of the Honorable the Secretary requires that every four years each general officer fit himself out anew with novices and perhaps strangers. This contravenes every military system, is opposed, as I view it, to true military principles, and on the first blush I am half inclined to think it is, as to these gentlemen, directly contrary to the intention and spirit of the law allowing a general officer a personal staff for his exclusive use, subject to his own selection and presumably during his own pleasure.

The case of a few aides-de-camp is a small matter, and of slight importance as a fact; but it does seem to me important to note every case where reform, instead of being intelligently and discriminatingly administered according to right reason, is fanatically driven, juggernaut-like, over any right or any principle. Perhaps I may be allowed to add, in conclusion, that no one admires the integrity and courage of this Administration more than does, Yours very truly,

C. E. S. WOOD.

PORTLAND, OREGON, August 25, 1885.

TRIFLING WITH THE MUGWUMPS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Higgins, out of the abundance of his experience as appointment clerk of the Treasury Department for nearly six months, has lately given to the public, through a reporter of the Washington *Post*, his views upon the right conduct of the civil service; and President Cleveland, upon his return to duty, will doubtless be pained to learn that there is an irreconcilable difference between himself and so distinguished an adminis-

trator as Mr. Higgins on this important question.

Yesterday the *Evening Star* newspaper of this city announced that General Rosecrans had received an urgent call from the Democratic Committee of Ohio to come out and help them, and that he held the request under advisement, with no present certainty as to whether he would take the stump or not.

With Governor Hoadly at the head of the Democratic ticket, it would seem doubtful that the fortunes of the party in Ohio could be as desperate as the flattering summons to General Rosecrans indicates; but, however that may be, a Democratic defeat in New York this fall would certainly crowd much more gloom to the cubic inch into the Government offices at Washington than a similar calamity in Ohio. In the social chat of the hotel piazza at seaside or spring, or on mountain, sundry Democratic leaders of New York have been admitting, this summer, that unless they can hold the Mugwump vote which overcame the eighty thousand Irish votes that are now confessed to have ratted to Blaine, their prospects are hopeless.

The Mugwumps neither expect nor desire their Democratic friends to open the doors of the public treasury to them, nor to raise a campaign fund of two-dollar or any other denomination of bills for their benefit; but they have their price, nevertheless, and unless they can see their way to getting it, their late unwelcome allies will find them as inert and unreliable as the veriest heeler to whom plentiful supplies of "soap" or "sugar" have been denied. Perhaps, in view of the Democratic necessities in New York, it is not too much to expect that the appropriate conscience-keeper of the Administration should chain up the appointment clerk and the Register of the Treasury, at least till after the election.

WASHINGTON, September 4, 1885.

CABINET RESPONSIBILITY IN RELATION TO THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: Your No. 1052 contains matter for argument so strong that it seems as if it needed only to be stated. Secretary Manning has sent out a circular inviting opinions upon the tariff from those practically interested, and it is understood that he has received many responses. We may suppose that he has in hand complete data for an elaborate system of tariff reform, and still the most important question remains untouched, How is he to obtain any practical result? He has of course no power to alter the tariff or do anything except enforce such regulations as Congress may prescribe. He cannot make any public appeal to the country, or at any rate such a course would be quite unprecedented, and would instantly arouse the resentment of Congress, none the less powerful because it would be concealed. Two courses only are open to him. He may make a statement as detailed as he pleases in his annual report, may secure for it a strong endorsement from the President, and follow it up with any number of special recommendations. But the whole will be received by Congress in perfect silence and referred to the proper committee, where it will stand upon precisely the same footing as any similar documents sent in by any individual or private interest. The fact that it comes from the Secretary counts for absolutely nothing. It will receive just so much attention, no more and no less, as suits the purposes of the committee; and as that committee is not at all responsible either to the Secretary or the country, and is very directly responsible to the private and local interests which swarm around it, the conclusion is obvious. The Secretary may appear before the committee, either of his own or their motion, and address to them the most elaborate and convincing argument. They will hear him in respectful silence, or, possibly, for the sake of appearances, put some questions. But the moment his back is turned they will pay no more attention to what he has said, apart from their private and party interests, than if he had not opened his mouth. If we add to this that the committee have absolute power to checkmate any action by Congress which they do not like, we see what are the chances of intelligent tariff reform.

The second course open to the Secretary is to descend into the arena of intrigue—to put himself on the level of private interests, and buttonhole and bully and "influence" members of committees. But in this game the Secretary is under overwhelming disadvantage. In the first place, it is beneath the dignity of his position. Then he has not the resources either in local political influence or in money. He is one man against many, with no counterbalancing advantage. He has no stimulus of personal gain against those who have large fortunes involved. Finally, as nothing is given for nothing, the mere approach to this, the only mode of effectively prompting legislation, involves a kind of trading which is most dangerous to the purity of executive office. I believe that all the scandals which of late years have rested upon the departments have arisen from this necessity of committee intrigues, which, being unavoidably secret, are magnified by suspicion far beyond the reality.

Meantime, the country looks on in utter ignorance and apathy. The people suppose that somehow the Secretary, the committees, and the two houses are working out the matter, but they have not the faintest idea how, or upon what basis or what motives of action; and while the newspapers are thundering out abstract arguments for free trade or protection, private interests of all kinds are in constant terror lest some violent and ill-considered action shall be thrust upon them, and are driven in self-defence to the indispensable game of intrigue.

We will now trace out a different process. An address from Secretary Manning on the floor of Congress next December, giving his arguments and conclusions in detail, would be really addressed to the country, and not to a committee of Congress. The newspaper discussion, in place of abstract theories, would come down to facts and the proposals of the Secretary. His opponents, instead of ignoring him and devoting themselves to lobbying, would find themselves obliged to select some competent advocate in Congress to answer him on the same field. The organization of public debate would become a necessity. Some individuals would force themselves into prominence, and every member would be obliged to take a public and definite relation to his constituents, very different from what now prevails. Public attention would be aroused, opinion crystallize, and elections have a different meaning. Even if for one or two sessions nothing was done, the ground would be cleared up, the real issues developed, and some basis of intelligent and continuous policy arrived at.

It shows how wide is the range of the principle, that it is equally applicable to your article on law reform. At present, any attempt in this direction has to do with the shifting atoms of a Legislature. As well try to pick up quicksilver, or to build a house with grains of sand. The first requisite is that in every State Legislature there should be a law official, appointed by the Governor, prepared to submit plans, to force on public and detailed discussion, to enlist public opinion in their support, and to put them in operation when approved. It means organization instead of chaos, leadership instead of a squabbling mob, public responsibility instead of haphazard chance.

Is it not practical common sense? G. B.

NORTH ELBA, N. Y., September 3, 1885.

THE TAX ON FINE ART.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to call attention to one of the many absurdities which disgrace our tariff system? Your columns have always been ready to give publicity to just grievances that affect any part of the community, and though mine may not be new, you will readily admit that it is only by a continual exposure of abuses that we can hope for a better state of things.

I have lately returned from Europe after a year's study of my profession of architecture, and have brought home photographs and books of engravings which are necessary to me in the pursuit of that profession. On arrival in Boston I am taxed 25 per cent. on my purchases. As many of my architectural friends had previously brought in similar matter free of duty, as "implements of trade" (which the law defines to include professional books), I appealed to Washington against the decision of the Boston officials, but that decision was sustained. I am a warm admirer of the thoroughness of the present Government, even in the administration of a bad tariff; but I confess I cannot see reason for so illiberal a construction of the law of which I happen to be a victim. It not only has not even the poor excuse of being protection of any industry of this country—for photographs of ancient buildings obviously cannot be produced here—but it is throwing an obstacle in the way of the development of the fine arts in this country which it should be the policy of an enlightened government to encourage.

Is not our present tariff a gigantic system of highway robbery?—Respectfully yours,

H. LANGFORD WARREN.

BOSTON, September 4, 1885.

THE OHIO DEMOCRACY.

TO THE EDITOR OF THE NATION:

SIR: Your articles upon Ohio politics in the last number of the *Nation*, are so full of errors that many of your admiring and intelligent readers in Ohio are concerned for the good reputation of the paper.

The root of the evil in your articles is, I think, due to your having erroneously conceived that the Democracy of Ohio is chiefly composed of two classes, "Mossbacks" and "Kids." The fact is, the Democracy here has an affliction at both ends of its body. At one extremity it has the "Kids"—new, energetic, and unscrupulous young spoilsmen, who would like to construct and run a new political machine. At the other extremity, it has the "Mossbacks"—old and worn-out spoilsmen, who would repair the old machine and get themselves into position. But the sound and healthful part of the body of the party is much larger than these afflicted parts, and is composed of honest and capable men, whose chief desire is sound and good government. This chief class might, I think, in distinction be properly designated as conservatives. While the "Mossbacks" and "Kids" hate each other, they are both cordially despised by the conservative element, who regard them as afflictions which time alone can alleviate.

Let me point out specifically some of the errors into which you have fallen.

"It [the *Enquirer*, the Kid organ] nominated Hoadly two years ago."

It opposed him bitterly, as did the "Mossbacks," with whom it joined. It endeavored to compass his defeat by publishing his "Mullet"

letter, in which he advocated civil-service reform principles. It was at that time that Hoadly and his friends started the Cincinnati *News-Journal* in opposition to the *Enquirer*.

You say: "It has nominated Hoadly again."

It was at best very lukewarm in the support of Hoadly. The two or three voices that arose in the Convention in dissent to his nomination came from the Cincinnati delegation, largely the tool of the *Enquirer*.

You say: "The leadership of the Democratic party of Ohio is, nevertheless, in bad hands. . . . It is dominated by the Cincinnati *Enquirer*."

The leadership is in the hands of the conservatives. No "Kid" or "Mossback" has a place upon the Executive Committee, which has at its head General Thomas E. Powell, a leading lawyer of high standing in the State, and is composed of active, capable, well-to-do business men. Let me add that the last convention was not controlled by the *Enquirer* gang or any other gang. Both "Mossback" and "Kid" were humble and docile before the conservative element of the party, which demanded the nomination by acclamation of Hoadly, because his administration had been clean, honest, and honorable; because he was loyal in heart, word, and action to President Cleveland and his policy; because of his ability and honesty, and because his old opponent, Foraker, whom he defeated in 1883, is again the Republican candidate. You speak of his mistakes having weakened him. What have they been? Where are they? If he has made any mistakes, they are the trifling ones of a frank, upright, and honest man, with a kind and generous heart, and have endeared him to the people rather than weakened their confidence in him.

His election would be the triumph of no gang or clique of politicians, but of the same class of people and the same principles that made Grover Cleveland successively Mayor, Governor, and President; and he should receive the undivided support of all friends of good government.—Respectfully, A. G.

CLEVELAND, September 1, 1885.

[The comments of the *Nation* upon the internal state of the Democratic party of Ohio were founded upon information which we believed to be trustworthy, but it may have been less so than we supposed. At all events we are quite willing that opposing views should be heard. The mistakes of Governor Hoadly's administration to which we particularly referred, were his dilatory movements when called upon to suppress the riots in Cincinnati and in the Hocking Valley.—ED. NATION.]

SEALS AND FISH ON THE PACIFIC COAST.

TO THE EDITOR OF THE NATION:

SIR: I cannot but think that some of the conclusions reached by the committee appointed to investigate the destruction of fish by seals in San Francisco Bay are open to question. Granting that there are 4,000 seals in the immediate neighborhood—although that figure seems high—it would be necessary for each one to consume an average of sixty pounds of fish each day to make up the estimated total of 120 tons daily. This is, to say the least, highly improbable. A great proportion of the seals will weigh under 200 pounds apiece (very few over 1,500 pounds), and would not require anything like the amount of food estimated. Then, too, it is by no means every day that a seal gets a "square meal," and to keep up the average it would be needful for even the very largest individuals to occasionally consume more than their own weight of fish in a day. That seals do not get, or need, an abundance of food every day is shown by their long fasts while on the breeding grounds or in captivity. There are no seals to speak of near the mouths of the Connecticut or Hudson Rivers, yet the fish have disappeared from those streams just as they disappear from every river flowing through a settled country. The seals are but a small factor in the problem, and man, with his giant powder, canning factories, saw-mills, and hydraulic mining, is the direct cause of the disappearance of fish. Years ago the seals and the fish were far more abundant than now. Would it not be logical to say that the disappearance of the seals has created a scarcity of fish?

A word in regard to the destruction of seals. That the seals *do* pay for the trouble of hunting them is shown by their systematic pursuit along the coast, and even at the Farallone Islands, where they are regularly slaughtered on the breeding grounds in direct defiance of the law. The sea elephant has recently been exterminated (or very nearly so) on the coast of Lower California by the seal hunters, who in their senseless greed killed all without regard to age or sex, thus putting an end to what, with a little care, might have become a fruitful source of revenue. In regard to the Alaskan fur seals, no one but the Alaska Commercial Company can tell whether or no they are decreasing at their great stronghold on the Pribylov Islands. At other localities in the North Pacific they are undoubtedly on the decrease, and unless the law regarding the number killed is carefully enforced, the fur seals will eventually become as scarce at St. George and St. Paul as they have become elsewhere.

Very respectfully, L.

WASHINGTON, D. C., September 4, 1885.

LOCAL PHOTOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: The advertisement which I often notice in your columns of "Unmounted Photographs of Ancient and Modern Works of Art," prompts me to call attention to the difficulty of getting unmounted photographs of local scenery, buildings, etc. I have been trying in vain for about two years to have such put on sale in the village where I reside. Several pretty views have been taken here, and sundry copies have been sold. But they are always mounted, and this fact limits the sale by doubling the cost, by greatly adding to the inconvenience of transportation, and by depriving purchasers of their choice as to modes of mounting. And although they have been in the market for months, they seem to have escaped the notice of numbers of persons who would naturally be interested in them, and some of whom would certainly buy them. I was this morning asked by one of our summer guests whether he could procure a view of an extremely interesting object, of which three different photographs are for sale within a mile of his temporary residence.

Few American country neighborhoods furnish such subjects as abound in England and on the Continent, but there are attractive bits of landscape almost everywhere, and in long-settled districts houses of considerable antiquarian or historical importance may be found. And if every building be ugly or commonplace, a general view of a shaded village street seldom fails to be pretty.

I observe that the advertised photographs of which I have spoken are offered at $1.50 a dozen; ours, probably a little larger, cost fifty cents apiece. When one wishes to send views by mail, the postage becomes a consideration. Half-a-dozen English views (costing ninepence each) came to me some time since for three halfpence. I paid more than twice as much in postage when I wished to send a single mounted view to a friend in England.

The objection which I constantly meet, when pleading with photographers, that the proper finish has to be given in mounting, is easily disposed of. I have unfortunately been obliged to send abroad unmounted American photographs which were far inferior to other work of the same maker, but those which I brought home with me from England lack nothing but a disagreeable gloss which is simply a blemish. It is not unreasonable to believe that by degrees a demand will be created which photographers will think it worth their while to supply. A.

August 31, 1885.

LAWYERS AND THE LAW'S DELAYS.

TO THE EDITOR OF THE NATION:

SIR: No present thing is of more practical importance than this, forcibly called to notice in your issue of August 27. Forty-five years in the courts may excuse a man who attempts to speak to it. His right to be heard depends upon his having something to say. Mr. Field and Mr. Dillon are right in charging the existing state of judicial administration upon the bar. The causes are not peculiar to lawyers nor the law. They lie below most human action. You are right in saying that the remedy must be reached by their aid. "The uncertainty of the law" resides in the uncertainty of the facts. Its texts are clear and certain, save in very complex cases, dependent upon its own vanishing artificialities, no longer rules of judgment. The greatest element of perplexity in court as everywhere is, to ascertain the truth. The uncertainty of the result of a trial, properly conducted, is due to the same cause.

"The law's delay," an old evil, is not justly chargeable to the bar as its conscious sin. Lawyers can have no more interest in delaying their cases than a board of railroad directors in delaying their trains. They, in this country, are seldom paid until a given case is ended. All the usual incentives to diligence are in force with them. The reasons for delay are special in courts as elsewhere. They are numerous. Their sum is large. It may be said that one-half of all the cases commenced are with no intention of having them tried over. Fully a fourth are never tried, from mere inertia—the movelessness of the procedure. Usually, if a case is not tried within a given time, it never is—never can be. The parties die; witnesses die—they disappear; a good case is dissipated. Values change with time; importance vanishes. Another fourth are never tried, through a change of temper, purpose, loss of interest, of patience, hope, from disgust, all arising from the same cause—inability to reach and get the cases on. This leaves a fourth of the whole for trial, though twenty per cent. of the whole number begun is a large estimate of the cases ever really brought to trial.

I say nothing of the lack and malorganization of the judicial force—the *mechanics* of courts. A vice—the vice—is below, deep, pervasive, and hard to deal with; the genius for mere detail, analysis, specialization—the sin of the later generations. The bar has it in an aggravated form. In England, in this country, the gravest cases were often tried in a single day. They now require a month, six months, twelve months. No wonder if men with later cases become discouraged, broken-hearted, die before they can be reached.

One of the gravest expressions of this eternal analysis is in the examination and cross-examination of witnesses. The thing is left wholly to counsel, and becomes a mere matter of attenuated ingenuity and industry. This leads to innumerable sub-issues, conclusive of nothing, the calling of

more witnesses, and a dreary waste of mere analysis, mere detail. This is not the chief evil. To deal with this endless detail requires a vast consumption of time in the summing-up. No jury in the world, few judges, are equal to the mental labor, in such a field, of reaching correct conclusions. A jury finds refuge in a division. If a verdict is achieved, in the multitude of sub-issues of law, the verdict is finally set aside, and the dreary farce of killing misdirected labor is to be done over again.

Trials must be much more summary. Limits must be formed to the investigation of facts, and the methods of conducting them amended in some important respects. Every controversy has a pith, a determining point, simple when found or compounded of simples. Let the parties set out their claims in writing, make it the duty of somebody to extract from these the thing to be tried, on evidence directed to that alone. It is of vastly more practical importance that all real cases should be speedily and cheaply disposed of, ended by the courts, than that, by the most laborious process and consumption of time, now and then one should be worked out right or wrong. The law works on a very vulgar level. It never idealizes, never persuades or leads, it coerces, drives, punishes, usually tearing if not devouring what it protects. R.

WASHINGTON, September 2, 1885.

Notes.

WE make our customary selection from the publishers' fall announcements. *G. P. Putnam's Sons*:—'The Treaty of Utrecht, with a Review of the War of the Spanish Succession,' by James W. Gerard; 'The Evolution of Contemporary Religious Thought,' by Count Goblet d'Alviella; 'The Evolution of Revelation,' by J. M. Whiton, Ph.D.; 'Plain Words concerning Certain Forms of Unbelief,' by the Rev. R. Heber Newton; the first volume of 'Scriptures for Young People,' edited by the Rev. E. T. Bartlett and Prof. John P. Peters; 'Practical Economics,' essays on the experience of the United States in taxation and finance, by David A. Wells; 'The American Caucus System,' by George W. Lawton; 'Lincoln and Stanton,' by W. D. Kelley; 'Study of Expressions of Humor in Animals,' by W. H. Beard; and 'The Dawn of the Nineteenth Century in England,' by John Ashton. *Harper & Bros.*:—'A Larger History of the United States of America, to the Close of President Jackson's Administration,' by Thomas Wentworth Higginson; 'Writings and Speeches of Samuel J. Tilden,' edited by John Bigelow; 'Principles of Political Economy,' by Prof. Simon Newcomb; a 'History of Christian Doctrine,' by H. C. Sheldon; 'The Boy's Book of Battle Lyrics,' by Thomas Dunn English; and 'The Boy Travellers in South America,' by Thomas W. Knox. *Charles Scribner's Sons*:—'Two Years in the Jungle,' by W. T. Hornaday, hunter and naturalist, whose field was India, Ceylon, the Malay Peninsula, and Borneo; 'Marvels of Animal Life,' by C. F. Holder; 'The Last Meeting,' a novel, by Brander Matthews; 'Bric-à-brac Stories,' by Mrs. Burton N. Harrison, illustrated by Walter Crane; and 'Winter Fun,' by W. O. Stoddard. *The Century Co.*:—'The Life of William Lloyd Garrison,' by his children; and 'The Life and Times of Samuel Bowles,' by George S. Merriam. *Dodd, Mead & Co.*:—The second and last volume of Woltmann and Woermann's 'History of Painting'; and 'The Print Collector,' by R. Hoe. *A. C. Armstrong & Son*:—'Poe's Raven,' with historical and literary comments, by J. H. Ingram. *E. P. Dutton & Co.*:—A quarto edition of Tennyson's 'Day-Dream,' with illustrations by Fenn and other American designers. *White, Stokes & Allen*:—'An Outline History of Sculpture,' by Clara Erskine Clement. *Macmillan & Co*:—A special American edition of Dr. Martineau's 'Types of Ethical Theory.' *J. B. Lippincott & Co.*:—'The Premises of Political Economy,' by Simon N. Patten; 'The Queen's Empire; or, Ind and her Pearl,' by Joseph Moore, jr.; 'Through Spain,' by S. P. Scott; 'Here and There in Our Own Country,' by various writers; 'Horse and Man: Their Mutual Dependence and Duties,' by the Rev. J. G. Wood; 'The Butterflies of the Eastern United States,' for students, by Prof. G. H. French, of the Southern Illinois Normal University; and 'Young Folks' Queries.' *Houghton, Mifflin & Co.*:—Four volumes in their "Commonwealths" series: 'Michigan,' by Prof. T. M. Cooley, 'Kansas,' by Prof. Leverett W. Spring, 'Tennessee,' by James Phelan, and 'California,' by Josiah Royce; 'Henry Clay,' by Carl Schurz, in the "Statesmen" series; 'Nathaniel Hawthorne,' by Jas. Russell Lowell, in the "Men of Letters" series; 'Italian Popular Tales,' by Prof. T. F. Crane; 'The First Napoleon,' a political and military sketch, by John C. Ropes; 'Poets of America,' by E. C. Stedman; 'Life and Letters of Louis Agassiz,' by Elizabeth C. Agassiz; 'The Idea of God as affected by Modern Knowledge,' by John Fiske; Holmes's 'Last Leaf,' a holiday quarto, illustrated by F. Hopkinson Smith and G. W. Edwards; Whittier's 'Poems of Nature,' a similar quarto, illustrated by Elbridge Kingsley; 'Studies in Shakespeare,' by the late Richard Grant White; 'Portraits of Thirty American Authors,' with biographical sketches; and A. L. Pontalis's 'Life of John De Witt,' translated by S. E. and A. Stephenson, in two volumes. *Ticknor & Co.*:—'Life and Letters of Henry W. Longfellow,' by the Rev. S. Longfellow; 'In Camp and Battle with the Washington Artillery of New Orleans,' by Lieut. Wm. Miller Owen; 'A Narrative of Military Service,' by Gen. W. B. Hazen; 'The Virginia Campaign of General Pope in 1862,' papers read before the Military Historical Society of Massachusetts; 'Tuscan Cities' and 'Italian Poets,' Mr. Howells's recent magazine articles; 'English Home Life,' by the Rev. Robert Laird Collier; 'Japanese Homes and their Surroundings,' by Edward S. Morse; and 'Songs and Ballads of the Old Plantation,' by Joel Chandler Harris. *Baker & Taylor*:—A new issue of the Waverley Novels; and facsimile reprints of Bunyan's 'Pilgrim's Progress,' after the first edition (1678); of Herbert's 'Temple,' after a unique copy of a gift edition prior to regular publication in 1633; and of Walton's 'Complete Angler,' after the first edition (1653). *Forest and Stream Publishing Co.*:—'Small Yachts,' an illustrated quarto, by C. P. Kunhardt.

Houghton, Mifflin & Co. have issued three reprints during the week, namely, the 'Poems of Thomas Bailey Aldrich,' uniform with the Household Edition of the Poets published by this house, and more complete than any previous edition; Hawthorne's 'Scarlet Letter,' from the Lathrop edition; and 'Uncle Tom's Cabin,' which recalls the Anglo-American red-border edition of 1879, to which Mr. George Bullen contributed a bibliography. The historical introduction has been retained, but the bibliography and all the illustrations save one have been omitted.

The judicious do not set too high an estimate on Prof. Vámbéry as an authority in Eastern matters, especially when politics are involved. He has shown a jingoish desire, in the late Afghan imbroglio, to bring England and Russia to blows, but has not been seconded by the Tories in power. The alarmist lectures which he delivered several months ago in England, and which Cassell & Co. have made into a book, 'The Coming Struggle for India,' seem flatter than ever since the adjustment to which Lord Salisbury's Government subscribes. We shall do no more than record their appearance in print.

Mr. C. S. Jerram has added to the "Clarendon Press Series" a convenient and scholarly edition of the "Iphigenia in Tauris" of Euripides. It is on the same general plan as his editions of the "Alcestis" and the "Helena" published in the same series, the latter of which has been already noticed in our columns. Most scholars will agree that the "Iphigenia" is a drama superior in beauty and power to either of the others, and it is probably for this reason that Mr. Jerram's commentary on it is about one-sixth longer than that on the "Helena," although the text of the latter play is nearly two hundred lines longer than the text of the former. Mr. Jerram gives us first a general introduction; then the text, with foot-notes showing the variations of all the editions of any importance; next his commentary or "notes"; next a "Critical Appendix," in which the more important variations of the text in the leading editions are somewhat fully treated; and lastly, that which is always wanted and is so often omitted, a very good index. His introduction is far more interesting than such compositions usually are; especially that part of it in which he analyzes and compares the "Iphigenie auf Tauris" of Goethe is very acute, and, it seems to us, perfectly just. Mr. Jerram regards Goethe's work as one of the finest productions of all dramatic literature. Its plot is ingenious, and its characters are, from a modern point, far nobler than those of the Greek writer. But it is not Greek, and a Greek audience would have regarded its characters as admirable, perhaps, but certainly as impossible. On the contrary, the work of Euripides is eminently Greek in conception and execution, and exactly calculated to enlist the sympathies and gain the approbation of a Greek, and especially of an Athenian, audience. On the whole, we think this one of the best editions of the "Iphigenia in Tauris" that have been published, containing about all that is needed by teacher or pupil. There are some minor defects in the details of the commentary, but they are not of sufficient importance to be worth the space it would require to point them out.

Mr. A. M. Elliott's introduction to Contributions to a history of the French language of Canada, in No. 22 of the *American Journal of Philology*, is decidedly interesting. He sketches the sources of French immigration to Canada from the beginning, and holds out a prospect of the Frenchification of the entire Dominion. He speaks enthusiastically of the completeness of the parish registers, and tells of the 300 MS. volumes of the Abbé Tanguay, of Ottawa, which constitute a Genealogical Dictionary of the French People of Canada. One volume of or from this manuscript has been published. Mr. George Lyman Kittredge has a curious if not convincing paper on arm-pitting (a species of mutilation of the slain) among the Greeks. Mr. B. Perrin discusses afresh the site of the battle between Cæsar and Pompey near Pharsalus, using Kiepert's 1882 map of Thessaly for his topographical authority. He very properly suggests excavations in the neighborhood designated. A series of Greek inscriptions noted in Palestine by the Rev. Selah Merrill is interpreted by Prof. F. D. Allen.

The motive of M. Adolphe Racot's monograph, "Le Critique Maudit," in *Le Livre* for August, is a desire to neutralize the judgment of Sainte-Beuve on the once famous and dreaded critic, Gustave Planche. This is accomplished in a very skilful review of Planche's life, which, while seemingly an apology, is really an assertion of the critic's rare qualities of independence and discernment. "All those of whom Planche pre-

dicted that they would live, whether in literature or in art, have lived; all those for whom he predicted death have died or will die"—Victor Hugo excepted; and M. Racot, with much dexterity, contrives to vindicate Planche's contemporary censure of Hugo, while not too obviously deprecating the national apotheosis of the poet at the present moment. Planche's art criticism was remarkably sagacious, and Sainte-Beuve, who had kept on the right side of Planche during his lifetime, made his posthumous attack from behind the popularity of Vernet, whom Planche had refused to rate among the immortals. An addendum to the article, in the previous number, on the National Library during the Revolution, tells of the narrow escape of the books from destruction in consequence of the general order to destroy everywhere the insignia of royalty and feudalism—even in bindings.

The cholera has caused a postponement of the sixth International Congress of Americanists until next year, when it will be held in September at Turin. It was felt that the absence of the Spanish delegates would be singularly unfortunate.

—We have never tasted that peculiar confection from which Mr. Howells has capriciously chosen to name his Sienese impressions, which open the September *Century;* but if there be any propriety in the title, *panforte di Siena* must be a nut-candy of varied and delicious sweetness. Impressionist as he is, and sketchy like his illustrations, and abashed by his own real delight, which hides itself away and peeps furtively from behind the big guide-book superlatives he quotes, never has he portrayed the delicate scene with sharper distinctness and more deft changefulness; never has he blended so agreeably the humor and poetry that are his native strains, or resorted less to the "properties" of his subject, whose annoying presence makes most Italian notes wholly trite. Yet how is it that to one who has once rested on those islanded hills and gazed on that ridgy landscape which now, recalling some familiar childhood print, seems the Judean mount and vale, and in a twinkling smiles out again the very heart of Turner's country—how is it that to him these vivid chapters on Siena pale their ineffectual fire as a mere glow-worm light? It is not an inefficiency peculiar to Sienese descriptions or to Mr. Howells. We have read many books of Italian travel, but none that gave Italy to the sight. In fact, the true sight of Italy, that which the best travellers give, is a sentiment, and the sentiment of one man is not his neighbor's. To what else may one so plausibly ascribe the failure of books on Italy to agree with one another or with an independent observer when they deal, not with history or conventional moods, but with the substance of original experience? It is, therefore, not Mr. Howells's fault, but only his taste, that he passes by with so slight a glance the place where lies, it seems to us, the very hearthstone of the Sienese past—those queer low rooms and corridor-alleys of the Belle Arti, where the art of the centuries of faith survives, after the fashion of ancient things, as in the pleasurable and remote silence of some attic loft. But if Mr. Howells left the key with which we unlocked the heart of Siena hanging on the wall, has he not used a dozen of his own, and do they not turn in the wards as well?

—From the monuments of Italian accomplishment and aspiration to the bare rights of a black man whose race only now begins to have a history, is a long step, but turning a page of the *Century* brings us there; and perhaps the moral distance is as great between this new plea of Mr. Cable's made to the "silent South," in behalf of the negro, and that old one of Prudence Crandall's school in the Connecticut "Middle Ages" whose history, in a later article, is abstracted from the forthcoming Life of Garrison. Mr. Cable's article is a rejoinder to his Southern critics, who would seem to have proved mainly hostile to his former paper on "The Freedman's Case in Equity." He writes too ramblingly to let his argument be summarized. Three points may be mentioned. He treats the incomplete enjoyment of civil rights by the negroes as a conceded and notorious fact. In reply to the statement that neither race wants things different, he not only denies it so far as the negroes are concerned, but makes the obviously pertinent distinction that it is a matter of individual and not of race rights. Finally, in making plain the difference between civil right and social privilege, he scouts the idea of any confusion of the two as likely to arise in practice. To read these reiterated positions over and over gives one a strange feeling, which is perhaps most definite in an instinctive wonder that a New York monthly is the best platform Mr. Cable can find to address a provincial audience. For it is not the North, it is not the world nor the nation he writes to, but explicitly to the South. There is in his very manner, his rhetoric and whole vocal style, something *passé*, that recalls controversies when Virginia cross-roads were electoral grounds, and in his ideas there is something that seems preposterously simple: with us they are axiomatic and built in the foundation of law and order. It is the South he speaks to, and, with the old sensitiveness, he claims his right not as a citizen but as a Southerner, and seems to reserve the serfdom of the negro as a "domestic question." Once slavery was such a domestic question. But, though noting the attitude and the old assumption, we follow and applaud what he has to say, and would help to force it home. It is true, as he remarks, that the North has given the settlement of that question into the hands of the Southern whites and agreed to wait—not for the South to do what it will, even to the permanent establishment of a ruling and a servile caste, but for the South, of its own will and in the ripeness of its own enlightened and civilized conviction, to do what loyalty to the law and sentiment of liberty in which this people is built, demands; not merely to grant the civil rights when years hence the negro race may be ready for them, but to withhold them from no negro who is ready for them, and to hasten the day when the color line shall be struck out of State law and local custom. Mr. Cable deserves the thanks of the country for his disinterested and patriotic outspokenness.

—A second paper by General Grant appears in this number of the *Century*. It is a brief and clear résumé of the campaign of Vicksburg; too brief to give much of detail, but excellent as an outline of the important operations which resulted in the opening of the Mississippi River. The condensation necessary to bring the whole within a single magazine article precluded the introduction of any new material. No illustrations but maps accompany it, owing, as the publishers announce, to a change in the intended order of its appearance. The frontispiece portrait of Grant from a very late photograph is interesting as a presentation of his more recent appearance, but cannot compare with that which appeared in the February number as a characteristic likeness of the man in his prime. "A Woman's Diary of the Siege of Vicksburg" is a vivid picture of the domestic tragedies, sufferings, and victories which, unheralded to the world, were accompanying the military events of which the cool, almost scientific, analysis is given in the General's paper. It is the pathetic human side of historic events. The writer is not named. She is evidently of foreign birth, but sympathizing with the national cause. In a brief introduction Mr. Cable gives hope that the rest of the diary may yet appear. The "Memoranda" contain Grant's correction of his former statements as to Generals McCook and L. Wallace at Shiloh, General Hamilton's claim to the original suggestion of a canal at Island No. 10, and General St. George Cooke's version of the cavalry affair in the battle of Gaines' Mill, controverting that of Fitz-John Porter.

—The catalogue of the library of the Wisconsin Historical Society is very voluminous, filling six octavos which aggregate 3,896 pages. This bulk is a necessity growing out of the plan of the work, which is to show every book twice over, under the name of its author, and also under that of its subject, and, what is more, to treat every pamphlet as a book. As the pamphlets are more than fifty thousand, they cannot be catalogued in any small space. But unless thus registered they would be buried deeper than papers in periodical literature were before the publication of 'Poole's Index.' The sixth volume, of 820 pages, represents the growth of the Wisconsin library for three years wanting one month—a period ending August 1, 1884. It has been more than a year in press, as the State printer has been crowded with other documents. Meantime, the library has been increasing. Thus the Shaksperian titles in volume six are 176; the subsequent accessions are already 52. In some cases a single title covers from twenty to thirty volumes. The Wisconsin library is strong in newspapers. Its volumes in that department amounted on last New Year's to 4,583, some of them as early as 1605. Its forte is, however, in the History of the Northwest, derived from every possible source. From the outset the library, like that of the British Museum, has been gathered on the principle that every book has a value—often a value which cannot be anticipated, and which may not become apparent for ages. To a botanist no plant is a weed. At least 4,000 volumes are in Dutch, the gift of a lady from Holland who was a Wisconsin pioneer. These books are where they should be, for of the 58,000 native Hollanders in the United States, 24,000 are residents of Michigan and Wisconsin.

—A strong effort has been made in England during the past two or three years to break down the tyranny of the three-volume novel, and to offer even new novels directly to the public at a very low price. 'Called Back' was published at a shilling, and a sale of more than 300,000 copies proves the splendid success which is possible. 'Dark Days,' by the same author, falls behind its predecessor, although its circulation in England has almost attained the very respectable figure of 200,000 copies, while Mr. Lang's clever parody, 'Much Darker Days,' sold nearly 25,000 copies. In the same series with Mr. Hugh Conway's stories, Mr. Anstey's 'Tinted Venus' has recently appeared, and a first edition of 30,000 copies was promptly exhausted. Other publishers were quick to take the cue. Stories by Ouida, by Capt. Hawley Smart, by Miss Helen Mathers, by Mr. G. Manville Fenn, have been put forth at a shilling, and the first editions of from 10,000 to 15,000 were soon sold. Miss Warden's 'House on the Marsh,' and Mr. Maclaren Cobban's 'Tinted Vapors: a Nemesis,' were yet more popular. Mr. R. L. Stevenson's 'Dynamiter' was also published in England at a shilling, and so were Mr. Bret Harte's 'On the Frontier' and 'By Shore and Sedge.' These were all copyright books, issued by direct arrangement with the author; and so were new editions, in shilling volumes, of the novels of Mr. Howells and of Mr. James. Nor has advantage been taken of the "boom" in shilling works merely to sell stories; a few books in other departments of literature have been issued at the same popular price.

—Among these many shilling volumes are three books about the stage. Of these, 'Behind the Footlights; or, The Stage as I Knew It,' by W. C. Day (London: Warne; New York: Scribner & Welford), is of the least, and of almost no, value. It is a collection of elaborated anecdotes of theatrical life, having little originality or point. The account of the doings of the Scenic Club is full of lower-middle-class humor, in the manner of Dickens. There is much of the joking which is, oddly enough, called practical, though it would never be indulged in by a practical man. 'On the Stage—and Off: the Brief Career of a Would-be Actor,' by Jerome K. Jerome (London: Field & Tuer; New York: Scribner & Welford), is a much more amusing book. Mr. Jerome has a pleasant humor, a little self-conscious, perhaps, but both dry and playful. His book seems to be a perfectly truthful account of his own experience, and is a tonic to put in the hands of any young man affected by the glamour of the stage. The conditions of the English stage of about ten years ago, which is apparently the period of the narrative, differed from the present conditions of the American stage; but the difference is not so great that Mr. Jerome's experience may not serve as a warning. The third book is 'Curly: an Actor's Story,' by Mr. John Coleman (London: Chatto & Windus; New York: Scribner & Welford). It is adorned with the rather erratic illustrations made for it by Mr. J. C. Dollman when it was published in the *Graphic*. It is a tragic tale, told with not a little directness and vigor, in a style supersaturated with quotations, as the style of an actor is wont to be.

—Dr. Schweinfurth, the African explorer, who is in a position to be acquainted with the aims and intentions of the German East African Company, a politico-commercial organization somewhat wrapt in obscurity, makes some interesting statements concerning it in a letter to the Secretary of the British and Foreign Anti-Slavery Society. Dr. Schweinfurth is rather hopeful about the company's future, and expects from it great services in the interest of humanity. The Upper-Nile territories neighboring on the scene of its operations, the Kilima-Njaro region, are now cruelly scourged by fanatical and rapacious slave-hunters, abetted and guided by Moslem fakirs, lately auxiliaries of the Mahdi. The first policy decided upon by the German Company is to free the whole of its territory from Arabs, and to banish the foreign Moslems, especially traders. The German territory occupies, in this respect, a dominant position, being on the highroad to the Arab trade centre at Unyanyembe, "the Khartum of eastern Africa." Another important measure adopted is the prohibition of elephant hunting in order to save a species which may be of great value for the future development of Africa. The introduction of alcoholic drinks into central Africa is also to be absolutely prohibited. Nor will trade in firearms and gunpowder be allowed. Dr. Schweinfurth is aware that it will be very difficult to carry out the principles adopted, and that, "in fact, they may never be realized." But the very attempt made by such an organization to be guided by "ideas which cannot be translated into gold and silver" will, he thinks, be "an immense gain to humanity." There is both philanthropy and German patriotism in the thought.

—The July and August numbers of Dr. Umlauft's *Deutsche Rundschau für Geographie und Statistik* (Vienna) contain a readable sketch of Mormon life and superstition from the pen of a lady of Washington, Emma Poesche. She seems to speak from personal observation, presents clearly the salient points of her subject, and with some humor, without feminine talkativeness. The historical threads woven into the picture are rather scanty, considering that the essay is written for the German public. The indefatigable industry and exemplary temperance of the Mormons, as well as the unscrupulous shrewdness of their priestly-worldly leaders, are brought out in relief in explanation of their wonderful success in transforming a wilderness into a blooming land, and baffling obstacles, pressure, and persecution. The religious tenets of the Mormons are shown to have become a confused medley of absurdities, full of glaring contradictions, owing to the elasticity of a "progressive development" by revelations renewed from time to time. The "apostle" Orson Pratt is responsible for some of the worst nonsense. "As late as 1830, the 'Book of Mormon' taught the doctrine of the Trinity. In 1835 the personality of the Holy Ghost was denied in 'Doctrines and Covenants'; later the Holy Ghost was made to reside in the body of Joseph Smith; Pratt preaches and teaches in writing a plurality of divine beings, and speaks of Christ's grandfather. At present the Mormons imagine God as a material being, a soul in a body, dwelling in the central constellation, Kolob, by the revolutions of which he measures the course of time." Angels are subordinate spirits, unable to attain promotion, and Mormon women who do not submit to connubial "sealing," can only become angels, according to Orson Pratt, while the Mormon aristocracy become "gods" after death. The Church is rich, the mass of the people are held in political as well as spiritual bondage, the new settlers are tied down by money advances, all work like bees in a hive, wealth accumulates, Mormondom is elated and intoxicated. "The Mormons dream of a great worldly empire. Can they achieve their aim? All the chances are against them. They have come too late."

—We regret to learn that the fiftieth and fifty-first volumes of Wurzbach's biographical dictionary of Austria, which have lately appeared, are likely to be the last. The publication of the work was begun thirty years ago, so that its author, now an old man, has devoted to it the best part of his life, and to so good purpose, it is said, that the material for the concluding volumes is ready for the printer. But the small support it has received from the public has been far from sufficient to cover the expenses, the deficiency having been supplied by the Academy of Sciences, while the printing has been done at the Government printing-office. But the constantly growing centrifugal tendency of Austrian politics has at last reached even this innocent evidence of the former existence of a uniform "official language," the most obvious symbol of the political unity in German traces, which, to a great extent, has already disappeared, and to the complete abolition of which Czechs, Poles, Slovenes, and Italians are alike devoted. A striking instance of this political "principle" occurred a few weeks since in Tyrol, where the Italians of the South, though liberal in general politics, united with the Clericals to defeat the Liberal but German candidates for Parliament.

– Lozzi complains in *Il Bibliofilo* of the careless way in which Italian archives and libraries are administered. Antiquities, manuscripts, and incunabula are left uncatalogued, and sold to any one, stranger or dealer, who may want them, a proceeding to which the officials shut their eyes. Lozzi demands that commissions should be appointed in each city to revise the catalogues, and that the collections of engravings should be kept under lock and key, or rather under two keys, one to be in the hands of the librarian, the other under charge of the prefect or syndic, or the rector of the university, or some such officer, and that once a year an account of stock should be taken. Signor Lozzi also suggests that it would be well if the Minister of Public Instruction should ascertain how many and which of their librarians are able to distinguish a block book from a book printed with movable types, an undated incunabulum from an ordinary specimen of early printing, an original engraving from a facsimile, a steel engraving from an etching; to tell the age of a manuscript and the country of its writer from the form and the character of the handwriting, and in miniatures to recognize the hand or the school of the artist. But even without demanding so much, he thinks it questionable whether many Italian librarians could properly catalogue an early-printed book, noting all the peculiarities which give it value, or even could make an exact copy of the title, such as all the librarians of the chief libraries of the civilized world and all the leading dealers in old books, particularly the Parisians and Germans, could certainly make. A German writer, commenting on this, says that it would not be altogether safe to push such inquiries very far among the German librarians.

IDEAL ÆSTHETICISM.

Marius the Epicurean. His Sensations and Ideas. By Walter Pater. 2 vols. Macmillan & Co. 1885.

THE heart of this work lies in its thought about the ideal, and it is in the nature of all such thought to make a peculiar demand upon the reader. Its wisdom is felt to be, as it were, sacerdotal, and requires a conscious preparation of mind in him who would know of it; its vision is supernal, and disclosed only when some spiritual illumination has been sent before. So runs a Platonic doctrine of election and grace that has been held as rigorously in literature as in theology. This aristocracy of idealism—its exclusiveness, its jealousy of any intrusion of the common and worldly within the company it keeps, its sense of a preciousness, as of sacred things, within itself—is incorporate in every fibre of Mr. Pater's work; and he makes the demand natural to it, not only implicitly by an unrelaxing use of such æsthetic and intellectual elements as appeal exclusively to the subtlest faculties of appreciation in their highest development, but explicitly also by the character of his hero. Marius, before he became an Epicurean, was moulded for his fate; his creator demanded an exceptional nature for the æsthetic ideal to react upon in a noble way, and so Marius was born in the upland farm among the fair mountains to the north of Pisa, and was possessed from boyhood of the devout seriousness, the mood of trustful waiting for the god's coming, which is exacted in all profound idealism. "*Favete linguis!* With the lad Marius there was a devout effort to complete this impressive outward silence by that inward tacitness of mind esteemed so important by religious Romans in the performance of their sacred functions." Marius was born one of the choice natures in whom the heavenly powers are well pleased; and emphasis must be given to this circumstance because it follows that the ideal life which he lived, deeply meditated though it is, is really an individual one. Marius is not typical, nor even illustrative in any broad way of the practice of æsthetic morals; and yet, since he is not national, nor local, nor historic, in his essential self, since he is more than an enlightened philosopher and yet less than the enlightened Christian, since his personality approaches the elect souls of other ages, other sentiments and devotions, and yet is without any real contact with them, he is typical and illustrative perhaps of something that might be. This confusedness of impression springs from the fact that Mr. Pater, while he imagines in Italy, always thinks in London; he has modernized his

hero, has Anglicized him, indeed, and nevertheless has not really taken him out of the second century. It was a bold thing to attempt. It was necessary for his purposes as an evangelist of ideal living, and perhaps within the range of moral teaching it is successful; but the way in which it was done is a main point of interest.

A Roman Epicurean, one suspects, was not unlike the proverbial Italianated Englishman. The native incompatibility between the distinctive Roman temperament and the light-hearted gayety of Greek sensuousness was similar to that between the English and the Italian character in the later times; the perfection of Marius by a Greek ideal, therefore, may run parallel with English culture under southern influences. There was, too, in Roman character a trait or two which brings it near to qualities that lie at the base of our own stock. Even in the Italian landscape there are northern notes such as Mr. Pater mentions when Marius, in his walks to the coast, sees "the marsh with the dwarf roses and wild lavender, the abandoned boat, the ruined floodgates, the flock of wild birds," and has an especial relish for all that. We are told, also, that "poetic souls in old Italy felt, hardly less strongly than the English, the pleasures of winter, of the hearth, with the very dead warm in its generous heat, keeping the young myrtles in flower, though the hail is beating hard without." This note of Marius's home-life and the love he had for it, with his particular regard for "Domiduca, the goddess who watches over one's safe coming home," and with the ideal of maternity that grew up in his memory of home—this peculiarly English note is struck in the opening and is dominant at the end. Certain other characteristics ally this Etrurian boy with that nobler strain of English blood, the Puritan strain as it was in Spenser. His instinctive seriousness, his scrupulosity of conscience, his inheritance of a certain sombreness from the stock that adorned the Etruscan funeral urns, his attachment to places and awe of some of them as sacred by the touch of a divine power, his sense of invisible enemies about his path, his rigorous self-discipline in preparation for certain hereditary sacred offices, a deadly earnestness at times—as when he gazes so fixedly on the rigid corpse of his friend Flavian—such are some of the traits that define his nature as essentially rather northern than southern, and provide a ground of special sympathy and understanding to us.

The second device by which Marius is modernized is by giving to him a power which, for him who runs as he reads, makes the character incredible. He is said to be affected sometimes in a way the opposite of the common experience which many have who, on seeing a new place, seem to have been there before: Marius feels, in the most marked of his experiences, something that shall be—he has always a prescience. Thus, in the cadence of Flavian's verses he hears the music of the Latin hymnology; in the sight of his second friend, Cornelius, who displays and puts on his armor of a Roman knight in the dusty sunshine of the shuttered country-house, he foresees the Christian chivalry; in the faces and groups of the worshippers in Cecilia's house he discerns the serene light and streaming joy of Giotto's and of Dante's vision, and looks on the Madonna and the Child that Raphael first painted. In all this there seems an unreality; in the Puritan Roman, the Cyrenaic Christian, there is a sense almost of conscious artifice, as if one were being befooled. And yet, as for those northern notes of landscape, custom, and character, scholarship can give chapter and verse for them; and as for the gift of prescience—well, if it were impossible for Marius to have it, in a sufficient measure at least, then the theory of ideal living which he held to was at fault. And this Marius, so constituted, his creator places in an Italy over which the romantic desolation, which we know, was laying its charm of dreamful decay, and in a Rome which, then as now, was the huddled deposit of religions.

The intellectual conviction on which Marius conducted his life was simple and common enough, as must be the case with every theory capable of being made a principle of living. The world is what we think it, and our part in existence is the fleeting moment of present consciousness. What shall be done with this moment? Economize it, said Marius, in dissent from the Stoic who said, "Contemn it." Economize it; make the most of the phenomena that arise in it, and see, so far as it depends on you, that these phenomena, both of sensation and idea, as they arise, are the most valuable possible to the moment; and so your experience—in other words, your life—will be the fullest and most refined. Above all, do not forget the main thing in this doctrine of economy, which is that the worth of experience depends not on what it is at the moment in its detached and transitory phase, but what it will prove in memory when it takes its place permanently and in relation to the whole of life. In such a scheme, receptivity, the most alert and varied powers of taking in impressions, is the one aim of cultivation. Here, too, much depended on the nature of Marius, this time on the side of his southern endowment. An impressibility through sensation was his gift, his talent; and especially he was susceptible to what the eye takes in: he was one of those who are "made perfect by the love of visible beauty." This is the point of union of his life with the æsthetic ideal, and makes the story of it a pathway through scenes of loveliness not unlike, in a certain mild beauty, the frescoes on ancient walls. The narrative is pictorial, almost to the point of decoration, and moves always with an outlook on some fair sight. From the landscape of the villa where Marius was born—among those delightful Etrurian hills whence one looks to the marble drifts of Carrara gleaming above olive and chestnut slopes, and gazes off through the purple sea-valley of Venus's Port, that noblest gateway of the descending sun—to the last throttling earthquake morning, a beautiful visible world is about us, and exercises its attractiveness both in nature and in humanity. The one end of Marius was to appropriate all this, to choose the best of sensation and its most nearly connected emotions, and to live in that. To do this involves a secondary talent, a gift of insight, a power to perceive relative values, which in reality means a faculty of moral discrimination; and just here one may easily fail to see whence Marius derived this.

Why was it, for example, that he, being so attached to sensation and the emotions that cling closest to it, rejected voluptuousness, with all its forms of beauty and joyfulness, as a thing essentially not beautiful nor joyful? What was it that kept him, the comrade of Flavian, who represents the pagan surrender to this life, pure—so pure, indeed, that with his visionary sense he foresaw in chastity an ideal that was to be, and foreknew its supreme beauty? A mere interpreter of character, an analyst, would say, that Marius obeyed in these choices his own nature—that Puritan nature whose compulsion is always strong. He venerated his own soul and cherished its early instincts, and this was his salvation. But one might also give another explanation, which would seem more harmonious with the purpose of the author; one might say that what is moral is in its outward manifestation so clothed with beauty, visible beauty, that the man who looks for beauty only, the noblest, the ideal beauty, will find therewith the highest, the ideal good. It is essential to such a seeker that he shall look with his own eyes and be frank with himself shall "look straight out" and acknowledge what he sees; and this Marius does, thereby prefiguring in a way and practically making that "return to nature" which is the continually recurring necessity of all sincerity. If virtue does in fact wear this outward loveliness—and who would deny it?—why may not the lover of beauty have truly seen the new and springing forms of goodness, recognized them, and taken their promise into his life? In other words, was not that prescience of Marius merely a power of clear and honest seeing of the elements of beauty and ugliness there before him?

That this is Mr. Pater's view of the matter is indicated most definitely by the contrast which he continually insists on between Marcus Aurelius and Marius, and which he brings out clearly in the attitude of these two toward the gladiatorial shows. In the amphitheatre Marius is conscious of the Emperor, the strenuous Stoic, as "eternally his inferior on the question of righteousness." The young Epicurean has a "decisive conscience on sight" which is indubitable—that conscience which, in its condemnation of the great sin of an age, is the touchstone of the select few in it, which makes them on the side of the future and aware of its excellence to be, when "not to have been, by instinctive election, on the right side was to have failed in life." Aurelius, we are told, made the great mistake: *Vale, anima infelicissima!* is the last word of our author to him on the eve of the persecutions. And the reason is, that the Stoic was truly blind; he had paltered with his senses until they lied to him or spoke not at all. Marius saw the deformity of the evil, and, while rejecting it as something he might not see and live, chose the good by its beauty, and so selected in the midst of that Roman corruption the Christian elements in whose excellence the Church would triumph and be made fair.

There may be some surprise in perceiving in the evangel of æstheticism a morality of this height, a concentration of attention on the beauty of austerity, an exaltation of a noble Puritanism toward which the Cyrenaic ideal may lead. When this is understood, however, one finds it natural enough that the pervading tone of this history of an ideal life is really religious; idealism, when it is living, cannot be otherwise than essentially religious. Nevertheless, it is a bold thing to put the question, as Mr. Pater implicitly does, whether an attention to the beautiful, to visible beauty, may not only be equivalent to moral discrimination and a safeguard of virtue, but also a mode of solving these ultimate religious questions of deity and man's relation to it. Marius does arrive at an intimation, perhaps a faith, that a protective divine companionship goes beside him, and at an emotion of gratitude to that All-Father.

Two points only, in this wide branch of the speculation, can be dwelt on now. He says toward the end that he thinks he has failed in love; and here he touches on one weakness of his ideal, for it is only by love, as he perceives, that any reconciliation between the lover of beauty and the multitudinous pitiful pain which is so large a part of the objective universe can be obtained. The second weakness is perhaps greater. In his ideal there is both doubt and isolation; the subjective element in his knowledge, the exclusive reliance on his own impressions, the fact that in metaphysical belief the world is only his world and in actual living the experience is individual—all this holds in it a basis of ultimate incertitude. True and real for him it no doubt is, but is that, indeed, the necessary limit of knowledge and life? In effect, too, his creed is Protestant; independently of the necessary element of doubt in it, it has the isolating force inevitable to the believer

who will accept only the results of his own examination by exercise of private judgment. This position is unsatisfactory; and he seems to allow the rationality of that principle of authority by which an individual life obtains correction for its idiosyncrasies, cancels the personal error, and at the same time lets in upon itself the flood of the total experience of humanity summed up and defined in the whole body of the elect. Though stated here in terms of the Stoical philosophy, this is the Catholic conclusion. Or, if Marius does not quite assent to this, he does accept it in a half-hearted way as an hypothesis which is worth making since it reunites him to mankind. There is, it may be observed, a tendency toward Catholicism throughout the religious speculation. Another note of it, for example, is the attraction felt by Marius in the ritual of worship as the perfection of that ceremonialism to which in his boyish worship of the old gods he was devoutly trained.

After all, at the end one still states the promises of this æsthetic ideal, even when working on so unusual a nature as Marius's, interrogatively. Marius's life does not set it forth with convincing power. For one thing, it is not a vital life, but a painted one; and there is an inconsequence in the series of pictures—they do not seem to follow one another by any iron necessity. It would be foolish to complain that a life avowedly only receptive and contemplative of the beautiful is inactive. Marius does nothing except at the end. Yet, within such limits, one never sees how beauty affected Marius or developed his soul, and though he is said to have got much from companionship, one sees love operative in him very seldom, and then it is a very silent and unexpressed love. He repeats his own epitaph—*tristem neminem fecit*—and it was true; but all his life seems negative, and continually one asks, How did he really live? and gets no answer. His whole life was a *meditatio mortis*—that is all that is told us.

A sense of failure, or rather of incompleteness, oppresses one when he lays down the volumes. Even granting that the success Marius is said to have achieved—one is never quite sure that he did—by that exquisite appreciation of beauty and impassioned contemplation of its ideal forms, was, in fact, his, yet of what worth was it—what did it mean to either God or man? The northern idealist, the Puritan, cannot dispense with some serviceableness as essential to any high living. We would not push the point too far, however. Independently of all that has been said, any one who cares to think on counsels of perfection for man's life will find profound and original thought about the ideal elements still at hand in modern days for use, and many wise reflections, sown along these pages. It is a rare work, and not carelessly to be read. Some exquisiteness of taste, some delight in scholarship, some knowledge of what is best worth knowing in the historic expressions of man's aspiration, and, above all, that "inward tacitness of mind" the reader must bring to its perusal. What of it? Have we not the highest authority for casting our pearls where Circe's herd cannot come?

HARVARD AND YALE BIOGRAPHIES.

Biographical Sketches of Graduates of Harvard University. By John Langdon Sibley, M.A. Vol. iii. 1678-1689. Cambridge: Chas. Wm. Sever. 1885. 8vo, pp. 457.

Biographical Sketches of the Graduates of Yale College, with Annals of the College History. Oct., 1701-May, 1745. By Franklin Bowditch Dexter, M.A. Henry Holt & Co. 1885. 8vo, pp. 788.

To younger hands Mr. Sibley now resigns the continuance of a work upon which he feelingly says, "I can do no more." His third volume leaves but a brief interval between itself and the first of Mr. Dexter's Yale series, and this is curiously bridged by a member of the Class of 1681, the Rev. James Pierpont. The common ancestor of Aaron Burr, of President Dwight, of John Pierpont, of President Woolsey, was as much as any man the founder of Yale College. To this end, when he had become a pastor at New Haven, he took counsel with his classmate, the Rev. Samuel Russell, and, together with still another classmate, the Rev. Noadiah Russell, was made one of the Trustees under the charter of the "Collegiate School of Connecticut," established at Saybrook. The first Rector of the School was a Harvard alumnus, of the Class of 1668; the first graduate, a grandson of President Charles Chauncy, of Harvard. Jeremiah Dummer, of the Harvard Class of 1699, a correspondent in England of Pierpont's, secured there many gifts for the School, and notably prompted Elihu Yale to make, in 1718, that conspicuous donation of books and money which determined the ultimate name of the College.

Yale, thus begotten of an older clerical-seminary, repaid the debt by fostering others in its turn. Its fourth Rector, Elisha Williams (H. U. 1711), visited England in 1749 to raise funds for the College of New Jersey, incorporated the year before, with Thomas Arthur (Yale 1743) among the Trustees. The founder of Dartmouth was, as is well known, Eleazar Williams, a member of the Yale Class of 1733, though President Stiles remarks in his Diary that "it was a singular event Dr. Wheelock's rising to the figure he did with such a small literary furniture." Philip Livingston (Class of 1737), who signed the Declaration of Independence, was one of the earliest promoters of King's College (Columbia), of which Samuel Johnson (Yale 1714) became President, as did likewise William Samuel Johnson (Yale 1744). More remotely, Williams College was founded by a half-brother of the wife of John Sergeant (Yale 1729), Sergeant becoming the great-grandfather of President Hopkins, of the same College, as Abraham Nott (Yale 1720) became grandfather of the most famous President of Union. Through all the minor channels of education the influence of Yale's graduates must have been powerfully felt, seeing that one-half those noticed by Mr. Dexter became clergymen, at that time the ex-officio patrons of learning.

Theology and theologians prevail in both these volumes. Cotton Mather is the great luminary in Mr. Sibley's pages; Jonathan Edwards and Samuel Hopkins in Mr. Dexter's; while their common possession, James Pierpont, drew up those famous articles for the administration of church discipline called the Saybrook Platform. Cotton Mather's commencement part for his second degree in 1681 was concerned with what appears to have been a favorite question, "An Puncta Hebraica sint originis divinæ." "Affirmat respondens," the programme says of the youth; but in after years he was converted to the negative. There is nothing here to show which side he would have taken on the question, "An Terra Movetur?" or in the disputation noticed by the astronomical Rev. William Williams in his Cambridge Ephemeris for 1685: "Whether or no there was any existence of Rainbows before the Floud is a Question? answered by some Affirmatively by some Negatively; But the Affirmative voice seems to be most clear and rational," as Williams prudently argues, having already affirmed the earth's motion at Commencement in 1683. Mr. Sibley's sketch of Mather is full of color and of humor. On account of his stammering from birth, he would have chosen physic in place of theology, had not an old schoolmaster counselled a "dilated Deliberation in speaking." This enabled him at seventeen to preach on three successive Sabbaths in his two grandfather's pulpits, and in his father's. Nor was there any lack of volubility when, later, he lost the Presidency of Harvard, and took to abusing his enemies roundly in consequence. "I mentioned their names unto the Lord," he wrote privately on this occasion, "who promised to be my shield. I sang agreeable psalms, and left my cause with the Lord." For Mather's advocacy of inoculation the dynamiter of 1721 threw a hand-grenade into his sleeping-chamber, but it failed to explode. Worse still, negroes were named for him in malice, that he might seem to be implicated in the police reports. More than a quarter of Mr. Sibley's volume is occupied with Mather's bibliography, which contains 456 numbers. His practical "Essay to do Good" was perpetuated in Franklin, to whom it gave "a turn of thinking" which affected his conduct through life. Mather's name became extinct among his descendants, but in some of these his blood flows along with that of George Burroughs, at whose execution, in the witchcraft folly, he figured on horseback.

James Davenport, of the Yale Class of 1732, brother and classmate of that Abraham Davenport so happily portrayed by Whittier, raised a very interesting question by becoming, under Whitefield's influence, and partly in his company, an itinerant preacher, with a revival extravagance of voice and gesture, and with sharp censure of brother ministers. This led the General Assembly to pass an act "to prevent the intrusion of strangers into any parish," and to expel as vagrants "persons not inhabitants within the Colony, who should presume to preach, teach, or publicly exhort in any town or society, without the desire and license of the settled minister and the major part of the church." This act was followed by a still stronger one in 1742, "the object of which was to give each minister the absolute control over all preaching and exhorting within his parish, and to restrict each ministerial association to the cognizance of affairs within its own territory." Those who are curious in such matters may find this principle revived against abolition lecturers by the Orthodox Congregational Associations of Connecticut and Massachusetts in 1836 37.

Whether it grows out of the difference between the seventeenth and the eighteenth centuries, between Massachusetts and Connecticut, between Harvard and Yale, or finally between the biographers, there is more quaintness and piquancy in Mr. Sibley's sketches than in Mr. Dexter's. The latter is sparing of facetiæ such as the former records in the case of the Rev. John Hancock, the eccentric grandfather of the Governor, and of his classmate, the Rev. Samuel Moody. Both editors throw light on early public sentiment concerning some social problems. The Indian missionary, Grindall Rawson, whose services, as his classmate, Cotton Mather, said, were pyramids, was discouraged by the obstacles which strong drink, furnished by some of the English, threw in his way. As a last resort, "he perswaded the Church to *Renew their Covenant;* and a Solemn Day of *Prayer* with *Fasting* was kept on that Occasion; and this Article was made One of the Engagements, *That whoever should Sell any Strong Drink to an Indian should be counted a Covenant-breaker, and be dealt withal in the Church accordingly.* Which put a Considerable Stop unto it." On the other hand, Yale built its Rector's house out of an impost on rum. The will and inventory of the Rev. Samuel Whittelsey (Yale 1705), a leader of the "Old Light" party, and vouched for as "a laborious, faithful minister of Christ," show "an estate of about £22,000, of which only a scant hundred pounds is invested in books, and four-

teen times that amount in 'negro and molatto servants.'" The Rev. Jonathan Todd (Yale 1732), who died February 3, 1791, freed and endowed all his slaves by his will, having "long been convinced in my own mind that the enslaving of the Africans brought from Africa or those born in this country is unjust; and it is one of the sins of the land, and I would endeavor to free my estate from the cry of such a sin against it." Samuel Hopkins's Dialogue and Discourse on slavery and the slave trade (1776 and 1793) are too notorious to be more than mentioned here.

It remains to add that Mr. Dexter tells the economic history of Yale in short chapters called Annals prefixed year by year to the several classes. The labor of this portion as of the rest of his self-denying task should not be underrated. In an Appendix he provides statistics of the graduates embraced in the present volume, indicating their origin (three-fourths from Connecticut), their permanent home (three-fourths in Connecticut), their callings, etc. A discussion, by Prof. H. A. Newton, of the life of these undergraduates reveals a large mortality below the age of seventy. The greatest longevity was that of Nathan Birdseye (Class of 1736), who lived to be nearly 103 years and six months. Stephen John Chester (Class of 1721) was the first graduate bearing two Christian names. Charles Treat (Class of 1722) was the first who bore that particular baptismal name, and no other followed till 1757, when the memory of Kings Charles I. and II. had begun to fade. Says Mr. Dexter:

"The favorite names for the period under review were all Scriptural; in fact, William is the only name borne by any considerable number of the graduates before 1745, which is not taken from the Bible. Of the whole number (483), 47 are named John, 46 Samuel, 26 Daniel, 28 Joseph, 22 William, and 20 Jonathan. The special reason for the popularity of Samuel may have been that many who bore it were children dedicated from infancy to God's service, and to the best attainable education."

Finally, beginning with Jonathan William s in 1722, that family has had more representatives at Yale than any other except Smith.

A DEVOTEE OF LEARNING.

Life and Works of Alexander Csoma de Körös. By Theodore Duka, M.D., Fellow of the Royal College of Surgeons of England, etc., etc. London: Trübner & Co. 1885.

THE subject of this well-executed memoir, a Transylvanian, was born in 1784, and died in 1842, just after attaining his fifty-eighth year. His family, though poor, was of gentle extraction. Having acquired the rudiments of education at a school in his native village, Körös, he entered the College of Nagy Enyed, where, some years later, he was appointed Professor of Poetry. Subsequently, having repaired to the University of Göttingen, he became a pupil of the once celebrated Eichhorn. Till the age of about four and thirty he was diligently occupied as a student, and by that time he had not only thoroughly qualified himself in the classics, but had obtained a familiarity with the leading authors of Germany and France, and had also made some progress in acquaintance with English. The choice of two appointments was then proposed to him. These were a private tutorship in the family of a nobleman, and a professorial chair at Sziget, both which he declined. This was in 1818.

The greater part of the year following he spent in Lower Hungary, busied with the study of Slavonic; and in January, 1820, he finally set out on the adventurous journey from which he never returned to Europe. After a sojourn at Alexandria, he travelled leisurely through Central Asia, Afghanistan, the Punjab, and Kashmir, and arrived at Leh, the capital of Ladak, in June, 1822. At the Monastery of Yangla, in the province of Zanskar, he passed sixteen months, there laying the foundation of his knowledge of the Tibetan language and literature. Leaving Tibet for a while, he afterwards twice revisited it. For four years and a half he was next engaged, at Calcutta, in completing or in printing his principal publications. For about two years he then devoted himself to Sanskrit and various living Indian languages, somewhere in Eastern Bengal. Between 1837 and 1842 he was again at Calcutta, employed, as librarian to the Asiatic Society, in arranging its store of Tibetan works, in writing for its Journal, and in other congenial avocations. Early in 1842 he left Calcutta, with the intention of proceeding to Lassa, which, however, he did not live to reach. Exposed at night to the noxious malarial atmosphere of the Terai, he was stricken down with jungle-fever. Arrived at Darjeeling, in British Sikkim, he refused to avail himself of medical treatment until all remedies were ineffectual, and, after an illness of six days, died there, on the 11th of April. The place of his interment is indicated by a handsome monument, which has recently been restored, and which will henceforth be cared for by the Government of Bengal.

If Csoma had chosen to write a detailed autobiography, it would doubtless have introduced the reader to a large variety of the novel and the outlandish. While in Persia and the adjacent countries, he had recourse to the costume of an Asiatic; and, as he was a ready linguist, the probability is that he was ordinarily taken for a nondescript Oriental. It was politic, presumably, that among semi-barbarians he showed himself as uncommunicative. From natural reserve and modesty, not to add suspiciousness, he was almost equally so, however, towards his English acquaintances, save when circumstances absolutely compelled him to render an account of himself and of his aims. It is in great part, therefore, by his results as a scholar that he is destined to be known to the world. Yet, in consequence of Doctor Duka's researches, his personality is by no means a blank, as many an attractive page might be quoted to testify. To mention one trait that he displayed, his was the genuine metal of an explorer of untrodden and rugged paths, whom hardships and perils are powerless to daunt or to dishearten. During upwards of four out of the sixteen months that he was breaking ground in Tibetan at the Monastery of Yangla, he was unable, the mercury being below zero-point, to face the rigors of the open air. Not only so, but throughout those months he was immured in a room only nine feet square, where, in the company of the Lama who officiated as his teacher, and an attendant, he read from morning till night, wrapped in a sheepskin cloak, and with his arms folded inside it, except when he released them to turn a page. Fuel being unprocurable, he was obliged to dispense with a fire; for want of a lamp, he lived in darkness between the twilights; the bare ground of his cell served as his bed; and the walls about him were his sole protection against the inclemency of a region cursed with all but eternal winter. A brave and lofty spirit was that of the self-dependent, simple, and enthusiastic Csoma. From its beginning to its end, his career was signalized, where not by heroic fortitude, by an ardor and a persistence at once indefatigable and disinterested.

His unremitted labor of twenty years in the East was mostly the labor of a pioneer. How productive it was is witnessed by his Grammar and Dictionary of Tibetan, by his analyses and translations of works in that language, and by his essays. Previously to his time, Tibetan was, to the scholars of Europe, hardly more than a mere name. Something had, to be sure, been written about it and about it; but the fumbling of Fourmont, Giorgi, and Hyde was quite of a piece with the futility of disquisition which was, at the outset, evoked by the cuneiform inscriptions; and nearly everything concerning it that in our century has emanated from the pens of the arrogant Klaproth and the arbitrary Rémusat is now evacuated of all importance. It was facts and the means of getting at facts that Csoma capacitated himself to offer, in contrast to dreams and guesses on the part of all who had preceded him in his special line of inquiry. His dissertations apart, he has provided, in his grammar and dictionary, a key to a copious literature, which, as being largely derived from Sanskrit works long extinct, must be examined in its actual form before we can hope for complete information regarding the early Buddhism which mainly constitutes its subject-matter.

Dr. Duka, a compatriot of Csoma, seems to have spared himself no trouble to ascertain everything relative to him, personally, that is recoverable; and we now have, very certainly, as full a portraiture of him as we shall ever possess. It is clearly manifest that Csoma was no visionary, though, till only the other day, he was often, and in the teeth of all trustworthy evidence, represented as such. For particulars resort must be had to the statements and the proofs which the zeal of his memoirist has ably and successfully marshalled. The object which drew away Csoma from Hungary is not, indeed, definite. But he was aware that wide tracts of Asia, alike territorially and as to the lore of those who dwelt there, still remained to be explored; and he was bent on exploring them. The acquirement of Tibetan was, with him, only instrumental to something ulterior. His great ambition was to penetrate Mongolia, there to enjoy an opportunity, as Dr. Duka expresses it, "to study, from a Hungarian point of view, several yet unsolved ethnological and historical problems, hoping that his labors generally might be found useful by *posterity*, whose appreciation he looked for as his only reward." That ambition was, as has been seen, disappointed; but still his exertions were very far from sterile. As a philologist he accomplished that which entitles him to grateful and honorable commemoration. Conspicuously exceptional, too, in the annals of the votaries of letters, are the singleness of purpose and the unselfishness which distinguished his life, and the physical difficulties and privations which he voluntarily and even cheerfully encountered. Thanks to what he achieved, the darkness which had enveloped a section of antiquity, remote, yet not without its lessons for us, is now, at least in a measurable degree, replaced by light.

AUTOCRATIC DEMOCRACY.

La Démocratie Autoritaire aux États-Unis: le Général André Jackson. Par Albert Gigot. Paris: Calmann Lévy; New York: Christern. 1885.

THE development of democracy has brought forward a phase of it which needs a name. It is democracy as the legitimate, rational, and only true political theory. Such democracy is absolutist, autocratic, irresponsible, an end in itself, a guarantee of itself, and appeals to pure reason as other absolutist theories have appealed to divine right. Such a theory, with its appropriate form of government, would not depend for its authority on the blessings which it confers on men, and it would not brook the checks and limitations of constitutional institutions.

The leading title of the little book before us seems to indicate that the author intended to use the life of Andrew Jackson for the purpose of criticising the theory of democracy just described. He does not define "la démocratie au-

toritaire," but, in his preface, he sketches it as the democracy which loves heroes, is determined to have heroes, yet will have none but servile heroes, and, when it finds them, heaps upon them its extravagant bounty. Its final word for such a hero is, Let him be Cæsar. Such democracy is autocratic, whether we personify democracy and use the adjective to indicate that it derives its authority and legitimacy from itself, or whether we follow it to its practical working, when it always must be lodged in the hand of a Cæsar—an autocrat. Our author says of this democracy: "Strange and dreadful malady, to which modern nations can apply no remedy save constantly increasing liberty in institutions and customs! Their future welfare and honor are at stake; for, so surely as free democracy is the noblest form of government of human society, so truly is servile democracy the most worthy of scorn."

We certainly ought to have a rational and historical analysis of democracy, for, like every other political notion, it contains true and false elements, and, so soon as it is realized in practice, it takes on a great variety of forms and phases. There is not now an accepted definition of it, although it is on everybody's tongue. It is used for everything, from rudimentary popular institutions to the autocratic rule of a popular idol. Everybody says that it is coming, and, especially in England, the fashion of the moment seems to be to hasten it on, and to encourage the exaggeration of it. Why is it coming? What are the causes of its strength? What does it mean? What will it be when it comes to pass? What are the limits of its benefit to mankind? How are good and ill mixed in it, and what will be the form, in respect to it, of the old problem of winning the good and minimizing the ill? These questions have not been answered; they have hardly been raised. The popular notions and the fashionable philosophy in regard to them are superstitions, and the questions, instead of awakening serious thought, seem only to cause irritation.

The English seem to belie their national character by the dismay or the flippancy with which they meet the coming of democracy. The old virile ability to cope with political questions and master them soberly and practically seems wanting. It is remarkable that several French publicists have taken up democracy as a study, and have shown great practical political sense in dealing with it. It may prove a very important and fruitful fact if the French now take the lead in political philosophy. Our author does not follow out, of set purpose, the attempt which his leading title suggests. He does not point the moral or draw the lesson of the biography-history. He makes a very succinct, and, for its limits, very clear and strong story of Jackson's career. He uses only second-hand authorities, and appears to have only popular influence in view. He leaves the story to speak for itself as an exposition of what autocratic democracy is. He has not always quite correctly understood the facts and incidents which had strong local color, and he yields more faith to gossipy anecdotes than seems to us judicious; but he has used his authorities with great judgment and success for the purpose which he had in view. The statement on page 251 about the effect of winding up the first Bank of the United States is historically and financially incorrect, and the mention of Gallatin (p. 253) is an error.

At the close the author puts into a few paragraphs the summary criticisms on Jackson's character and work which his study of the subject suggests to him. In such generalizations there is always danger of exaggeration, and danger that rhetoric will get the better of historic truth. These dangers have not been altogether avoided in the present case, but the views expressed are, in the main, such as seem to be the mature verdict of those who have studied the subject:

"The first Presidents of the United States . . . all belonged to the intellectual élite of the country. Experience of public affairs, cultivation of intellectual power, the studies which had occupied their lives had prepared them to direct the Government of a great people. The election of Jackson interrupts this tradition. For the first time, the suffrage, or, to be more exact, popular acclamation, raised to the first magistracy a violent and illiterate soldier, ignorant of the first elements of history, jurisprudence, and political economy, of the useful sciences, and of all which, in a civilized nation, forms the basis of the education of the enlightened classes. We can perceive fermenting, in him all the passions, rancor, and prejudices of the classes whose idol he was. He believes in the infallibility of the people, and he pretends to be the organ and vicegerent of it. He is unshakable in his resolutions, immovable in his wrath, implacable in his resentment, eager for strife and peril, as inaccessible to scruples as to fear, as unable to resist a flatterer as to yield to an adversary. Contrasts abound in this strange nature. This brutal soldier possesses in a rare degree the gifts of charming. This illiterate planter sometimes astonishes us by the promptitude of his comprehension, and, if anger does not blind him, by the natural sagacity of his mind. . . . This dictator, who has neither the sentiment of liberty nor respect for law, has, nevertheless, the soul of a patriot, like so many other great despots, who have confounded their own cause with that of their country, and have loved their country with all the force of their egoism and their ambition. Above all, he has the predominant qualities which captivate a bold and enterprising people like the Americans; he knows how to act and how to dare.

"That which has survived him and which remains attached to his memory is the degradation of the tone of the Government and of public morals; the dispossession of the enlightened classes in favor of the ignorant crowd, enrolled under the leadership of a gang of adventurers; the transformation of public life, as Von Holst says, into a disreputable trade; the organization which he brought to perfection for the purpose of exploiting popular suffrage—the shameful system which, by making public office the reward of political services, has introduced corruption and disorder into the administration of the Government."

Home Studies in Nature. By Mary Treat. Harper & Brothers. 1885. 12mo, pp. 243. Illustrated.

MRS. TREAT has an excellent reputation as a naturalist. From time to time for years she has put before the public the results of her studies, and from first to last the quality of her work has been such as to give little chance for adverse criticism. Science is indebted to her for many additions to knowledge of the various animals and plants that have received her attention. Among naturalists her standing is similar to that of Fräulein von Chauvin of Germany, noted for her studies of Salamanders. Most of Mrs. Treat's discoveries have been made among objects common and easy to secure, yet her field has been pretty much her own. Articles in different magazines and the little book 'Chapters on Ants' have already introduced her to the general reader. The volume before us contains chapters on familiar birds, wasps, ants, spiders, and plants, reprinted from different periodicals. In each case there is a considerable amount of new information. The reader's enjoyment need not be lessened by doubts of the truth of what is given. Our writer is a good observer, and has her imagination under control. She is able to separate the "ghosts" from what is really observed, and is entertaining, enthusiastic, and accurate in her descriptions. A book, at once scientific and popular, by such a writer is one on which we can satisfactorily bestow time and attention. Of the pictures, the majority are good. In a few cases we must take it for granted the cuts represent tanagers, sparrows, pewees, or mocking-birds, etc., because the artist says so.

The writer's method of familiarizing the birds she wished to study was the novel one of leading them to believe she was afraid, and that they could drive her as they would. Thus treated, they soon became so fearless as to pursue their domestic occupations under close observation. The fact that, as they grow older, birds improve in architecture, is confirmed; though, of course, it is often the case that, through stress of weather, accident, or other cause for haste, an old bird builds a nest which under other circumstances would not be owned.

The spiders and ants are even more interesting than the birds. The stories of the every-day life of the spiders—manner of feeding, tower building, behavior in the season of danger from the wasps, caring for and weaning their young, etc., or of the arts of peace and war among the ants—harvesters, herders of cows, or slave owners—may well provoke from believers in instinct the remark, "How wonderfully like reason it is, to be sure." The interest culminates in the descriptions of insect-eating plants—plants the leaves of which form oddly shaped but effective traps, plants which spread lures of nectar on stems and leaves, and plants which even go so far, according to the author, as to ply their victims with intoxicating liquor, and, having ensnared them, proceed to digest their captures with evident satisfaction.

"Life in Florida" and "In the Pines" form pleasing contrasts. With a patriotism as ardent as that of the man from Maine who placed the garden spot of earth at Skowhegan, our author places the future orchard-garden of the continent in the Jersey pines.

A vexatious mistake occurs on page 199, where the kindness of an entomologist is acknowledged for aid in researches, "and especially in his excellent and very accurate drawings of the chironomus and mosquito larvæ on pages 142 and 143." The figure on page 142 represents one of the utricular traps of *Utricularia clandestina*, and that on page 143 is the water-bear, *Tardigrada*.

The Missing Link in Modern Spiritualism. By A. Leah Underhill, of the Fox Family. Thomas R. Knox & Co. 1885.

"TIME, the great teacher, will decide between us. Ten years—probably less—will see the question determined whether the Spiritual hypothesis is destined to grow in favor and assume station as a reality, or to sink into discredit as a mere figment of the brain. I am content to bide the event." Not ten, merely, but twenty-five years have elapsed since Robert Dale Owen thus wrote to the sceptical President Felton, of Harvard College. If the two disputants were now living, which would appeal to the verdict of Time? We all know that "the Spiritual hypothesis" is very far from having secured the universal acceptance implied in Mr. Owen's prediction; on the other hand, the phenomena on which it is based have never been explained or even scientifically explored. Nobody, we imagine, would join more heartily in the laugh against the "knee-joint" explanation of "rapping" than Dr. Austin Flint, who, together with two other M.D.'s of the University of Buffalo, avouched it with their signatures on February 17, 1851. The book before us, if it be accepted as truthful (and it has all the marks of candor and of self-restraint), opens up the undetermined question as freshly for the present generation as did the original "Rochester knockings" of March 31, 1848, for that generation. The author, we are bound to admit, is as respectable as any one who will read her account of those knockings and the attendant *diablerie*; her integrity is above reproach; neither she nor any of her sisters or family has ever been convicted of imposture, or attempt at imposture; her narrative is full of marvellous occurrences,

many of which were witnessed by persons of national reputation and high literary and social standing. Will her narrative, however, do anything to establish "the Spiritual hypothesis" among unbelievers? We apprehend not.

Whether the number of Spiritualists has increased since Mr. Owen wrote, we have no data for affirming. They are commonly reckoned at millions. It is certain that they occupy the position of a religious sect, with newspapers, perhaps here and there a society regularly convened, and in some quarters (as on Cape Cod) annual camp-meetings. Like other sects, they have a fixed revelation, for, strange to say, nearly forty years of mediumship have resulted in nothing more definite concerning the communicants than that they are disembodied spirits, and generally (if we may take their word for it) "happy." This is sufficient to hold and to attract thousands who long to believe in a future existence, and whose doubts have failed to be set at rest by Scriptural doctrine on that point; but it does not satisfy a moderately inquisitive mind. Moreover, not a page of the whole volume of Spiritualistic literature has the smallest value. More unmitigated rubbish was never seen in print. What with this and the emptiness and triviality of the communications, the pursuit of Spiritualism has been abandoned by thousands who do not contest the reality of the fundamental phenomena —*i. e.*, rapping and table-tipping which attest a hidden intelligence. Such persons neither admit the "Spiritual hypothesis" as a reality, nor "discredit [it] as a mere figment of the brain." Some of them are waiting to see what light the societies for psychical research may throw on it, in spite of their cautious avoidance of any appearance of interest in it. Perhaps there would have been no such societies had there been no Rochester knockings.

History of the Town of Milford, Mass. By Adin Ballou. Published by the Town.

A WORK like this illustrates the permanence of the old New England spirit in New England, amid the extraordinary changes in the character of its population witnessed by the generation now just passing middle life. Milford is an important manufacturing town, and has its share of Irish and French-Canadian citizens. It was not, strictly speaking, their festival when the municipality celebrated the hundredth anniversary of incorporation in 1880, though they doubtless participated in it with a good will, and perhaps with some civic pride. Nor do many of them figure in the Biographico-Genealogical Register which forms the latter half of this bulky volume. Nevertheless some do; and many more of their names are found on the roster of Milford soldiers in the great war of the rebellion, where French and Irish fell in defence of the New England idea against the South Carolinian. A few occur in the lists of selectmen, assessors, and overseers of the poor. The most intelligent among them, we are sure, have bought this book and read it with interest, and their children will regard it as the book of beginnings for them. The link thus established with the past, by a spontaneous movement on the part of the townspeople, is one more assurance against the dying-out of the traditions which moulded the community in its first half-century of independent existence.

Moreover, the genealogical, family or personal interest is the chief excuse for the present work. There is little in the history of Milford that is eventful, peculiar, or in any way picturesque—with one exception to be noticed presently. Instead of being a large frontier settlement, becoming by subdivision the parent of many towns, it was itself the offshoot of the adjacent Mendon, and not a single home is known to have been set up in Milford's borders when Mendon was wiped out in King Philip's war. After the secession it remained a precinct till 1780. This separation, as was common enough in the last century, grew out of a dispute about the location of the meeting-house. When the Puritan scheme of a theocracy was menaced by the growth of dissent, the struggle between town and parish arose in Milford as all over Massachusetts, though the parish triumphed, as was not generally the case. These incidents, and the ripple of disturbance caused in Whitefield's day by the inroads of unlearned and lay moral teachers upon the preserves of the regularly established clergy, are pretty much all that the historian can dwell upon caressingly. For the rest he must give dry statistics of municipal finances, streets, industries, churches, schools, libraries, and the like.

The venerable author is himself the cause of the greatest interest which attaches to his narrative. Those who have studied the literature of our American attempts at socialism know him as the founder in 1841-42 of one of the most remarkable, the so-called Hopedale Community. Pending the publication of a full account of this experiment, Mr. Ballou gives a sufficient sketch of it, and records without bitterness its failure, which can never cease to be a grief to him. His own explanation is that he and his thirty associates expected too much too soon, and that they were probably not fitted for the enterprise. They founded a model town or precinct (Hopedale is part of Milford), but the community as such broke down. Mr. Ballou gives its constitution, which exacted of all adherents a belief in the religion of Jesus Christ as set forth in the Bible—not merely in its moralities, but in its divinely appointed and inspired origin. This was equally the requirement of Noyes in his Oneida Community, who nevertheless drew from the Bible an economical, political, and sexual policy differing entirely from that laid down by Mr. Ballou as the result of his study of the same authority. The latter thinks the community should have been preceded by and grown out of a church, and this was Noyes's idea of the way in which his sort of community was to multiply. We have no space here to moralize on the lesson of the two failures.

Of the many town histories that we have read few have had the literary quality possessed by this one. Mr. Ballou's style is exceptionally lucid and agreeable; seldom does one meet a better. His narrative is permeated by human sympathy and benevolence, and his constant speaking in the first person lends the charm of quaintness to these pages in the most unexpected places. To begin such a work as this at the age of seventy-three, and to pursue it for eight years till it had emerged from the press, was a striking *tour de force*. But indeed Mr. Ballou's resignation as a minister at the age of seventy had to be revoked, such was the urgency of the congregation which succeeded to the Hopedale Community. For seven years more, therefore, he continued to preach what doctrine he pleased to the Liberal Christian Society, an organization without a creed, though affiliated with the Unitarian Conference of Worcester County.

Letters to Guy. By Lady Barker (Lady Broome). Macmillan & Co. 1885.

GUY is the son of Lady Barker, destined to be a soldier, and getting his education in England. His mother writes to him from the antipodes, on the removal of the family from Mauritius to the Government House at Perth, West Australia, in the spring of 1883. The correspondence covers a year, and enables the writer to exhibit all the seasons of the coast and all the variations in the flora. The Governor's travels to acquaint himself with his new charge furnish the staple of incident and adventure, and the reader obtains a very good bird's-eye view of the land and its inhabitants.

The Letters are not, strictly speaking, for children. They are hardly genuine letters to Guy. Lady Barker feels the Queen and her husband's subjects constantly looking over her shoulder, and we are treated to much effusive loyalty. "All these arches and flags, and mottoes," she writes, "are very nice as welcoming your father; but how much nicer do they become when they are just the words in which the West Australians say, 'We love our dear Queen so much that we are ready to be cordial and pleasant to whoever She chooses to send to represent Her.'" For this our American boy at least will not care so much as about the information in regard to birds' eggs, that they are very hard to get, since the distance between the nest and the ground is apt to be 150 feet, with a branchless trunk to climb; or about the curious fact that the aborigines, what with true eye and great swiftness in running, make capital cricket players. On the whole, the adult reader will find nothing more entertaining than the incidental glimpses of the blacks, whether dancing the corroboree, or performing the pantomime of hunting the kangaroo and emu, or throwing the kylie and the spear. We are brought very near to savagery in the account of the convict natives on Rottnest Island, a delightful refuge from the heat which on the mainland made it impracticable to have Christmas trees in December, "for I am sure the tapers would all have melted in the shut-up room, large as it was." On this island, Guy is told, "your father goes out quite alone after his ducks of an evening, with a couple of murderers as retrievers, and it is very amusing to hear their conversations." Lady Barker was impressed with the handicraft of the natives: "Perhaps the 'message sticks' are the most curious, with their smooth surface, on which all the news of the place is neatly and carefully drawn. It looks like etching, and is done with a finely-pointed, red-hot stick; it is really the newspaper of the district." Was it in Australia or in Tasmania that this pictorial sense was used by the authorities to reconcile the blacks to British justice? Posters or broadsides were circulated representing a white killed by a black, and the black hung therefor, and a black killed by a white and the white impartially brought to the gallows.

BOOKS OF THE WEEK.

Alden's Cyclopædia of Universal Literature. Part II. J. B. Alden. 15 cents.
Aldrich, T. B. Poems. Household ed. Houghton, Mifflin & Co. $2.
Alexander, Mrs. At Bay. A Novel. Leisure Hour Series. Henry Holt & Co. $1.
Ballou, M. M. Due South; or, Cuba, Past and Present. Boston: Houghton, Mifflin & Co. $1.50.
Bauer, Karoline. Memoirs. Boston: Roberts Bros.
Braddon, Miss M. E. Cut by the County. Harper & Bros. 25 cents.
Browne, R. E. Water Meters: Comparative Tests of Accuracy, Delivery, etc. D. Van Nostrand & Co. 50 cents.
Boulton, S. B. Preservation of Timber by the Use of Antiseptics. D. Van Nostrand & Co. 50 cents.
Carlton, Will. City Ballads. Harper & Bros.
Carr, Alice Comyns. Paul Crew's Story. Harper's Handy Series. 25 cents.
Cervantes, M. de. Don Quixote. Edited by John Ormsby. Vol. 4 and last. Macmillan & Co. $3.50.
Challamel, A. Souvenirs d'un Hugolâtre. Boston: Schoenhof.
Clark, W. A. Intellectual People: Poetry. Boston: De Wolfe Fiske & Co.

HENRY HOLT & CO., 29 West 23d St., N. Y., have now ready a new descriptive catalogue of their Educational Publications and will send it to any one who applies, referring to this advertisement.

Houghton, Mifflin & Co.

PUBLISH SATURDAY, 12TH:

MICHIGAN: a History of Governments. Fifth Volume in the American Commonwealth Series. By Thomas M. Cooley, LL.D., Professor in the Law School of the University of Michigan. With a fine Map. 16mo, gilt top, $1.25.

Judge Cooley, widely known as one of the most eminent of American jurists and writers in the department of law literature, has narrated the history of Michigan in an admirable manner. Its original settlement by the French, the conspiracy of Pontiac, the British invasion of 1813, the later occupancy of the State by emigrants from the Eastern States, and the development of its industrial, educational, and political organizations—all this is depicted with great ability and in a style to enlist the reader's interest. Judge Cooley's familiar acquaintance with the State enables him to make the story peculiarly clear and attractive.

THE FIRESIDE COOPER. Novels of James Fenimore Cooper. New Fireside Edition, in 16 volumes, 12mo, cloth, $20; half calf, $45. (*Sold only in sets.*)

A convenient and desirable edition of stories which should be in every library, public or private.

AMERICAN JOURNAL OF ARCHÆOLOGY
AND OF THE
HISTORY OF THE FINE ARTS.

Advisory Editor, CHARLES ELIOT NORTON, of Harvard College; Managing Editor, A. L. FROTHINGHAM, Jr., of Johns Hopkins University; assisted by a number of Special Editors.

The *Journal* is published quarterly, at the subscription price of $3.50, forming at the end of the year a volume of about 400 pages, with numerous plates and figures. It is devoted to the whole field of archæology—Oriental, Classical, early Christian, Mediæval, and American—and gives a summary of archæological periodicals and societies, and of investigations and discoveries in all parts of the world. Detailed circulars can be had by applying to the Managing Editor,

Dr. A. L. FROTHINGHAM, JR.,
Baltimore, Md.

HARVARD UNIVERSITY,
CAMBRIDGE, MASS.,
Lawrence Scientific School.

Four years' courses are given in I, Civil Engineering; II, Chemistry; III, Natural History (Biology or Geology); IV, Mathematics and Physics. The degrees given are Civil Engineer and Bachelor of Science. Graduates of colleges can enter with advanced standing of one or two years.

Persons who are not candidates for a degree may enter the School as Special Students at any time, without examination, and pursue any of the courses of instruction for which they are found competent. Address the Dean of the Lawrence Scientific School.

SCHOOL OF MINES
Preparatory School.

A High School of Science and English. 32 E. 45th St. J. Woodbridge Davis, C.E., Ph.D., Principal.

Here can be obtained a good general education, with a little greater leaning toward science and English and a little less toward the ancient languages than is common; but thorough in everything. Introductory to all scientific colleges. Four years' course, including French, German, and Latin. No primary department. Daily session, 9 A. M. to 1 P. M. Reopens October 1. Circulars on application.

COLLEGIATE INSTITUTE OF
DOCTOR J. SACHS,
NO. 38 WEST 59TH STREET,

Scribner & Welford's

NEW BOOKS.

Microcosmus:

An Essay Concerning Man and His Relation to the World.

BY HERMANN LOTZE.

Translated from the German by Elizabeth Hamilton and E. E. Constance Jones. Two volumes, thick octavo, *net* $10.50.

Among recent philosophical writers of Germany, Hermann Lotze is destined to exert the most lasting and beneficent moral influence. This influence has already begun to be reflected in the writings of others, and frequent acknowledgments of indebtedness are made to the "profound spiritual thought of that master of physical science, as well as of ideas, the sceptical believer, Lotze." In his 'Microcosmus,' Lotze seeks "to investigate and ascertain the entire significance of human existence from the combined consideration of the phenomena of individual life and of the history of the civilization of our race." This work is a rich treasure-house of instruction, and its publication in an English translation will be the means of widely extending the author's influence.

Caroline Bauer and the Coburgs.

Translated and edited from Nachgelassene Memoiren von Karoline Bauer. By Charles Nisbet. Portraits. 12mo, cloth, $1.50.

Dictionary of Needlework:

An Encyclopedia of Artistic, Plain, and Fancy Needlework, dealing fully with details of all stitches employed, method of working, materials used, etc. Eight hundred wood-engravings and colored plates. By S. F. A. Caulfield and Blanche C. Saward. New and enlarged edition, 4to, cloth, $12.60.

The Country Banker:

His Clients, Cares, and Work. From the Experience of Forty Years. By George Rae. Crown 8vo, cloth, $3.00.

The First Three English Books on America.

[? 1511]—1555 A. D.

Being chiefly translations, compilations, &c. By Richard Eden, sometime Private Secretary to Sir W. Cecil, afterward Lord Burghley. From the writings, maps, &c., of Pietro Martire of Anghiera (1455-1526), Apostolical Protonotary, and Councillor to the Emperor Charles V.; Sebastian Münster, the Cosmographer (1489-1552), Professor of Hebrew, &c., at the University of Basle; Sebastian Cabot, of Bristol (1474-1557), Grand Pilot of England: With extracts, &c., from the Works of other Spanish, Italian, and German Writers of the Time. Edited by Edward Arber, F.S.A., Editor of *English Reprints*, etc. 4to, cloth, $8.00.

This volume cannot fail to interest the cultivated reader. One is able therein to look out on the New World as its discoverers and first explorers looked upon it. Nowadays, this globe has but few geographical mysteries, and it is losing its romance as fast as it is losing its wild beasts. In the following texts, however, the wonderment of its discovery in all its freshness is preserved, as in amber, for all time; and they also contain notices of not a few barbaric civilizations which have long since passed away from off the face of the earth.

But for us moderns the chief interest in these three works may be that they are the very beginning of a mighty literature. The future of mankind lies with the Anglo-Saxon race; and of all English books relating to the American portion of that race, the three reprinted in this volume are the *very first*.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also one devoted to Music and Musical Literature, will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons

PUBLISH THIS DAY:

A WHEEL OF FIRE. By Arlo Bates. 1 vol., 12mo, $1.

Mr. Bates's novel is so unusual in its conception and plot that it would make a very strong impression on this account alone. But in addition, the way in which the strange and striking story is told—with remarkable power and intensity, and with a lighter plot developing constantly beside the strongly contrasted action of the main history—will give this book no ordinary circle of readers.

THE COMPLETE POEMS OF J. G. Holland. New and Cheaper Edition, with Illustrations. 1 vol., 8vo, $3.50.

In this library edition, with many full-page illustrations and a portrait by Mr. Wyatt Eaton, the complete poetical works of Doctor Holland are published at a lower price than ever.

*THE AMERICAN BOY'S HAN-*dy Book; or, What to Do and How to Do It. By Daniel C. Beard. Fully illustrated by the author. A New Edition. 1 vol, 8vo, price reduced to $2.

Mr. Beard's book is the first to tell the active, inventive, and practical American boy the things he really wants to know; the thousand things he wants to do, and the ten thousand ways in which he can do them.

THE ILLUSTRATED LIBRARY of Wonders. A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself, sold separately at $1 per volume.

A new edition of this extraordinarily popular series has been made necessary by the modern advancement of science and the need of an adequate exposition of the wonders of natural science. The volumes have been divided into three distinct series. Additions and corrections keep them well up with the late scientific discoveries.

One volume in each series will be issued every month until the complete set is published. The following volumes are now ready:

THE WONDERS OF MAN AND NATURE.—"The Intelligence of Animals."

THE WONDERS OF SCIENCE.—"Wonders of Heat."

THE WONDERS OF ART AND ARCHÆOLOGY.—"Egypt 3,300 Years Ago."

NEW BOOKS.

I.

Microcosmus:

An Essay Concerning Man and His Relation to the World.

BY HERMANN LOTZE.

Translated from the German by Elizabeth Hamilton and E. E. Constance Jones. Two volumes, thick octavo, *net* $10.50.

Among recent philosophical writers of Germany, Hermann Lotze is destined to exert the most lasting and beneficent moral influence. This influence has already begun to be reflected in the writings of others, and frequent acknowledgments of indebtedness are made to the "profound spiritual thought of that master of physical science, as well as of ideas, the sceptical believer, Lotze." In his 'Microcosmus,' Lotze seeks "to investigate and ascertain the entire significance of human existence from the combined consideration of the phenomena of individual life and of the history of the civilization of our race." This work is a rich treasure-house of instruction, and its publication in an English translation will be the means of widely extending the author's influence.

II.

Egypt and Syria:

Their Physical Features in Relation to Bible History. By Sir J. W. Dawson, Principal of McGill College, Montreal, F.G.S., F.R.S. With many Illustrations. Crown 8vo, cloth boards, $1.25.

III. LAWN TENNIS ANNUAL

for 1885, describing the various kinds of Courts and how to make them, and all the newest and best Racquets, Balls, Scorers, etc., etc. With numerous illustrations. 8vo, paper, 40 cents.

Themselves. By Col. Tcheng-ki-Tong, Military Attaché of China at Paris. Translated from the French by James Millington. 12mo, cloth, $2.40.

VI. THE COUNTRY BANKER.

His Clients, Cares, and Work. From the experience of Forty Years. By George Rae, Author of 'Bullion's Letters to a Bank Manager.' Crown 8vo, cloth, $3.

"My desire is less to advance special views of my own, than to exemplify and uphold from fresh points of observation the accustomed lines and recognized limits of prudent banking; a rational observance of which would have rendered the bank failures of our time fewer in number, less scandalous in their revelations, and less calamitous in their results."—*Author's Preface.*

VII. A SHORT ENQUIRY INTO

the Formation of Political Opinion from the Reign of the Great Families to the Advent of Democracy. By Arthur Crump. 8vo, extra cloth, $3.

Bohn's Libraries.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., (just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

PLUTARCH'S MORALS: Theosophical Essays, Translated by C. W. King, M.A., author of 'The Gnostics and their Remains.' $2.00.

GOETHE'S EARLY AND MISCELLANEOUS Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS TRAVELS, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

*LESSING'S WORKS. Translated from the Ger*man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY. New Musical Catalogue preparing.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons

HAVE JUST PUBLISHED:

Two Years in the Jungle.

The Experiences of a Hunter and Naturalist in India, Ceylon, the Malay Peninsula, and Borneo. By William T. Hornaday. 1 vol., 8vo, with maps and illustrations. $4.00.

Mr. Hornaday's book offers a fresh contribution of the utmost interest to the literature of travel and adventure, and is certain to rank with the best works of its class. While his pages are made exciting by accounts of tiger and elephant hunts and hand-to-hand fights with all manner of wild beasts, he imparts information invaluable to the naturalist or the reader who is interested in the study of animals.

Christ and Christianity.

Studies in Christology, Creeds and Confessions, Protestantism and Romanism, Reformation Principles, Sunday Observance, Christianity and Slavery, Religious Freedom, and Christian Union. By Philip Schaff, D.D. 1 vol., 8vo. $2.50.

A discussion of many of those vital questions which are forced upon the minds of thinking Christians of to-day, by a writer whose profound knowledge of all phases of principles and dogmas, and of the records of the Christian church, will secure at once the attention of all students to the work.

Color Studies.

By Thomas A. Janvier. 1 vol., 12mo. $1.00.

This dainty little volume contains the four stories by "Ivory Black" which brought Mr. Janvier so wide a reputation as a writer of novelettes of very striking qualities. The titles are: "Rose Madder," "Jaune D'Antimoine," "Roberson's Medium," and "Orpiment and Gamboge."

Winter Fun.

By W. O. Stoddard. 1 vol., 12mo. $1.00.

The thousands of young readers who have been interested in 'Dab Kinzer,' 'The Saltillo Boys,' 'The Quartet,' and 'Among the Lakes,' will welcome this book by Mr. Stoddard, describing the fun a jolly set of city boys met with in a winter's visit in the country.

The Boys' Library of Pluck and Action.

4 vols., 12mo. In a box. Illustrated. $5.00.

Containing four of the best books for boys ever written, by four famous authors, as follows: 'The Boy Emigrants,' by Noah Brooks; 'Phaeton Rogers,' by Rossiter Johnson; 'A Jolly Fellowship,' by Frank R. Stockton; 'Hans Brinker,' by Mrs. Mary Mapes Dodge.

Saxe Holm Stories.

New and cheaper edition, in two series.

FIRST SERIES contains: "Draxy Miller's Dowry," "The Elder's Wife," "Whose Wife Was She?" "The One-legged Dancers," "How One Woman Kept Her Husband," "Esther Wynn's Love Letters." 1 vol., 12mo. Cloth, $1.00; Yellow Paper Series, 50 cents.

SECOND SERIES contains: "Four-leaved Clover," "Farmer Bassett's Romance," "My Tourmaline," "Joe Hale's Red Stocking," "Susan Lawton's Escape." 1 vol., 12mo. Cloth, $1.00; Yellow Paper Series, 50 cents.

Late Volumes in the YELLOW PAPER SERIES, 50 cents each:

THE LADY OR THE TIGER? By Frank R. Stockton.

THAT LASS O' LOWRIE'S. By Frances Hodgson Burnett.

GUERNDALE: AN OLD STORY. By "J. S. of Dale."

NEWPORT: A NOVEL. By George Parsons Lathrop.

THE RUSSIANS AT THE GATES of Herat. By Charles Marvin. With Maps and Portraits.

*** *Sent, post-paid, on receipt of price, or may be found at Bookstores.*

Charles Scribner's Sons,
743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 17, 1885.

The Week.

SENATOR SHERMAN takes his position as No. 2 in Senator Hoar's "party of three." He says that in his opinion the sectional issue is "by far the most important before the American people"; that there is nothing dead about it; that the Northern people are not fully awake to its importance; that he deems it a patriotic duty to arouse the public conscience upon it, and that he had rather be permanently retired from public life than be silent upon it. This is in effect Senator Hoar's attitude. Both men are resolved to cling to the past, even if they have to step into the grave to do it. They prefer defeat on the old issues to victory on new ones, and if they succeed in inducing the Republican party to follow their leadership, they will undoubtedly have their preference. The country cannot be "aroused" any more on the sectional issue, simply because arousings aggravate rather than remove the difficulties. Senators Sherman and Hoar may go about in the old way, ignoring all the vital questions of the time, answering all unpleasant inquiries about them by wiping a tear from their eyes and saying "Poor negro," but they will arouse nothing more than a general scepticism concerning their own mental soundness.

The danger signal which the Republican press of Ohio has been displaying for some days over the prospects of the party in that State is now raised by the *Tribune*. It is frankly admitted that the outlook for Republican success, which was very good a few weeks ago, is at present gloomy. The *Tribune* says that the "danger appears to lie in the apathy of the Republicans," and calls for the "instant and cordial coöperation of leading Republicans from all the States" in order "to raise the canvass to the plane of national politics." We should say that the surest way to dispel the "apathy" would be to have the State leaders, Messrs. Sherman and Foraker, raise the canvass out of the grave of dead issues to the plane of live ones. The apathy dates from the moment that they appeared at the front with the sectional issue as their party's chief battle-cry, and outside help would only deepen it unless a change of policy were adopted. It is one of the most cheering signs of the times that even Ohio, where the Mugwump is said by the Republican State press, to be unknown, is passing beyond the control of the Republican Bourbons.

The Hinkley attempt to test the constitutionality of the Civil-Service Act will come before the court on the order to show cause on the 25th inst. We believe it is not unlikely that the District Attorney will allow Mr. Dorman B. Eaton to argue the case, and probably nobody at the bar is better fitted for the task, or has given the subject more attention. But we fear it will go off on the technical point that Hinkley, having no claim to or interest in any office, has no standing in court, so that there will be no judgment on its merits. This is unfortunate for the supporters of the law, though very fortunate, as we think, for the Jeffersonian Democrats, because if the Court decided that the law was constitutional, they would lose the only serious objection to it they have ever had. The rest of their argumentation is generally some form of burlesque or falsehood touching the nature of the examinations, or the age or antecedents of the persons who pass them. They are able to say now that the act is unconstitutional, whereas, after the courts have spoken, all but the more ignorant and silly of them would be confined to joking and lying about its operation.

The truth is, however, that it is difficult to see how the act is ever to get before the courts on its merits, as long as the President is satisfied with it. He or the heads of departments are probably the only persons who would, in making an attack on the act, have any standing in court. If he thinks it ought to stand, no head of department will gainsay it or question it, and nobody else has or can have any rights as against it. If, for instance, a man presented himself for examination for a place, and failed to get it, through, as he alleged, unfairness of the examiners, or the unwillingness of the appointing officer to appoint him, he could not assail the constitutionality of the act, because, in the absence of the act, he would have no more right to a place than the first comer in the streets. Nor has any man a right to a place without examination at all. The courts do not recognize political work, or lifelong fidelity to party principles, as giving a man a legal claim to an office, nor would the argument that hundreds of thousands of "lifelong Democrats" did not like the law weigh much with the judges. In fact, we know of no way for the Democrats who think the act unconstitutional to get the question tried, except by inducing the President or one of the heads of departments to raise it by attacking the act in the courts as an infringement of his constitutional rights. Failing this they might get the President to ignore the act altogether. Why do they not try this? The act only "authorizes" the President to appoint Commissioners to "aid him at his request in preparing suitable rules for carrying the act into effect." It does not direct him to do so. We presume he might with perfect impunity remove the present Commissioners, and fail to appoint others, or he might abrogate all the present rules, and fail to "request" the Commissioners to prepare others. In fact, he is, or we are greatly mistaken, complete master of the situation. It is to him and not to the courts that a Jeffersonian Democrat should hiccup out his objections to the law.

Congressman Seymour, of the Fourth Connecticut District, gives Mr. Lynde Harrison some valuable information in reply to the latter's request for views concerning President Cleveland's civil-service reform work. He tells a reporter of the New Haven *News* that there are in his district 120 post-offices, and that so far as he knows there has not been as yet a single removal in any of them. There have been changes due to resignations and other causes, but no forced withdrawal. "Indeed," adds Mr. Seymour, "I may go further and say that, as a result of Mr. Cleveland's conservative policy, I have not even had applications nor heard a word on the subject of changes in the case of more than 40 of the whole 120 post-offices—leaving some 80 of those positions for which there has not only not been a Democratic 'scramble,' but not even a visible attempt to drive out the present incumbent. As to the Federal positions outside of the post-offices of my district, I am unaware of a single change. All the old Republicans still hold their places." It should be added that the Fourth District is ex-Senator Barnum's old stamping-ground, and has long been regarded as his political preserve. If "influence" would bring changes anywhere, it would do it there.

Why the changes have been so few is made clear by Mr. Seymour's account of his visits to Washington in the interest of removals. He says that when he stated his errand to the Postmaster-General he was promptly told that he must get proper affidavits certifying to the causes justifying the removals, or assert similar causes on his personal responsibility. In talking over the general policy of the Administration, the Postmaster-General told him that it was to fill vacancies with Democrats, as it would manifestly be unfair for Republicans to continue to have a monopoly of the offices; that an organization of the civil service in favor of either party invited just criticism and weakened the service; and that his idea was that the end of the present tenure of power of the Cleveland Administration should find the Federal offices about equally divided between the two parties, so that succeeding administrations should have a non-partisan system in actual existence and firmly fixed.

Mr. Creswell, the counsel for the Government before the Alabama Claims Commission, has gained nothing by his controversy over his salary with Mr. Durham, the Assistant Comptroller. The law is so clearly against him that there is really not much room for discussion over it. It says he ought to have a fee for each case in which he is engaged, the amount to be fixed by the Court, but the fees were in no one year to exceed $8,000. He, however, has been drawing $8,000 a year as a salary without any reference to the amount of work done. Part of his defence is that although the Court did not fix $8,000 as the amount to be paid him, he fully earned it. To this Mr. Durham neatly replies, that this is extraordinary, for, besides his salary, there has been paid from the establishment of the Court in July, 1882, down to March 31, 1885, the enormous sum of $166,739 84, to "special counsel" to help Mr. Creswell in his labors. When one comes across these things one understands the fury of the Blaine men over their defeat last fall, and their anxiety about the future of the poor negro—for "the poor

negro" meant plenty of fat pickings which Mr. Blaine would never have interfered with.

Admiral Jouett's case, in which the Treasury charges him with $400 for money expended in a luncheon to visitors on board his flagship, the *Tennessee*, at the New Orleans Exposition, is undoubtedly a hard one. We believe that in most, if not all, foreign navies allowances are made to commanding officers for necessary or reasonable official hospitalities. But the Second Comptroller certainly appears to have the best of it in the discussion over the law of the matter. He contends that "contingent expenses," allowed by law, are incidental expenses necessary to the proper performance of the duties required by the Department, and he can find no regulation of the Department requiring admirals to give luncheon on their flagships. The truth is, that these various small laxities, which the Treasury is now discovering, are the natural results of twenty-five years of Republican rule, with overwhelming majorities and an overflowing Treasury. This bred carelessness in every direction about what the law prescribed or forbade. Parson Newman's voyage round the world, for instance, as an "inspector of consuls," at $5,000 a year salary, would now be regarded as a gross job, and the Treasury would not think of it for a moment; but Mr. Boutwell perpetrated it, at General Grant's request, without the least hesitation. The whole administrative machine needs screwing up, and this is what the President and the Cabinet are doing, while "the party" is swearing at them through the locked gates for not treating the crowd.

The Mugwumps of Massachusetts, like their brethren everywhere, are fully satisfied with their "recreancy" of last year. Mr. George F. Williams, the Chairman of the Independent Committee of One Hundred, tells a reporter of the Boston *Advertiser* that each Mugwump is thinking for himself, and that so far as his observation goes all are content with the situation. "We are not anxious," he says, "nor are we inclined, this fall to dig up the seed we planted last year, to see if it is sprouting; we know it is. The Democrats and Republicans are much more interested in our movements than we are ourselves; we are perfectly satisfied, see into a good future, and hope both parties will see the force of Governor Long's very characteristic remark that 'in 1888 we shall win if we deserve to.'" That is the precise attitude of the Mugwumps everywhere. They are awaiting developments, and will cheerfully help that party to win which best deserves success.

Concerning the probable conduct of the Independents in the next Massachusetts campaign, Mr. Williams gives some opinions which may be taken as a perfectly safe guide in reference to the action of the same voters in New York. "If the Democratic State Convention strongly endorses President Cleveland and the policy of civil-service reform, and nominates a ticket in accordance with its professions, I dare say many Independents will vote for it. Will the Independents attend the Republican caucus? Be assured I, for one, shall not. As a devoted supporter of Mr. Cleveland I should be a sorry sight in a caucus to choose delegates for a State convention which will condemn the President, and then go bodily into the catacombs which Messrs. Hoar, Sherman, and Evarts have built for the Republican party." We do not believe that there is a single Republican who voted for Mr. Cleveland last fall who will not say a hearty amen to this. Not one of them has been found or can be found who regrets his course in refusing to support Blaine. We do not believe that one can be found who could be induced to formally reenter the party fold and become a "member in good standing." Neither have they a desire to enter the Democratic party in the same capacity; but it must be admitted that the "catacomb" policy of the Republican leaders is making Independent sympathy with Republican candidates more and more difficult every day.

After waiting for six months for the "recognition" which there was never any hope of their getting from the Administration, the Tammany braves have met and solemnly resolved that the Civil-Service Law is "an abridgment upon the privileges conferred upon the chosen servants of the people," which Tammany "condemns as an unwarrantable invasion of popular rights, and an undemocratic and indefensible restriction of the vigor and effect of the suffrage." The author of the resolutions, who was one of John Kelly's silver-tongued orators at Chicago in opposition to Mr. Cleveland's candidacy, supported them in a speech which was received with a "whirlwind of applause." He said he was in favor of an honest civil-service reform, and explained what that was by declaring that he believed in filling the offices with persons who "got their honesty out of the tenement-house, their intelligence out of the public schools, and their patriotism out of their idea of the true blessings of the Government." General Spinola declared the Civil-Service Law to be a "cunning Yankee trick," and General Pryor proudly boasted his "full allegiance to that memorable formula, 'To the victors belong the spoils,'" and thought the resolutions ought to come out boldly in favor of the only true Democratic reform, which was to turn the Republicans out of office and put the Democrats in. This was the most successful speech of the evening. It is evident that the braves are in very low spirits. They were opposed to Mr. Cleveland's nomination, and voted against his election because they feared he was not their kind of a man, and their worst fears have been realized. There is nothing for them to do but to shut up the wigwam and go to work for a living.

Many solutions of the negro problem have been proposed in our time, but not one which, to our minds, for the rapidity of its action can compare to the composition called "Anti-Curl" advertised in a late number of the colored organ called the New York *Freeman*. The advertisement has two portraits of colored citizens, illustrating the operation of the "Anti-Curl," one showing the hair in its woolly, kinked condition, before the application, and the other in its beautiful, wavy, Caucasian appearance after the application. It renders, the advertiser says, "kinky, curly, and rigid hair soft, elastic, and pliable," and also "straight, glossy and pliable," and is manufactured by an "Anti-Curl Association" in Walker Street. A hundred thousand pots or so of this preparation annually would, judiciously used, probably knock their platform from under Senators Hoar and Sherman, and make us once more a homogeneous people.

It is announced that Miss Ada Sweet, the somewhat famous Pension Agent at Chicago, has resigned, and that Mrs. Mulligan, widow of the late General Mulligan, has been appointed in her place. Miss Sweet has held this office ever since the death of her father, whose chief clerk she had been some fifteen years ago. During this time her office has been a model of methodical and business-like efficiency. When her commission expired in 1878 a desperate push was made by the friends of Mrs. Mulligan to secure the place for the latter, and these efforts have been renewed from time to time, but ineffectually until now. The movement against Miss Sweet and in favor of Mrs. Mulligan was in no sense political. It was begun under President Hayes and continued during the Garfield and Arthur Administrations. If Mrs. Mulligan is a Democrat, that fact did not prevent Republican Congressmen of Illinois and several other Western States from being her industrious supporters. The movement in her favor was a social and neighborhood affair altogether, and it would have been successful long ago but for the remarkably good record that Miss Sweet had made as a public officer and a woman of business. If she has really resigned, there can be no objection now, on civil-service-reform grounds, to Mrs. Mulligan's appointment. It is to be hoped that the new appointee will vindicate the admiration and perseverance of her friends by the efficiency of her service, but we can hardly expect to find in her the qualifications for business which have so justly distinguished her predecessor.

The cottagers at Cotuit, a pleasant Massachusetts watering-place, have been much disturbed by the removal of the Postmaster, or rather by the failure to reappoint him, owing mainly, it is said, to the influence of one of their own number, Mr. Augustus Thorndike Perkins, who got the vacant place for a lady at one time a governess in his own family. They accordingly held a meeting the other day which was attended by all the legal voters of the town except four; and they unanimously protested against the removal, as "contrary to the principles of civil-service reform and to the spirit of the present Administration," inasmuch as the late Postmaster was very efficient and was not an offensive partisan. The moderator of the meeting writes to us asking us to notice the matter, and we willingly do so, but only to say that experience has taught us to be very careful about complaining of a removal unless we have very full knowledge of the case. The Civil-Service Law very wisely, as we think, puts no check whatever on the power

of removal, and, in the case of postmasters, none on the power of appointment. Moreover, Mr. Vilas is charged, in the case of the postmasters, with the correction of a gigantic Republican abuse, the reservation during a quarter of a century of all the post-offices for members of one party. In making the correction, no doubt he often makes mistakes, or is misled by local advice, but we do not think "the principles of civil-service reform" call for the retention of every Republican postmaster against whom no charge can be brought. The Cotuit case, too, is one which can be better discussed in detail by those who are near the scene than it can by us.

There is no proof whatever that Vice-President Hendricks's expression of sympathy with the Irish Nationalists has excited any of the "resentment shown by the English newspapers" on which the *Sun* comments. No English newspaper of the smallest consequence has taken any notice of it. There is no reason why any English newspaper should be troubled by Mr. Hendricks's utterances on any question of foreign politics, because he knows nothing about foreign politics, and has no interest in it. He is in favor of Irish independence, just as he would be in favor of Abracadabra if he thought it would bring him a vote or two. One good post-office or collectorship is of more interest and importance to him than all the foreign nations on the globe. When he went abroad a few years ago he innocently revealed his astonishment at finding parliaments on the European continent. Doubtless he expected to see nothing there but post-offices and custom-houses, carried on by despots and manned by vicious noblemen on life tenures. He is of importance now in American politics, we beg to inform the Queen, Mr. Gladstone, and Lord Salisbury, and the British press, simply because he would succeed Mr. Cleveland if the latter were to die—a contingency which makes most intelligent Americans shake in their boots.

The growing bitterness of feeling between the English and French in Canada seems to have reached its present fervor through the outbreak of smallpox in Montreal. For some reason or other the French object to being vaccinated, and the disease has accordingly been most prevalent among them. This has led to supercilious comments in the English press on French habits, including aspersions on the cleanliness of the French population, which the French press has fiercely resented, the Catholic clergy in some cases backing the newspapers up. The comparative cleanliness of the two races has long been a sore subject, but the controversy has generally been conducted somewhat unfairly on the English side. It originated mainly in the failure of the French in France to adopt the practice of "tubbing" in the morning, which Englishmen took up about fifty years ago. It has been aggravated, too, by the slowness of the French hotels to provide the enlarged bowls and pitchers which British tourists about the same time began to have in their own houses—a fact on which the English press has been in the habit of commenting every fall for half a century. The way Frenchmen, too, sometimes talk about a bath, as something which it would be well for a man to take when he feels out of sorts, but only then, helps to foster the pride of cleanliness in the English mind. But the comparison, like many other comparisons of English with foreign manners, has always been unfair because it was a comparison of one small English class with a whole foreign people. The bulk of the population in France would stand very high in any scale of national cleanliness. The French people as a whole are far more neat and clean in their dress, in their homes, and in their eating than the English people as a whole. The sense of decency and self-respect is much stronger among them. In fact, one has to go up pretty high in the English population to reach the average French standard of living, although it is quite true that very few Frenchmen, indeed, take as good care of their persons as do the men of the upper middle and upper class in England, or are as exacting in matters of domestic comfort and propriety.

The comparison is likely to have serious consequences in Canada in widening the breach which has always existed between the two races. Curiously enough, however, the English, who are the chief objects of the French rage, number only 881,301 against the 1,298,929 French. The English-speaking population consists besides of the Irish 957,403, and the Scotch 669,863, while the Germans number 254,319; so that the English are really a small minority of the population of the Dominion. It would appear, however, that community of religion does not bring the French and Irish together, and that the latter, on the whole, side with the Saxons in this instance, and are in the main loyal to the British crown. The threats of the French Canadians to take arms against the Saxons may probably be despised, for there is but little power of initiative and little taste for venturesome enterprises left among them. But their discontent and unwillingness to assimilate must always prove a heavy political burden for the Dominion to carry—so heavy, perhaps, as to prevent the ultimate success of the Confederation. It is being used, too, as one more illustration of the inability of the English to absorb and content populations of other races and creeds, and it must be admitted that as such it has a good deal of force. The Englishman, like the Roman, has immense ability as a conqueror and administrator, but he has not the Roman art of converting the vanquished to his manners and ideas, and making them proud of belonging to his Empire.

The approaching admission of the farm laborer to the franchise in England, with the strong probability that in the beginning, at all events, his employers will try to intimidate or cajole him into voting the Tory ticket, has raised a vigorous discussion as to the lawfulness of lying. One Anglican clergyman has published an address in which he advises the laborer to lie freely to his employer about his vote, if necessary for the protection of his independence. This has called down on the clergyman the indignant rebuke of his Bishop, and has set a great many other clergymen to raising up their voices on behalf of bold truthfulness. But there appears to be a strong current of lay opinion in favor of lying in answer to any question which threatens a man's rights in mind, body, or estate. The labor agitators, in particular, favor any amount of falsehood which the purity of the ballot may call for. The *Daily News* points out, however, that no great amount of lying is likely to be needed, owing to the stringent provisions of the election law, which make liable to one year's imprisonment at hard labor, or a fine of $1,000, any one

"who shall directly or indirectly, by himself or by any other person on his behalf, make use of, or threaten to make use of, any force, violence, or restraint, or inflict, or threaten to inflict, by himself or by any other person, any temporal or spiritual injury, damage, harm, or loss, upon or against any person in order to induce or compel such person to vote or refrain from voting, or on account of such person having voted or refrained from voting at any election."

Numberless were the political surmises when the Emperors of Germany, Russia, and Austria-Hungary met at Skierniewice, in Russian Poland, a year ago. The leading diplomatists of the three empires were there, Bismarck among them. Conferences were held. Yet the world was left in darkness concerning the political import of the affair, and, in a sense, is in darkness still; for not a single diplomatic act has taken place during the year which could be directly classed as a sequence of those imperial and ministerial deliberations. The general conclusion now is that nothing really important, nothing new, was resolved upon at Skierniewice, and that an exchange of friendly declarations and peaceful assurances was all that took place there. The meeting of Alexander III. and Francis Joseph, at Kremsier, in Moravia, toward the close of last month, has been from the start looked upon merely as a matter of personal courtesy between the Courts of St. Petersburg and Vienna. Emperor William was there only "in spirit," as many a report from Kremsier had it, and Prince Bismarck shone by his absence; and without them what could be expected? It is true, while the two emperors were slaying bucks driven into the episcopal park, their foreign ministers, M. de Giers and Count Kálnoky, conferred upon international affairs; but the outcome of it is—as the former told the representative of the Vienna *Neue Freie Presse*, one of forty correspondents admitted—"L'entrevue c'est la paix."

This ought to be a pleasant announcement, but, such are the true relations between the Empire of the Czar and Austria-Hungary, it is far from delighting the press of St. Petersburg or Moscow, Vienna, Pesth, or Cracow, excepting official sheets. Growing cordiality between the two Courts is suspicious to German Liberals, Magyars, and Poles on the one side, and repugnant to Russian Slavophils on the other. The fact is, the two empires are at peace only because Germany, befriending the less aggressive of them, has set her veto on war. The meeting seems to have been a harmless, though very expensive, distraction for the emperors, empresses, and crown-princes—of whom the Russian sadly need it—and nothing else. The flood of telegrams about it—together 87,800 words—was the silliest stuff ever wired.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 9, to TUESDAY, September 15, 1885, inclusive.]

DOMESTIC.

THE first Cabinet meeting since the President's return to Washington was held on Thursday morning at 11 o'clock. Secretaries Bayard, Manning, and Lamar were present. The subjects under discussion included the Austrian mission, the Wyoming disturbances, and a number of minor matters under the Treasury and Interior Departments.

A meeting of the Cabinet was held in Washington on Tuesday at which all the members were present except Secretaries Bayard and Endicott and Attorney-General Garland. It is understood that the silver policy of the Government was one of the questions considered.

A Washington gentleman, cognizant of the negotiations going on in the matter of silver legislation, was reported on Monday as saying: "It should be remembered in considering this subject that it is the silver men, and not the Administration or any of its representatives, that are offering to compromise. The ground taken by the Administration has always been that the coinage should stop; it is to the interest of the silver men that it should continue, and it is hardly fair to apply the term compromise to any measure by which the coinage is stopped. The passage of such a bill in any form is, of course, a defeat for the silver men, and the fact that it has been suggested by some of the stoutest adherents of silver coinage is in itself a surrender to the power of the Administration and public opinion."

It is now known that Messrs. Morrison, Mills, Herbert, and Hewitt propose to introduce tariff bills in the next House of Representatives. Mr. Hewitt's bill will aim to take the duties off of raw material. Mr. Mills, of Texas, goes back to the "tariff for revenue only" principle, and proposes to derive revenue mainly from duties upon luxuries. Mr. Morrison's bill will resemble in most respects his previous productions.

President Cleveland on Friday appointed the Rev. Moses A. Hopkins, of North Carolina, Minister to Liberia. He was born a slave, and was educated at Lincoln University, Pa., and at Auburn, N. Y., Theological Seminary. He was highly recommended for the place.

Miss Ada Sweet has resigned the Pension Agency at Chicago to accept a private business engagement, and the President has appointed Mrs. M. A. Mulligan in her place.

George B. Bacon, Chief Weigher of the Brooklyn District and for sixteen years an efficient Custom-house officer, was on Monday summarily removed by Collector Hedden's Deputy at this port, and George H. Sterling, a Brooklyn Alderman, boss, and liquor-seller, appointed in his place. No cause for the removal is assigned.

First Auditor Chenoweth, of the Treasury Department, has returned to Washington from Texas, ready to continue his attack upon the Coast Survey. He claims that the developments yet to be announced are fully as striking as those already made public. The subject is one on which there is much difference of opinion in official circles.

The Government engineers have made a report on the reservoir system of the upper Mississippi. They say: "The reservoirs at Leech Lake and Lake Winnebagoshish were opened August 1 with a large discharge. Pokegama reservoir, the receiving reservoir, 100 miles by water below the upper reservoir and 318 miles by water above St. Paul, was opened August 15, with a discharge of about 3,000 cubic feet of water per second. The rise in the Mississippi River at different points since, resulting from the discharge from the reservoirs, was on September 1, at Grand Rapids, 4 miles below Pokegama, 5 feet; Aitkin, 109 miles below Pokegama, 2½ feet; Crow Wing, 230 miles below Pokegama, 2 feet; Sauk Rapids, 295 miles below Pokegama, 2 feet. The river at St. Paul fell, from August 1 to August 23, 1 foot and 3 inches. Since then the St. Paul gauge shows an average stage of 3 feet up to September 7. As there was no rainfall of any importance from August 1, the river must have continued falling at about the same rate as its tributaries, and probably not far from the same proportion as from the 1st to the 23d of August, had it not been for the supply from these reservoirs. As clearly as can be estimated the reservoirs are now furnishing not far from one foot of water at St. Paul—a clear and convincing proof of the wisdom of this great undertaking and the assurance of its success."

The State Convention of the National Greenback-Labor party, held in Clarendon Hall, in this city, on Wednesday, resulted in the nomination of the following State ticket: For Governor, George O. Jones, of Albany; Lieutenant-Governor, Lyman W. Gage, of Rochester; Secretary of State, George W. Pimm, of Orange County; Comptroller, Nelson W. Shaler, of Catskill; Treasurer, Allen Wood, of Steuben County; Attorney-General, William B. Guernsey, of Chenango County; State Engineer and Surveyor, Edward A. Stillman, of Ontario County.

The New York Prohibition Convention at Syracuse on Wednesday nominated the following ticket: For Governor, H. Clay Bascom, of Troy; Lieutenant-Governor, W. Jennings Demorest, of New York; Secretary of State, Edward Evans, of Tonawanda; State Treasurer, Hiram Vandenburgh, of Fulton County; Comptroller, Frederick Sheldon, of Hornellsville; Attorney-General, W. Martin Jones, of Rochester; State Engineer, George A. Dudley, of Ellenville.

The Rev. Henry Ward Beecher sends the following to the Rochester *Post-Express* from Peekskill: "I am decidedly in favor of the insertion of a high-license plank in the platform of the coming Republican State Convention, because absolute prohibition is an absolute impossibility. High license is possible, feasible, and equitable. The moral sense of the community will sustain the demand. The result will be a greater protection of society from the evil of liquor selling than by any other method that can be enforced."

On Thursday the Massachusetts Prohibitionists nominated Thomas J. Lathrop, of Taunton, for Governor.

The Georgia Local Option Bill has become a law. It provides that upon the application for prohibition signed by one-tenth of the voters in any county, the Ordinary shall hold an election to determine whether or not spirituous liquors shall be sold in that county. If the result of the election shall be against the sale, the Ordinary shall give notice once a week for four weeks, and the act shall take effect as soon as the result is ascertained, except as to the vested rights of persons whose annual license has not expired. If the result of the election shall be "for sale," no other election on the question shall be held in that county within less than two years.

The Virginia campaign is warming up, and it will not be long before the bitterest personalities may be expected to be indulged in. General Wise, Mahone's candidate for Governor, has completed his canvass of most of the white counties. General Lee has just started out. His warm reception by the people is wormwood to Mahone's followers. The Democrats claim that a considerable number of negroes will support their ticket this year. The desertion of some of the influential Republican leaders makes this probable. An effort will be made by Mahone and Wise to get Blaine and Logan into Virginia in the last week or two of the campaign.

The Mississippi Republicans have decided to hold no convention this year, "because of the well-known impossibility of securing at the polls an honest election."

A band of white "Regulators" in Fairfield County, S. C., have been warning and whipping all families of mixed white and colored people, and directing them to leave the country. Their motive is to break up miscegenation.

Mollie Maguire outrages are reviving in the Pennsylvania coal regions.

At Wichita, Kansas, on Friday, the cases against Captain Couch and the Oklahoma boomers for treason were dismissed at the request of counsel for the Government.

Julio Romano Santos, who was recently released from prison in Ecuador, arrived in this city on Monday on his way to Washington to establish his claim to be a citizen of the United States. He places his damages by false imprisonment at $100,000.

A terrible tornado at Washington Court-House, Ohio, on the evening of September 8, destroyed 200 residences and many stores. Five people were killed and 50 injured. The suffering of the destitute people is great. The damage to property is estimated at more than $250,000.

A large building occupied by Chinese laborers at the Coal Creek mines, twenty miles from Seattle, W. T., was attacked by a mob on Saturday morning. The Chinamen, about fifty in number, fled to the woods. Their lodging-house and cook-house were burned. The attacking party were all masked. None of the Chinamen were hurt. Trouble at the New Castle mines is feared.

The *Puritan* and *Genesta* attempted for the third time on Friday to sail the first race for the *America's* cup. There was a good wind when the boats started about 11:30 A. M. The yachts led by turns for the first few miles of the race to windward, but the *Puritan* gradually sailed ahead, and, when she turned the stake boat at 5:37, was two miles dead to windward of the *Genesta*. The judges gave the signal declaring the race off before the *Genesta* reached the stake boat, it being evident that the race could not be finished within the seven hours' limit, as the wind had died out. On Saturday another attempt was to be made, but about 2:30 P. M. the judges decided that there should be no race that day. The wind was only eight miles per hour, and it was useless to attempt to sail the race within the limit.

The race was successfully sailed on Monday over the course from Pay Ridge through the Narrows to Sandy Hook Lightship and return, a distance of 38 statute miles. The start was a capital one, the *Puritan* getting off at 10:32:02 A.M., and the *Genesta* four seconds later. At the lightship, where they turned on their homeward course, the *Puritan* was four minutes and twenty-two seconds ahead, her time being 2:14:54. At the finish the *Puritan* was sixteen minutes and forty-seven seconds in the lead, crossing the line at 4:38:05. Throughout the race the *Puritan* led. The wind was good outside and there was a moderate sea, with plenty of white caps. The race was viewed by thousands. Owing to a slight accident to the upper cap of the *Genesta's* topmast, the second of the races will not take place until September 16. That race will be twenty miles to windward and return.

Dr. Duncan has declined the Presidency of Vassar College.

Scott Lord, of this city, died at Morris Plains, N. J., on Thursday, at the age of sixty-five. He came into prominence as Senator Conkling's law partner at Utica. He was a Democrat, and defeated Ellis H. Roberts for Congress in 1874. This was followed by the Utica *Herald* declaring war on Conkling, and continuing it until Conkling's power was broken. At the close of his Congressional term he became a member of a law firm in this city.

Rear-Admiral John W. Livingston, United States Navy, died in this city on Thursday, at the age of eighty-one. He entered the navy as a midshipman on the 4th of March, 1823, and

passed through all the various grades to that of Rear-Admiral. His services have been on all the naval stations, abroad and at home, in the Mexican war and in that of the rebellion.

Col. George Ward Nichols, President of the Cincinnati College of Music, and author of a history of "Sherman's March to the Sea," died on Tuesday.

FOREIGN.

The Spanish Government on Thursday despatched a note to Germany, which was approved at the council of Ministers, requesting her to renounce all intention of establishing a suzerainty over the Caroline and Pelew Islands. It was also reported, but without authority, that the note declared that otherwise Spain must decline to give satisfaction for the recent insults to the German Embassy.

It was asserted in the London *News* on Friday morning that Germany had consented that the Vigo and Valencia Consulate matters should be settled separately, and allowed Spain voluntary action in giving satisfaction, the apology to be oral or printed, in order the best to prevent a fresh popular outburst, which would tend to strengthen the opposition to the monarchy. The Spanish reply, while not totally rejecting arbitration, would contend that Spain's prior rights were sufficiently proved to justify the termination of the dispute by direct negotiation.

There was a military uprising in one of the largest barracks at Madrid about one week ago. The soldiers seized their arms and shouted, "Death to our chiefs." The authorities were prepared for the outbreak, and vigorously suppressed it before it had assumed formidable proportions. Every precaution was taken to prevent its recurrence.

Advices from Yap show that a conflict at that place was only prevented because the Spanish man-of-war's captain refused to obey the order of the Governor of the Carolines to fire upon the German gunboat. An altercation took place between the two, and the Governor was wounded and put under arrest.

The note of the Spanish Foreign Minister to Prince Bismarck claims Spanish sovereignty over the Carolines on the ground of discovery, exploration, missionary work, protection, recognition by the natives, and the existence of Spanish trading posts. A complete apology for the Embassy incident has been sent by Spain to Germany.

A despatch from Madrid to the London *Standard* on Tuesday morning said: "If Spain persists in her rejection of arbitration in the Carolines dispute, Germany will endeavor to convene a conference of the European Powers and the United States, either at Paris or Vienna, for the purpose of deciding the principles which shall govern the acquisition and protection of territory in the Pacific. The Convention will be similar to the recent Congo Conference."

It is announced in Madrid that the Spanish Government will gladly reopen commercial negotiations with England and America upon the arrival of the new ministers from those countries.

The total number of cases of cholera reported in Madrid from September 1 to 12 was 10,666, and for the whole of Spain for the same period 23,644. The total number of deaths from the disease throughout Spain for the same period was 6,379. The disease has almost disappeared from the provinces of Valencia, Murcia, Saragossa, and Granada.

The London *Standard* on Monday morning published the Anglo-Russian protocol concerning the Afghan frontier. Every detail in connection with the frontier line has been settled. The only possible point of difference is the Oxus, which the English have been unable to survey minutely. The boundary defined coincides nearly with that proposed by M. Lessar. Russia gets the whole oasis of Panjdeh, including Ak-Tepe, Akrobat, and Puli-khatun. Afghanistan gets Merutchak and the whole Zulfikar Pass. Colonel Kohlberg will be chief of the Russian Commission, and M. Lessar next in command. Both commissions will be much smaller than those headed by Sir Peter Lumsden and General Zelenoi. They will meet at Zulfikar in November. It is estimated that they will not conclude their labors until August, 1886.

It is asserted that the protocol defining the Afghan frontier was signed in London on Thursday.

It is stated in diplomatic circles at Paris that M. Nelidoff, the Russian Ambassador at Constantinople, has gained the Sultan's ear, and that the latter, being also encouraged by France, will not accede to the main proposals of Sir Henry Drummond Wolff, the British Special Envoy, regarding the occupation of Egypt. It is probable that the mission of Sir Henry will result in a failure, owing to the pressure that is thus being brought to bear upon the Sultan.

It is stated that the Sultan has expressed his willingness to send 5,000 Turkish troops to Egypt whenever he is requested to do so by England.

It is believed that November 14 will be the date for the coming election in England.

Mr. Chamberlain's recent speech announcing his programme has been received by the Radical party of Great Britain with enthusiasm. The London *Times*, commenting on it, says that both Mr. Chamberlain and Lord Randolph Churchill must resort to very different arguments if they wish to attract the Whigs to their political fold. The *News* (Liberal) says: "At the present moment there is less reason than ever for the Whigs to join the Conservatives. Whether the Liberal majority be large or small, it will consist of the advanced section of the party, and a Liberal failing to pledge himself to the changes in the land laws and taxation has no chance of being heard."

Mr. Chamberlain asserts that Radicalism, which has hitherto been the creed of the most numerous section of the Liberal party outside of the House of Commons, will henceforth be a powerful factor inside. The Radical aims, he says, are constructive, not destructive.

Mr. Chamberlain spoke at Glasgow on Tuesday night. He took the ground that it was a matter of national importance that the coming Parliamentary elections should result in seating a majority numerically strong enough to put down Mr. Parnell. Speaking on the subject of church disestablishment, Mr. Chamberlain said that was the great question of the day in Scotland. He opposed State interference with or aid to religion. In this matter he was a liberationist. He was in favor of freeing the Church in England, Scotland, and Wales from State control. Referring to the Irish question, the speaker said he still adhered to the idea of a National Council in Dublin. Mr. Parnell, he said, though asking more, would doubtless take less.

Mr. Gladstone and Lord Rosebery have each written a letter for publication, stating that the question of the disestablishment of the Scotch Church is purely a matter for Scotchmen to deal with, and ought not to be made a test question at the coming Parliamentary election.

There is trustworthy information to the effect that when Mr. Gladstone's manifesto comes, whether spoken or written, it will be found to give the Liberal programme three chief heads, viz.: Reform of local government, of the land laws, and of Parliamentary procedure.

Mr. Gladstone is preparing a manifesto on the Irish question.

Archbishop Walsh, at Dublin on Tuesday, replying to a number of addresses, approved the policy of the Earl of Carnarvon, the Lord Lieutenant, and applauded his lordship's recent act of justice in ordering an inquiry into the Maamtrasna and similar murder cases, in which it is alleged innocent persons were convicted.

John Bright will speak in the coming British political campaign.

The health of Lord Randolph Churchill, Secretary of State for India, has given way under the severe strain of his official duties and the part he has taken in the Parliamentary campaign. All of his political engagements have been cancelled in accordance with the imperative orders of his physicians.

The London *Times* on Monday said: "The statement will be read with interest that we have the presence of the Chief Justice of the United States among us. It is regrettable, though, that the time of the year prevents concerted action respecting his visit being taken on the part of the different inns of court. The legal profession, however, will extend Chief-Justice Waite that cordial reception given by Americans to Lord Chief-Justice Coleridge on the occasion of the latter's visit to the United States. But it is fitting that the presence among us of a Judge yet more eminent in position than Lord Coleridge be known and recognized by us."

William Augustus Guy, F.R.S., a famous London physician, died on Saturday, at the age of seventy-five. He was the author of a long series of essays on the pulse and respiration, and other matters of physiology. He devoted much of his attention to sanitary reform, social science, and allied subjects.

The Eliza Armstrong case in London has been adjourned until September 26.

Letters from China represent that France lost 15,000 men in the Tonquin campaign, and that her losses in money, including the cost of building forts, hospitals, and frontier defences, were £43,000,000, while China's losses were 100,000 men and £38,000,000.

A Chinese loan of $40,000,000 has been negotiated at Paris and Berlin for the construction of a railroad from Taku to Tungchow, twelve miles south of Pekin. A Manchester firm has obtained the contract for building the road.

Hostilities have been resumed between French ships and Madagascar, Manangare being under bombardment.

The Clémenceau party in France has issued an electoral manifesto similar to that of the Radical Socialists. Premier Brisson's organ, the *Siècle*, ridicules the programme as absurd and impossible.

Jean Claude Bouquet, the well-known French mathematician, is dead at the age of sixty-six.

A great Socialist meeting was held in Rotterdam, Holland, on Sunday, in favor of general suffrage. The speakers declared that the people would take no denial.

Hans Canon, a famous Austrian artist, is dead.

The full Court of Manitoba, sitting at Winnipeg, on Wednesday gave judgment in the Riel case, disallowing the appeal and confirming the death sentence passed by the Northwest Territory Court. All held that on the evidence the jury could not come to any other decision than they did. As to the insanity plea, they all held, while admitting that the prisoner acted strangely at times, that he was a clever and designing man, who sought to advance his own personal interests by using the half-breeds as tools. It is believed, however, that he will be reprieved.

Riel was on Tuesday granted a respite pending the decision of the Privy Council of Great Britain in his case.

General Caceres and a band of insurgent troops recently defeated the Peruvian Government troops at the town of Canta. This is the first advantage of any consequence gained by the revolutionists.

The Panama *Star and Herald* says: "We shall see in October the first section of the Panama Canal opened in its full length, breadth, and depth. The first section will comprise a waterway from Colon to near Tiger Hill, a distance of twelve kilometres."

MR. RANDALL ON THE TARIFF QUESTION.

MR. SAMUEL J. RANDALL has written for a Southern periodical a disquisition on the tariff, on internal taxes, on the rate of interest, the cost of labor, and the price of living, embodying his views of the most desirable course of legislation on those questions. The paper may be taken in a broader sense as a statement, by one of the most prominent Democratic statesmen, of the political issues of the day. These issues, according to Mr. Randall's view, are financial and industrial. According to Senators Sherman and Hoar, they are related in some way to the slavery question. According to Mr. Cabot Lodge and Mr. Andrew D. White, they are related to the civil-service question. According to the New York *Tribune*, the real issue is the failure of John Roach. Amid this contrariety of opinion upon a mere question of fact, the parties have as much trouble in getting started as the two yachts in the international race. There is not enough wind, and what wind there is changes too often. There is danger that one craft may run into the other and knock off its bowsprit. No great harm would result if both should go to the bottom, as they eventually will unless they can find some issue appealing to the present needs of the people, and enlisting the support of intelligent public opinion.

Mr. Randall has, at least, touched upon a public need, and has spoken a decisive word. The tariff is one of the things that call for reform, and Mr. Randall states by authority that it must be overhauled. "No one who understands the existing tariff laws," he says, "will deny the justice and necessity of thorough revision." Mr. Randall is himself the highest authority on this question, since he is the leader of the high-tariff Democrats. If he considers thorough revision necessary, there is nobody in the dominant party in the House of Representatives to oppose that undertaking. Therefore a revision of some sort may be set down as a certainty next winter; a revision to be supported and encouraged by some considerable part of the industries of Pennsylvania.

When we come to examine the principles of tariff and tax revision which Mr. Randall favors, it is easier to discover the general tone and drift of his conceptions than the process by which they are reached. He is opposed to protection on principle, but in favor of it in practice. He thinks that "protection for the sake of protection" is unconstitutional, but that protection accomplished incidentally is lawful and proper, and even necessary. In order to make a certain rate of duty on imports constitutional, it is only needful that the statesman should settle in his own mind whether it is levied for protection or for revenue. How to determine this point Mr. Randall does not explain, but it is evident that if the contending opinions of manufacturers and wool growers should fail to produce conviction, resort might be had to prayer. Is a duty of twelve cents per pound on wool to be considered as protection for the sake of protection, or as protection incidental to the needs of the public treasury? We can perceive no solution of this problem adequate to the needs of Congressmen from the non-wool-growing States, except severe self-examination under divine guidance.

The postulates of political economy are frequently hard to understand, but if we can find the key to any exposition of them by a statesman or publicist, we may hope to unravel the knottiest problems of the science. Mr. Randall furnishes the key to his philosophy in the following paragraph:

> "It will not be denied that the rate of interest indicates the cost of living; that the cost of living indicates the price of labor; and that the price of labor indicates the cost of production. This rule may sometimes be disturbed by abnormal conditions—such as crop failures, war, or overtrading. The country which has the lower rate of business interest will drive the country having the higher rate of business interest out of the world's markets, and eventually out of its own domestic markets; it will absorb all its means of paying its debts, including all its specie, than which nothing can be worse. There is no mode of recovery from such disaster save, first, by the reduction of the rate of business interest to a par with low-interest countries; or, second, by the imposition of such duties on imports as will raise the cost of the foreign article to the cost of the domestic article in the home market."

This is an elaboration and further elucidation of the thesis of Mr. Randall's Nashville speech of last year. "The rate of interest indicates the cost of living," says Mr. Randall. Well, what of it? Is a high cost of living desirable? Is a high rate of interest desirable? "The cost of living indicates the price of labor," he continues. We do not assent to this proposition any more than we assent to the other; but supposing it to be true, what comes of it? Why this, says Mr. Randall, "that the price of labor indicates the cost of production." This is the conclusion which Mr. Randall says will not be denied by anybody, yet it is denied by the highest authorities on economic science, who point to the examples of England on the one side, with its high-priced labor and low cost of production, and the continent of Europe, and India, and Mexico, and China, with their low-priced labor and high cost of production on the other, as furnishing a complete refutation of that dogma.

We cannot perceive that Mr. Randall has added anything of value to current political discussion except his *ipse dixit* that the tariff needs revision and must have it. This is, as we have already said, important by reason of Mr. Randall's standing, both party wise and tariff wise.

SENATOR SHERMAN AND GOVERNOR HOADLY.

SENATOR SHERMAN'S appeal to the country to restore the Republican party to power in order that the rights of the colored voters in the South may be secured, has been pointedly answered by Governor Hoadly, who asks what the Republican party proposes to do for the colored man that it has not been able to do during its twenty years of uninterrupted power at Washington. This is a question which must be answered if the Republican campaign in Ohio is to be fought on the issues of the past, as both Senator Sherman and Judge Foraker have drawn their line of battle. If the colored man has been shorn of his rights during five successive terms in which the Republican party has held all the Federal offices, how is his condition to be improved by another term of the same sort? Is there any guarantee that a sixth would yield any better results than the five that have gone before? The burden of proof is upon Senator Sherman and his party. He and they are bound to explain why they have misused the power heretofore intrusted to them, and how they intend to correct their mistakes, before they ask for votes on the ground that the colored man is still deprived of his rights. The least that they can do will be to show that the condition of the negro has progressively improved since the close of the war; that they have been the cause of the improvement; and that this condition has been altered for the worse since the election of President Cleveland.

That the condition of the freedman has been greatly improved since the close of the war is universally acknowledged. That the future is full of hope for him is the testimony of all impartial observers who have visited the South during the present year. But it is equally well known that the bettering of his lot and the brightening of his prospects have not been due to the attempt made by the Republican party to enthrone the ignorance and squalor of the South above its education and wealth, but have been accomplished in spite of that deplorable experiment. When the State debt of Louisiana rose from $11,000,000 in 1866 to $50,000,000 in 1875, the Republican plan of governing the South by the agency of carpet-bag statesmen, marshalling the newly emancipated slaves, broke down. The system could not go on because there was nothing left to prey upon. Repudiation followed close after the other forms of roguery, and it was agreed upon all hands that whatever else should come in place of the governments set up by Packard and Pinchback, by Moses and Scott, by Clayton and Dorsey, those bunko shops must be closed up. In closing the Louisiana concern, Senator Sherman took an active part as a member of Mr. Hayes's Cabinet. And what did they set up in its place? A Democratic State Government which received fewer votes than Mr. Tilden received at the same election. If Mr. Sherman thinks that the colored men of Louisiana are deprived of their rights, when did they begin to lose them? Was it before or after Governor Packard was taken by the ear and led out of the executive office and Governor Nicholls installed in his place?

The service rendered by the Republican party to the colored men since the war is not to be found in its external and aggressive acts, but in the moral pressure it has exerted upon the South. Its carpet-bag governments led to bankruptcy and Kukluxism, and then disappeared in chaos. After they were gone, society built itself anew on the principles which lie at the bottom of all civilized governments. The educated and responsible classes took the places from which they had been forcibly expelled, and established the present system of Southern governments, which may be briefly described as universal suffrage conditioned upon the supremacy of the educated and the subordination of the ignorant. In the administration of this sys-

tem they have been under the moral supervision, perhaps we may say terrorism, of public sentiment in the North, which has insisted that the colored men shall be fairly dealt with, their freedom shall not be encroached upon, and that they shall have all the privileges that are consistent with good order in the communities where they live. So long as the Republican party was in power this was the maximum of their demands upon the South, after the carpet-bag governments had been helped out of the way. Has this moral pressure been lessened since the election of President Cleveland? Has the public sentiment of the North taken a lower tone since that event than it held before? Can any consequences be pointed out, showing that the rights of the colored men are less respected now than they were one year ago? Is it not true, on the contrary, that there has been substituted, in the place of moral compulsion, a feeling of duty and responsibility more elevating to both races and more promising to civilization than anything ever known in Southern politics since slavery became a rock of offence in the nation's history?

THE ALABAMA CLAIMS COMMISSION AND ITS EXPENSES.

THE free way in which the *Alabama* Claims Commission and the counsel have helped themselves to the funds is, if the charges against them be true, a very natural result of the way the money was obtained. Large claims were made from the British on account of the insurance companies which took the war risks and paid the owners for their losses, and the Geneva Tribunal allowed these claims, as any other court would have done, and they were accordingly paid over by the British. No sooner had the money been received, however, than Congress turned around and decided that the insurance companies should have nothing, and that instead of this the persons who had paid war premiums, and who, the Tribunal decided, were not entitled to anything at all, should be paid in full. The war premiums are, however, a very trifling sum compared to the losses of the insurance companies, and the result is that there is, out of the $15,000,000 paid by Great Britain, a large surplus for which, under the rules laid down by Congress, there are no claimants.

It was most natural that under these circumstances the Commission should feel very "flush," and should disregard the letter of the act of Congress both in the number and the payment of their subordinates. The act of Congress, it appears, provides that "the counsel acting for the United States before the Commission shall receive for his services and expenses such reasonable allowance in each claim as may be approved by the Court, to be apportioned in each claim adjudicated, and paid from such award upon the certificate of one of the judges." No pretence of observing this rule appears to have been made by the Court. The counsel of the United States, Mr. Creswell, has been drawing a regular salary of $8,000 a year, which Congress fixed as the limit of his compensation in any one year, without any certificate of the Court, or any reference to the number of cases adjudicated, or the amount of the claims disposed of, or to the work done by him. Besides this, a considerable number of "assistants" of one sort or another have been employed at good salaries, without any warrant of law. Had Mr. Blaine been elected and the Treasury remained in Republican hands, we should doubtless never have heard a word of these abuses, and the Commission and its staff would long have drawn nutriment from the fund, which the British paid over in the belief that a host of eager and impoverished ship-owners and underwriters were waiting for it on this side of the water.

All this is, as we have said, the natural effect of a "surplus" on the official mind. The man in public life is rare indeed whose imagination is not in some way corrupted by a surplus. It makes honest men extravagant and reckless, and sets all the rogues to contriving ways and means of stealing without being caught. If just enough money had been obtained from the British to pay the just claims of American citizens for losses sustained through rebel cruisers escaping from British ports, the Commission would probably have been very careful about its expenditures, and have strictly observed the provisions of the act of Congress regulating them. But when Congress turned round and unblushingly admitted that the United States obtained a large sum of money from a foreign Power under false pretences—that is, to satisfy the claims of persons who had really no claims at all—it set an example of dishonesty and laxity which could not but influence everybody afterwards connected with the distribution of the award.

The truth, is that the *Alabama* claims constitute both one of the most creditable and discreditable incidents in the history of the Republican party. The way in which they were managed by the Grant Administration up to the final adjudication was extremely skilful and dignified. But the minute Congress undertook to distribute the money under the leadership of the then great Republican knave and charlatan, General Butler, the degeneration of the party under the influence of money and power began to show itself. The disallowance of the claims of the insurance companies, after pushing them vigorously before the Tribunal and using them to make up the amount which Great Britain ought to pay, was probably as disreputable a transaction as the Government of a first-class Power was ever engaged in. The allowance of the claims of the war-premium men after the Tribunal had disallowed them was not quite so bad, but very bad. After this, nothing that happens to the fund in the way of waste or dishonesty ought to be surprising.

THE LITERARY WORK OF INVALIDS.—II.

THE two immortals, the two invalids who from our present point of view deserve the most respectful attention, are Johnson and Montaigne. There is a peculiar pleasure in bringing into juxtaposition two such differing natures, and setting forth their equal superiority in composure and unshaken courage in the presence of disease. The fruits of their lives of ill-health are known to the world in their literary works, but the spirit in which they lived should not be forgotten, and since it can best be made evident by their own words, it is not necessary to ask forgiveness for the long quotations we shall make use of, nor for a little change in our subject-matter.

Johnson's physical disorders were of such a nature as to cause mental disturbance, and in his twentieth year he was attacked by a gloomy melancholy akin to despair, which ever after lurked about him, wounding and disabling him in all the intervals of his labors and enjoyments, and constantly rendering him subject to irritation, fretfulness, and impatience. On one occasion, in late middle life, when he was in such suffering from this malady that he refused all society, an old friend found him alone, sighing, groaning, talking to himself, and restlessly walking from room to room, and to this friend he measured his misery by saying, "I would consent to have a limb amputated to recover my spirits." His sure-footed intellect was constantly, and he knew it to be, on the verge of insanity. "I inherited," he said, "a vile melancholy from my father, which has made me mad all my life, at least not sober." He said, too, he "could not remember the day he had passed free from pain."

For three years before his death his health was "tottering"; and the death and illness of several of the members of the household he had collected about him made his circumstances the more sad. But no complaints appear in his letters; instead, after a two or three months' serious illness, he writes: "To be sick, and to see nothing but sickness and death, is but a gloomy state; but I hope better times, even in this world, will come, and whatever this world may withhold or give, we shall be happy in a better state." And as the end approached, his serenity distinctly increased, and the letter in which he describes an attack of paralysis, only two days after its occurrence, is too remarkable not to be given almost entire:

"In the afternoon and evening I felt myself light and easy, and began to plan schemes of life. Thus I went to bed, and in a short time waked and sat up, as has been long my custom, when I felt a confusion and indistinctness in my head, which lasted, I suppose, about half a minute. I was alarmed, and prayed God that however he might afflict my body, he would spare my understanding. This prayer, that I might try the integrity of my faculties, I made in Latin verse. The lines were not very good, but I knew them not to be very good; I made them easily, and concluded myself to be unimpaired in my faculties. Soon after, I perceived that I had suffered a paralytic stroke, and that my speech was taken from me. I had no pain, and so little dejection in this dreadful state that I wondered at my own apathy, and considered that perhaps death itself, when it should come, would excite less horror than seems now to attend it. In order to rouse the vocal organs, I took two drams. Wine has been celebrated for the production of eloquence. I put myself into violent motion, and I think repeated it; but all was vain. I then went to bed, and, strange as it may seem, I think slept.

"When I saw light, it was time to contrive what I should do. Though God stopped my speech, he left me my hand; I enjoyed a mercy which was not granted to my dear friend Lawrence. . . . My first note was necessarily to my servant, who came in talking, and could not immediately comprehend why he should read what I put into his hands. I then wrote a card to Mr. Allen, that I might have a discreet friend at hand to act as occasion should require. [This was the card: "It has pleased God this morning to deprive me of the powers of speech; and as I do not know but that it may be His further good pleasure to deprive me soon of my senses, I request you will, on the receipt of this note, come to me and act for me as the exigencies of my case may require. I am, &c., Sam. Johnson."] In penning this note, I had some difficulty: my hand, I knew not how or why, made wrong letters. I then wrote to Dr. Taylor to come to me, and bring Dr. Heberden; and I sent to Dr. Brocklesby, who is my neighbor. My physicians are very friendly, and give me great hopes; but you may imagine my situation. I have so far recovered my vocal powers as to repeat the Lord's Prayer with no imperfect articulation. My

memory, I hope, yet remains as it was, but such an attack produces solicitude for the safety of every faculty."

At this time he suffered much from gout, and three months later he writes from his "vacant and desolate habitation": "I carry about a very troublesome and dangerous complaint, which admits no cure but by the chirurgical knife. Let me have your prayers. . . . The operation is not delayed by any fears or objections of mine." Three months later still he was seized with very distressing asthma, complicated with dropsy. He was confined to the house and suffered much pain, and was the more worn upon by being often unable to lie down at all. But he was relieved now from mental suffering; he warmly welcomed the society of his friends, and, when not overcome with exhaustion, was always as ready for conversation as in his best days, uttering his truthful thoughts in honest speech to the last.

It is here and thus that Doctor Johnson stands in unwitting rivalry of excellence with Montaigne, whose days of sickness were likewise spent in uttering truthful thoughts in honest speech. We do not often think of Montaigne as an invalid, yet we honor him insufficiently till we have sat by his bedside. The admirably sustaining and invigorating power of his philosophy—an often unconscious philosophy—the charm of his simple, fearless, loyal, cheerful, serious vivacity of nature, is more than ever apparent in his hours of illness. In passing from youth to age, he passed from "an ebullient, vigorous, perfect, and careless health" to a state when "my body does not cease for an hour, sleeping or waking, to instruct me in death, patience, and penitence." "Formerly," he continues, "I used to mark as extraordinary dull and dark days; those are now my ordinary ones. The extraordinary are the fine and clear; I am ready to leap for joy, as if it were a special good fortune, when nothing discomforts me, . . . my habit of body begins now to catch hold of pain so easily!" It was before this time, before he had had much personal knowledge of physical suffering, that he had said: "It is in our power, if not to annihilate it, at least to lessen it by patience, and, even though the body should be perturbed by it, to maintain nevertheless the soul and the reason in firmness." Could Johnson be more truly described?

Later on, after "great familiarity with pain," his words were changed to deeds. When he was travelling in Germany, his secretary writes, "M. de Montaigne had last night the colic [*i. e.*, local suffering from his malady, the stone] for two or three hours—very severely from what he said in the morning," and he then goes on with details showing that the suffering must have been severe indeed. "He had got a chill the day before, and was out of sorts. . . . On the road he complained of pain in the kidneys, which was the reason he said that he made this stage so long a one, thinking that he was more at ease on horseback than he would have been elsewhere." But on arriving (after passing through "the thickest and most unendurable dust") at their destination, reaching the town late at night, "lui, tousiours à jun," he either that same night or early the next morning (after his "colic"), it is not clear which, summoned the schoolmaster of the town, "pour l'entretenir de son latin"; "but the man was a fool, from whom he could gather no information about the things of the neighborhood." Perhaps poor M. de Montaigne would have found him less of a fool when he himself was more comfortable; but what admirable vitality of will all this exhibits!

In Rome he was very frequently seriously indisposed; but this entry in the Journal, with details we must omit, resembles many others: "The 28th of January he had an attack of pain, *which did not hinder him about any of his usual occupation.*" At the baths near Lucca, where he stayed for some weeks in May and June, and where the "cure" appears to have been for him only a deplorable increase of illness, and every kind of form of indigestion beset him, and, what was worst of all, dimness of sight, he found pleasure in giving a ball to the peasantry of the neighboring villages, to which he also invited several ladies and gentlemen. And only a few days before, he had got up a more impromptu dance for the peasants of the place, when "I myself danced with them, in order not to seem too aloof from them (*troppo ristretto*)." At this time he not only entertained himself by providing amusement for his inferiors, toward whom his spirit was always so kindly and thoughtful, but he began, seemingly in order to pass the time of weakness and weariness, to write his Journal in Italian.

He had had, before being attacked by it, the greatest horror, always from his childhood, of the stone. His father died of it, and "it was precisely of all the accidents of old age that which I feared the most." After he had been suffering from it some eighteen months he writes:

"I am combating with the worst of all diseases, the most sudden, the most painful, the most mortal, and the most irremediable. I have already had the trial of five or six very long and painful attacks of it. Meantime, either I flatter myself or, indeed, there is in this estate wherewith to be sustained. . . . I have already learned to accommodate myself to it. I already compound with this colicky living; I find in it wherewith to comfort myself and wherewith to hope. . . . The action of pain has not such severe and poignant sharpness that a staid man must needs enter into passion and despair."

He nobly adds: "I had already attained to this much—to hold to life merely by life only; this suffering will loosen even this tie, and God grant that finally, if its severity should overpower my endurance, it may not carry me to the other extreme, not less sinful, of liking and desiring to die!"

He discourses afterward, with a smile, on the worthlessness of a rigid self-command when in pain, a restraint from all outcry and complaint—in a word, of a too forced dignity of bearing. Let Nature have her way, he desires, in tossings and groans, if, as perchance it may, it afford the body any relief. Our only thought should be of the soul; our philosophy should keep that

"able to recognize itself, to follow its wonted course, combating pain and sustaining its attacks, not shamefully prostrated at its feet; roused and heated by the combat, not cast down and overthrown; capable, in a measure, of social intercourse and conversation and other occupation. . . . I test myself when the suffering is heaviest, and have always found that I was capable of speaking, thinking, and answering as rationally as at another time, but not so steadily, the pain troubling and interrupting me. [Remember Johnson's Latin prayer, "not very good verses."] When I am thought to be the most overwhelmed and the bystanders can do nothing for me, I often try my powers and take the lead in remarks the most remote from my estate."

How perfectly this harmonizes with what we have quoted from the Journal. And how perfectly it fulfils the highest, strongest form of virtue—a sound mind in an *unsound* body. "The man was often ill: the *thinker* always appeared to be in good health." Both Johnson and Montaigne win from us this praise.

LOUISE OF LORRAINE.

PARIS, August 28, 1885.

I HAPPENED to visit, a few days ago, the cathedral church of Saint-Denis, which was for a long time reserved for the tombs of the Kings of France. The chapter, which had been reëstablished during the Second Empire, is now reduced to seven old and infirm members, and no canons have been nominated since 1870. The credit which was voted in old times for Saint-Denis has been much curtailed by a Chamber which means to laicize everything, and if Saint-Denis was not classed among the historical monuments, it would be almost abandoned. After a cursory visit to the magnificent tombs of Francis I. and of Henri II. (there are no finer monuments of the French Renaissance), I visited the vault where are still preserved the remains of a few members of the royal family of France. Some escaped by miracle the fury of the Revolutionary period, and a few were placed in Saint-Denis after the Restoration.

Behind a bronze door, which opens with three keys, is a little brick wall, which is now partly demolished. If you pass through the doorway, you find yourself in a cellar, where nothing is seen but eight coffins, placed on iron bars. The lead coffins are well preserved, but the wooden coffins which covered them are completely rotted, and there is hardly anything visible of the black velvet or black cloth which covered the wood. The Duc de Berri, who fell under the hands of an assassin, is here, as well as the two last Dukes of Bourbon. Two coffins contain whatever was found of the *supposed* remains of Louis XVI. and of Marie Antoinette (their remains were buried in lime after their execution). Among the older coffins there is one which contains the remains of Louis VIII., and one in which lies a Queen of France, the wife of Henri III. As there must be some doubt about the authenticity of the remains of Marie Antoinette, it may almost be said that the only Queen of France who is still at Saint-Denis is Louise de Vaudemont, the wife of the last Valois.

This visit led me to go over the history of Louise de Vaudemont, and I was helped by a work which has recently appeared, the 'History of Louise of Lorraine, Queen of France,' by the Comte de Baillon, who has undertaken to make a sort of gallery of famous ladies (he has written a life of Henrietta Maria of France, Queen of England, and a life of Madame de Montmorency, Marie Félicie des Ursins).

On the 19th of June, 1573, Henri of Valois, then called the Duke of Anjou, was besieging La Rochelle, when he learned that he had been elected King of Poland. He was the favorite of his mother, Catherine de Médicis. She had given him Tavannes as military governor, and, thanks to the advice of this experienced warrior, the Duke of Anjou had gained over the Protestants the battles of Jarnac and of Moncontour. He was only twenty-two years of age and was already celebrated as a great hero. The elected King of Poland left the army, made a brilliant entrée into Paris, and started for the frontier, accompanied by his brother, Charles IX., who was already very ill. In the midst of the festivities of the court of Nancy, he met Louise de Vaudemont among the ladies who surrounded Claude de France, the wife of the Duke Charles. He remarked her, and when he took leave of his mother he told her that he intended to take Louise for his wife. She was born in 1553, of a Comte de Vaudemont and of Margaret of Egmont (the Vaudemonts were a branch of the ducal family of Lorraine). Catherine de Médicis was afraid of the Lorraines, but she hoped that her son would soon forget the young woman whom he had seen but a moment; and among the secret conditions of the election of the Duke of Anjou to the throne of Poland was a marriage with Anne Jagellon, the heiress of King Sigismund.

When Charles IX. died, his brother, already disgusted with his barbaric northern kingdom, fled from the castle of Cracow, travelled by way of Venice and Pavia, and entered Lyons, where he informed his mother that he wished to marry

Louise de Vaudemont. The Cardinal of Lorraine died at the same moment, and Catherine, somewhat reassured by his death, gave her consent. Louise was very much surprised at the caprice which made her the first Queen in Christendom. She was married at Reims, at the beginning of 1575, and went to Paris, where she made her entrée on the 27th of February. She was not long in perceiving that the King was entirely in the hands of a few favorites, who were popularly called the *mignons*, probably on account of the extravagance of their dress and of their feminine habits. One of them, Du Guast (who plays a great part in the memoirs of Queen Marguerite), asked the King to banish the three ladies whom Louise had brought with her from Lorraine, and the King at once obeyed. The King was occupied solely with his amusements and with outward acts of piety; his materialistic religiosity seemed to him probably a sufficient compensation for his dissipation. The Queen was herself very pious, very much given to works of piety, and it may be that the King also indulged at times in these demonstrations, in order to please his young wife. He was very puerile in all his habits: he wore pearls and diamonds, was always surrounded with little dogs, with monkeys, with parrots; he had turned the Louvre into a menagerie. Catherine de Médicis had hoped that Louise de Lorraine would have children, but she had none, and the King fell again completely under the influence of the *mignons*. Du Guast was assassinated by the Baron de Viteaux, but the King had still Quélus, Maugiron, Livarot, Saint-Luc, and La Valetta d'Épernon. L'Estoile tells us in detail the actions of these wild young men. The Queen could not be ignorant of them, and she knew that the King took part in all their amusements and their follies.

M. de Baillon has not much dramatic power. His history is written somewhat in the style of the Court Circular, and somewhat in the style of those devotional books which are used in Catholic convents. We doubt if Queen Louise could be quite as politic, as disinterested, as dull, as he paints her. She was a Lorraine, an ally of the Guises, as well as the wife of the King of France. It would have been interesting to show her between the conflicting forces of her times. That her heart was in the League cannot be doubted. She saw the King at first on the side which was naturally her side; but she saw him afterward drawn to the other side, and then she must have felt more anxiety and more doubts than M. de Baillon seems to suspect. The King had given up the hope of having an heir, and he knew that the end of his reign would be the signal for a long civil war, and that the Lorraines would contest the rights of Henry of Navarre. France was already divided into two camps. Henri III. felt that the Duc de Guise was becoming too strong. His name was in all mouths; his popularity was immense; he was the popular hero. "La France," says Balzac in his 'Entretiens,' "était folle de cet homme-là, car c'est trop peu dire amoureuse." Can we imagine that Queen Louise did not favor in her heart the cause of the *Balafré;* that, having no son, no hope of any child, no interest in the succession, knowing Henri III. better than anybody, she could have been indifferent to the cause which was to her the cause of religion? She tried, at times, to bring the King and Guise nearer together. The day before the Barricades of Paris, Guise, entering the Louvre, had gone to her room and asked to see the King. He was, if not the King of France, the King of Paris, and when, at his order, Paris covered itself with barricades, Henri III. could do nothing but flee with great difficulty.

This time Henri III. swore to avenge himself; Guise had defied him in the Louvre and chased him from his capital. Henry of Valois had been taught dissimulation by his mother. He first signed a treaty with Guise at Rouen, recognizing him as Chief of the League, or Lieutenant-General of the Kingdom. He sacrificed to him Épernon and those who had followed the royal cause. At the beginning of September the Court went to Blois, and the States-General opened in October. These States-General were to mark the hour of triumph for the Duc de Guise. The King found them hostile to his authority, ardent and enthusiastic for the League; he resolved to use his authority and to get rid of his enemy. A word from the King in those times was an order. Henri III. had a guard chiefly composed of cadets of Gascony. He sent for Guise early in the morning. The great Lorraine had been warned; he had proudly said, "Ils n'oseront." They *did* dare, and in the room which was next to the King's room he fell under the poniards of the assassins.

What were, on this occasion, the sentiments of Queen Louise? She must have felt a great horror, and perhaps a great fear. She sent word to her brother, the Duke of Mercœur, to be on his guard; but the Duke was arrested, as well as several of her relations. M. de Baillon, who seems to believe that conjugal fidelity requires a total abdication of intellect, says: "We do not know what were the arguments of Henry and the impressions of the Queen; what is certain is, that the heart of Louise remained with her spouse." This phrase does not give a bad idea of the manner of M. de Baillon. The assassination of the Duc de Guise was a bold stroke. Catherine de Médicis had not been in the secret, and she died soon after, in the presence of Henry and Louise. It had been said of her, "Elle enfanta trois rois et cinq guerres civiles." She left, in her will, the castle of Chenonceaux to Queen Louise, with all the lands which surrounded it, and all its fine furniture and works of art. Louise was at Chenonceaux when Henri III. and Henry of Navarre joined their forces at Plessis-les-Tours against the League and the Spanish party. She learned there of the assassination of her husband by Jacques Clément. The two Henrys were together before Paris with forty thousand men. The King of France, when he saw his capital, said: "Paris, head of the kingdom, but too big and too capricious a head, you need to be bled." After he received the fatal wound, Henry had time to dictate to his wife a letter, which is dated from the bridge of St. Cloud, on the 1st of August, 1589. He died the next day, after having asked all his followers to recognize Henry of Navarre as his legitimate successor.

Louise went into mourning in white, according to royal etiquette, and preserved this mourning all the rest of her life. She was called in Touraine "the white Queen." She was very anxious to remove from Henri III. the excommunication pronounced against him, said the Leaguers, after the double murder of the Duke and of the Cardinal of Guise. She sent a special envoy to Rome, begging Sixtus V. to order all the members of the clergy to respect the honor and the memory of the late King, to express in a pontifical declaration horror at his assassination, to order annual services for his soul to be performed by the Jacobin monks at St. Cloud and at Sens. Sixtus V. was inflexible, and gave negative answers to all her requests. The correspondence which began on this occasion between Louise and the papal court lasted as much as ten years, and Louise obtained finally only half a victory. The Pope consented to say that Henri III. did not die excommunicated, but no penalty was inflicted on the Jacobin monks (Jacques Clément belonged to their order).

Queen Louise led almost a cloistered life in her magnificent castle of Chenonceaux, once so gay and so full of animation. She surrounded herself, after the fashion of the time, with emblems of death. Her chapel was hung with black. We have a curious "Inventory of the furniture, jewels, and books left at Chenonceaux in 1603." The Queen spent all her time in prayers, in pilgrimages, in visits to chapels. She did, however, sometimes receive the visits of Queen Margaret, her sister-in-law, who was not much given to piety nor to melancholy. It is evident that she led a quiet, dull, regular life, but we have some difficulty in believing that she was completely lost in her regrets. M. de Baillon will have it that she was an inconsolable widow; what we know of her life merely proves that she was extremely devout. She had preserved her attachment for her own family, and she left Chenonceaux to her niece, Françoise de Lorraine, the daughter of the Duc de Mercœur, even in her lifetime, only keeping for herself the life-interest. Her last days were spent at the castle of Moulins. She died there on the 29th of January, 1601, at the age of forty-eight years. Since 1817 her remains have been in the vault of St.-Denis.

Correspondence.

THE COAST SURVEY AND "POLITICAL SCIENTISTS."

To the Editor of The Nation:

Sir: The article on "Political Scientists" in the *Nation* of August 20, while it contains many wholesome truths concerning the management of scientific affairs in Washington, reflects with unnecessary severity on the administration of the Coast Survey. This article, so far as it concerns the Survey, is based upon a report drawn up by a committee of Treasury experts, who condemn alike the organization, the methods, and the expenditures of the Coast Survey. While giving due weight to certain features of their report, we cannot expect that a committee so constituted, however competent to judge of business methods, should know the value of the scientific work upon which, from their point of view, money has been squandered.

Even when their criticism is just, the fact remains that the late Superintendent is in no way responsible for the rules which control the general direction of his bureau. He inherited from his predecessors the superintendence of an old and well-trained personnel. This has not been materially changed during his administration. Mr. Hilgard did not enlarge the field of operations, but limited himself to the carrying out of plans already formed. In obtaining the appropriations necessary to this end, he relied greatly on the advice of his principal assistants.

In this connection it may be added that the Coast Survey is the only scientific bureau the appropriations for which are distinctly allotted to special objects. The Superintendent has, therefore, little liberty of action. For instance, the very sums devoted to pendulum experiments, so strongly condemned by the Committee, must have figured in the estimates submitted by him to Congress. Neither could Mr. Hilgard be expected to reduce the Coast Survey force, when appropriations, insufficient, it is true, to keep the force fully employed, were distinctly made to pay the salaries of the employees who had grown old in the service of the Government. The publications of the Coast Survey only contain communications strictly relevant to such investigations as were authorized by the appropriations. As to the experts living at a distance from Washington, such specialists have always been employed by the Coast Survey. They have usually received a very moderate compensation for work carried on in addition to their usual avocations—

work which could not have been done otherwise except at great expense.

The article in the *Nation* implies that the Coast Survey has been a party to the distribution of scientific salt in the shape of gifts such as photographs, chromo-lithographs, illustrated books, and the like, and has also done its full share in the way of personal favors to Congressmen. Whatever have been the failings of the administration of the Coast Survey, there never has been a "political scientist" at its head, and the above charges are, so far as I know, absolutely false. My belief is based on an intimate association of many years with this department of Government work.

The method of investigation adopted in this case seems somewhat autocratic. Even at this day the Superintendent has not seen or been able to obtain a copy of the charges brought against him, having merely been requested to reply in writing to a number of questions. He himself, as well as the assistant in charge of the office, the disbursing agent, and the chiefs of two divisions, were suspended, in other words, disgraced if not dismissed, before the investigation was begun. Some of these officers had served the department faithfully and intelligently for nearly forty years. Such off-hand condemnation of a bureau from which so much work has gone forth of a character most honorable to the science of the country is surely to be deprecated in itself, and can hardly be considered by scientific men as less than an outrage upon them all. They have a right to ask that the wholesale imputations thus cast upon official science should be carefully verified before they are accepted.

Thus far the scientific public has received the report of the Commission through the newspapers alone, and the press has been liberally supplied with inaccurate and ex-parte statements in regard to the investigation into the Coast Survey affairs. Their dictum upon the late Superintendent, at least as far as his professional career is concerned, is answered by his position as an investigator in the scientific world. In this jury, called for the express purpose of deciding upon the value and efficiency of scientific work, men of science have had no voice.

On several occasions attempts have been made, through the medium of the National Academy of Sciences, to revise the organization of the scientific bureaus according to a comprehensive plan, which might remedy the evils of the present system. A committee of Congress has at last taken up the matter, but nothing of value has as yet been effected, nor have the recommendations of the Academy had the least weight with Government officials, or with members of Congress. No member of the Cabinet has availed himself of its councils, though the Academy was especially chartered by Congress to be the scientific adviser of the Government. Since its organization Superintendents of the Coast Survey, of the Nautical Almanac, of the Signal Service, of the Geological Survey, and of other scientific bureaus have been appointed without consultation with the men of science in the country.

We do not ask that a scientific bureau should be absolved from the requirements of ordinary business methods, or that the dictates of common sense should be forgotten in its administration. Scientific men can only sympathize with the efforts of the Administration to reform the management of the scientific bureaus at Washington. They protest merely against ignorant interference with scientific affairs. Is the Superintendent of the Coast Survey, the head of the Nautical Almanac, the Director of the Geological Survey, or the Secretary of the Smithsonian to submit the scientific expenses of these bureaus to the judgment of a clerk in the Auditor's Department? The necessary appropriations having been made, is that Department or any member of it to decide upon the value of the scientific work thus provided for, or upon the method of its execution? Surely, such an alternative would be worse than the state of demoralization said to exist now in our scientific bureaus. If this be the nature of the contemplated changes, they can only be dreaded by the friends of science.

The surveillance can hardly be too strict, but let it be intrusted, so far as scientific work and methods are concerned, to men who have some training in both. Undoubtedly there is much which should be changed at Washington with a view to introducing a proper coördination among the different scientific bureaus. But the blame for this does not rest on the "political scientist" alone. The former Secretaries of the Interior, of the Treasury, of War, and of the Navy, as well as Congress, are partly responsible for the existing confusion and inefficiency; they have tolerated a duplication of work which has little by little brought about the present state of things.

One word more as to the character of the work done by the Coast Survey. Professor Bache himself was perhaps the most successful of all the heads of our scientific bureaus in obtaining from Congress the appropriations necessary to the maintenance and efficiency of his department. He and Peirce originated the very scientific investigations now decried by the Committee. Their successors have only carried out the methods and the physical experiments which they deemed necessary. Are these to be abandoned because a Treasury expert has seen fit to condemn valuable experiments and to indulge in a few cheap jibes about "swinging the pendulum"? That he should not see the use of such experiments is quite natural. To one who does understand their importance, the wonder is that such an opinion should have any weight in such a matter. The standard in the early days of Bache is still the standard of the Coast Survey work of to-day. Let us hope that no ignorant criticism will have power to lower or to impair the efficiency of a department of whose scientific record the country may well be proud.

While criticising the article of the *Nation* so far as it relates to the Coast Survey, let me express my complete agreement with its condemnation of the "political scientist." It is time that the system thus attacked should be abandoned, and that indiscriminate scientific assistance given by the heads of bureaus to institutions and individuals, and never contemplated or sanctioned by Congress, should be discontinued. It has brought nothing but discredit upon the official science of the country. Let the most liberal appropriations be made for the work of our scientific bureaus, but let the requisitions be so complete and detailed as to invite a fair and open criticism. ALEXANDER AGASSIZ.

CAMBRIDGE, Mass., September 9, 1885.

THE BOUNTY ON REFINED SUGAR.

TO THE EDITOR OF THE NATION:

SIR: Will you permit me to say a few words in reference to your remarks on this subject in the *Nation* of the 13th ult.? You say you have never heard of the bounty and do not believe it exists. In reply I should like to call your attention first to the very admirable annual review of the Sugar Trade of the United States given in the New York *Shipping and Commercial List* of January 17, 1885, in which the following passage occurs:

"One of the most notable features of the operations of the year has been the large exports of refined, aggregating 63,643 tons, the bulk of which has been shipped away from the port of New York. The increase compared with last year, which aggregates over 50,000 tons, has been mainly shipments made to Great Britain, where the product of our refineries has found ready sale and successfully competed with the output of British refineries. This has been possible, however, solely in consequence of the drawback allowed to exporters under the present tariff law, which is tantamount to a bounty, and has given our refined product an advantage which it could not have obtained otherwise in a country where sugar is admitted free of duty."

Secondly, I would direct your attention to an official publication, Bulletin No. 5 of the Department of Agriculture, entitled, 'The Sugar Industry of the United States,' and published at the Government Printing Office at Washington. At pages 26 to 36 of this interesting work you will find the whole subject completely stated, and the conclusion to which the writer comes is that the drawback should be 2.49 cents per pound instead of 2.82.

I would also bring to your notice, if space permitted, several articles in commercial journals, more especially one in *Bradstreet's* of the 25th July and another in the *Merchant's Review* of the 19th June, in both of which the writer conclusively shows that the present drawback gives a bounty of at least 50 cents per hundred pounds. In May last, *Bradstreet's* wrote as follows:

"It is generally admitted that the present drawback upon hard sugar is equal to a bonus of 50 cents per 100 lbs. As this amount comes out of the Treasury, the refiners have been exporting sugar at the country's expense."

The New York *Price Current* of April 8 says:

"For some time past the value of refined sugar has been maintained almost wholly by the export demand for granulated, which is profitable to refiners because of the drawback allowance which the Government makes, and which in reality amounts to a bounty estimated at about 50 cents per 100 pounds."

As what I write must necessarily be suspected as coming from an interested source, I have been careful to confine my evidence to extracts from American papers or official statements; but if you or your readers care to have conclusive proof that there is a bounty of half a dollar, I can send you a few hard figures which cannot be refuted.

I am, sir, yours faithfully,

GEORGE MARTINEAU,
Secretary British Sugar Refiners' Committee.

LONDON, 21 Mincing Lane, September 3, 1885.

[Without stopping to give our reasons for not attaching the same credit to the authorities cited that Mr. Martineau does, we proceed at once to the matter in dispute. In 1875 the drawback was $3 60. In 1877 it was reduced to $3 18, but not, as the British refiners alleged, in a communication to Lord Salisbury last July, in consequence of their representations to our Government. At that time the duty was based solely on *color*, and the drawback was on the average duty paid on importations. But foreign cane-sugar growers found that, with vacuum pan and centrifugal, they could make a very high-testing or pure sugar with a dark color, so that the Government received a much lower duty on the pound of actual sugar than before. Hence the drawback as it stood was excessive, and three commissions were appointed in as many cities to report upon it. The Boston commission's view, that the drawback should be reduced, and reduced to $3 18, was adopted by Government. This was a "proper amount," according to Mr. Duncan, President of the British Refiners' Association, and probably the largest refiner in the world (see the communication to Lord Salisbury, referred to above, in the *Sugar Cane* for August, pp. 404, 405). Now the average rate of duty from 1877 to 1883 was $2 37 per 100 pounds; at present it is $2 08. Applying

the rule of three, if $3 18 was a proper drawback in those years, $2.791 would be proper now—and it is actually $2 82, less one per cent.

This drawback does not give fifty cents bounty, since even if color did not enter into the existing tariff, pure sugar (100°) would pay $2 40 entered as raw sugar. It is a curious fact that the export of refined sugar in 1883, prior to June 1, under the "proper" drawback, was unusually large; while after that date, and until February 1, 1884, under what Mr. Martineau calls a bounty of half a cent a pound, it ceased entirely. Any one who has followed the course of the markets can understand why exports recommenced at the latter date, and why they have been vastly larger in 1885 than in 1884: our British friends have been wildly speculative in the last eighteen months, and our exporters have taken advantage of it. Moreover, the British public has become enamored of American granulated sugar.

That the drawback was not intended to be protective is notorious, and is admitted by the British refiners (*Sugar Cane*, p. 404). If the United States Treasury is suffering a "loss of two shillings per hundredweight" (*ibid.*), official investigations now making will doubtless discover the fact and apply the remedy.—Ed. Nation.]

THE GOVERNMENT LAND SYSTEM.

To the Editor of The Nation:

Sir: The letter of "An Observer" upon the "Cattle Business," in your issue of August 27, has greatly interested your readers in this section, as the first impartial and wholly truthful statement as to the practical working of our present land system ever seen in print. My own observation, extending over a period of more than fifteen years, long ago led me to conclusions identical with those of your correspondent as to the utter inadequacy, and consequent mischievous working, of our public land system in its application to our exclusively grazing lands, comprising at least ninety-five per cent. of the great Rocky Mountain plateau; and these conclusions are corroborated, without exception, I believe, by all my acquaintances who are familiar with the facts.

Only a clear conviction, based on personal knowledge of the great evils which this system fosters, and an honest apprehension, widely shared by the friends of good government throughout the West, that unless the system be speedily reformed, still greater evils and abuses will result, could induce me to ask you to devote further space to this subject. That it is a matter of national and not merely of local importance, I believe you are fully aware. I desire briefly to indicate some of the more glaring evils wrought, or at least made possible and encouraged, by our existing land laws, and to suggest such reforms as, in the opinion of many thoughtful men thoroughly familiar with the subject, ought to be speedily made if these evils are to be checked. During the early days of "cattle ranching," before the ranges were overstocked, the evils of our land system, though apparent, were less grievous and harmful than now, because there was then room enough for all—the "bonanza cattle kings" and transatlantic cattle companies being of comparatively recent development. The evils complained of are twofold: first, to the settler and his family; second, to the community at large. The settler, under the present law, is shorn of all his rights, or, more strictly speaking, he is virtually prohibited acquiring any rights worth maintaining, or which, if maintained, would be of any help to him in earning a livelihood or supporting a family. Let him avail himself of the law as intelligently as he may, and select his location with whatever foresight and sagacity, he is still left wholly unprotected. He is absolutely debarred by fixed conditions of soil and climate, as was admirably shown by "An Observer," from engaging in any other industry than that of stock-growing; yet neither by homestead, preemption, purchase, nor lease can he acquire from Government a right to sufficient pasturage for the support of enough cattle, sheep, or horses to furnish him subsistence, even though he forego all luxuries and nearly all comforts, and in his scale of living closely approximate the plane of the savage.

Neither is he any longer allowed to fence in, as he once did (though without legal right), enough "free grass" to support his little flock, and so protect it from the starvation, or wide scattering and consequent loss, which inevitably follows the wanton driving or accidental drifting upon his range of some neighboring cattle king's large herds. He has absolutely no remedy against any who may choose, from whatever motive, to "turn loose" other cattle upon him, or pasture other sheep within a bow-shot of his cabin—thus in one month's time, perhaps, rendering worthless, for that year at least, all his land and improvements.

He is wholly defenceless; and defencelessness here, as elsewhere, invites depredation. He cannot lawfully drive away the marauding cattle and sheep with their herders, even if he has the physical force; for is it not all "Government grass" outside of his little 160-acre patch—free alike to all, and therefore, of course, the lawful spoil of the strongest? If he had ten thousand or more cattle, and could therefore afford to keep a small army of mounted cowboys to ride after them, he, too, would become, in his turn, the scourge of his weaker neighbors—not intentionally or with any ill-will, but simply because, in the nature of things under the existing law, it could hardly be otherwise. But not having the ten or twenty thousand head of cattle, but probably only a paltry hundred or two, he finds himself, at the end of two or three years, practically bankrupt, and is glad to sell out the remnant of his scattered and decimated herd, with his preëmpted land or homestead thrown in, for whatever he can get. The "heavy" cattle-owner, whose herds have done the mischief, is the only available purchaser; for the settler's cattle are mixed with his and scattered over the plains for twenty to fifty miles around, and he alone can gather them with any economy; and the settler's preëmpted land would be as worthless to any one but the owner of the large herds as it was to the settler himself.

Monopoly has thus made another stride in the land, and another home, actual or potential, with all that it implies, is wiped out; and all because Government has failed to provide any means whereby a settler upon these pasture lands may acquire control of sufficient pasturage to make self-subsistence possible. If the worsted settler be a good "cow-man," able and willing to endure the roughness of a cowboy's life, he very likely takes service under the cattle king's "boss," and, in nine cases out of ten, gives up all thought or ambition of again attempting to create a home for himself or become an independent proprietor. And often thereafter, by the herder's camp-fire, in his hours of bitter retrospect, he will tell how "Uncle Sam" beat him out of the good stake which he had when he came from Ohio and settled with his little "bunch of cows" at "Lone Spring" or "Cottonwood Gulch," intending to make a "nice home" there and bring out the "little girl" who promised to wait for him.

But impoverishment is not the worst of the evils which the settler reaps under our present land policy, as a reward for trying to extend the bounds of civilization and plant new homes in the wilderness. He has the incubus of failure upon him, imposed, as he keenly feels, by no fault of his, but the chagrin of which makes him shrink from ever going back to his Eastern home; and he is thenceforth an exile. To hundreds of brave fellows, starting out with high hopes, this experience, with its crushing disappointments and blighting sense of injustice, has proved a fatal reef; and in their shipwreck they have lost not only property and credit, but their "moral grip" as well. My own observation will, I think, justify me in saying that nine men out of every ten who go through this experience—and there are, to my knowledge, hundreds who have gone through it—lose thereby the hopeful courage and ambition essential to any strenuous endeavor, and especially needful to help the young settler hold himself erect amid the temptations to gross vice which abound in his pathway here, with little or no counter influence. Suffice it to say, without dwelling on this point, that our unfortunate land system is justly chargeable with the ruined lives of hundreds of young men, naturally bright and ambitious, who, under the operation of any enlightened system of apportioning the public domain, would have made worthy citizens, heads of prosperous families, and efficient contributors to our national wealth. But the same land policy which ruins the settler enriches the capitalist; and as long as the present policy is maintained, so long will the Government be playing directly into the hands of our monopolists—ignorantly, it may be, but not the less effectively, and with a blindness of ignorance which seems wholly inexcusable.

From some points of view the evils to the public at large for which our pernicious land system is responsible, and of which this curse of ever-growing monopoly is one, are more deplorable than the ills inflicted upon the settler. They are of greater magnitude and more far-reaching in their influence. But this point requires no elucidation from me: the evils and dangers attending a monopoly of land, especially if under the control of foreign corporations, are patent to all.

Now what is the remedy for this state of things? How can our land laws be amended in their application to strictly grazing lands, untillable, so as to protect the settler, discourage monopoly, and best promote the development and prosperity of this great region?

I believe there can be no serious difference of opinion among well-informed men as to the true remedy. Indeed, in the absence of prejudice or self-interest, the general features of the needed reform would seem to be unmistakable. The existing evils all spring from one root, namely: the lack of any provision in our laws whereby the settler may acquire control of enough pasturage to enable him to make a living. Supply this lack and the evils cease. Nothing further need be done. The remedy will be complete.

So long as he cannot acquire lawful control of pasturage enough to support a sufficient number of cattle or sheep for the maintenance of his family, he will be, as now, wholly at the mercy of the large "operator," who may at any time bankrupt him, and render worthless his homestead and preëmption holdings—either with or without such intent, as I have previously shown. But let it once be made possible for the settler here to acquire, by virtue of his homestead and preëmption rights, holdings somewhat approximative in value to those acquired by other settlers, through the exercise of the same rights elsewhere, upon tillable lands, and all these wrongs will cease. Thenceforth the settler, secure in the possession of pasturage for at least

enough cattle to enable him with industry to support his family, would be independent of the "cattle-barons" and undisturbed by their great herds. For he could then fence his pasture and thereby protect both his cattle and sufficient grass for their support. He could not be dislodged, nor forced, as too often now, to sell out against his will for whatever pittance his richer neighbor might choose to give him.

His security of tenure would justify him in erecting suitable shelter for the protection of his stock, and a comfortable home for himself and family; and if for any reason he should wish to sell out, he would be able to demand a fair price, and to secure the advantage of competing purchasers, for his holding would be valuable not to the large operator alone, or especially, but equally to all who might wish to engage in the stock business. Under the operation of such reforms in our land system as are above indicated it is believed, however, that changes in the ownership of settlers' holdings, in this region of arid and untillable pasture-land, would be at least as infrequent as changes in the ownership of improved farms within the corn and wheat-growing belts; and that, but for his greater isolation from the busy world and unavoidable lack of near neighbors, the lot of the average stockman would compare favorably with that of the agricultural settler in more favored regions.

Under such reforms, too, all that is possible ever to be developed upon these arid plains, of wealth, population, and the refinements of civilization, will be developed, and speedily; but without such or similar reforms, never. For it must be seen that, under the present system, the prime condition requisite to healthy industrial growth is wanting, namely: opportunity for the man of moderate means to acquire such an interest in the soil as will enable him to earn a livelihood and support a family, while remaining his own master and working for himself, and not as the hireling of some mammoth proprietor. Under the existing laws, he may, it is true, acquire, by the exercise of his homestead right, title to 160 acres of land; and if this land were capable of being tilled and made to produce crops, it would suffice. But such is not, and no sane man believes ever will be, the character of the land under consideration. Not a pound of wheat or peck of potatoes will it grow—nothing, in short, but a scanty crop of hardy native grasses. Everything which the settler consumes, except only his meat and dairy products, he must buy at long prices, with heavy charges added for railroad carriage and wagon freights. His fruits and vegetables come in tin cans, chiefly from New York and San Francisco; his grains mostly from Kansas and Nebraska, and his flour from Denver. All must be purchased for cash, and paid for, with the added costs of transportation and profits of middle-men, out of the proceeds of his beef or wool; and, unless allowed sufficient grazing room to grow the beef or wool, how can he live? Cattle cannot subsist upon less than thirty-five to forty acres per head, nor sheep upon less than five to ten acres, according to the season and to whether it be old or a fresh pasture. His 160 acres will, therefore, if carefully fenced and protected from range-cattle, afford pasture for five or six cows or about twenty sheep—the annual produce from which may, if he be prudent, suffice, perhaps, to pay the cost of the axle-grease consumed in wagoning his yearly household supplies from the nearest railway station. Outside his little patch stretches to either horizon the broad prairie, part of our vast public domain, treeless and waterless, except here and there at wide intervals, but covered with grass, to which no one under existing laws can acquire title, and no acre of which can be lawfully fenced—all reserved and held sacredly in trust, as it would seem, and as the settler is not slow to assert, for the special delectation and profit of our "cattle kings," "barons," "syndicates," and foreign corporations, whose immense herds roam and wax fat thereon, year after year, without payment of scot or lot, taxes or rents.

But the law should not only be so amended as to enable the settler to acquire, by compliance with the Homestead Act, sufficient pasture land for the support of 400 or 500 head of cattle—say about sixteen sections—but provision should also be made for leasing to him, at a moderate rent, payable annually in advance, the lands lying contiguous to his homestead and extending half way to the next stream, spring, or other permanent "watering." Then, as his business increased, the settler would rent, and if necessary fence in, these additional lands, which, being without water, are naturally tributary to the springs or watering places embraced within his homestead, and without access to which they could not be utilized.

Under the operation of such a law our arid and unsalable public lands would, within a few years, become a source of large annual public revenue; but this would be the least important, perhaps, of all the benefits which such a reform would bring. The strides of monopoly would be effectually checked and fettered. This whole region, instead of gradually falling piecemeal, ranch after ranch, at merely nominal prices, into the hands of a few men, largely foreigners and nearly all non-residents, would remain in the hands of the actual settlers and their children, and be filled with the independent holdings of thousands of prosperous herdsmen, with their thrifty homes and families.

Not only would the taxable value of all this region be enormously increased, but its productive value or rent-paying power would also be augmented in even a larger ratio by means of the desired reform, and the improved methods of stock-husbandry which such a reform would make possible.

There is but one interest which would not be signally benefited by the accomplishment of this so-much-needed reform, namely: the interest of monopoly. Every other interest involved, public and private, industrial and social, imperatively demands it. Nor would any injustice or serious hardship result to the large operators—often too hastily dubbed "monopolists," many of whom are among our most intelligent and patriotic citizens. The effect upon them would be chiefly restrictive—more in the nature of a curtailment for the public good of over-large operations than the infliction of any real loss. For, the reform being in no wise retrospective or discriminating in its operation, they would have the right to rent from the Government, and, if they should choose, to fence, also, the arid lands contiguous to the watering-places which they had already purchased; but would be compelled by the larger lawful holdings, under homestead and lease of the smaller ranchmen and settlers, to restrict their cattle practically within the limits of their rented lands. While this would compel them to do a smaller business than now, and, probably, to retire some portion of their capital, it is believed the added elements of increased safety and permanence would be speedily recognized, and would go far toward reconciling them to the change.

I have the honor to be, sir, very respectfully,
Your obedient servant,
A COLORADO RANCHMAN.

HUGO, COLORADO, September 7, 1885.

TO THE EDITOR OF THE NATION:

SIR: Referring to the lucid and instructive letter of "An Observer" upon "The Cattle Business," published in the *Nation* of August 27, and which I heartily endorse, I beg leave to say that, not less upon the ground of humanity to animals than of justice to the settler, should some effective legislation be had, and that speedily, whereby each cattle-owner upon the Western plains may acquire control of the "range" over which his cattle graze, especially in winter. For under the present laws, which prevent the segregation and individual control of ranges, and chiefly because of such prevention, incalculable suffering is yearly inflicted upon thousands of helpless cattle—suffering equivalent to positive torture, long protracted, and often ending only in a horrible, lingering death.

I know whereof I affirm when I say that during every hard winter upon these Western plains, especially in Montana and Wyoming, thousands of cattle perish from thirst. It is impossible, probably, to form any adequate conception of the dumb misery of the poor brutes as they wander painfully over the bleak plains in search of water, which is everywhere frozen; but enough may be realized to render its contemplation, by persons of ordinary sensibility, sufficiently appalling. The horrors of thirst, as experienced by shipwrecked mariners and desert explorers, have often been the theme of moving song and story. We cannot conceive of a wretch base enough to wantonly leave a horse or cow to perish in their stalls for lack of water. The man who would condemn the meanest cur to die of thirst would be justly execrated. Yet such is the fate which, under the only methods of conducting the stock business that our present land laws favor, annually befalls thousands of our domestic cattle.

That a community can calmly, and almost without remark, allow large numbers of animals, because just beyond the horizon and out of sight, to suffer such tortures and death as, if inflicted upon only one animal in their midst, would create a general uproar, is a significant reminder of the extent to which even our more commendable acts and emotions are still dependent upon our sense-perceptions. It may, perhaps, be doubted whether even the trained sympathies of Mr. Bergh have ever gone out with merited fulness toward the frantic, thirst-tortured, and dying animals which he doubtless knows might be seen by scores and hundreds upon our Western plains during any protracted "cold snap," if he were only there to see.

It must not be supposed that all cattlemen are alike indifferent to this yearly recurring and horrible cruelty. Many of them would gladly incur far more than their share of the common expense, and disburse a sum greatly in excess of the value of the cattle which they annually lose, in employing men to ride the ranges during the cold weather and keep the water-holes and springs cut open. But to get any concert of action among all or the majority of the cattle-owners in any given section of country is the difficulty. And such concerted action seems well-nigh indispensable under the existing order of things, where no man owns or controls any given range, but the cattle of a score of separate owners roam and drift together. For if part only of the several owners were to undertake to keep "open water" during any hard winter over all the common range where their own cattle are scattered with thousands of others, they would inevitably incur a heavy expense chiefly for the benefit of other owners better able than themselves, perhaps, to bear it. And it is this knowledge, that no one can do anything in that direction for his own benefit only or chiefly, with the not unnatural reluctance to spend money for the benefit of another, which has thus far checked and paralyzed all effective action. But if the several ranges were segregated, and each cattle-owner could control his portion under long lease or other

wise (preferably under lease, I think), then the situation would be precisely reversed, and the same motives of self-interest which now deter from action would then stimulate and insure action. Each owner would then, to prevent loss if not from humane motives, keep open through the winter the water-holes upon his own range. In short, sir, I am persuaded that whoever secures the enactment of a practical lease-law for these barren plains will thereby accomplish more toward the prevention of cruelty to animals than has been hitherto accomplished by all agencies whatsoever.—Truly yours, JOHN T. MINOT.

GRINNELL, KAN., September 10, 1885.

Notes.

WE continue our list of forthcoming publications. *Macmillan & Co.* :—'Life of W. Stanley Jevons,' by his wife; 'William the Conqueror,' by Prof. E. A. Freeman; 'Life of Peter De Wint,' by Thomas Humphry Ward, illustrated with photogravures from the artist's pictures; 'Greenland,' by Baron Nordenskiöld; 'Madagascar,' historical and descriptive, by Capt. S. P. Oliver; a new volume of Poems by Lord Tennyson; 'Lectures Introductory to the Study of the Law of the Constitution,' by Prof. A. V. Dicey: 'Historical Sketch of the Distribution of Land in England,' by W. Lloyd Birkbeck; Dante's 'Paradiso,' edited, with a prose translation and notes, by A. J. Butler; Goethe's 'Reynard the Fox,' translated by A. Douglas Ainslie; Amiel's 'Journal Intime,' translated by Mrs. T. H. Ward; 'Flowers, Fruits, and Leaves,' by Sir John Lubbock; and 'Alice's Adventures under Ground,' by Lewis Carroll—"a facsimile of the original MS. book afterwards developed into Alice's 'Adventures in Wonderland'"—with twenty-seven illustrations by the author. *D. Appleton & Co.* :—A series of small volumes entitled "English Worthies" (past and present), edited in England by Mr. Andrew Lang. Mr. Grant Allen leads off with a life of Darwin, and Mr. George Saintsbury writes the life of the Duke of Marlborough. *William S. Gottsberger* :—'A Political Crime: the History of the Great Fraud'—of 1876, namely—by A. M. Gibson, formerly the Washington correspondent of the New York *Sun*. *D. Lothrop & Co.* :—A subscription edition of the poetical works of James Berry Bensel. *George J. Coombes* :—'Books and Bookmen,' by Andrew Lang, first of a series of volumes to be called "Books for the Bibliophile."

Joel Munsell's Sons, Albany, solicit subscriptions for a third edition of Durrie's 'Alphabetical Index to American Genealogies,' an indispensable guide to family researches. It is seven years since the second edition appeared, and the new one (brought down to 1886) will contain more than half as many references again, or some twenty-one thousand. The price will remain at $3.00.

The New York Shakspere Society, as to whose Baconian leanings we are assured we have been mistaken, will issue from time to time other publications besides its monthly papers. A list of English plays prior to 1700, a bibliography of Shaksperiana, and a specimen of text-editing on a novel and original plan (using the "Merry Wives of Windsor") are already named. The size will not be rigidly 16mo.

An excellent serial in *Shakesperiana*, compiled by Appleton Morgan, is an alphabetical list of publications on Shakesperian themes. Every special student will thank him for the attempt—and regret that he must wait so long for the compilation to be completed. Four papers have been needful for enumerating the titles which have the first two letters of the alphabet as their initials. When the line, which seems likely to "stretch out to the crack of doom," shall come to an end, the articles will be gathered (as above noted) into a volume indispensable to every library, and which none but the most superficial readers of the great dramatist can afford to do without. But the more meritorious Mr. Morgan's plan and performance, the more we regret a strange stumble of his on the threshold of all his papers from first to last. We let it pass for some time, but it is now clear that his "sin's not accidental but a trade." It "roars too loud and thunders in his *Index*" to be overlooked. Mr. Morgan's title is "A Topical Index Shakespearianae." The last word is meant for a Latin genitive singular. But in Latin at least the word is plural and demands the termination *-orum*. In this case no pretence of misprint can be made.

J. B. Lippincott Company, Philadelphia, as the authorized publishers of "The Duchess's" novels, desire to warn the public and the trade that her last work, 'O Tender Dolores,' has appeared in New York under the title of 'Dick's Sweetheart,' and will be issued by an English house as 'Green Pleasure and Gray Grief.'

The lectures which Mr. Edmund Gosse delivered in this country last winter, 'From Shakspere to Pope,' will shortly be published by the Clarendon Press, with a dedicatory poem to Mr. W. D. Howells. Toward the end of the year Mr. Gosse will also publish 'Firdusi in Exile, and Other Poems,' dedicated (in verse also) to Mr. Austin Dobson, and issued in uniform style with Mr. Lang's 'Rhymes à la Mode' and with Mr. Dobson's 'At the Sign of the Lyre.' Mr. Gosse's life of Sir Walter Raleigh, which is to appear in the "English Worthies" series, will not be ready before the new year.

American stories continue to find favor in the eyes of English publishers and of the English public. Mr. Howells's 'Silas Lapham' will be issued by Mr. Douglas, Mr. James's 'Bostonians' by Macmillan & Co., Miss Murfree's 'Prophet of the Great Smoky Mountains' by Chatto & Windus, and Mr. Brander Matthews's 'Last Meeting' by Mr. Fisher Unwin.

The current number (Sept. 1) of the *Revue des Deux Mondes* translates in full "Choy Susan," the initial story of Mr. W. H. Bishop's volume of short stories, filling some thirty-two pages of that magazine. The translation is very well done, but it is amusing to see the translator's effort to wrestle with the idiomatic Americanism of the Pacific Coast and the Chinese dialect. A storekeeper is *chef du matériel*, "a bad man from Bodie," *un coquin de* Bodie. "Great Scott!" becomes *C'est trop fort;* "Too much dam' talkee," *Trop parler nuit;* and "as easy as rolling off a log," *aussi facilement que l'on roule un fagot.*

The Messrs. Scribner have launched anew their illustrated "Library of Wonders," beginning with 'Egypt 3,300 Years Ago,' 'Intelligence of Animals,' and 'Wonders of Heat.' All these appear in smart bindings, and are printed from the old plates, the last-named book containing a new supplementary chapter.

The Messrs. Putnam likewise give a new dress to their "Art Hand-books," which are bound in two tasteful volumes, embracing eight divisions. Exceptionally pleasing and serviceable is the binding they have adopted for 'Representative Essays,' a selection of twelve out of the twenty which composed their 'Prose Masterpieces from the Modern Essayists.' Irving, Lamb, De Quincey, Emerson, Matthew Arnold, John Morley, Lowell, Carlyle, Macaulay, Froude, Freeman, and Gladstone are the writers in the present collection. Finally, the same house reissue Mr. John S. White's selections from Plutarch's Lives, in their "Old-Time Classics" series, and add a similar selection by the same hand from Herodotus, making in all four very presentable volumes with large print and a variety of illustrations.

"The World's Workers" is the name chosen for a series of thin volumes just begun by Cassell & Co. Lincoln and Franklin are the subjects of the two which have come to hand.

Scribner & Welford send us the six volumes added last year to the Bohn Standard Library, namely: Boswell's Johnson, in four volumes, and 'Tour to the Hebrides,' in one, edited by Alexander Napier, and a volume of 'Johnsoniana,' compiled by Mrs. Napier. This last is made up of Mrs. Piozzi's 'Anecdotes,' the correspondence with Miss Hill Boothby, extracts from Hannah More, Fanny Burney, etc., and especially the rare 'Diary of a Visit to England in 1775,' by Dr. Thomas Campbell. It is needless to say that this edition contains more of Doctor Johnson than any other single work heretofore published.

Doctor Johnson's "If the man who turnips cries" is cited in the amusing little book on 'Old London Street Cries,' by Andrew W. Tuer (London: Field & Tuer; New York: Scribner & Welford), which is an eccentric reduction (as well as extension) of a large-quarto *édition de luxe*. The subject-matter is entertaining enough, but the reader's amusement is heightened by what Mr. Tuer calls "heaps of quaint cuts," after Rowlandson, Cruikshank, and much older and cruder artists. One character, "the cat's-meat man," has, so far as we are aware, no representative on this side of the water. Mr. Tuer gives a cut of him and a pretended facsimile of his card—"Famleys owning Cats & Dogs Waited on daily and regler." For the rest, he scrupulously indicates the sources of his cuts, and adds an appendix discussing some of the obscurer cries.

'Beowulf,' edited by Harrison and Sharp (Boston: Ginn & Co.), has just appeared in a second edition. The editors have profited conscientiously by the criticisms of their several reviewers. Wherever feasible, mistakes have been corrected *in situ*, by cutting the plates. Longer corrections are given in the supplemental pages 320-323. Pages 324, 325 give "recent readings and suggestions" advanced by German and English scholars within the last two years. Thus revised, the American 'Beowulf' is a fresh evidence of editorial zeal and untiring industry.

Marlowe's "Tamburlaine," so memorable in the history of the English drama, has just been edited by Albrecht Wagner (Heilbronn, Henninger). Of this little book we can speak nothing but unqualified praise. The text follows that of the 1590 octavo (A), foot-notes giving the variants from the 1592 octavo (B), and the 1605 quarto (C). Orthography and punctuation of the Elizabethan period are reproduced literatim. Thirty pages of notes contain useful linguistic and other explanations. The verse-numbering is continuous (4644) through both parts. In the Introduction the editor discusses the relation between Marlowe and his "sources," viz., the Spanish work of Pedro Mexia in Fortescue's English translation, 'Foreste or Collection of Histories,' etc., 1571, and the 'Magni Tamerlanis Vita' of Perondinus, 1553 (itself based on Mexia). The editor also elucidates fully the respective values of texts A, B, and C. Paper and press-work are excellent, the shape convenient, and price moderate, only four marks. Editor and publisher deserve the warmest thanks. Such a model only sharpens our impatience for Breymann's "Doctor Faustus," which is to follow.

Otway's "Venice Preserved," reprinted by Mr. Rowland Strong (Oxford), from the original quarto of 1682, may help to resuscitate what was once esteemed a glory of the English drama. The reprint is made to resemble the original in orthography, paper, and typography—presumably also in pagination. The editor has added of his own merely a brief analysis of the plot and some notes on the personæ dramatis. For the

modest sum of one shilling sixpence one can now read Otway at his best in an undoctored text.

The latest monthly issue of Prof. Henry Morley's "Universal Library" is Goldsmith's 'Vicar of Wakefield, Plays, and Poems.' Mr. Austin Dobson, who recently edited the 'Vicar of Wakefield' for the "Parchment Library," is now writing a preface for the facsimile reprint of the first edition which Mr. Elliot Stock is about to issue, uniform with his reprints of 'Rasselas' and 'Robinson Crusoe.' This edition will be enriched with a bibliography. Finally, Mr. Irving has reopened the Lyceum Theatre for the winter season with the 'Olivia' which Mr. W. G. Wills founded on an episode of Goldsmith's masterpiece.

The latest addition to the Johns Hopkins University Studies (3d series, ix-x) is entitled 'American Constitutions: the Relations of the Three Departments as Adjusted by a Century,' by Horace Davis, of San Francisco.

Since our recent article on Law Reports was printed, the Lawyers' Coöperative Publishing Co. have added the Supreme Court Reports of the District of Columbia to one of their series, the *Central Reporter*—perhaps in consequence of our having pointed out the neglect of these courts heretofore. They have also included the Court of Appeals of Missouri in their *Western Reporter*, and have added the names of Mr. Benjamin Vaughan Abbott and Mr. Robert Desty as editors; the editorial staff otherwise including Mr. S. K. Williams and Mr. E. B. Smith, as well as Mr. J. E. Briggs, who edited their edition of the U. S. Supreme Court Reports.

The first report of the New York Forestry Commission, transmitted to the Legislature in January, has now been printed. Besides the recommendations in the text, this little pamphlet will be valued for its copies of certain fine photographic proofs of the devastation caused in the Adirondacks, and for a large colored folding map of the same region, prepared by Prof. C. S. Sargent, and showing the virgin timber, the weeded timber, the cultivated tracts and the barren ones, as now existing.

Cartography, long since varied by manifold applications to physical, historical, statistical, industrial, and other branches of knowledge, besides the properly geographical, has recently received also an extension into the domain of prehistoric inquiry. Much praised is a prehistoric map of the Grand Duchy of Hesse, the first part of which was lately exhibited by its author, Herr F. Kofler, on occasion of the Hessian Historical Society's jubilee. This first division consists of twelve sheets of the great map of Hesse prepared for the General Staff. All palæontological and archæological finds are entered at the places where they were made, marked with signs concerted upon with other workers in the same field. An exhaustive table of references to similar works is added. The sheets exhibited cover the Province of Upper Hesse; the other two provinces were soon to be completed. This large map is to be preserved in the archives of the Society, and every new find to be entered upon it; and every member of the Society receives a condensed map of the Grand Duchy in two sheets.

Though Lindley Murray is no longer studied in our schools, most astonishing things are yet written in the name of grammar. A Maine correspondent of a critical journal in this city complains of the lapses from correct English in Mr. Howells's 'Indian Summer.' "In one paragraph the speaker is made to say 'he was *going to come* every Thursday.'" Why shouldn't he? "And, in the very next sentence, 'Miss Graham *drew him* a cup of tea from the Russian samovar.' Miss Graham certainly did not 'draw him' but drew the tea *for* him." This is dreadful; it is the most startling instance we have met lately of the decline of religious practices. The objector has evidently never read his Bible or his Shakspere.

The factitious and modern restriction in England of "riding" to locomotion on horseback seems likely to be done away with, as the "noted vulgarism" (*vide Quarterly Review*) of riding by the aid of wheels is coming into fashion with the bicycle and tricycle—just the vehicles, one would say, for driving.

—That gravest ill that flesh is heir to, Insanity, fills the largest space in the sixth volume of Dr. Billings's monumental 'Index-Catalogue of the Library of the Surgeon-General's Office, U. S. A.' (Heastie—Insfeldt). No less than 160 pages are needed for the list of books and articles in periodicals upon this painful subject. Hygiene is the next most voluminous topic (117 pp.), followed by Hospitals (99 pp.), and Hernia (86 pp.). There is a long interval between the last and Infants (38 pp.), Hydrophobia (32 pp.), Hip and Hip-joint (28 pp.), and Homœopathy (24 pp.). "Num quis medicorum," asks a brochure of H. Hartlaub's (Leipzig, 1833), "potest esse simul deditus homœopathiæ et allopathiæ salva conscientia?" This reminds us what a brave show the Autocrat of the Breakfast Table makes with his professional publications in this volume, among them those sensation-making lectures on 'Homœopathy and its Kindred Delusions' (1842). Doctor Holmes's humor, which is proof against everything but homœopathy and Calvinism, is of another sort from that which supported a fashionable pathology a generation ago. Humors hardly fill two pages in Doctor Billings's classification. Five pages, on the other hand, are given to Histology, of which the earliest book mentioned bears date of 1827. The medical literature of India occupies eleven pages. Hippocrates—the various editions of his works, the lives of him and commentaries on him—has ten. Fifteen are devoted to Heat and Heating, four to Homicide, eight to Influenza, seven to Idiots, seventeen to Hysteria. Under Hypochondria the books occupy more space than do the periodical articles; but the contrary is true under Horse-flesh, a rather brief entry. Horse-hair, it seems, as a textile fibre, is suspected of communicating animal poison. Up to this point, Doctor Billings tells us, 64,142 book titles have been recorded in the 'Catalogue,' and 219,154 articles, along with 4,335 portraits. Nor should it be overlooked that in a large number of cases the dates of birth and death of authors are set down by the compiler's care.

—The seventh convention of the American Library Association, held in the tenth year of its existence, has been the best attended, the busiest, and the most sociable of all. The attractions of the place of meeting, Lake George, no doubt account for the large number present—more than eighty. This is the first time that the Association has selected a "summer resort"; the experiment has succeeded. In the cities, members are apt to stray away to libraries or other places of interest, or to visit friends; on an island, though joined by a bridge to a scarcely inhabited shore, this was impossible. Perhaps nature would have proved as serious a diversion from work as civilization, had not a rainy first day created a habit of attending the meetings closely, which continued when the cause had ceased. Though surrounded by the scenery of one of the most lovely lakes of America, the assiduous librarians, with scarcely an exception, sat through seven long sessions. If they have not determined much—if the result of their deliberations does not take the form of definite propositions—it is because the Association is rather an advisory than a legislative body. No one is compelled to accept its canons; the vote of the majority does not bind the minority in their own libraries. Hence, when many possible ways of attaining any result are presented, the Association is falling more and more into the habit of listening to all with interest, without proclaiming any to be the best. The prevailing character of the papers and talks is different at each meeting. One year, library architecture was the chief theme; another year, the relations of libraries and schools engrossed attention; and another year, special thought was given to the best methods of intercepting public documents on their way to the junk shop, and securing them for public libraries. This time the material side of library work was most looked at—buildings, bindings, and what are called library appliances. The reason was, that the secretary of the Association—the librarian of Columbia College—in the late reorganization of his library, has been considering just such questions, has made a number of interesting experiments, and had a number of new devices to explain; all were eager to hear the results, and many ready to describe their own inventions. Library architecture was introduced by an excellent paper of Mr. Poole's on small library buildings, which all intending builders should study, not necessarily to adopt his plan—no plan can suit all lots—but because any good plan is suggestive. One very important point was well brought out—the mistake of erecting lofty libraries. In the cities, where land is costly, they must be high like other buildings; but there can be no doubt of the wisdom of those who in the country spread their libraries over the ground instead of carrying them up into the air. The entertaining paper of the session (for the Association allows itself one) was by one of the younger members, Mr. E. C. Richardson, of the Hartford Theological Institute, who made a most ingenious use of fable to satirize those who advocate any arrangement of books that is not founded on the only basis of logical classification—the resemblance of subjects. It was neatly done without offending any one. Each victim acknowledged that the cap fitted, laughed, and probably continued to believe his own method the best.

—By 'The Affiliation of Mediæval Boroughs,' the title of a monograph reprinted by Mr. Elliot Stock from the London *Antiquary*, its author, Dr. Charles Gross, intends the relation, analogous to that of offspring and parents, which is traceable, in certain respects, between the minor English towns and a few other towns of older establishment. Though the interesting fact had never before even been so much as suggested, he has distinctly proved that the former were indebted to the latter for their burghal laws and ordinances, by adopting them, often without noticeable modification. Not only was this the case, but, when, in a daughter-town, questions arose regarding the interpretation of municipal enactments, its magistrates were wont to refer to the town whose statutes it had borrowed, for information, with a view to practical guidance, as to its way of construing the phraseology in litigation, and as to what it recognized as custom. Similar legislative subordination is observable with respect to Continental boroughs. These, however, as it is shown, developed, the more recent of them towards those of longer standing, a description of dependence of which English towns, owing to the overruling influence of the crown, afford no examples. On the Continent, especially in the Netherlands and in Germany, the corporation of a mother-town became, in tract of time, for nearly every daughter-town, a court of appellate jurisdiction, in the fullest legal acceptation of the term. Such is the gist of the monograph, the subject of which has been despatched with uncritical cursoriness, where it has been adverted to at all, by every writer on English constitutional history that has touched on it.

—The topic is one for the due treatment of which it is indispensable, over and above possessing an intimate acquaintance with the entire range of literature bearing on the history of the various English boroughs, and exploring an enormous accumulation of unprinted town records, to peruse numerous German, French, and Italian works relating to the municipal history of the Continent. That Doctor Gross's equipment for the undertaking which he has accomplished, and for undertakings in the same department with it, has been that of a sedulous and acute researcher, is at once patent to his readers. On his 'Gilda Mercatoria,' a treatise of marked promise, and also of substantial merit, we have already briefly reported in No. 966. Of Americans educated at the universities of Germany, not a few have, during the last half-century, contributed materially to raise the character of our national scholarship. But the position which Doctor Gross holds among them is unique. It is that, namely, of a pioneer in employing, in the investigation of English municipal history, that rigorous scientific method which still is far too exclusively peculiar to Germany. To obtain adequate materials available to his purpose, he has, of course, found a lengthened residence in England, and personal visits to well nigh all its cities and larger towns, a necessity to which there was no alternative. An extensive work from his pen, on English Guilds, and also a group of dissertations kindred to the one now noticed, are, it is understood, in a state of considerable forwardness for publication.

—Under date of August 12, Mr. Bandelier, who is now at work on his Report of his recent investigations for the Archæological Institute, writes as follows, from San Juan, N. M.:

"It is a matter of great surprise to me how easy it has become at last to open the mind of the Indian, and I have also found that the very tribe to which I have clung so tenaciously, was the most difficult of all to approach—Taos excepted. They are more reticent than any other. But having partially succeeded at Cochiti, it has made work very light everywhere else. Since my arrival here I have secured the full organization and clanship, a good portion of the traditions and mythology of the Tehua Indians of San Juan, their symbols and many of their rites. Of the Taos Indians I have secured their organization with its full nomenclature, some of their mythological ideas and cosmological notions. Of Isleta I have obtained the full nomenclature of their clanship; and of my own people, a host of details and traditions. All these data give full confirmation to the discoveries of Mr. Cushing, and should he be attacked again, it will be easy to crush all opposition forthwith, and I shall be most happy to contribute towards doing it. . . . The Pueblos are rather excited over the question of taxation and ultimate citizenship. It would not be desirable to make citizens of them at once: they do not wish it, and are unfit for it as yet. Of course there will be no trouble, but it is unwisely premature to attempt anything of that sort at this day."

—We have received from B. Westermann & Co. the first ten sheets of a work on 'The Sounds of Speech in General and the Sounds of the English, French, and German in particular,' published by Dr. Moritz Trautmann, Professor in the University of Bonn (Leipzig: Gustav Fock). We have read them through, and our present impression is that Doctor Trautmann's theory is wrong and his method misleading. This judgment is, we think, justified by the results to which his theory and method lead him. On page 56 of his work, after concluding his general investigation of the vowel sounds, Doctor Trautmann sums up his numerical results. He concludes that there are "140 pure vowel sounds" (!!!). Each one of these may be "nasalized" (*genäselt*), thus making 280. But this enormous number by no means exhausts the possibilities or the actualities of human speech. He asserts that other vowels are not only conceivable, but really exist in language, but, for reasons into which there is no necessity and we have no space to enter, he omits them for the present. We presume most philologists and special phonologists will regard this statement as a *reductio ad absurdum* of the whole system. On page 28 Doctor Trautmann says: "It cannot be doubted that in the treatment of the vowels we must not, as has heretofore *always* happened, take our departure from the loud-spoken, but from the whispered (*geflüsterten* vowels." The italics are ours. Doctor Trautmann is much mistaken. It has not "heretofore always happened" that writers on phonology have commenced with the "loud-spoken vowels." Among others, nearly half a century ago Dr. Heinrich Ernst Bindseil published (Hamburg: Friedrich Perthes, 1838) an elaborate treatise on the 'Physiology of the Sounds of the Voice and of Speech,' in which he "takes his departure," exactly like Doctor Trautmann, from the "whispered" vowels. It is impossible to pronounce a final judgment on Doctor Trautmann's book until we have seen his application of his system to the languages mentioned in his title-page. The present ten sheets contain only a portion of his treatment of the English language. The last page breaks off in the middle of a sentence, leaving the rest of his treatment of the English and the whole of the French and German yet to come. Under these circumstances it would be unjust to the author and hazardous for the reviewer to attempt any full notice of the book. Meanwhile, we will remark that the work, as might be expected in the production of a professor in a German university, gives evidence of very wide and careful reading, is full of acute observations, and is worthy of perusal by all who have made phonology a special study. No one, however, can appreciate it fully who is not acquainted with the acoustic theories of Helmholtz. To those who have not this preparatory knowledge much of the work would be unintelligible.

—At first sight, the Council of Trent does not seem to have much to do with literature and the fine arts among Catholic people. Prof. Ch. Dejob, however, has written an essay of more than four hundred pages to show what its influence was, and the *Revue Critique* allows that if he has not connected the restoration of decency in literature and art, the reaction against the pagan spirit of the Renaissance, and the glories of the age of Louis XIV. very directly with the Council, he has at least shown that the decrees of the Council and the Christianization of literature arose from the same cause—that they were different manifestations of the counter-reformation in the Catholic Church; in other words (though this the *Revue* does not say), that they were the result, and the not very distant result, of the Protestant Reformation. Professor Dejob would not be content with this. He would trace much more to the direct influence of the Council or to the action of the court of Rome, the popes and cardinals, who are to be considered as at once the inspiring spirit and the executive officers of the Council. In regard to art and literature proper, the reviewer finds that Professor Dejob relies more on his eloquence here than upon his "unpublished documents"; but in regard to the restoration of the ecclesiastical sciences, he yields all that the Professor could demand, and then claims, justly, for France and her Bollandists and Benedictines a large share of the glory of carrying out the movement begun by Gregory XIII. and Sixtus V.

—Pascal Duprat, the French politician and journalist, died on the 17th of last month in mid-ocean, while on his return voyage from Chili, where he represented the French Republic as Minister Plenipotentiary from the close of 1882. His body was dropped into the sea. Duprat was at various periods of his life one of the more prominent and most combative Republicans of France. Born in Southern France, in 1816, he studied there and in Germany, went to Paris, and in 1840 was appointed professor of history in Algiers. Returning to Paris, he wrote for democratic journals, edited the *Revue Indépendante*, and after the revolution of February, 1848, aided Lamennais in founding the *Peuple Constituant*. He was elected a member of the Constituant Assembly by his native department, Landes, and took his seat on the left, but, in June, during the Socialist insurrection, he was one of the fraction who carried through the investing of General Cavaignac with dictatorial powers. When Louis Napoleon was elected President, Duprat joined the Radical opposition. Elected in Landes a member of the Legislative Assembly, he vehemently combated the reactionary policy and denounced the criminal ambition of the Prince President, and, in the *Coup d'État* of December 2, 1851, was imprisoned, and then banished. He spent his exile in Belgium, Switzerland, and Italy, writing pamphlets and editing small reviews in the cause of democracy. Restored to France by Imperial amnesty, he failed in two attempts, as opposition candidate, to enter the Corps Législatif; but after the fall of the Empire he represented Landes in the National Assembly, and, from 1876 to 1881, a Paris constituency in the Chamber of Deputies. He was an impetuous debater, a pleasant lecturer, and the author of several historical books.

—Prof. Johannes Steenstrup, the Danish scholar, who has published so many interesting and comprehensive works on the Scandinavian settlement of Normandy, has recently issued a valuable little work on the celebrated Bayeux tapestry ('Bayeux-Tapetet,' Copenhagen). This famous tapestry, representing William the Conqueror's expedition to England and his victory at Hastings in 1066, is preserved in the Bayeux Library in Normandy, while full-size photographs of it are to be found in various European museums. Steenstrup's profound study of Norman history has made him peculiarly well qualified to interpret the scenes depicted on the tapestry and to solve the problems touching its age, origin, historical and artistic value. In his little book we find an explanation of fifty-three Latin inscriptions found on the tapestry, and of a series of figures sewed into it with eight different colors. Of the figures, 623 represent persons, 202 horses, 555 other animals, 37 buildings, ships, and boats, and 49 trees, making a total of 1,512. The tapestry is 224 feet long and 18 inches wide. A critical examination of the uniforms and weapons of the warriors, of the architecture of the houses, and of the build of the ships and boats, of the priestly garments, etc., and a careful investigation of the chronicles, annals, and biographies from the early centuries of the middle age, have led Prof. Steenstrup to the conclusion that Bishop Odo, of Bayeux, caused the tapestry to be made in commemoration of the expedition in which he himself took part. The figures were made by Normans, and the fingers of Norman women plied the needles. The tapestry was made to adorn the walls of the new cathedral which was dedicated in Bayeux in 1077, and the great interest now attaching to it is the fact that it is a pictorial representation of the conquest of England *by a contemporary*, so that it is in reality one of the oldest historical descriptions of the middle age to be found. American libraries which already possess photographic copies of the Bayeux tapestry would do well to secure a copy of this little volume; others would do well to get both. The book could easily be translated and used as a hand-book for visitors.

THE YORK MYSTERIES.

The Plays Performed by the Crafts or Mysteries of York on the Day of Corpus Christi, in the 14th, 15th, and 16th centuries. Edited, with Introduction and Glossary, by Lucy Toulmin Smith. Oxford: At the Clarendon Press. 1885.

THE scanty literature which embraces the beginnings of the English drama has received in this volume a singularly important accession. The existence of the work has been known for more than a hundred years; but, as a matter of fact, little has been known of it beyond its existence. Through the zeal of the editor and the kindness of the Earl of Ashburnham, the present owner of the manuscript, it has at last been made accessible to all students of the origin of the English drama. We have now in our tongue four reasonably complete series of mystery plays, the Coventry, the Towneley, the Chester, and this just printed, which is, on the whole, the fullest, and in some points the most interesting, of them all.

In one important particular it has been a positive advantage to have this collection remain in manuscript till the present time. A far more exacting standard of editorial duty now exists than when the previous series were published. The manner in which the duty has been discharged in this instance is perhaps as conspicuous a proof as could be given of the higher ideal which is aimed at in these later days. Here is a work which has to make no apology for shortcomings that could have been avoided by a little care; a work, too, which neither needs nor asks for lenient criticism on the ground that it has been edited by a woman. The most thorough and conscientious treatment is shown throughout. The introduction, consisting of nearly seventy pages, gives full information upon all points connected with this particular collection. The glossary, moreover, is far better than those found in the other series of mystery plays. There are a few words left unexplained, a few with the explanation of which we are not altogether satisfied; there are also one or two statements in the introduction from which we should feel inclined to dissent; but it is a tribute which the censorious critic is glad to pay, that the editorial work comes fully up to the highest requirement that can fairly be demanded.

In regard to the collection itself, the following facts may be stated. It naturally has a general resemblance to the other collections. Five of its plays, indeed, are essentially identical with plays in the Towneley series, showing that they must have come from a common original, or that one must have borrowed from the other. The language is in the Northern dialect. The date of composition is ascribed by the editor to the former half of the fourteenth century. In the versification there is great variety. Along with the rhyme there is frequent resort to alliteration, a fondness for which lingered long, especially in the hearts of the men of the North, and has, in fact, affected English poetry through all periods of its existence. The collection embraces forty-eight pageants or plays, beginning, as usual, with the Creation, and ending with the Judgment-day. As usual, also, the main portion of the whole is taken up with incidents in the life of Christ, and these are founded mainly upon the New Testament, with some little help from the apocryphal Gospels.

When we come to consider this collection in comparison with the others, we are disposed to rank it in certain respects above them all. In purely literary quality, at any rate, the York Mysteries must be put at the head of the four series. This is not, to be sure, giving it much praise. Still, it is probably more praise than would ordinarily be accorded by those who are prevented by the combined raggedness and ruggedness of versification, generally found in the mystery plays, from giving due heed to the poetic possibilities contained in single passages. Occasional lines, for instance, make their appearance in this collection, of which no writer need feel ashamed. Particularly worthy of remark is the song sung by the chorus of citizens in the twenty-fifth pageant, which represents Christ's entry into Jerusalem. With a little more mastery of form, with a little more evenness of expression, this might fairly be considered a lyric decidedly above the average of those composed in later days.

The collection, moreover, is free from the grossness and coarseness which abound in the Chester and the Towneley series. In this respect it resembles the Coventry plays. But the Coventry collection gains in decorum at the expense of interest. It suffers from its respectability, as there is too little dramatic power displayed to make up for the lack of the stimulant of unadulterated indecency which is furnished sometimes lavishly in the two collections to which we have referred. In the York Mysteries there is movement and action sufficient to compensate for the loss of what must have been to many of the audience, a most attractive feature of the dialogue. And even to us it is something of a loss. The occasional coarseness of these collections does give us a picture, such as it would be hard to find elsewhere, of the manners of the age. In the Towneley series—a series which needs more study and better editing than it has yet received—the vulgarity is sometimes so irredeemably vulgar as to break the shock of the blasphemy by which it is accompanied.

The York Mysteries show also a higher grade of cultivation in the unknown writer or writers. The characters talk throughout more in accordance with what is due to their position. The contrast between the opening pageants in this and in the Chester Mysteries will show what we mean. In the latter the fall of Lucifer exhibits far less skill comparatively. It is not simply that Lucifer appears at first as professing humbleness in the most abject manner. That might be justified on the ground that it was desirable to make the character as disagreeable as possible. But the Lord himself is treated no better. He is made unnecessarily and irritatingly aggravating in telling the angels not to touch his throne, as if he were in a great state of anxiety as to the occupation of that seat while he was absent. He threatens them with the destruction of their beauty, with the forfeiture of their heavenly home. It is obvious that such a representation of the character of the Creator must have defeated the design of the author, and have led the hearer, as it does the reader, to feel that Lucifer had at least a colorable pretext for stirring up a revolt. From such gross betrayals of the requirements of even the rudest art the York Mysteries are comparatively free. It is not meant by this that the characters do not talk in the conventional style in which they are represented in these collections. Here as elsewhere Cain swears, Herod rants, and Pilate boasts. Nor is this work unmarked by the low tone with which matters of religion were constantly treated in these plays, and the almost grovelling ideas connected with the interpretation of the events of Scripture. Thus, in the pageant of the Annunciation, we are informed that the reason for Mary's being wedded was to mislead the fiend as to the fact of the incarnation of the Godhead. In a similar way, Satan is represented as being entirely opposed to the crucifixion, because he recognizes that in that case he will be shorn of the realms of which he is now in possession. In this new light of a defender of the faith, therefore, he appears to Pilate's wife. He it is that in a dream puts it into her head to beg her husband not to condemn the "gentleman Jesus," as he is called. Nothing truly of a purely theological cast is more conspicuous in these collections than the idea prevalent in mediæval, and not altogether unknown to modern religious literature, that a sharp and steady fight is going on between the Lord and the Devil, and that it takes all the skill and power of the former to counteract the craft and activity of the latter.

To the student of the later drama, however, the most interesting feature connected with all these plays is the intense realism pervading them. In the other collections it is usually rather amusing than agitating. It is, in fact, sometimes so coarse as to deserve the epithet of stomach-stirring instead of spirit-stirring. Sometimes the realism, indeed, was carried to an extraordinary extreme. In the Chester plays, for instance, not only was the creation of Eve represented by the taking out of Adam's rib while he was in deep sleep, but the stage direction further informs us that "Adam and Eve shall stand naked and shall not be ashamed." This last might have been true in the case of the actors, but must surely have represented unfairly the feelings of some of the audience. But in the York plays the realism is more of a strictly tragic character. In the crucifixion scene it is simply terrible. The nails are represented in the act of being driven into the hands and feet. More than that, as the sinews have become shrunken, the extremities are stretched out by cords fastened to them till they fit properly the holes that are bored in the cross. It is such harrowing details as these that enable the reader to appreciate how much of the horrible the Elizabethan theatre had sloughed off, instead of originating, as has been a too common impression. Many more points of a similar nature are suggested by the perusal of this work, which, both for the matter contained in it, and for the way in which that matter has been edited, we can cordially commend to all students of our early literature, and in particular to all students of our early drama.

THE NORTHEAST FRONTIER OF INDIA.

A Fly on the Wheel, or How I Helped to Govern India. By Lieutenant-Colonel T. H. Lewin. London: Allen & Co. 1885.

THE portion of the Himalaya Range which constitutes the northwest frontier of India is tolerably well known. The wars which the English have waged in Afghanistan, and the advance of the Russians across the steppes of Central Asia, have led to a vast accumulation of facts about the people in this part of the world and the natural features of the country. On their northeast frontier the English rulers of India have been under no such impulsion to explore all but inaccessible mountain ranges and enter into relations with savage hill tribes. This part of Asia remains, in consequence, very largely an unknown land to this day. Successive ranges of mountains tower up, one behind another, ever increasing in altitude, and clothed with primeval forests. In these woods tigers, elephants, and other wild animals abound, and so dense is the forest growth that a single traveller would not unfrequently be obliged to clear a path for himself through the bamboo jungle. Hidden behind this impenetrable screen dwell a number of hill tribes in a condition of savage independence, and often but little elevated above the animals around them. In the lower ranges which abut upon the valley of the Irawaddy a species of debased Buddhism has spread among the hill men, but that soon disappears and is replaced by the most primitive forms of Nature-worship. With these remoter tribes the English in India have no relations, ex-

cept when plundering parties descend into the plain country to pillage the villages and devastate the tea-gardens in British territory. "Tribes," says an official report upon the subject, "over whom we can exercise no control, come surging up against our outposts from the unknown mountains of Burmah and from valleys yet unsurveyed. Of the causes that press them forward we know nothing. New names crop up. A raid by savages of a strange fashion of hair tells us a tribal change has taken place across our frontier, and we have nothing for it but to strengthen our outposts, increase our patrols, and watch to see what the years may bring forth."

One result of this constant movement from behind has been that the tribes dwelling upon the sub-Himalayan ranges have been compelled to emerge from their forest screen, and settle upon lands definitely within British boundaries. Here they have been compelled to lay aside their predatory habits and betake themselves to the cultivation of the land. But the attempt has not been made to introduce among them the complicated machinery of administration which exists in the more civilized parts of India; or, to speak more correctly, where such an attempt has been made, its disastrous consequences have caused it to be abandoned. The British Government interferes as little as possible in the internal affairs of each tribe. These are left to the chiefs of each; but over the different "hill tracts" (as they are called) an English officer is appointed to act as superintendent. He acts as the mediator between the tribal chiefs and the English Government, and it is also his duty to see that the chiefs do not abuse their authority. Among the most important of these hill tracts, all of which are under the authority of the Lieutenant-Governor of Bengal, are those of Chittagong, and over these the author of the book before us was nominated Superintendent in the year 1866. 'A Fly on the Wheel' is mainly devoted to telling the story of what he saw and did in this capacity.

Never has a more felicitous selection been made than that which sent Colonel Lewin to this particular appointment. In general, Englishmen in India are moved by no curiosity to understand aught of the strange peoples among whom their lot is cast. Not so, however, in the case of Colonel Lewin. From the beginning of his Indian career it was his delight to go among the natives of India, as much a native as it was possible for an Englishman to become. He was a Police Superintendent, and when visiting his out-stations or making inquisition into crimes perpetrated at some remote corner of his district, he never cared to go with the state and ostentation which is affected by almost every member of the ruling race in India. He would set off to walk there. Attired as a native, and attended only by two or three attendants, he liked to pass through the country, content with such fare as the villages on his road could supply, and the hospitality which the villagers were ready to offer. In the evening, when the day's work was done, he was always ready to join the throng of village gossips which collected under the great peepul tree to talk about their crops and tell stories of the "good old times." Tastes such as these produced as their natural fruits a familiarity with the dialects of the country, and an understanding of the common people, such as are not probably possessed by a dozen other Englishmen in India. The tastes, however, were strengthened by what they fed on. In the course of time Colonel Lewin was nominated to the charge of the police in the district of Chittagong in Eastern Bengal, and there, to one of his roving and adventurous disposition, the hills which rise beyond the British frontier had an irresistible fascination. He could not rest until he had penetrated the recesses of the great forests which covered their sides, and made acquaintance with the unknown peoples who dwelt in the midst of them.

An unsuccessful attempt to reach the country of the Shendus, which nearly cost him his life, but, at the same time, brought him to the notice of the Bengal Government, led to his appointment as Superintendent of the hill tracts. In this character he obtained so deep and lasting an influence over the rude hill-men, that the worship of Thangliena—this is their corruption of Tom Lewin—prevails among them to this day. The following extract gives a vivid impression of the wildness of the region where, in a sense, he reigned as king:

"As I poled up the Myani, my dug-out canoe was brought to a standstill in a somewhat novel and unexpected fashion. A wild elephant (a big tusker) was taking a bath, and filled up the whole of the small stream with his huge body. Now, the water was too shallow for us to effect a retreat with any speed, so that, had we insulted him in any way, he could easily have caught and punished us. I had with me, moreover, only a light double gun, which was of doubtful efficacy against such a mountain of flesh. There was nothing for it, therefore, but to wait patiently until his Majesty had concluded his ablutions, when he solemnly stalked up the bank into the forest, and we were able to pursue our journey.

"The same day I witnessed another equally curious and unusual spectacle. The banks of the stream rose on either hand high and steep, the margin, however, affording a pleasant, passable path. I had got out of the boat to stretch my legs, and, more from idle curiosity than any other reason, I climbed the steep slope on the right, to see what sort of country lay on the other side of it. As my head topped the bank, I found myself looking into a small grassy, basin-like clearing, on the opposite slope of which, facing me in the sun, lay a most beautiful tigress, with two small cubs tugging lustily at her teats. It was a fascinating sight, and fortunately, as the sun shone right into her eyes, I was able to observe it at my leisure. Presently the two little ones left off sucking, and began to play in the most graceful and fantastic manner possible, until the sound of my boatmen singing, as they poled the boat up stream, put an end to my enjoyment, and I retired as quietly as I had come, lest madame might resent the invasion on her domestic privacy."

Here is another extract, which shows the character of the people who dwell in these wild and secluded mountains:

"I had much at heart a plan for inducing the principal Sylu and Howlong chiefs to accompany me to Calcutta, there to pay their homage to the great ones of Government and to see the glories of the metropolis. . . . It was, however, no easy task. . . . One day the chief Saipoiya, a leader and influential man among the Southern Howlongs, came to see me with a numerous following, and to him I forthwith propounded my scheme in glowing colors: he would receive presents from the Governor-General; he would see such wonders as none of his ancestors had ever seen or ever dreamed of. . . . All this and much more I pressed upon the chief, who was evidently much tempted by the proposal. His followers, however, did not at all relish the idea, and a wily old Karbari (*i. e.*, man of business) put forward the views of the opposition in logical form, as follows: 'It is true, and we believe all you say, Thangliena; we have known you for a long time, and your tongue is straight. Your words are very good words, but it is wise to look at both sides of a matter. Is it not?' A murmur of assent from all, in which I joined. 'You say,' continued the Karbari, 'that the Big Chief in Calcutta, the Gubnor-Gendel, is more powerful than you are. Is that the case?' 'Yes,' I replied. 'He is very great; certainly more powerful than I am.' 'Well, then,' rejoined the Karbari, 'suppose he orders Saipoiya to be speared?' Sensation. It is needless to say that Saipoiya did not go to Calcutta."

At last, however, by dint of much persuasion, Colonel Lewin prevailed upon seven chiefs, with a select following—the party numbering twenty-seven in all—to brave the chance of being speared by the order of the "Gubnor-Gendel," and accompany him to Calcutta. Arrived there, they consented to pay a visit to the Lieutenant-Governor of Bengal, but no persuasion would induce them to appear in the presence of the "Gubnor-Gendel." The risk of being speared by the orders of this mysterious and omnipotent chief overcame all other considerations. On one occasion, two of their number lost their way in the streets of Calcutta, and their prolonged absence was interpreted by the rest of the party as due to the spearing propensities of Lord Northbrook. A profound depression seized upon them, until the two belated chiefs returned to their domicile under the escort of a policeman. In all other respects, the chiefs and their followers maintained a resolute impassivity of demeanor. "Once, and once only," Colonel Lewin writes, "were they roused to enthusiasm, and that was when I took them at full speed on a fiery, snorting locomotive engine, which was placed at my disposal for the purpose by the traffic manager of the East India Railway. This fairly frightened the dignity out of them, and, when safely arrived on the earth again, they shook their heads, confessing that the power and wisdom of the Sahibs was altogether wonderful."

'A Fly on the Wheel' can be safely commended to those who read only for amusement. It is full of adventure, anecdote, and quaint descriptions of life and manners. But it posesses also a more serious interest, as disclosing how intricate and many-sided is the social and political problem which has to be worked out by the English in India. Colonel Lewin is himself so enamored of the barbarous life which he describes, that he appears to regard the introduction of civilization as an evil rather than a good; and it is impossible to accept *sine multis granis* his idyllic pictures of the social and family relations which exist among the Sylus and Howlongs—the Sushais, or "head-decapitators," as they collectively call themselves, from their pleasant practice of beheading those on whom they raid. But, however that may be, the days of this barbarian life are clearly numbered. The authority of the English will, of necessity, gradually penetrate the forests where dwell the Sushais in company with the tiger and the wild elephant; and it is most probable that these hill tribes, unable to accommodate themselves to the new conditions of life, will gradually disappear, as aboriginal races have done in so many other countries.

Sarah and Angelina Grimké. The First American Women Advocates of Abolition and Woman's Rights. By Catherine H. Birney. Boston: Lee & Shepard. 1885.

We detract nothing from a just estimation of the Grimké sisters when we challenge the claim made for them by their biographer on the title-page. They were not the first American women advocates of abolition, except in the qualified sense of public lecturers addressing mixed audiences—a worthy and sufficient distinction. And it was their defence—on the platform and in the press—of their conduct in this particular which gave them their sole precedence in the advocacy of woman's rights; for, as against the charge of "publicity" and quitting woman's sphere, the whole doctrine of sexual equality in spiritual interests and duties had been uttered by Mrs. Chapman in her official 'Report of the Boston Female Anti-Slavery Society' in 1835. Nevertheless, Angelina Grimké's eleventh open letter to Catherine Beecher, and Sarah Grimké's letters to Mary Parker published in the New England *Spectator*, in 1837, are peculiarly entitled to rank as the earliest literature of the woman's-rights agitation.

The question as it arose was purely an incident of the anti-slavery movement, and the shape in which the lectures of the Grimké sisters precipitated it upon the abolition organizations was, whether women should be denied the right to vote, to speak, and to sit on committees in the regular meetings of societies of which both sexes

were members. Mrs. Birney does not make it clear that this was the only right contended for by the abolitionists as such on behalf of woman; yet it sufficed to alarm the clergy, and to cause a permanent division in the anti-slavery ranks in 1840. Before this breach was consummated the Grimkés had completely withdrawn from public activity, and the record of the rest of their lives is chiefly concerned with their work as teachers in private schools of their own, and with their inexhaustible self-sacrifice and noble charities, including the adoption of their nephews—the natural sons of their deceased brother Henry by a slave mother—whom the war had freed.

The first of the three parts into which Mrs. Birney's narrative naturally falls has Charleston for its scene, the birthplace of the Grimkés. Nothing could be drearier than the exhibition from their diaries of the morbid spiritual condition of the sisters, their theological experiments, their self-torture, their uncomfortableness to all about them. This went deeper and lasted longer with Sarah than with Angelina, but paralyzed in both the most admirable intellectual and moral faculties. Concern for their own souls occupied far more of their thoughts than did the wrongs of the slaves, to which they were by no means insensible. Had Sarah never gone North and fallen in with the Quakers, the sisters would have lived and died in the stifling atmosphere of a slave-cursed society. The new atmosphere was none too bracing, and in fact the sisters had to *fall out* with the Quakers in order to be free to obey the voice which called them to the public service of humanity. Their emancipation was immediately brought about by the editor of the *Liberator*.

This fact it has not pleased Mrs. Birney to make prominent. Her first mention of Mr. Garrison is compulsory, since his publication of a thrilling letter addressed to him privately by Angelina determined the career of the sisters, and worked a revolution in their views of duty to God and man. If there was one document which ought to have been given in full in these pages, it was this letter, in which the whole nature of the writer is discernible, and which she never surpassed in elevation of tone or felicity of expression. Mrs. Birney, who curiously misstates the occasion of it, has not even saved the best passages, and one which she purposely omits in the middle of a paragraph shows that Angelina had for some time been a reader of the *Liberator* and become a convert to its doctrines—"our principles," as she calls them. This is a minor sample of an animus towards Mr. Garrison which has generally to be read between the lines. Thus it is at him that the elaborate praise (with significant anonymous antitheses) of the New York managers of the American Anti-Slavery Society on pp. 155, 156, is aimed; but, singular to relate, nearly all those whom Mrs. Birney mentions, violently opposed Mr. Garrison for his maintenance of the right of woman to speak in public, as claimed and exemplified by the Grimkés. This leaves Mrs. Birney (who is a strong woman's-rights advocate) in a ludicrous dilemma, but she does not seem to be aware of it.

To the same gratuitous antipathy is attributable the too scanty information about the views of the sisters on peace, and especially on "Perfectionism." The acknowledged omissions in several of the letters force us to suspect suppressions elsewhere. Mrs. Birney is very severe on the "no-government" views imputed to Mr. Garrison, but quotes with approval the higher-law doctrine professed by Theodore D. Weld when he married Angelina (no clergyman or magistrate being present, and Mr. Garrison reading the certificate). "He alluded," wrote Sarah, "to the unrighteous power vested in a husband by the laws of the United States over the person and property of his wife, and he abjured all authority, all government, save the influence which love would give to them over each other as moral and immortal beings." "It was fortunate for the anti-slavery cause," we are told (p. 219), that the sisters "were warned in time by their New York friends of the fatally dangerous character of the heresies they were inclined to accept"—read, "had accepted" (*vide* pp. 212, 213). The sequel hardly justifies this exultation, seeing that the Grimkés shortly afterward withdrew from the cause (though not forsaking their abolition sentiments), while the non-resistants, "Perfectionists," and anti-government men held on to the end. With the Grimkés, virtually retired the majority of the New York anti-slavery managers whose praise by Mrs. Birney was noticed above.

Faults of carelessness and of want of knowledge must be added to that of bias, in our criticism; but were they all greater than they are, the book could still be highly recommended. It is a substantial and entertaining contribution to the history of American institutions and character, and deserves to be read by all thoughtful persons. To women and to clergymen, above all, it seems to us to address itself, in virtue of the lessons which it conveys. Neither class is conscious of what it owes to the unflinching integrity of "Carolina's high-souled daughters."

The Influence of the Apostle Paul on the Development of Christianity. By Otto Pfleiderer, D. D., Professor of Theology in the University of Berlin. Translated by J. Frederick Smith. [The Hibbert Lectures, 1885.] 1 vol. 12mo. Charles Scribner's Sons. 1885.

THE Hibbert Lectures possess a special significance in illustrating the transition state of religious opinion in our day. Organized by a foundation for the advancement of religion, under the patronage of men like Dean Stanley, its first lecturer, Max Müller, himself a professor in orthodox Oxford, alluded to belief in Revelation as possessing interest merely as a survival of medieval superstition. A subsequent lecturer, M. Renan, argued with silvery eloquence that Simon Magus was none other than St. Paul. Now we have Dr. Pfleiderer, one of the most distinguished theologians of Germany, and professor of theology in the University of Berlin, who coolly regards the Christian religion as a matter of human invention, taking, by happy accident, a form that enabled it to become permanent.

The lecturer's account of the struggles and antagonisms out of which Catholic Christianity was evolved is exceedingly ingenious and acute, manifesting a profound study of the texts and familiarity with all the scanty sources remaining to us of those early times. Yet its chief interest appears to us to lie in the psychological problem unconsciously suggested by the author. His tone is reverent, and he evidently feels himself to be thoroughly orthodox, and yet no "infidel" could more coolly, as a matter of course, eliminate all the divine element from Christianity. He quotes Eduard von Hartmann's definition of Paul as "the inventor of Heathen Christianity," but for whom Jewish Christianity "would simply have figured among the curiosities of history" (p. 5), apparently without recognizing how closely his own line of argument assimilates itself to that of the philosopher. It is true that the spirit in which Pfleiderer and Hartmann regard the results accomplished by Paul is essentially different, but their conceptions as to the nature of his work and the material employed in it by him are radically identical. In fact, the lecturer does not hesitate to argue that without the dogmas of Paul we cannot reasonably believe that "Christianity could have become the religion of the world and an established ecclesiastical institution, or would have survived the commotions of time" (p. 11).

Nor was this because Paul merely developed the teachings of Christ. His work was original and creative. If the Christian religion comes from Jesus, Christian theology dates from Paul (p. 10), whose explanation of the transitory character of the Mosaic Law is "a boldness of paradox such as is possible only to a religious genius' (p. 73). It was due to external circumstances and not to overruling Providence that his work became permanent. Thus when Peter agreed that circumcision should not be required of Gentile converts, "this act of noble, self-denying magnanimity saved the future of Christianity at a critical moment" (p. 88). So the "shortsightedness" of the Council of Jerusalem in not foreseeing the results of its concessions to Paul was "so far fortunate, as without it the acknowledgment of Heathen Christianity, with its freedom from the Law, could hardly have ever been brought about" (p. 94).

Interesting as is Dr. Pfleiderer's book, we fear that he has rather thrown an apple of discord than furnished, as he hopes, an eirenicon which shall prove "an excellent help towards the settlement of our religious troubles" (p. 5).

A Diary of Two Parliaments. By Henry W. Lucy. The Disraeli Parliament—1874-1880. Second edition. Cassell & Co. 1885.

THE old adage that no man is a hero to his valet may be applied to Parliament as seen from the reporters' gallery. That august body, consecrated by the unbroken traditions of at least four centuries—and we suspect that few Americans, who have given any considerable attention to English history and politics, experience any deeper sensation in their travels than when they enter its precincts—is yet made up of individuals as marked, not merely in their public but their private characters, as any actors in a theatre. Any one who has passed a session in following the proceedings of the Senate of the United States (for the House is too much of a babel to give any place to individuality) will appreciate how thoroughly one gets to know the character and peculiarities of each Senator, even though he may never have exchanged a word with him. Accordingly, this extremely entertaining book is not a narrative of political events, though a knowledge of them sharpens the point of the allusions. It is more a series of pictures of character and forms of proceeding, many of them written originally for the *Daily News*, and therefore under the immediate impression of the scenes described. They are the work of a keen observer of human nature, with decided likes and dislikes, and are written with an especial eye to the ludicrous side. When the individuals thus painted are Disraeli and Gladstone, Lord Randolph Churchill and Sir Charles Dilke, the Marquis of Hartington, Mr. Forster, and Sir Wilfrid Lawson, with a long list of similar names, the matter offers a double interest. Our readers may not have a personal knowledge of Major O'Gorman, but, after perusing this volume, they will not only be well acquainted with him, but have found him a source of amusement almost equal to Mr. Pickwick himself. The best way to give an idea of the book would be to quote some samples at once of the fun and the vigor of description; but, on turning it over, we are at a loss to select among the scenes which succeed each other with kaleidoscopic rapidity. We may refer, however, to the entrance of Sir Hardinge Gifford into Parliament on page 190, and the description of Mr. Gladstone on page 450. The historical value of such photographs, as it were, of men and events is also very great. What would one not give to have similar records of Lord North's Parliament, or of the times of Pitt and Fox and Burke.

The title speaks of two Parliaments, but this volume covers only that—the last but one—in which the Conservatives held office. We sincerely trust that Mr. Lucy will give us another volume, with the account of Mr. Gladstone's Administration, which would certainly be not less rich in material.

Genealogy of the De Veaux Family. Introducing the numerous forms of spelling the name by various branches and generations in the past eleven hundred years. By Thos. F. De Voe. 1885. 8vo.

THIS book contains a great deal of information in regard to the descendants of Frederick de Veaux, who is said to have been one of a Huguenot family which sought safety in Mannheim. At all events, the officials of that city gave him a passport in 1675, and he soon after came to New York, where Nicholas and Daniel de Veaux, his presumed brothers, had settled a year or two earlier. Frederick married Hester Tourneur and settled on Harlem River. His descendants have been numerous, and the story of the family is told with particularity. Owing to the utter lack of system in arrangement, the casual reader will find it impossible to form any idea of the narrative. He will, however, find abundant evidence of the patient care and industry of the compiler, and he will light upon a good many interesting bits of information. It is a pity that so good work should be so badly set forth. A good index lessens the defects, and at least the book is entitled to a respectable place on the collector's shelves.

Register of the University of Oxford. Vol. I. 1449-63, 1505-71. Edited by the Rev. C. W. Boase, M.A., Fellow of Exeter College, Oxford. Oxford: Printed for the Oxford Historical Society at the Clarendon Press. 1885. 8vo, pp. 363.

THIS initial volume of the publications of the Oxford Historical Society contains all the records remaining for the period embraced therein. It is emphatically a book of reference, since the annotations upon the most suggestive names are limited to a line or two. But to the antiquary the dates will be of the highest value as an authoritative statement, easily accessible. "The next volume will combine the matriculations and degrees together, and be especially valuable for the literary history of the Elizabethan and early Stuart age." Such is the attractive promise of the editor, and the present work is a sufficient earnest of the result. The present volume must have required an immense amount of labor on the part of the editor, and its appearance carries with it the assurance that implicit confidence can be placed upon its accuracy. The Society has begun well, and there can be no doubt that it will earn for itself an honorable position.

BOOKS OF THE WEEK.

Behnke-Browne. The Child's Voice: its Treatment with Regard to After Development. Chicago: A. N. Marquis & Co. 60 cents.

A number of Short Stories, Poems, and Articles of Interest upon Current Topics also appear.

For sale by all newsdealers. 25 cents per copy, $3 per annum.

J. B. LIPPINCOTT COMPANY,
PUBLISHERS,
715 and 717 Market St., Philadelphia.

HARVARD UNIVERSITY,
CAMBRIDGE, MASS.,
Lawrence Scientific School.

Four years' courses are given in I, Civil Engineering; II, Chemistry; III, Natural History (Biology or Geology); IV, Mathematics and Physics. The degrees given are Civil Engineer and Bachelor of Science. Graduates of colleges can enter with advanced standing of one or two years.

Persons who are not candidates for a degree may enter the School as Special Students at any time, without examination, and pursue any of the courses of instruction for which they are found competent. Address the Dean of the Lawrence Scientific School.

JUST ISSUED:

SWINTON'S
Sixth or Classic English Reader.

An Advanced Number in the well-known Series of School Reading Books by Wm. Swinton.

Designed for the Upper Grades of Grammar Schools, and for High Schools, Academies, and Seminaries.

CONTAINING representative selections from the writings of ten British and ten American authors, chronologically arranged, with critical sketches of the Life and Works of each, with annotations.

By its method and scope, the Classic English Reader not only provides a manual for advanced classes in keeping with the high character of the general series, but also forms, with its biographical and critical notes, a sterling text-book of English literature.

Cloth. 16mo. 608 pages.

Sent, post-paid, for examination with a view to introduction, on receipt of $1.

IVISON, BLAKEMAN, TAYLOR & CO.,
PUBLISHERS,
753 and 755 Broadway, New York.

Dr. Sauveur's Educational Works.

A copy of any of Dr. Sauveur's Works will be sent to teachers by the author, on receipt of half the retail price.

Schools can obtain from Dr. Sauveur his new volume, '*Grammaire Française pour les Anglais*,' at the introduction price of 80 cents, and the '*Corrigé des Exercices de la Grammaire Française*' at 25 cents. The books are sent C. O. D., unless otherwise agreed upon. Descriptive circulars will be sent to applicants.

Address DR. L. SAUVEUR,
GERMANTOWN, PA.

STUDIA BIBLICA: Essays in Biblical Archæology and Criticism, and Kindred Subjects. By Members of the University of Oxford. 8vo, $2.75.

*THE MATHEMATICAL THEO-*ry of Electricity and Magnetism. By H. W. Watson, D.Sc., F.R.S., and S. K. Burbury, M.A. Vol. I. Electrostatics. (Clarendon Press Series.) 8vo, $2.75.

EDUCATIONAL WORKS.

A New Algebra for Schools.

ELEMENTARY ALGEBRA FOR

Schools. By H. S. Hall, B.A., and S. R. Knight, B.A. 16mo, 90 cents; with answers, $1.10.

"This latest algebra is one, however, that has so many points of excellence, as compared with its predecessors, that no apology is needed for its issue. The following features are easily recognized: The practical side of the subject, and its most interesting applications, such as easy equations, are introduced earlier than usual; and very complex expressions are postponed until the operations of algebra have been explained by means of simple expressions. The plan always adopted by every good teacher, of frequently recapitulating and making additions at every recapitulation, is well carried out here."—*The Schoolmaster.*

A New Course.

MACMILLAN'S LATIN

Course. First Year. By A. M. Cook, M.A., Assist. Master at St. Paul's School. 16mo, 65 cents.

"There are some excellent features in this work. The exercises are numerous; the same words crop up from time to time, and in different relations throughout the exercises; and easy and interesting narratives are introduced at a much earlier stage than usual. We have been greatly pleased with the whole preparation and arrangement of the work. . . . It is the very book to put in the hands of young beginners in Latin; and even they will find the exercises by no means dull, but even interesting work."—*The Schoolmaster.*

New York, 112 Fourth Avenue.

JUST PUBLISHED.

Life and Reminiscences of

GUSTAVE DORÉ.

By BLANCHE ROOSEVELT. 1 Vol., 8vo, extra cloth, gilt top (in box). Price, $7.50.

This volume has been compiled from material supplied by his family and friends and from personal recollections, and contains several hundred illustrations, many of which have never before been published.

The Dutch School of Painting.

By HENRY HAVARD. Translated by G. POWELL, and Edited by JOHN C. L. SPARKES, Principal of the South Kensington Art School. With over one hundred illustrations and index. Crown 8vo, extra cloth, gilt top. Price, $2.00.

THE NOVEL OF THE YEAR.

AS IT WAS WRITTEN.

A JEWISH MUSICIAN'S STORY.

By SIDNEY LUSKA. 1 Vol., 16mo, extra cloth. Price, $1.00.

Mr. E. C. STEDMAN says of this work: "I have read the proof-sheets of 'As It Was Written,' Mr. Luska's romance of Jewish life in New York. Its intensity, picturesqueness, and exciting narration are in sharp contrast with the works of our analytic novelists. There is the ferment of youth in this story, but with it a fresh imagination, an instinct for language and color, and a touch of genius that bodes well for your new author."

The Parson o' Dumford.

A STORY OF LINCOLN FOLK.

By GEO. MANVILLE FENN. 1 Vol., 12mo, cloth. New Style. Price, $1.00.

The World's Workers.

A series of new and original vols. by Popular Authors, with Portraits, in large 12mo vols. of 128 pp. each, and bound in extra cloth, colored inks.

Price, per vol., 50 cents.

The Nation

VOL. XLI.—NO. 1056. THURSDAY, SEPTEMBER 24, 1885. PRICE 10 CENTS.

New Medical Books.

I.

The Use of the Microscope

In Clinical and Pathological Examinations. By Dr. CARL FRIEDLAENDER, Privat Docent in Pathological Anatomy at Berlin. Translated from the enlarged and improved second edition by HENRY C. COE, M.D., etc. With a Chromo-lithograph. 12mo, x + 195 pages, cloth. Price, $1 50.

"A brief description of those methods which are adopted in microscopical examinations, conducted for diagnostic and pathological purposes. These same methods, which twenty years ago were extremely simple, have gradually become more complicated and have, in many respects, been very essentially improved and refined."—*From Preface.*

II.

A Treatise on Nervous Diseases.

THEIR SYMPTOMS AND TREATMENT. A Text-Book for Students and Practitioners. By SAMUEL G. WEBBER, M.D., Clinical Instructor in Nervous Diseases, Harvard Medical School. 8vo, ix + 415 pages, cloth. Price $3 00.

"This book was commenced with the purpose of writing briefly, and including what is most essential for the study of nervous diseases, within as small a compass as possible. . . . An effort has been made to describe the symptoms with sufficient detail to render easy the recognition of a case in practice."—*From Preface.*

III.

A Practical Treatise on the Diseases of Children.

By ALFRED VOGEL, M. D., Professor of Clinical Medicine in the University of Dorpat, Russia. Translated and edited by H. RAPHAEL, M. D., formerly House Surgeon to Bellevue Hospital. *Third American from the eighth German edition, revised and enlarged.* Illustrated by Six Lithographic Plates. One volume, 8vo, xii + 640 pages, cloth. Price, $4 50.

"The exhaustion of the second American edition of this work, and the new subjects introduced into the author's revised edition, are my reasons for presenting a third edition in English, corrected and enlarged. The new matter comprises all that is contained in the author's eighth German edition."—*Translator's Preface.*

IV.

Elements of Modern Medicine,

INCLUDING PRINCIPLES OF PATHOLOGY AND THERAPEUTICS, WITH MANY USEFUL MEMORANDA AND VALUABLE TABLES FOR REFERENCE. Designed for the Use of Students and Practitioners of Medicine. By R. FRENCH STONE, M. D., Professor of Materia Medica, Therapeutics, and Clinical Medicine in the Central College of Physicians and Surgeons, Indianapolis, etc. 12mo, xii + 369 pages, leather, with pocket and tuck. Price, $2 50.

"It has been suggested that an abridged work presenting the more advanced views of leading authorities throughout the world, with reference to *general pathology and therapeutics*, considered in connection with certain other points of practical importance, if arranged for convenient and ready reference (and of suitable form to be carried in the pocket) might prove of infinitely more value to a busy practitioner than many larger and more cumbrous volumes which fill the shelves of our libraries."—*From Preface.*

For sale by all booksellers; or either work sent by mail, post-paid, on receipt of price.

D. APPLETON & CO., Publishers,
1, 3, & 5 Bond Street, New York.

Of Mr. Roe's stories, three-quarters of a million volumes have been sold.

DODD, MEAD & COMPANY have just published a first edition of twenty-five thousand copies of AN ORIGINAL BELLE: a novel by Edward P. Roe. 12mo, cloth, $1.50. The scenes of this story are laid in New York during the time of the Civil War, and the plot reaches its culminating point during the stirring events of the New York riots, where the hero makes hasty love to the music of "the wild mob's million feet."

At the same time [illegible] published DRIVEN BACK TO E[illegible] by Mr. Roe. 12mo, cloth, $1.50. This [illegible]s to be a book for young people, but [illegible] read with equal interest by those of older years. It narrates the affairs of a family who give up life in the city and take a farm. As they are obliged to earn their living, the book is largely practical. The volume contains many beautiful illustrations, and is issued uniform in size, etc., with the other books by this author.

DODD, MEAD & COMPANY,
New York.

LITTLE, BROWN & CO., Publishers,
254 Washington St., Boston.

D. Appleton & Co.

HAVE JUST PUBLISHED:

Without a Compass.

A Novel.

By FREDERICK B. VAN VORST.

12mo, cloth. Price, $1 50.

'Without a Compass' is a powerful story of social life in New York, written by a member of one of its well-known families. While the scene is laid in New York, however, the interest of the story depends upon passions and experiences common to all places—that is to say, it is not a local story merely, although local characteristics are touched upon, but a romance involving the deepest emotions of which human beings are capable.

D. Appleton & Co. have recently published:

THE OLD DOCTOR. A Romance of Queer Village. By JOHN VANCE CHENEY. 16mo, paper cover. Price, 50 cents.

WHY WE BELIEVE THE BIBLE. An Hour's Reading for Busy People. By J. P. T. INGRAHAM, S. T. D. 16mo, cloth. Price, 60 cents.

THE STUDY OF POLITICAL ECONOMY. Hints to Students and Teachers. By J. LAURENCE LAUGHLIN, Ph. D., Assistant Professor of Political Economy in Harvard University. 16mo, cloth. Price, $1 00.

THE MONEY-MAKERS: A Social Parable. New cheap edition. 16mo, paper cover. Price, 50 cents.

A VAGRANT WIFE. A Novel. By FLORENCE WARDEN, author of 'The House on the Marsh,' 'A Prince of Darkness,' etc., etc. 12mo, paper cover. Price 25 cents.

GLENAVERIL; or, The Metamorphoses. A Poem in Six Books. By the EARL OF LYTTON, author of 'Lucile.' 1 vol., 16mo, cloth. Price, $1 50.

THE MAURICE MYSTERY. A Novel. By J. ESTEN COOKE, author of 'The Virginia Comedians,' etc. 12mo, paper. Price, 25 cents.

CATTLE-RAISING ON THE PLAINS OF North America. By WALTER BARON VON RICHTHOFEN. 12mo, 102 pages, cloth. Price, 75 cents.

A PRINCE OF DARKNESS. A Novel. By FLORENCE WARDEN, author of 'The House on the Marsh,' etc. 12mo, paper. Price, 25 cents.

STRUCK DOWN. A Novel. By HAWLEY SMART, author of 'Breezie Langton,' 'A Race for a Wife,' etc. 12mo, paper. Price, 25 cents.

THE ADVENTURES OF HARRY MARLINE; or Notes from an American Midshipman's Lucky Bag. By ADMIRAL PORTER, author of 'Allan Dare and Robert le Diable,' etc. With Illustrations. 8vo, 378 pages, paper. Price, $1 00.

A NEMESIS; or, Tinted Vapors. A Novel. By J. MACLAREN COBBAN, author of 'The Cure of Souls.' 12mo, paper. Price 25 cents.

COLONEL ENDERBY'S WIFE. A Novel. By the author of 'Mrs. Lorimer.' 12mo, paper. Price, 50 cents.

RIVERVIEW ACADEMY.—FITS FOR any College or Government Academy, for Business and Social Relations. U. S. officer, detailed by Secretary of War, Commandant. Springfield Cadet Rifles.
BISBEE & AMEN, Principals.

NEW YORK, Rochester, 17 Grove Place.

MISS MARY A. DOOLITTLE'S Boarding and Day School for Young Ladies will reopen September 14, 1885.

NEW YORK, Rye.

PARK Institute for Boys, 24 miles from N. Y. on L. I. Sound. Rev. D. B. RATHBUN, M.A., S.T.B.

NEW YORK, Sing Sing.

DR. HOLBROOK'S MILITARY School.—Reopens Wednesday evening, September 16th.
Address Rev. D. A. HOLBROOK, Ph.D.

NEW YORK, Sing Sing.

MT. PLEASANT MILITARY ACA- demy, a select Boarding-School for Boys. The course of instruction embraces the following departments: Classical, Modern Languages, Elementary, Mathematical, English Studies, and Natural Science. Classes are also formed in Music, Drawing, Fencing, and Elocution. A thoroughly organized Military Department, Riding School, Model Gymnasium, and Workshop. Will reopen Thursday, Sept. 17. J. HOWE ALLEN, Principal.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—A Military Boarding School for Boys. $350 per annum.
WILFRED H. MUNRO, A.M., President.

NEW YORK, Utica.

MRS. PIATT'S SCHOOL for YOUNG Ladies.—The next school year begins Thursday, Sept. 17, 1885. Applications should be made early.

NEW YORK, West New Brighton, Staten Island.

ST. AUSTIN'S SCHOOL.—Church School of the highest class. Terms, $500. Rector, Rev. Alfred G. Mortimer, B.D.; Ass'ts: Rev. G. E. Cranston, M.A., Rev. W. B. Frisby, M.A., Rev. B. S. Lassiter, M.A., Rev. E. Barlow, M.A., W. F. Rees, B.H., Mr. R. H. Hicks, and others.

OHIO, Cincinnati.

MOUNT AUBURN INSTITUTE FOR Young Ladies.—Family and Day School; beautiful location; large grounds; thorough Scholarship; best Music and Art advantages.
Fall session opens September 23.
Address H. THANE MILLER, President.

OHIO, Cincinnati, 28 Auburn Ave., Mt. Auburn.

MISS ARMSTRONG'S SCHOOL FOR Young Ladies and Misses.
Fall term opens Sept. 23, 1885. Application should be made early.
Circulars contain full information.

OHIO, Cincinnati, 166 W. Seventh St.

MISS STORER AND MISS LUPTON will reopen their School Sept. 23, 1885. They aim to lay the foundation of a sound general education, or to prepare pupils for the Harvard examination or any college open to women. For circulars or any further information, inquire in person or by letter at the School house.

OHIO, Cincinnati, Walnut Hills.

MISS NOURSE AND MISS ROBERTS will reopen their English and French Family and Day School Sept. 23. The Home and School are separate. Particulars from circular.

PENNSYLVANIA, Bustleton.

ST. LUKE'S BOARDING SCHOOL for Boys reopens Sept. 16, 1885. C. H. STROUT, Prin.

PENNSYLVANIA, Germantown, 5128 Germantown Avenue, Phila.

FRANKLIN SCHOOL.—A NEW ENG- lish and Classical School for Boys—will open Sept. 21, 1885. Provision is made for six resident pupils. The Prospectus for 1885-6, giving the full course of study, will be sent on application. References: William Pepper, M.D., LL.D., Provost of the University of Pennsylvania; Rev. Thomas Hill, D.D., ex-Pres. of Harvard University, and others. GEORGE A. PERRY, A.M., Head-Master,

PENNSYLVANIA, Germantown, 126 Price St.

MRS. HEAD'S SCHOOL FOR YOUNG Ladies and Little Girls reopens Sept. 22, 1885. Students prepared for a University Course. Four pupils received as boarders.
French taught by Dr. LAMBERT SAUVEUR and Mrs. E. L. VAN PELT. Dr. SAUVEUR'S classes will be open to Special Students of French and Latin.

PENNSYLVANIA, Philadelphia, Locust and Juniper Streets.

ACADEMY OF THE PROT. EPIS. Church.—Founded A. D. 1785. One hundred and first year begins Sept. 17. Prepares for College, Scientific Schools, and Business.
JAMES W. ROBINS, D.D., Head Master.

PENNSYLVANIA, Philadelphia, 50th St. and Woodland Ave.

DIVINITY SCHOOL OF THE PRO- testant Episcopal Church in Philadelphia.—The next year begins on *Thursday, September* 17, with a complete faculty and improved opportunities for thorough work. *Special* and *Post-Graduate* courses as well as the regular three years' course of study. Griswold Lecturer for 1885, Archdeacon Farrar. For information, etc., address the Dean, Rev. EDWARD T. BARTLETT.

PENNSYLVANIA, Philadelphia, 2106 Spruce St.

MISS M. S. GIBSON'S FAMILY AND Day School for Young Ladies and Little Girls (formerly 1519 Walnut St.) will reopen September 24.

PENNSYLVANIA, Philadelphia, 1833 Chestnut St.

MISS L. V. SMITH'S English and French Boarding and Day School for Young Ladies and Children will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, Norwood Avenue, Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's English and French Boarding and Day School for Young Ladies will reopen Sept. 21.

PENNSYLVANIA, Swarthmore.

SWARTHMORE COLLEGE.—THIRTY minutes from Broad Street Station, Philadelphia. Under the care of Friends, but all others admitted. Full college course for both sexes; Classical, Scientific, and Literary. Also a preparatory school. Healthful location, large grounds, new and extensive buildings and apparatus. For Catalogue and full particulars address EDWARD H. MAGILL, A.M., President.

PENNSYLVANIA, West Philadelphia.

UNIVERSITY OF PENNSYLVANIA.
I. DEPARTMENT OF ARTS, four-years' classical course. Degree A. B.
II. TOWNE SCIENTIFIC SCHOOL, five-year courses in (a) Chemistry, (b) Geology and Mining, (c) Civil Engineering, (d) Dynamical Engineering, (e) Architecture, leading to B. S., and to technical degrees, P. C. (Practical Chemist), M. E., C. E., E. M., Architect.
III. WHARTON SCHOOL OF FINANCE AND ECONOMY. Courses in Constitutional Law and Public Administration, Political Economy, Mercantile Law and Practice, Finance, Banking, Railroading. Degree Ph. B.
IV. COURSE IN PHILOSOPHY, four years. English, Latin, French, German, Mental and Moral Philosophy, Mathematics, General Science, extended instruction in Biology with laboratory work. Degree Ph. B.
Liberal electives in and between these courses at close of Second Year.
V. COURSE IN MUSIC. Two-years' graded course. Degree Mus. Bac.
VI. MEDICAL SCHOOL. Three-years' graded course with optional fourth year. Degree M. D.
VII. DENTAL SCHOOL. Two-years' graded course. Degree D. D. S.
VIII. VETERINARY SCHOOL. Three-years' graded course similar to European schools. Degree V. S.
Clinical and laboratory advantages a prominent feature in these three schools.
IX. LAW SCHOOL. Two-years' course; diploma admits to Pennsylvania Bar. Degree LL. B.
X. BIOLOGICAL SCHOOL. Two-years' course, with extended laboratory work. Certificate admits to Medical School without examination. Special courses.
XI. DEPARTMENT OF PHILOSOPHY. Two years' post-graduate course in numerous subjects leading to degree Ph. D.
In making inquiry please specify department.
Rev. JESSE Y. BURK, Secretary,
University of Pennsylvania, West Philadelphia, Pa.

PENNSYLVANIA, West Philadelphia, 3903 Locust St.

MR. GEORGE F. MARTIN'S SCHOOL for Boys, will reopen September 21. Provision is made for five resident pupils. Course of study arranged with especial reference to the demands of the University of Pennsylvania. References: the Provost and Vice-Provost of the University.

MACMILLAN & CO.'S NEW BOOKS.

Monthly, Price 15 Cents; Annual Subscription, $1.75.

COMMENCING THE THIRD VOLUME.

The English Illustrated Magazine.

NO. 25. OCTOBER. *Will be ready on the 30th inst.*

CONTENTS:

1. RYE. Engraved by Lacour from a Drawing by J. R. Wells.
2. THE INTERPRETERS. A Poem. Algernon Charles Swinburne.
3. LONDON COMMONS. Part I. Robert Hunter.
Illustrations: Headpiece.—Near the Windmill, Wimbledon.—The "Old Manor House," Barnes Common.—On Barnes Common.—Wandsworth Common.—Clapham Common.
4. SAUCY KITTY CLIVE. J. Fitzgerald Molloy.
5. DECAYED SEAPORTS. Bernard H. Becker.
Illustrations: Blakeney.—Decay.—Condemned.—Sandwich.—The Old Bridge and Barbican.—Sandwich from the Marshes.—Mistlay.—Rye, Ypres Tower, and Entrance to the Harbor.—Wells and the Entrance to the Harbor.—Woodbridge and the Entrance to the Deben.—Cley-next-the-Sea.
6. SINGING AND LOVING. W. F. B.
7. THE INCOMPLETE ANGLER. Basil Field.
Illustrations: Mr. Trimmer and White-Headed Bob.—Initial.—Mr. Stubbs.—"Are You Ready?"
8. ADVENTURES ON THE EQUATOR. Joseph Hatton.
Illustrations: Principal Street in Elopura.—Head of a King.—At Coal Point, Labuan.—The Quay, Sandukan Bay.—On the Kinaram River.—On his Last Expedition.—"Good-By."
9. AUNT RACHEL. D. Christie Murray.
ORNAMENTAL FRIEZES, HEADINGS, AND INITIAL LETTERS.

A NEW GIFT BOOK.

English Illustrated Magazine, 1885.

A Handsome Volume, consisting of 840 closely printed pages, and containing nearly 500 Woodcut Illustrations of various sizes, bound in extra cloth, colored edges, price, $2.50.

Among the chief Contents of the Volume will be found:

H.M.S. "BACCHANTE" at the ANTIPODES. By Prince Edward and Prince George of Wales.
A FAMILY AFFAIR. A Novel, complete. By Hugh Conway, author of 'Called Back,' etc.
PRIMROSES and COWSLIPS. By Grant Allen.
IN CANTERBURY CATHEDRAL. By the author of 'John Halifax, Gentleman.'
IN the LION'S DEN. By the author of 'John Herring.'
IMITATIONS of ROUMANIAN LAYS. By W. Beatty-Kingston.
CHINA-MAKING at STOKE-ON-TRENT. By Bernard H. Becker.
STUDY for the PICTURE of KING COPHETUA and the BEGGAR-MAID. By E. Burne-Jones, A.R.A.
THOMAS GAINSBOROUGH, R.A. By J. Comyns Carr.
THOUGHTS in a HAMMOCK—THE SIRENS THREE. By Walter Crane. Illustrated.
The GIRL at the GATE. By Wilkie Collins.
The SQUIRE at VAUXHALL. By Austin Dobson.
CHRISTMAS in the KHYBER PASS—INTERVIEWED by an EMPEROR—WOLSELEY: a Character Sketch. By Archibald Forbes.
A SHIP of '49. By Bret Harte.
The ART of ACTING. By Henry Irving.
The PATH of DUTY. By Henry James.
ST. GUIDO. By Richard Jefferies. With Illustrations by Alfred Parsons.
The DRAMATIC OUTLOOK. By Henry A. Jones, joint author of "The Silver King."
SHAKESPEARE'S COUNTRY. By Rose Kingsley.
The GREAT FEN. By S. H. Miller. With Illustrations by Robert Macbeth, A.R.A.
ETON. By Mowbray Morris.
SCHWARTZ: a History. By D. Christie Murray.
HEIDELBERG. By M. O. W. Oliphant.
CLOVELLY. By Frederick Pollock.
The LITTLE SCHOOLMASTER MARK. Part II. By J. H. Shorthouse.
The BABY'S LULLABY. After a Picture by L. Alma Tadema, R.A.
The BIRTHDAY. After a Picture by Mrs. Alma Tadema.
The LONDON RAGAMUFFIN. By Dorothy Tennant.
OUR MISSION to ABYSSINIA. By Frederick Villiers.

THE LIGHT OF ASIA AND THE LIGHT OF THE World: a Comparison of the Legend, the Doctrine, and the Ethics of the Buddha, with the Story, the Doctrine, and the Ethics of Christ. By S. H. Kellogg, D.D., Professor in the Western Theological Seminary, Allegheny, Pa. 12mo, $2.

MALTHUS AND HIS WORK. By James Bonar, M.A., Balliol College, Oxford. 8vo, $4.

"Mr. Bonar has performed a useful service to students of political economy in presenting them with this careful account of the life and teaching of Malthus. . . . He writes with a thorough knowledge of the economist he is expounding. His book will be read with interest."—*St. James's Gazette.*

FORENSIC FACTS AND FALLACIES: a Popular Consideration of Some Legal Points and Principles. By Sydney E. Williams, Barrister-at-Law. 12mo, $1.50.

NEW EDUCATIONAL WORKS.

ELEMENTARY CLASSICS—NEW VOLUMES.

AESCHYLUS.—PROMETHEUS VINCTUS. Edited, with Introduction and Notes, by Rev. H. M. STEPHENSON, M.A. *[Immediately.*

CICERO.—DE AMICITIA. Edited with Notes, Vocabulary, and Biographical Index, by E. S. SHUCKBURGH, M.A. 18mo. 40 cents.

XENOPHON.—The STORY of CYRUS. Selected from the Cyropaedia, and Edited, with Notes, Vocabulary, and Exercises, by Rev. A. H. COOKE, M.A. *[Immediately.*

CLASSICAL SERIES.—NEW VOLUMES.

ANDOCIDES.—DE MYSTERIIS. Edited by W. J. HICKIE, M.A., late Assistant Master in Denstone College. Fcap. 8vo. 60 cents.

HORACE.—The EPISTLES and ARS POETICA, Edited by A. S. WILKINS, M.A., LL. D., Professor of Latin in Owens College, Manchester. $1.60.

LIVY.—Books XXIII. and XXIV. Edited by G. C. MACAULAY, M.A., Assistant Master at Rugby. *[Immediately.*
*** This Edition will be uniform with Mr. Capes's well-known Edition of Books XXI. and XXII.

A NEW LATIN COURSE.

MACMILLAN'S PROGRESSIVE LATIN COURSE.
FIRST YEAR. By A. M. COOK, M.A., Assistant Master at St. Paul's School. Globe 8vo. 65 cents.
This Course differs from existing books mainly in being easier and more abundantly supplied with examples in illustration of each rule.

LATIN PROSE after the BEST AUTHORS. Part I. CAESARIAN PROSE. By F. P. SIMPSON, B.A., Balliol College, Oxford. Globe 8vo. 60 cents.

An INTRODUCTION to LATIN ELEGIAC VERSE COMPOSITION. By J. H. LUPTON, M.A. Globe 8vo. *[Immediately.*

SCIENCE AND MATHEMATICS.

LESSONS in ELEMENTARY PRACTICAL PHYSICS. By Professor BALFOUR STEWART, M.A., LL.D. F.R.S., and W. HALDANE GEE. Vol. I. GENERAL PHYSICAL PROCESSES. With illustrations. 12mo. $1.50.
The *Athenæum* says: "It is clearly and judiciously written, and is a great advance upon anything of the same kind previously existing in the English language."

TEXT-BOOK OF GEOLOGY. By Archibald Geikie, F.R.S., Director-General of the Geological Survey of the United Kingdom. With numerous illustrations. Second Edition (Fifth Thousand), Revised and Enlarged. Medium 8vo. $7.50.

A COURSE OF PRACTICAL INSTRUCTION in BOTANY. By F. O. BOWER, M.A., F.L.S., and SYDNEY H. VINES, M.A., D.Sc., F.R.S. With a Preface by W. T. THISELTON DYER, M.A., C.M.G., F.R.S., &c. Part I. PHANEROGAMAE—PTERIDOPHYTA. 12mo. $1.50.

An ATLAS of PRACTICAL ELEMENTARY BIOLOGY. By G. B. HOWES, Demonstrator of Biology, Normal School of Science and Royal School of Mines. With a Preface by THOMAS HENRY HUXLEY, P.R.S. Small 4to. $4.

A NEW ALGEBRA FOR SCHOOLS.

ELEMENTARY ALGEBRA FOR SCHOOLS. By H. S. HALL, B.A., Master of the Military and Engineering Side, Clifton College, and S. R. KNIGHT, B.A., late Assistant Master at Marlborough College. In Globe 8vo. Price 90c.; with Answers $1.10.

MODERN LANGUAGES.

FOREIGN SCHOOL CLASSICS. Edited by G. Eugene FASNACHT, Assistant Master in Westminster School. New Volumes.

SANDEAU, JULES.—Mademoiselle de la Seigliere, Edited by H. C. STEEL, M.A. 18mo. 40 cents.

VOLTAIRE.—CHARLES XII. Edited, with Historical and Grammatical Notes, by G. E. FASNACHT. 18mo. 90 cents.

DUMAS, ALEXANDRE.—Les DEMOISELLES de ST. CYR. Edited, with Introduction and Notes, by Victor Oger. *[Just Ready.*

PRIMARY SERIES of FRENCH and GERMAN Reading Books. Edited by G. Eugène Fasnacht, Assistant Master in Westminster School.

DE MAISTRE.—La JEUNE SIBERIENNE et le Lépreux de la Cité D'Aoste. Edited, with Introduction, Notes, and Vocabulary, by S. Barlet, B.Sc. Globe 8vo. 40 cents.

GRIMM.—KINDER und HAUSMARCHEN. Selected and Edited, with Notes and Vocabulary, by G. E. Fasnacht. Illustrated. Globe 8vo. 60 cents.

HAUFF.—Die KARAVANE. Edited, with Notes and Vocabulary, by Herman Hager, Ph.D. Illustrated. Globe 8vo. *[Immediately.*

La FONTAINE.—FABLES. A Selection. With Introduction, Notes, and Vocabulary, by L. M. Moriarty, B.A. With Illustrations by Randolph Caldecott. Globe 8vo. 50 cents.

MACMILLAN'S PROGRESSIVE GERMAN READER.
First Year. Containing an Introduction to the German Order of Words, with copious Examples. Extracts from German Authors in Prose and Poetry, Notes, and Vocabularies. By G. Eugène Fasnacht. Globe 8vo. 55 cents.
The *Journal of Education* says: "The passages are well chosen—not hackneyed—simple and interesting. Full help is given; two-thirds of the book are notes and vocabulary. An Introduction gives clearly the chief rules for the order of words. A very thorough piece of work."

THEOLOGY.

GREEK TESTAMENT FOR SCHOOLS.

The NEW TESTAMENT in the ORIGINAL GREEK. The Text Revised by Brooke Foss Westcott, D.D., and Fenton John Anthony Hort, D.D. An Edition for Schools. 12mo, cloth, $1.10.; 18mo, roan, red edges, $1.25.

BIBLE READINGS from the PENTATEUCH and the Book of Joshua. Arranged and Edited by the Rev. John A. Cross. Globe 8vo. *[Next week.*

*** *CATALOGUES of MACMILLAN & CO.'S EDUCATIONAL WORKS and other Publications, free by mail on application.*

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 24, 1885.

The Week.

We have good reason to believe that the President will soon deal with the Bacon case in a manner which will satisfy all friends of good government, that neither he nor his Cabinet mean to permit or connive at such excesses as Hedden and Beattie have been guilty of. Pending an investigation of the whole case, Secretary Manning on Tuesday morning issued an order suspending Sterling from the public service, and called on the Collector to report to him all the facts. But we sincerely trust his action will not be confined either to getting rid of Sterling or putting Captain Bacon back. Nothing will prevent the repetition of such offences as Hedden's but the punishment of those who commit them. The undoing of what they do is not enough. The decapitation of Hedden or Beattie, or both, is what the occasion calls for. They have done more harm than if they had gone off with some of the Government funds, and it is harm of the same sort. Such people must be taught that appointments like Sterling's are the equivalent of theft, and will be dealt with as such.

The Democratic managers who are responsible for the Bacon removal, are shortsighted as usual. They are looking only to the securing of the support of the Brooklyn boss and his delegation in the nominating convention, unmindful both of the bad impression which their performances are making upon the independent voters, and of the valuable campaign ammunition which they are supplying to their opponents. Every Republican manager in the State has been hoping that the Bacon blunder would not be revoked by the President, because if allowed to stand it would be worth thousands of votes to the Republican ticket. What a boon it would be to the Republican platform, and what a sting it would give to its denunciation of the Democratic variety of civil-service reform. It would give the Republicans precisely what they want most—a live issue, which would attract to their side the independent voters who have hitherto been inclined to the Democratic side. The friends of Mr. Edward Cooper, in whose interest this blunder is generally believed to have been committed, make a serious miscalculation if they think it would be easy work to elect him if he were to be nominated through such means. He would go before the people as the representative of those very men and methods which the independent voters of the State most heartily detest, and it would be simply a matter of duty on their part to do their utmost to compass his defeat.

What actually preceded Captain Bacon's removal was this: He was notified to call at the office of the Collector at a time when that officer was absent at Saratoga. He did so call, and was then and there requested by Mr. Parker, Mr. Hedden's private secretary, to resign, with the alternative of prompt dismissal. He asked what the charges against him were, and was told by Mr. Parker that "it was not a matter of charges." Captain Bacon refused to resign, and Mr. Parker then said that (it was Saturday afternoon) further action would be postponed till Monday. Captain Bacon then went to the office of Mr. Beattie, the Surveyor, from whom, as the official superior of the weighers, charges, if there were any, should have come, and Mr. Beattie disclaimed all participation in the request for the resignation, and said it was the Collector's affair. This was, we believe, about a month ago. When the dismissal came it was signed by Berry, the Collector's special deputy. It will thus be seen that the Collector has been avoiding all personal contact with Captain Bacon in this matter, and all direct share in the job of getting rid of him, which will confirm people's impression of Mr. Hedden's weakness. His present *ex-post-facto* activity in getting up "charges" indicates, however, something worse than weakness.

A literary fraud of a peculiarly vulgar type has been committed by the Southern periodical *Dixie*, which published in its last number an article on the tariff question, the authorship of which was ascribed to the Hon. Samuel J. Randall. The most important part of this article, looking at Mr. Randall's position of leadership among the protectionist Democrats, was the declaration, commented upon by us last week, that the tariff needs thorough revision. Such a judgment seemed to go far to settle a point much disputed among the high-tariff people, who for the most part have been opposed to any tariff revision whatever. The remainder of the article appeared to be a restatement of Mr. Randall's economic views as defined in public speeches with which the public were already tolerably familiar. Mr. Randall now says that he has written no article whatever for *Dixie*, and that the one purporting to be his is a home manufacture for which he is not responsible. This announcement has created a good deal of surprise and excitement at Atlanta, the local habitation of the periodical. The *Dixie* people say in reply that they asked Mr. Randall to write them an article on the tariff question, and that he sent them a collection of his speeches with certain leaves turned down and certain passages marked, and that they, conceiving this to be Mr. Randall's method of writing magazine articles, cut out the marked passages, pasted them together, and published the resulting mosaic as an article under his name. This statement of the case sufficiently establishes the character of *Dixie* as a common cheat. It is only necessary to add that no importance is to be attached to Mr. Randall's declaration that the tariff needs revision until we know at what time, if ever, he made it. If it was made before the revision of 1883, it refers only to the circumstances of that time and has no present significance.

The continued and rapid decline in the price of silver has produced something like a panic in the London market, the quotation having fallen to 47d. per ounce. The cablegram announcing this fact says that it is the lowest point ever touched. This is a mistake. In July, 1876, silver fell to 46¾d., but did not long remain at that figure. It advanced almost as rapidly as it had declined, and remained comparatively steady for a year or two after the American coinage began under the Bland-Allison Bill. Then it began to sag little by little, but the decline did not become very rapid until the present year. Since the first of January the fall has been 2¾d. per ounce. But nearly all of this decline has been made within a few weeks. It is not easy to divine the causes of so rapid a fall, but it is probably due mainly to apprehensions of a suspension of coinage in the United States, and of a disruption of the Latin Monetary Union, and of demonetization in Holland. The great decline in 1876 was certainly due to apprehensions of general demonetization in Europe, for when these apprehensions were dispelled the price quickly recovered. It is worthy of remark that, great as has been the decline in silver within the past two years, the prices of both wheat and iron have declined even more.

The effect of the downward movement on public opinion in this country is likely to be salutary. The silver dollar is now worth only seventy-nine cents. The accumulation of these dollars in the Treasury represents a loss of more than four millions, counting only that portion owned by the Government and not represented by outstanding silver certificates. Counting the entire coinage since the Silver Bill was passed, the loss is upwards of ten millions, supposing that the silver could be sold at its present London quotation. But this is obviously impossible. Any attempt on our part to "realize" would send the price reeling downward indefinitely. What we have to do is to pocket our present loss, and avoid a greater one by stopping the coinage. The stock on hand owned by the Government, say $70,000,000, may be treated as a special fund to secure the parity between the silver dollar and the gold dollar so far as the former is in the hands of the people. The fund is large enough to secure this end in every contingency, and it ought to be applied to the purpose by melting the surplus dollars into bullion and selling it from time to time for what it will bring. There is no reason why silver should be "tailed up" at Government expense any more than cotton or cheese. The decline will necessarily close up the less productive mines, and, by lessening the supply, will eventually bring about an equilibrium in the market, which will be wholesome to the world. Until such an equilibrium is reached, the production of silver will be a form of gambling, where the winnings and losses will be determined by the action of governments and of monetary reunions. There is now hanging over the silver market $70,000,000 of dead stock in Germany, an equal amount in the United States, besides $15,000,000 which the Netherlands Government would like to be rid of. The future of the silver market is thus largely

dependent upon the arbitrary action of political bodies. If Germany had gone resolutely forward in 1876 and sold what she had to sell, regardless of consequences, and if the United States had kept out of the silver business altogether, the market would now be a natural one, and far more favorable to the producers than it can be with the present cloud hanging over it.

It is not to be expected that the acrimonious disputes between the sloop men and the cutter-men will be settled once and for all by the result of last week's yacht race, but there can be no doubt that the *Puritan* has proved herself, in a great variety of weather, one of the fastest and handiest boats ever constructed, and has furnished the sloop men with a very potent argument in support of their side of the case. She has beaten her opponent, undoubtedly one of the finest and fleetest cutters afloat, not only in light airs and smooth water, but in half a gale and a rough sea; not only in running free before the wind, but in working to windward. These are facts which cannot be gainsaid, and the cutter maniacs, as the sloop men call them, will be obliged to give more credit to the "skimming dishes" for general seaworthiness than they have been willing to do up to the present time. But the circumstances attending the defeat of the *Genesta* are not so absolutely fatal to the pretensions of the cutter as some of the sloop men would have the world believe. In singing the praises of the *Puritan* they must not forget that they are also paying tribute to the merits of the boat which crossed the winning line only two minutes or so behind her. It is possible, not probable perhaps, that if the race could be sailed again with conditions identical with those of Wednesday week, the cutter might be the winner. The margin between the rivals is evidently a narrow one, and one nautical reporter was bold enough to say that had a particular slant of wind which favored the *Puritan* fallen to the lot of the *Genesta*, the result of the contest would have been reversed.

The cutter men cannot pretend, of course, any longer that a centre-board sloop cannot compete successfully with a cutter in a thirty-five or forty-knot breeze, but they will certainly point out the fact that the *Genesta* carried her club-topsail when the *Puritan* found it advisable to house her topmast, as an indication of the cutter's superior stiffness in a hard blow, and, when they have recovered their spirits a little, it will not be long before they will be saying that although the *Puritan* succeeded in winning with the wind at thirty-seven knots, she would probably have been beaten in a forty or forty-five-knot breeze. In this way the arguments, of which there has been somewhat too much of late, may be prolonged indefinitely and to very little purpose. It is not likely, however, that the Englishmen will be in a great hurry to risk the reputation of their crack cutters in another contest against an American sloop for the *America's* Cup. After all, the great question of the relative merits of cutter and sloop is only difficult when an attempt is made to solve it arbitrarily by the comparison of single vessels. The advocates on either side seem to be agreed that their boats have special advantages in particular weather. It is therefore manifestly almost an impossibility to pit two representative boats of their respective classes against each other under conditions equally fair to both. Both types are the result of evolution, and are designed to meet special requirements.

The women registered on the poll-tax qualification as school voters in Boston numbered only 271 last year, and have risen this year to 1,843, most of the additions being Catholics. The Boston *Pilot*, the Catholic organ, denies that this increase is due to religious motives or ecclesiastical pressure, but the Protestants believe it nevertheless. The woman-suffragists, being twitted with it as a sign of what they are bringing on the country, say it is all true, but that it will do good by forcing the Protestant women to register also; and they apparently have a mysterious plan for turning the whole female vote, when it is registered, against the liquor dealers, and eliminating the religious question from the controversy.

Reports from Pennsylvania show that the Republican canvass for the election of Colonel Matt Quay to the Treasurership is dragging so heavily that there are fears that even last year's Republican majority of 81,000 may not be large enough to save the party from defeat. We should rejoice to have these reports verified by the result in November, but we have little hope that they will be. A State that could give 81,000 majority for such a candidate as Mr. Blaine, ought to take Colonel Quay without grumbling. If Pennsylvania Republicans had shown any squeamishness last year, Quay would not have been put before them now. It was because they grew so enthusiastic over Blaine that the Colonel thought they would rejoice at an opportunity to vote for him. He left out of the account the protection issue, which is not involved in his candidacy, and this may prove to have been a serious error, but we are not yet prepared to believe it fatal.

Mr. Dorman B. Eaton, the Chairman of the United States Civil-Service Commission, has placed his resignation in the President's hands, to take effect on the appointment of his successor, of whom the President is now in search. Mr. Eaton's retirement from office does not mean his retirement from the service of the cause which he has so much at heart, which is so much indebted to him, and to which he has given so unstintedly of his time and money during the last ten years. He intends to work for it still as a volunteer, but three years' close residence in Washington have made it impossible for him for hygienic reasons to work any longer in harness. His last official act of importance will probably be the argument of the Hinkley case to-morrow before Judge Wallace. As there is very little doubt that the suit is to all intents and purposes sham, and is meant simply to be kept going during the fall as campaign thunder, there is some danger that the promoters of it may try to get a postponement, or in some way to prevent a peremptory dismissal of it. They can only clear themselves from this suspicion by being ready to-morrow with all the law and logic they have at command. There is not the slightest foundation for the report, started by some Jeffersonian Democrat, that Mr. Eaton's resignation is due to any difference between himself and the President, or to any doubt on his part of the President's absolute sincerity as a civil-service reformer, or to any "trouble" of any kind "in the reform camp." On the contrary, there never was so much determination, or so much preparation, in that camp to keep the Jeffersonians moving, and prevent them from getting a dishonest living out of the Government.

A recent Washington despatch told of a practice which has grown up of construing ambiguous clauses in appropriation acts by reference to the estimates transmitted to Congress, or to the debates on the floor. This is not only a practice, in the ordinary sense of the word, but an established and defended usage. Nothing is more common than a search by Treasury officials, often protracted for days, through the *Record*, to discover the object or the amount of an appropriation act. Such clerks as appeared before the committees (for it has been customary for clerks to explain to the committees how much money was needed for certain purposes, and how it would be used) have always been expected to throw light upon the matter by telling what passed between them on the occasion. A recent illustration of this is Mr. Creswell's reference to what Secretary Bayard said as Senator on the floor concerning his salary as counsel for the United States before the Court of Commissioners of *Alabama* Claims. Mr. Bayard as Senator used language in debate which indicates that he considered that the counsel's compensation ought not to be dependent upon fees, but fixed at $8,000 per annum; and a citation of this, Mr. Creswell thought, would have its effect in the construction of the law by the Treasury officials. Heretofore it undoubtedly would have had such an effect. In the published decisions of the First Comptroller of the Treasury we find it laid down that though "the debates in Congress cannot *generally* [italics ours] be looked to as an aid in giving construction to an act, its general history and progress through Congress may," and that a reference to them "as a *kind of dictionary* [italics again ours] to show the sense in which words are used" may be made (iv. Decisions of First Comptroller, 536; v. id., 187). "Estimates," also, says the same judicial authority, "though they cannot be looked to for the purpose of construing the statute, may be consulted as evidence of the prevailing construction" (ii. id., 2d ed., 423). It is easy to pass from this to entire submission to the interpretation of a statute given by a member of Congress who was instrumental in securing its passage, when he visits the Treasury Department to look after the interests involved in it. Hereafter, we are glad to learn, the meaning of acts is to be gathered from no such sources.

The news comes from Rock Springs, Wyoming, that the returned Chinese miners have gone to work, that the white men who attacked them, murdering twenty or thirty and driving the remainder into a parched and rainless desert to perish of thirst, have struck, that General Manager Callaway has issued orders to pay them off and give them passes to leave the Territory, and that President Adams has tele-

graphed him that the directors of the Company will stand by him firmly to the end. Anonymous Kuklux letters have been received by officers of the Company, threatening destruction of life and property by dynamite if the Chinese are again employed, and there are mutterings at Omaha among the Knights of Labor on the subject of a general strike of that organization in favor of the Rock Springs assassins. The resolution taken by the directors of the Company, as indicated in President Adams's telegram, will receive the solid backing of the moral sentiment of the nation, profoundly shocked by the Rock Springs massacre. If the Knights of Labor fancy that they have anything to gain by publicly espousing the cause of a pack of gallows birds, with or without dynamite, the opportunity is now open to them. It is not often that a great corporation finds public opinion ranged altogether upon its side in a contest with its employees. The conditions of moral support could not be more favorable than they are in this case, while, looking at it from the lower standpoint of dollars and cents, it is plain that the Company is really fighting for the possession of its property, and has no alternative but to fight to the last extremity.

Judge Wallace's decision in the "Mikado" case, declining to enjoin the performance of that opera which is given with an orchestral "arrangement" built up from the published piano score, is in accordance with the one given by Judges Bond and Morris in the "Iolanthe" case in 1883. In the latter case, the Court held that when "once the composer of any work, literary, musical, or dramatic, has authorized its publication in print, his control over so much as has been published and of the use which others may make of it is at an end"; that the enterprising manager who should take the published piano score of a work, and, "by his independent skill and labor," make from it a full orchestral score, would compose what "is obviously so far an original work that it could itself be protected by copyright under our United States statutes." This is possibly a correct interpretation of the law, but what queer law it is. So long as a man does not print his composition he has a natural right of property in it under the common law which holds good anywhere; but as soon as he publishes it he loses that right and acquires instead a limited right (copyright) by statute. This limited right not only does not prevent another man from pirating the composer's work, but actually permits him to copyright his piracy.

There is little probability that Turkey will take any steps to undo what has been done by the insurrection in Eastern Rumelia, for the simple reason that, even if she had money or troops for a war, it would not pay her to begin operations in this case. As far as she is concerned, Rumelia is of no more importance than Bulgaria. Both pay tribute, or are supposed to pay tribute, to the Porte, but this is all the relation that exists between them and the Porte. If they do not pay it—and we do not believe Bulgaria has ever paid a cent—the Sultan has no means of collecting it. His troops are excluded from both, the only difference being that Eastern Rumelia has a Christian Governor-General appointed by him with the consent of the Powers, and that Turkish troops may be sent into the province on "the call" of the Governor-General, "if the internal or external security of the province should be menaced." As the province is now gone, and probably with the connivance of the Governor-General, the necessary "call" is not likely to be made. Moreover, Turkey had such an awful lesson in the last war of the danger of trying to suppress insurrections in her way, that she will probably never repeat the attempt in Europe at all events. In other words, she will not march into Eastern Rumelia, because she cannot tell what enemies she would there encounter. European opinion is, in fact, never likely again to allow Mussulman troops to attack Christians on European soil.

The truth is that Eastern Rumelia, as well as Bulgaria, was lost to the Porte forever by the war of 1877. Both were taken away from Turkey by the Treaty of San Stefano, but the retention of the province as nominally part of Turkish territory, with a Governor-General appointed by the Sultan, was a compromise conceded to Disraeli by the Berlin Treaty, to enable him to humbug his home public with the appearance of a triumph of some kind. He and everybody else knew that Eastern Rumelia would prove merely a shadowy creation, and its existence transitory. So that the news of the revolt and annexation is probably vexatious and surprising nowhere but in London, where it must dumbfound Lord Salisbury, as helping to destroy the Beaconsfield legend on which the Tory party has been living so long. The gradual disappearance of all traces of the Treaty of Berlin, which he brought back with so much pomp and ceremony, and which was expected to cover poor Gladstone with confusion and despair, must of course greatly discourage the Tory leader. But there is nothing to be done but protest.

Mr. Gladstone's manifesto distinctly announces that he has no immediate intention of retiring from the arena, and will seek reëlection from Midlothian. He defends his Afghan policy with success, and his Egyptian policy very lamely. In fact, he acknowledges the error of the occupation of Egypt and the still more terrible error of the war in the Sudan; but the only excuse he has to make for it is that the Opposition found no fault with it. This is a sad confession if it stops here, and does not lay a large part of the blame, of the war in the Sudan at all events, on the blind, unreasoning, sentimental jingoism of the British public of all parties, which really forced the Ministry into the wild and criminal attempt to rescue Gordon. His admissions that the disestablishment of the Church is in the air, and that the House of Lords must be reformed, are mainly important as showing the rapid advances which Radicalism has made even within the last five years, for it is not probable that either of these questions will be taken up during the coming Parliament. It will most likely take the whole of its existence to find out what the new voters think about these and other great changes, and until then both Ministers and private members will be chary of touching them with a firm hand. The proposal that there should, in reforming the House of Lords, be some recognition of "the principle of birth," is probably a sort of formality put in for the benefit of the monarchy, which is based on this principle, and which can hardly exist in its present form after the principle has lost all hold on the minds of Englishmen. That it still has great strength in the English counties there is no denying. Among the farmers the fact that a man is his father's son still constitutes a powerful and sometimes overwhelming claim to public office, but that it will long survive the pressure of the democratic tide flowing out from the great towns, it is useless to expect.

To the simplification of the transfer of land, and to a compulsory registration of titles, such as exists here, the Liberal party has long been pledged. The same thing may be said of the abolition of entail, even in its present modified form, and of primogeniture, which in the absence of the power of entail would have little importance. The low rate of taxation on land is a real grievance, which will probably now disappear. There is in England a heavy direct tax, running from 10 per cent. down, according to the relationship of a legatee to a testator, on all personal property transmitted by will or inheritance. From this, land is totally exempt. So that cases occur every day in which the recipient of a $100,000 legacy in consols or cash is compelled to pay $10,000 into the Treasury, while his next-door neighbor, coming in the same way into possession of a landed estate worth say $200,000, does not pay one cent. This inequality is sure now to be promptly redressed. The address, which undoubtedly furnishes "the keynote of the campaign" to all the Liberal constituencies, is probably more valuable as a means of healing dissension and restoring order in the ranks, than as a political programme. It will put an end at once to the notion that there is anything to be feared from the "Whig wing."

The Tory Home Secretary seems to be making a great mistake in trying to suppress Socialist meetings in London, and it is difficult to imagine on what grounds he does it. The accusation of obstruction brought against a great body of men for holding a political meeting is ridiculous, because it has long been acknowledged by the police that large peaceable assemblages for political discussion in public places are allowable. In these days it will hardly do to suppress a meeting unless there is a strong probability that it will end in rioting and violence. The Socialist meetings which were broken up here in New York by the police were led by men who advised murder and arson and pillage as a means of redressing grievances; but there is no intimation that anything of the kind finds a place in the English Socialistic programme. In fact, the Socialists there are generally, like Mr. Morris, the poet and designer, a harmless and estimable body of men, who have got it into their heads that if the State undertakes to provide every man with a good living, he will in return undertake not to have too many children, and to work like a beaver.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 16, to TUESDAY, September 22, 1885, inclusive.]

DOMESTIC.

CONGRESSMAN WARNER, of Ohio, is not meeting with the encouragement which he hoped to receive from the Administration in the matter of his Silver Bill. This compromise measure has been completed, but not yet made public. It is believed that, as heretofore reported, it contemplates the issue of silver-bullion certificates on the basis of the value of the silver bullion in gold on the date of issue. The certificates are to be redeemable in lawful money at the option of the holder, or in bullion at the option of the Government. They are to be a legal tender for citizens in all commercial relations with the Government, and for the banks and the Government in all their relations with each other; but they are not to be a legal tender as between one citizen and another. This latter qualification is the only limitation upon their legal-tender quality. The new bill also contemplates the continuance of the present silver certificates, extending them so that $1 and $2 silver certificates may also be issued.

It was learned at the Custom-house in this city on Tuesday that, in accordance with an order issued by Secretary Manning at Washington on Monday morning, Alderman George H. Sterling, of Brooklyn, recently appointed as Weigher in the place of Captain Bacon, has been suspended from the public service, and Collector Hedden has been ordered to make a report upon all the facts in the case. As this appointment violated the whole spirit of civil-service reform, and offended its friends throughout the country, the prompt action of the Administration is warmly praised.

On the appointment of President Cleveland's brother-in-law, N. B. Bacon, to be Superintendent of the Custom-house in Toledo, the Washington *Post* says that Mr. Bacon is a Republican. He was one of several applicants for the place, and was strongly endorsed, and it is said that all the other candidates agreed that he would be the best man for the place if he would accept it. Two years ago Representative Hurd recommended him on account of his capability. When his name was brought, some two or three months ago, to the attention of the President, the latter positively refused to appoint him, and not until he was convinced that Mr. Bacon was the best man for the place did he consent to the appointment.

The President has appointed Lemuel B. Fowler to be Postmaster at Augusta, Me. The candidate for the office whom Mr. Blaine opposed was Colonel Morton.

Dr. J. B. Hamilton has tendered his resignation as Surgeon-General of the Marine Hospital service, to take effect November 1, but is willing to remain in the service with the rank of Surgeon. His resignation has not been accepted, and the impression is growing that he will retain the office.

Vice-President Hendricks visited Washington, it is understood, for the special purpose of urging the appointment of his friend, Dr. Matthews, of Louisville, to be Supervising Surgeon of the Marine Hospital Service. The President has recently said that the contest for this position is between Dr. Matthews and Dr. Walling, of Indianapolis, who is recommended by William H. English, of Indiana, and is an officer of the service. The case attracts much attention, as the spirit of civil-service reform requires the promotion of the very ancient Democratic surgeon in the Marine Hospital Service, Dr. Storer, who seeks the place. It was reported at Washington on Tuesday that the Vice President had withdrawn from the contest, impressed with the belief that a change in the office was neither wise nor expedient.

Mr. Worthington C. Ford, of Brooklyn, has been appointed Chief of the Statistical Division of the State Department, vice Michael Scanlan, who remains in the bureau as a fourth-class clerk. Mr. Ford is the author of the 'American Citizens' Manual' in the "Questions of the Day" series.

The resignation of Mr. Dorman B. Eaton, of the Civil-Service Commission, will take effect at the close of the suit in regard to the constitutionality of the Civil-Service Act. It is understood that a reorganization of the Commission throughout will follow.

Republican primaries to select delegates to the State Convention were held on Friday in all the Assembly districts of this city except the Twenty-fourth. The delegation, while containing many of the men whose names are familiar as politicians, is a better one than has been selected on many previous occasions.

The Republican State Convention convened at Saratoga on Tuesday. Seldom had the indications of who would be the nominee been so few and indefinite. The prominent candidates were General Carr, now Secretary of State; Levi P. Morton, Cornelius N. Bliss, A. B. Cornell, Gen. W. H. Seward, Ira Davenport, and Joseph Drexel. The Convention was called to order soon after noon by Chairman Warren, and Senator Warner Miller was made temporary Chairman. He delivered a violent "bloody shirt" speech, in which he eulogized the past of the Republican party, and raised the old cry of a suppression of free ballot in the South. The usual committees were appointed, and a recess taken to 4:30 P. M. When the Convention reassembled, Gen. James W. Husted of Westchester was made permanent Chairman. The nominating speeches were proceeded with and one ballot taken, resulting as follow: Carr, 205; Davenport, 105; Morton, 42; Warren, 137; Swinburne, 32; Drexel, 37; Bliss, 53; Seward, 57; Cornell, 4; Andrews, 1; Low, 16; Starin, 1; Evarts, 1; total, 691; necessary to a choice, 347. An adjournment was then taken until Wednesday morning, September 23.

The Maryland Democratic Convention on Wednesday nominated J. F. Turner for Comptroller and S. Jones for Clerk of Court of Appeals. The platform opposes the present civil-service system and demands reform, so that the subordinate positions shall not be filled by persons opposed to the appointing power. The Maryland Prohibitionists named their State ticket on the same day.

A threatened trouble in the Dakota Constitutional Convention over the States' rights question was adjusted by the adoption of a bill of rights, which declares all political power inherent in the people, all free government founded on their authority, and that they have the right to alter the forms of government, and declares the State of Dakota inseparably a part of the Union, and the Federal Constitution the supreme law of the land.

The Government Directors of the Union Pacific Railroad, who have been examining the condition of affairs at the scene of the anti-Chinese outbreak in Wyoming Territory, have sent the following to Secretary Lamar: "We find such a condition of affairs here as, in our opinion, endangers the property of the road, jeopardizes the interest of the Government, and calls for prompt interference. We think, therefore, it is important that full authority should be given to the proper officers to afford ample assistance to the managers in their efforts to protect the property of the company and conduct the business of the road."

Work has been resumed in two of the mines at Rock Springs, Wy., where the recent troubles occurred. About 100 Chinamen and a few white men have gone to work, but the white miners as a rule have refused to go back. No attempt has been made to interfere with the Chinese workmen, the mines being guarded by troops.

Active demonstrations against the Chinese have begun in Montana.

Terrible prairie fires have been prevailing in Dakota, destroying much wheat in stacks.

It is believed that the Texas cotton crop has been damaged several million dollars' worth by the recent rains.

The Apaches still continue their depredations, and recently murdered ten citizens of Grant County, New Mexico.

The Boston sloop *Puritan* on Wednesday defeated, for the second time, the English cutter *Genesta*, thus keeping the *America's* cup in this country and rendering a third race unnecessary. The course was from the Scotland Lightship twenty miles to leeward, which was east-southeast, and return. Wind and wave were favorable to bringing out the best points of the English boat. The sea was lumpy, and the breeze freshened almost to a gale. At 11:05:16 A. M. the race began by the *Genesta's* crossing the line. She was followed by the *Puritan* forty-five seconds later. On the run out the latter forged ahead for a time, but was passed by the *Genesta*, which rounded the stake at 1:05:30 P. M., having made the distance in 2:00:14. The *Puritan* went around the stake at 1:07:36, or two minutes six seconds after her rival. Coming back, the Boston boat overtook and passed the other, but a shifting of the wind enabled the *Genesta* to lay her course so that the *Puritan* went behind again. The latter subsequently ran by the English boat to windward and finished the race at 4:09:15 P. M. The *Genesta* crossed the line at the finish at 4:10:39 P. M. In actual time, counting the forty-five seconds interval at the start, the *Puritan* won by two minutes nine seconds. From this must be deducted the time allowance of thirty-one seconds. This makes the *Puritan's* lead at the finish one minute thirty-eight seconds. In distance the *Puritan* was ahead about one-third of a mile. She sailed over the course in five hours three minutes and fourteen seconds.

In the races for the Commodores' Cups on Friday the *Genesta* won the Douglas Cup for sloops by twenty-one minutes corrected time, and the *Grayling* the Bennett Cup for schooners. The *Puritan* did not sail.

Henry R. Selden, ex-Judge of the Court of Appeals and ex-Lieutenant-Governor of New York, died at his residence in Rochester on Friday, at the age of eighty.

FOREIGN.

The populace of Philippopolis, the capital of Eastern Rumelia, almost to a man rose in rebellion on Friday, seized the Governor-General, deposed the Government, and proclaimed a union with Bulgaria. A provisional government was established. The revolt was so well planned that no disorders or bloodshed occurred, everybody being in sympathy with the movement except the Government officials. Immediately after the organization of the provisional government the militia was sworn in, taking the oath of allegiance to Prince Alexander, of Bulgaria. It is generally believed in diplomatic circles that Russia arranged the programme of the rising, and suggested the union with Bulgaria. The insurgents occupied all the strategic points on the Turkish frontier. The Bulgarian army was mobilized, and a corps was sent to the Rumelian frontier. Prince Alexander proceeded to Philippopolis, and appointed as commissioner M. Stransky, who was President of the Rumelian Provisional Government. By the treaty of Berlin (1878), Eastern Rumelia was made a province under the direct military and political authority of the Sultan, with certain restrictions imposed by the Powers. Bulgaria, on the other hand, was only nominally tributary to the Sultan.

Prince Alexander, of Bulgaria, has issued a proclamation announcing that in accordance with the wishes of the entire populace he assumes sovereignty over the two provinces of North and South Bulgaria. He expresses the hope that the people will defend the union at any sacrifice. The army of Bulgaria is being mobilized, and, when united with the Rumelian

militia, will, it is estimated, form an effective force of 56,000 men. It is believed in Berlin that peace will be maintained. Russia and Austria, it was reported, agreed to the revolution; Austria being at liberty to annex Bosnia and Herzegovina. The Sultan and his ministers decided on Sunday to appeal to the Powers to maintain the rights of the Porte in Rumelia. The London *Daily News* on Monday morning reminded its readers that when Disraeli effected the Berlin Treaty Gladstone predicted the present disruption.

On the Continent the gravity of the situation is fully recognized. Bismarck arrived in Berlin, Gourko hastened to Livadia in the Crimea, and King Milan of Servia and King Charles of Rumania to their capitals. The Porte is paralyzed by the religious festival of Bairam. The news was received jubilantly at St. Petersburg, with caution and non-committal at Berlin, and with anxiety at Vienna.

A despatch from Philippopolis on Monday said that the agents of all the great Powers signatory to the Treaty of Berlin had sent despatches to their respective governments approving of the movement. It was rumored at the various consulates in that city that the ambassadors at Constantinople had succeeded in dissuading the Porte from sending Turkish troops to Eastern Rumelia to regain possession of the country.

Semi-official advices in Paris on Monday asserted that Prince Alexander of Bulgaria acted independently of Russia in annexing Rumelia. Conservative papers in London accuse Mr. Gladstone of knowledge and complicity in the conspiracy to cause the rising, and assert that he is in communication with the leaders of the revolt. The Turkish forces have not yet crossed the Rumelian frontier, but the authorities are greatly excited, and active preparations are being made. The Bulgarians have occupied the Balkan passes.

The opinion prevailed on Tuesday at the Turkish Embassy in Paris that the great Powers of Europe, and especially Germany, will enforce respect of the Treaty of Berlin, and that the difficulty in Rumelia will be settled favorably to Turkey without a resort to arms. In London, however, there were rumors that the Turkish army was being mobilized for immediate service. Russian and other foreign securities declined rapidly, and general uneasiness prevailed. Austria denies that she consented to the rebellion, and asserts that she does not want Bosnia or Herzegovina.

There is no longer any doubt of the failure of the mission of Sir Henry Drummond Wolff, the British Special Envoy to Turkey, as it was announced in London on Wednesday that the Anglo-Turkish joint occupation of Egypt had been abandoned, and that the Porte would consider the expediency of sending a commission to accompany Sir Henry to Egypt. It is generally believed that the Sultan's reason for not acceding to the terms offered by the British Envoy is that he feared Russia would forget her promises respecting the Treaty of Berlin in the event of an Anglo-Turkish alliance.

England does not intend to support Germany in her claims respecting the sovereignty of the Caroline Islands, but offers to mediate with Spain for the settlement of the question.

It is reported in Berlin that Prince Bismarck has informed the Bundesrath that he has no fears that the differences with Spain will result in hostilities.

It is believed that immediately upon the assembling of the Cortes, Spain will ask for a loan of 30,000,000 francs to strengthen her navy and her coast and colonial defences.

The Spaniards have taken de-facto possession of Yap.

A better feeling prevails in Madrid owing to a report having been received from Count Benomar, the Spanish Ambassador at Berlin, to the effect that he expects Germany will accept the offer of a naval coaling station, liberty to trade, and right of navigation among the Caroline Islands as a basis of settlement of the Carolines dispute. The settlement will be made without referring the matter to an arbiter.

Mr. Gladstone's manifesto was issued on Friday in London, in the form of an address to his constituents in Midlothian. It shows a distinct recognition of the Radical advance. He regards the future with cheerfulness. He says the arrears of legislation are due to Tory obstruction. He claims credit for the Afghan settlement, and says he found Afghanistan broken to pieces, and left it friendly. He traces all the trouble in Egypt to the policy of foreign intervention, of which he has never ceased since 1876 to point out the danger. He advocates a withdrawal from Egypt at the earliest moment that honor permits, saying: "I will admit we committed serious errors of judgment at a great cost of treasure and precious lives in the Sudan. For none of these were we rebuked by the Opposition." He opposes primogeniture and entails. He notes that the current is slowly setting in the direction of disestablishment, but believes the vitality of the Church equal to her needs even at this crisis. He is averse to pressing the Gratuitous Primary Education Bill. On the Irish question he says: "I cannot believe the political genius of this nation's illustrious history will prove inadequate to the solution of the problem or permit embittered civil strife." Evidently alluding to Mr. Parnell, he says: "I believe history and posterity will consign to disgrace the name and memory of every man, on whichever side of the channel he dwells, who, having power to promote peace and friendship, uses it for strife and enmity." He says no progress is possible without reform of the legislative instrument. On the question of the House of Lords he says: "I certainly cannot deny that there is a case sufficient to justify an important change in the character of the House of Lords But I trust a reasonable share of power may be allowed under wise conditions to the principle of birth."

That portion of Mr. Gladstone's manifesto referring to Irish affairs was received in Dublin with a feeling of general disappointment. The ground is taken by some that the expressions of the ex-Premier are in harmony with those of Mr. Chamberlain, as expressed by the latter recently at Glasgow and elsewhere. The London *Daily News* (Liberal) interprets the manifesto to mean that Mr. Gladstone intends to lead his party in the House of Commons, and not to retire after the elections.

Mr. Gladstone's general health is excellent, but he is troubled with occasional hoarseness. His doctors believe that he will be able to speak in the campaign.

The British Parliament has been further prorogued until December 5. This caused considerable excitement in the clubs in London, owing to the report that the Government intended to postpone the elections. Sir Michael Hicks-Beach and other Ministers, however, stated positively that the Government had no such intention.

Mr. Chamberlain has been making a triumphant tour in Scotland. He delivered an address at every stopping place. The people greeted him with the greatest enthusiasm, and cheers were given for "England's future Premier." In one of his speeches he announced that Mr. Gladstone had been restored to health and would assume the leadership in the electoral campaign.

Sir William Vernon Harcourt, who was Home Secretary under Mr. Gladstone, in a speech at Plymouth, England, on Thursday, said the late Government were prepared to abolish coercion in Ireland, retaining only those provisions of the Coercion Act which were aimed against boycotting. Sir Michael Hicks-Beach, Chancellor of the Exchequer in the present Ministry, speaking on Thursday, strongly opposed disestablishment, but admitted that the Church was open to reform. The Conservatives, he said, favored local government for Scotland and England. He expressed a strong opposition to a separation of Ireland from England, and said he was in favor of a modified peasant proprietary land law for Ireland.

General Roberts arrived in London from India on Wednesday, and was received with great enthusiasm.

Lord Tennyson's latest poem deals with home rule in Ireland. He is dramatizing it for Henry Irving. The poet laureate's health is said to be breaking.

A great Socialist meeting in London was broken up by the police on Sunday, and a number of people arrested amid great uproar. William Morris, the poet, was arrested at the hearing of the case on Monday, for contempt of court in raising a disturbance. He was afterward discharged.

A panic prevailed in the silver market in London on Wednesday, and prices dropped to the lowest point that has been touched, save once, in the present century. The crisis continues.

The St. Leger Stakes were won in England on Wednesday by Melton, ridden by the jockey Archer.

Professor John Campbell Shairp, LL.D., is dead. He was the author of several works, including 'Kilmahoe, a Highland Pastoral, with other Poems,' 'Studies in Poetry and Philosophy,' 'Lectures on Culture and Religion,' and 'The Poetic Interpretation of Nature.' He was born at Linlithgowshire, and educated at Edinburgh, Glasgow, and Oxford; was appointed an Assistant Master of Rugby School, made Professor at the University of St. Andrews in 1861, and appointed Principal of the United College of St. Salvator and St. Leonards in the same University in 1868. Three years later he was elected Convocation Professor of Poetry at Oxford.

There are at present 1,300 candidates in the field for election to the French Chamber of Deputies. Of this number 500 have previously occupied seats in the Chamber.

A meeting of Anarchists, held in Paris on Sunday, broke up in a row. Twelve persons were wounded by shots from revolvers.

Admiral Miot, the French Commander in Madagascar, has asked for reinforcements. Seven hundred men are about to be sent to him.

The Black Flags in Tonquin are preparing for an active guerilla war on the French troops.

Thirty thousand persons have fled from Palermo, Italy, on account of the cholera, and there is a great scarcity of food and water.

In St. Petersburg the police have been ordered to renew the stringent measures adopted during the darkest days of Nihilism.

Jumbo, the famous elephant belonging to Barnum, was killed on the Grand Trunk Air-Line track half a mile east of St. Thomas, Ont., on September 15. His keeper was leading him along the track to load him, when a freight train came up behind unnoticed and ran him down. He was injured so badly that he died in thirty minutes. Jumbo was one of the largest elephants known in recent times, was of the African species, and about twenty-five years of age. He was taken to the London Zoölogical Gardens when a baby, and became the pet of English children. Barnum purchased and brought him to this country in 1882, his sale causing vigorous protests from the whole British press and people.

The people of Montreal are thoroughly aroused about the smallpox epidemic. Forty-two deaths occurred in one day recently, and more than 250 during last week. Stringent measures have been adopted.

The recent reports of the discovery of vast deposits of silver ore in the Sierra Madre Mountains, Mexico, are, it is said, fully confirmed by experts who have visited the place. Four hundred Americans are already at the mines or en route.

THE ADMINISTRATION AND THE CUSTOM-HOUSE.

THE Administration is, we believe, really abstaining from any attempt to influence the coming election in this State. We believe also that President Cleveland will not swerve, no matter how the election goes, from the course he has marked out for himself in regard to administrative reform. But the recent doings in the New York Custom-house, following close on a visit of Messrs. Hedden and Beattie to Washington, have made many people believe that though the President is not interfering in the State canvass himself, he is allowing the Custom-house to be used by local politicians to whatever extent they may deem necessary. We do not ourselves believe that these suspicions are well founded. We still think that when the President's attention is called to what is going on in the Custom-house, he will take measures to check it. In fact, he can hardly avoid doing so without parting company, in the very first year of his Administration, with a large body of his foremost and most faithful supporters. Secretary Manning has already suspended Sterling, the weigher appointed in place of Captain Bacon, pending an investigation of the whole matter. We must hope that this investigation will be thorough and impartial, and will cover the manner in which Captain Bacon discharged the duties of his office. We hope, too, that if the investigation results in proving that an injury has been done to the service through Sterling's appointment, or that it was made in indifference to the effect on the service, somebody will be punished for making it.

The New York Custom-house is too prominent a part of the Government service for excusable mistakes to be made in it. On the contrary, it has always furnished and still furnishes the gauge by which the purity and sincerity of the Administration for the time being are to be measured. Nobody will ever believe in the reformatory zeal of an Administration which allows the Custom-house to be used for party purposes. Its management under Grant, Hayes, and Arthur represented with the utmost accuracy the extent to which each of these Presidents cared for what is called the reform of the civil service. In fact, it stands to the Administration at Washington very much in the relation of the electric clock's dial to the observatory from which it gets its time; and all the world sees it. If —to vary the simile—there be the poison of the spoils disease working in the veins of the Administration, the New York Custom-house is the place in which the disease will show itself most virulently. Consequently, if the President wishes to know how the work of reform in which he is so much interested, is going on, all he has to do is to ask what the Collector and Surveyor are doing. He, therefore, cannot ignore Hedden and Beattie. Hedden appears to be a very weak man, who has had so little self-respect as to accept a position of which he surrenders a large part of the authority and responsibility, while Beattie is one of the smart, brassy youths whom New York politics is constantly bringing to the surface, who are always ready to do dirty work from which older and more conspicuous hands shrink. It is not with such instruments as these, however, that a great public office is to be administered as "a public trust." These are not the men to transact public business as private business is transacted. If Beattie were to expel a man like Captain Bacon from an office like the Weighership, and put a liquor-dealing politician in his place, while acting as superintendent of a railroad or manager of a factory, he would be promptly "bounced" by his superiors.

It is no secret that the performance is looked on by political observers here as part of an agreement between Hubert O. Thompson and McLaughlin, the Brooklyn boss. That Hedden is only a sham Collector is now made very clear. That Beattie is acting as somebody's else "man," seems also now tolerably plain. Well, the public ought to know before the election, and Congress ought to know before it meets, who the real Collector is, and who "owns" Beattie. If it be Mr. Hubert O. Thompson, the friends of reform ought to know it, because if this gentleman be the kind of person the Administration thinks fit to manage an office like the New York Custom-house, Mr. Cleveland is not the man for whom they voted. There was, in that case, somewhere at the last election a great and most unfortunate mistake.

A Custom-house managed by sham officers, under the unseen direction of trading politicians, with the offices used to reward workers, and the revenues wasted to help carry elections, is the old sort of Custom-house, which began, as soon as the war was over, to stink in the nostrils of honest men, and degrade the United States in the eyes of foreigners. Mr. Cleveland was elected, we thought, to rid us of "this foul, dishonoring blot," to cleanse the service of liquor-dealers, and "workers," and lay figures, and thieves, and loafers. There was a time since the war when a politician in this city had his pointer dog carried on the Custom-house payrolls at four dollars a day. This was very impudent, but we think it reflected less discredit on the Administration under which it occurred, considering how the public service was then regarded by politicians, than the deliberate selection of an Aldermanic liquor-dealer by an Administration such as we now have, to fill a place of great trust toward the mercantile community and toward the Treasury —in place of an old, experienced officer and gallant soldier like Captain Bacon. We would, in short, sooner see a dog on the rolls than Sterling, for the dog's pay would be only a theft of $2,500 a year, while Sterling will be a corrupter of the service, a fraud on the Government and the importers, and a foul example to every youth in this city who has to earn his bread by labor.

THE ROCK SPRINGS MASSACRE.

THE details of the massacre of Chinese men, women, and children at Rock Springs, Wyoming Territory, are slowly coming out in pursuance of the investigations made or making by the Government Directors of the Union Pacific Railway, and the three Chinese consuls sent by their own Government to make an official report upon it. This is the first time, we believe, that the Government of China has ever bestirred itself to secure justice and the protection of law against mob violence for its subjects in this country. England, France, and the United States have repeatedly demanded and obtained satisfaction from China for the destruction of the lives and property of their subjects in the Celestial Empire. In a notable case we obtained an indemnity of $700,000 for property destroyed by a Chinese mob in Canton—a sum exceeding by $300,000 the total amount of claims put in for adjustment. This surplus constituted what was known as the Chinese indemnity fund, which came up for treatment at every session of Congress for twenty years, and was never paid back to China until last year. If indemnities are now called for by China for the Rock Springs slaughter, they will have to be paid. It is to be hoped that they will be demanded, and that all the damning facts connected with the massacre may be lodged with the State Department and given to the world in justification of the demand.

It is to be hoped, further, that the Government of China will teach the United States a lesson in the common principles of morality, whenever any man, woman, or child, entitled to their protection, is maltreated or molested in the enjoyment of rights secured to them by law or treaty in this country, by exacting the fullest measure of reparation for the wrong and of punishment for the offenders. It is time for our Government to bring down the heavy hand on the murderers and brigands of the West, who have so long rioted in the blood of an inoffensive and peaceful class, whose right to be here and to pursue their lawful vocations is as incontestable as that of any human being, native or foreign-born. We can well afford to drop all other public questions and give our undivided attention to this one, until it shall be ascertained whether the color of a man lawfully domiciled among us is sufficient warrant for his summary execution by any other man who entertains a prejudice against him. It is not the good name of the United States merely that is involved, but the supremacy of law and the maintenance inviolate of the indispensable conditions of civilized life. We have made a free man of the negro, and have given the Indian a standing in the lists of humanity. Are we equal to the task of protecting the handful of Chinese whom we have allowed to come among us, against organized brutality and concerted massacre? This question must be answered sooner or later if it tests the whole power of the Government. There is no better place to begin than at Rock Springs. If the outcome of the investigation falls short of the hanging of the wretches who committed these atrocities, the work of social regeneration will have to be done over again at Rock Springs or at Butte City, or at some other place where the idea has found lodgment that a Chinaman has no rights which a white man is bound to respect.

After twenty or more years of wrestling with the Chinese question we have reached a definitive understanding with China, with ourselves, and with the world, that all the natives of that country who were domiciled here at the date of the last treaty shall have the right to stay, and also to go and return, subject to certain degrading conditions not

exacted of any other people. We have discriminated against them severely, to our own shame, but we have taken our stand and there we must abide. This settlement, intended mainly to conciliate a depraved and lawless element in the Western States and Territories, composed principally of the offscourings of Europe, has proved unsatisfactory to them since it did not provide for the summary expulsion and deportation of all persons of Mongolian origin who had reached our shores in former years. It cannot be said that anti-Chinese riots have been lessened or mitigated by recent anti-Chinese legislation, or by the new treaty which we forced upon China. The spirit of brutality which had so long run riot on the Pacific Coast was encouraged by the action of Congress, and by the resolutions of the political conventions of both parties, to believe that public opinion approved of the barbarities that had been committed, and would condone any crimes that might be committed upon that unfortunate race. The Rock Springs massacre is a logical deduction from the weakness of Congress and of the State and Territorial governments in dealing with a plain question of human rights. We have now reached a stopping place where we must decide as a nation whether we will enforce the law against cut-throats, or allow them to dominate society and industry over half the area of the United States. The telegraph informs us that the Knights of Labor at Butte City, Montana, have decided that the Chinese must go, and that measures like those taken at Rock Springs will shortly be put in force if they do not depart within a given time. Obviously the measures adopted to bring the Rock Springs murderers to justice will have a deciding influence upon the Kuklux fraternity at Butte City. If they are proceeded against with the vigor due to their monstrous crime, there will be no disturbance of the peace at Butte City. If they are allowed to go unpunished or only half punished, there will be similar outbreaks in every place where half-a-dozen Chinamen can be found plying any honest vocation.

There is good reason to believe that the President of the United States and the Governor of Wyoming Territory are thoroughly in earnest in the endeavor to bring the Rock Springs assassins to justice. It is fortunate that the Federal authority is supreme in the place where the murders were committed, and that no obstacle can be set up in the interest of State sovereignty to shield the guilty. It is not necessary for the military power of the Government to wait upon the laggard steps of any State official whose re-election is pending. The responsibility for law and order in the Territories is not a divided one. It rests at Washington city, and it has been taken up with commendable promptness and decision. Rock Springs is under guard of United States soldiers, and the expelled laborers are returning under an assurance of ample protection. An issue of the utmost gravity is now drawn between the Union Pacific Railway Company, the employers of the Chinese, and the Knights of Labor. The Government has promised to protect life and property, and has collected sufficient means for that end. The Company, too, seems determined to stand by its engagements to its employees, and not to surrender to a secret society whose decrees are pronounced at St. Louis, or San Francisco, or some other place hundreds or thousands of miles distant from the scene of strife. A surrender at this time would imply a surrender for all time. Corporations are proverbially cowards, but in this case it must be evident to the most pallid shareholder that if his property is now handed over to the keeping of the Rock Springs desperadoes, there will be nothing left for him a few years hence.

THE PANBULGARIAN REVOLUTION.

SCARCELY has one phase of the vast Eastern question, the Afghan complication, vanished out of sight when the other, which touches the Balkan Peninsula, looms up threateningly on the diplomatic horizon. The little revolution which a few days ago took place in Eastern Rumelia may or may not lead directly to war like demonstrations, to alliances, to intervention against or in favor of the rebels, to a resettling of boundaries. What is sure is that it is the work of potent forces, which sooner or later must bring about violent convulsions and ultimately new and important changes in the map of southeastern Europe. The insurrection in Herzegovina, which broke out in 1875, was a flame that could not be quenched, and finally set the whole Ottoman Empire on fire; but other movements preceded it which were stifled in blood—for the moment, to break out anew. To which class of events the outbreak in Philippopolis belongs, a near future will probably show.

By the Berlin treaty of July 13, 1878, which ended the great drama of the Russo-Turkish war, Turkey renounced the direct control of almost all her Slavic subjects. Montenegro was acknowledged to be completely independent, which she virtually had been for generations. Servia was now freed of all dependence upon her suzerain, the Sultan. Cessions of adjoining territory were made to both these principalities, the latter of which soon after, imitating her likewise emancipated non-Slavic neighbor, Rumania, assumed the dignity of a kingdom. Bosnia and Herzegovina were surrendered to the Government of Austria-Hungary, to be "occupied and administered" by it indefinitely. What was formerly the vilayet of the Danube was, with changed boundaries, constituted a semi-independent Christian principality, Bulgaria. The country south of it, and for the most part separated from it by the Balkans, was made, under the name of Eastern Rumelia, an "autonomous province" of the Turkish Empire, to be ruled under its own laws by a Christian Governor appointed by the Sultan, with the consent of the treaty Powers. The bulk of the inhabitants of Bulgaria and Eastern Rumelia were nationally one people, and the treaty of San Stefano, which the victorious advance of the Russians to the gates of Constantinople forced the Porte to sign on March 3, 1878, had united both countries, together with districts of Macedonia and Southern Thrace, into one great Bulgarian realm. This work of General Ignatieff's diplomacy the Treaty of Berlin undid.

Excepting some contention about frontier districts, which in the case of Montenegro at one time threatened to become serious, the relations between the Porte and its former northwestern dependencies, Servia, Bosnia, Herzegovina, and Montenegro, soon ceased to be of any importance whatever. Bulgaria elected Alexander of Battenberg, a nephew of Czar Alexander II.'s consort, her prince, and Eastern Rumelia received a Governor in the person of Aleko Pasha (Prince Alexander Vogorides), a Turkish diplomat of Bulgaro-Greek descent. Domestically, all the Slavic countries of the Balkan Peninsula, except Bosnia and Herzegovina, have to this day been completely autonomous. In their external relations, in spite of community of religion and race, they have been swayed by different attractions. Prince Nikita, of Montenegro, and his people are warmly devoted to the Russian interest and guidance. King Milan, of Servia, has sought support and strength in friendship with Austria-Hungary; partly from rivalry with Montenegro, which by some is looked up to as the Savoy of the Balkan Peninsula, and partly from fear of the intrigues of the exiled house of Karageorge, which formerly ruled Servia, and is now again patronized by Russia. The radicals, the clergy, and the common people of Servia, however, have decidedly Russian leanings, and vehement opposition has driven Milan to frequent acts of tyranny and violations of the Constitution. In Bulgaria both the Prince and the people have been wavering between adherence to the exacting lead of Russia and a more independent attitude and ambition. Changes in the politics of Bulgaria, partly brought about by the impatience of the people and partly by that of Prince Alexander, amid the intrigues of Russian agents and native demagogues, have been almost incessant. Nor have arbitrary changes of the Constitution been wanting. At no time, however, has the army as yet slipped out of the hands of Russian officers. And through all the varying situations the guiding thought of the Prince and the nation, of party chiefs and Russian agents, has been the realization of the great Bulgaria of the treaty of San Stefano.

Montenegro, Servia, and Bulgaria are all ambitious States, each considering itself entitled to hegemony among the Slavs of the peninsula. The two former were once open rivals in regard to the liberation and annexation of Bosnia and Herzegovina. But these two provinces, "occupied and administered" by Austria-Hungary, are now out of reach of petty ambition, and only a general *bouleversement* could make them integral parts of a State south of the Danube and Save. Milan is now seemingly content with the existing order of things, and certainly dreads an immediate change; for this could benefit only Nikita, the faithful satellite of Russia, and father-in-law of the Servian pretender, Peter Karageorgevitch. The only State in the peninsula which has no ambition to conquer or lead is Eastern Rumelia, which, from the day of its formation, has cherished only one national desire—namely, to be incorporated with Bulgaria, from which it was unnaturally separated. All its politics have turned around this one point. It is needless to say that Bulgaria has constantly, though more or less secretly, fomented this tendency, or

that Russia has been plotting to realize the Panbulgarian scheme. Foreign emissaries have not ceased to incite the southern Bulgarians, including those of Macedonia, to revolt. Aleko Pasha, whose sympathies were perhaps divided between Bulgarian and Greek aspirations in Macedonia and Thrace, acted, as Governor, a part which satisfied neither his people, nor his suzerain, nor the Czar. The Czar put his veto on his reappointment as Governor of Eastern Rumelia last year, and Gabriel Chrestovitch, Aleko's officer, became his successor. It is he who has been overthrown by the revolutionary movement which has just taken place, although all his acts have been considered favorable to the union scheme. It could not be otherwise: the Governor of Eastern Rumelia must disappear if all the Bulgarians are to be united.

That the revolution has been instigated by official or unofficial Russia and Bulgaria combined admits of no doubt. Prince Alexander of Bulgaria has accepted the submission of "South Bulgaria," and formally announced his sovereignty over it, appointing as its Governor M. Stransky, the head of the Provisional Government proclaimed at Philippopolis. Whether Russia, on her part, will be ready to own her work, and whether we are correctly told by the cable that "the revolution was concocted in St. Petersburg, with the assent of Austria, under an agreement made at the Kremsier interview, according to the terms of which Austria is at liberty to annex Bosnia and Herzegovina," a few weeks, possibly a few days, must show.

MR. PARNELL'S DEMANDS AND THE ENGLISH ANSWERS TO THEM.

LONDON, September 5, 1885.

WITH that instinct which leads people to avoid the mention of disagreeable subjects till the time comes when they must be faced, we have all been saying as little as possible during the last year or two about the Irish question, and especially little about the most serious part of it—the claim of a separate Parliament. Mr. Parnell, however, in one of those bursts of Bismarckian frankness which occasionally break his attitude of dry reserve, has propounded a programme and a policy which make further silence impossible. No one has any right to be surprised at his utterances, for they are consistent with the indications he has previously, though more sparingly, furnished of his aims, and do not go beyond the language often held by his most trusty lieutenants. Nevertheless, they have startled the English, who, because recent discussions have turned chiefly on Irish land tenure, education, and the condition of the laborers, seem to have persuaded themselves that the success of the Nationalists in getting their way in these matters had allayed their appetite for change, and that the abandonment of the Crimes Act had softened their feelings toward England: a sad mistake, for every victory, by raising the hopes of the Parnellite party and giving them a fuller command of the allegiance of the Irish masses, stimulates them to new exertions and fills them with new confidence.

The first three sessions of this Parliament were spent on the Land Bill, the Arrears-of-Rent Bill, and the two acts for the repression of agrarian crime. At the end of 1882 there came a lull. The English would for the moment spend no more time on Ireland, thinking they had done enough, and being tired of Irish subjects. Mr. Parnell perceived that nothing more was to be had, and prudently resolved to wait for a new Parliament, in which his party would be stronger. His followers extorted small concessions from time to time, and occasionally reminded the Government what their powers of obstruction were. Skirmishing kept up the spirit of the party in Ireland, and from pitched battles there was nothing to be gained. When invited, as they were by Mr. Gladstone in a memorable speech three years ago, to propound some workable scheme for giving the Irish people the management of their own concerns, they made no sign in Parliament, while in Ireland they continued to declare that nothing less than the repeal of the Union was worth proposing. It would have been well for the Gladstone Cabinet to have framed and announced some scheme of their own, but this negative and hostile attitude of the Nationalist members seemed to excuse their omission. And time was wanting. Time always is wanting in English Parliaments and to English Ministries; but a task does not usually grow the easier for being postponed.

Thus the Home-Rule problem has hung on for the last six years, the only changes in the English view of it being a growing dissatisfaction with the Lord Lieutenancy and the whole system of administration from Dublin, and a growing tendency to purchase tranquillity, or rather the absence of worrying, by concessions, whether good or bad in themselves. Partly, perhaps, encouraged by this weariness of the English, but chiefly moved by the near prospect of a great accession to his forces, Mr. Parnell has now formally declared his purpose and the means by which he seeks to attain it.

That means is the formation of a perfectly cohesive Parliamentary party. The candidates for each county are to be chosen by a county convention, a method hitherto unknown in Ireland; but this convention, instead of consisting (like yours) of delegates from the constituency only, is to include the existing Parliamentary chiefs, who are to be present and influence its choice. When selected, the candidate is to take a sort of "ironclad pledge" that he will always vote in Parliament in accordance with the decision of the majority of the party, or, if at any time he does not do so, will forthwith resign his seat. No such engagement has ever before been suggested to, much less taken by, the members of any British Parliamentary party; it is, indeed, so inconsistent with the recognized doctrine of the duties of a member that one may fairly call it unconstitutional. But there is reason to think that the Irish constituencies will agree to choose their candidates in this manner, that the candidates will accept the pledge, and that the Nationalist party will therefore begin its operations next year with a disciplined unity of action never attained before. Here is something to alarm the English. Hitherto Irish parties have "scaled off" a fair proportion of their members, some on public, some on private grounds, and it has been possible for the Ministry of the day to play off some Irish members against others. Although over sixty members came from Ireland into the present Parliament professing themselves Home Rulers, they were not all sent to support Mr. Parnell. He has never been able to count on more than forty, and of these some have generally been absent. The eighty he expects to have next year will have been returned absolutely bound to him and one another. They will probably, for some time at least, give steady attendance, which they can the more easily do because few have any occupation in London save the House of Commons, and perhaps some journalistic work. Now eighty members detached from either of our great historic parties will prove a serious obstacle to the transaction of business. Though the new House of Commons will consist of 670 members, not the half of these can be counted on to attend regularly. The legal quorum is forty, and the average number present does not exceed 150. Hence eighty men always present, moved by one will, not merely unamenable to argument, but bent on giving all the trouble they could, might throw the machinery of Parliament entirely out of gear. Palpable obstruction might be dealt with; but there are other methods of preventing the despatch of ordinary business which would put any ministry to intolerable inconvenience, forcing it to make calls hitherto unheard of on the attendance of its supporters, and ultimately to radically alter the present methods of procedure.

These difficulties would be felt even if one party had a majority of the whole House of Commons. If, however, the two English parties were nearly balanced, and the Nationalists held the balance between them, any one can see how greatly they would be aggravated. Government would become impossible unless by a sort of arrangement between the English party leaders on each side; and the majority could purchase such an arrangement only by consenting to forego most of the usual rights of a majority. The minority would insist that no seriously controverted measures should be passed.

So much for the methods and engines of warfare which Mr. Parnell proposes to employ. Let us see what is the object which he intends by their help to attain. He has stated it to be "legislative independence." This is an elastic term, which would naturally include full power of passing every kind of measure relating to the internal condition of Ireland, but can hardly be taken to cover such matters as the imposition of taxes for the support of the army and navy or other imperial purposes. However, Mr. Parnell illustrates his meaning by three examples. His Irish Parliament is to be competent to legislate regarding the land, the conditions of tenure, the fixing of rents, the buying out of landlords. It is to legislate on education, which next to land has been the most vexed and thorny of all Irish questions. It is to have power to foster Irish industries, which seems to mean that it may impose customs duties on goods imported—imported even from England or Scotland—into Ireland, or, in other words, that it is to have a budget and financial system of its own. Nothing is said as to the nature of the tie which is to unite the two islands, as to the contributions for such common expenses as those of army and navy, diplomatic services, and so forth, but it may safely be assumed that Ireland, either through her own Parliament, or through representatives in some Imperial Parliament of the three kingdoms, is to retain her right of expressing her will upon these subjects.

Here is an ambitious programme. Mr. Parnell puts it forth with an air of unusual confidence, as being already virtually won, and his supporters enthusiastically welcome the moment which sees Ireland on the eve of achieving the independence for which she has so long struggled. How has it been received in England? First with surprise, a needless surprise, for everybody ought to know that in his position he could ask for nothing less. Next with indignation, because he appears to demand not only the dismemberment of the British Empire, and that just at the moment when so strong a wish prevails to draw the colonies closer to the mother country, but the power for one of these islands to begin a war of tariffs against the other. Thirdly, with a flat refusal. Not many speakers of eminence are at present on our platforms, but the press, Liberal as well as Conservative, lost no time in declaring that Mr. Parnell's plan was quite inadmissible. A few

days after the latter's speech, Lord Hartington delivered a long address in Lancashire. His attitude of refusal was of course expected, for he has always been among the statesmen least disposed to make concessions to Irish demands. But the language held by him seems to have been generally approved by the Liberal newspapers, even by those supposed to represent Mr. Chamberlain and the Radical section. The Tory chiefs have not yet expressed themselves, and some of them may be loath to throw down the glove to those with whom they have been cultivating relations much more friendly than prevail between Nationalists and Liberals. However, whether they speak soon or speak late, they will be forced to speak in much the same sense as Lord Hartington. Their own party, and the general feeling of England and Scotland, will compel them to reject the idea of a repeal of the Union and the erection of an independent Parliament in Ireland. It cannot be doubted that this is the universal sentiment of the upper and upper-middle classes in Great Britain, and the prevailing sentiment among such members of the poorer or working class as interest themselves in politics. There is a small section, with some following among the workingmen, who are willing to let Ireland go her own way and please herself, as they would let India also drop off from British power. But this section is for the present not worth regarding as a practical force.

The question, however, is not so much what the English now think, as whether they will continue so to think when the difficulties of the position are forced home upon them. As Mr. Parnell has just reminded Lord Hartington, in a speech replying to that statesman's, English Ministers have of late years done much for Ireland which they vowed they would never do, and certainly sorely disliked doing. Who can say that the limit of concession has been reached, or will have been reached when the Lord Lieutenancy has been abolished (as it apparently will shortly be), and when representative local governments have been established through the rural districts of Ireland?

That the Parnellian demands will not be granted without a severe struggle is so obvious that most people suppose his air of confidence to be an artifice to conceal his anxiety. Will they under any conceivable circumstances be granted? This is a question the answer to which depends not merely on the skill and perseverance of the Irish leaders, but on the still indeterminate character and tendencies of the new democracy of England and its leaders. If there are strong men among those leaders, they will continue to try for a good while longer the Gladstonian experiment of removing the tangible mischiefs of which Ireland complains, in order to see whether the sentimental desire for independence will not languish. If they are weak men, unable to keep a hold of their respective parties, they will probably go on from concession to concession till the desired Parliament has been yielded. All that a prudent prophet can assert is that the question is still far from a settlement, and likely soon to re-enter an acute stage. Y.

THE POLITICAL SITUATION IN IRELAND.

DUBLIN, September 12, 1885.

THE political situation in Ireland has, to a thoughtful person, scarcely ever been more puzzling than at the present moment. Mr. Parnell and his party have entirely on their side the majority of feeling, and will without doubt have the votes, except in a few counties in the north-east. The advocates of the pike and physical force are in the background, if indeed they have not entirely disappeared. The Catholic Church has confided its cause in such matters as education to the keeping of the Nationalists. For the first time since the Union an archbishop with decided Nationalist leanings has been appointed by the Vatican to the See of Dublin. The most powerful exponent of public opinion in Ireland, the *Freeman's Journal*, which a few years ago occasionally "tried a fall" with Mr. Parnell or the party, now follows almost unquestioningly in its wake—a sub-editor with Whig proclivities has been parted with, and Mr. Healy is believed to write many of the leading articles. *Punch*, in last week's cartoon, represents Mr. Parnell in an uneasy seat upon an ill-conditioned, jibbing horse — Ireland — and remarks to John Bull, "Leave him alone, John; he's safe to come a cropper." Never was there a more mistaken conception of the situation. There is no feeling in Ireland of being, as the poem which accompanies the cartoon has it, "bridled and bitted," of being "ruled like some common cocktail with a rein of rotten cord," of being "blunkered like some poor hack rushing on death in the red lists of Spain, cold cunning on her back." Never was there more heartfelt or freer allegiance. There is no feeling of subjugation in it. It is the allegiance of an army to a general and staff, who have moulded it out of a pitiful and despised rabble rout, have often led it to victory, and promise much in the future, and who at least have shown the humblest Irish peasant, the poorest Irish artisan, that he is now a factor no longer to be despised or trifled with by British statesmen. The force of the allegiance of the Irish people, to the party and the leader, lies largely in the full conception of this latter fact.

No Irish leader ever had better-disciplined, heartier, or more devoted followers; and yet perhaps the line was never more strictly drawn between the hearty, overt favorers of the National policy and all those who do not belong to this class. I do not mean to say that there is not a large number of persons, Catholic and Protestant, who, by their convictions, training, or sentiments, are Nationalists, and who yet stand aloof in various shades of unison with or opposition toward the dominant party. I mean that in support of the methods, and in belief in the successful outcome, of the Nationalist policy upon main issues, Ireland was never more clearly divided. The party has gained all along in voting weight, but has lost heavily by the secession of intelligent and thoughtful coadjutors and sympathizers. The lines are being drawn closer and closer. One has almost to swallow everything or be regarded as an enemy of Ireland. "Nationalist" never so entirely meant "Catholic" as at present. Previous political movements in Ireland drew an appreciable portion of their strength from Protestants, who are almost entirely opposed to the present agitation. Protestants find it more and more difficult comfortably and conscientiously to sustain any representative position in the National ranks. The falling-off in this respect in the north of Ireland among the successors of the old Ulster United Irishmen is marked. This tendency was well illustrated in Mr. Bigger having become a Catholic. It is reported that he said there was no use in trying to continue an active Irish National politician without being a Catholic. The essence of Protestantism is independent thought—the assertion of the right of private judgment—the cultivation of a questioning habit of mind. How could this accord with the party discipline now demanded by Irish public opinion? "It is the only apparent way of obtaining certain ends." Well, allegiance to principle is a higher duty than allegiance to the cause of any country. "The discipline required is practically no greater than the average allegiance demanded by English political parties." That may be, but does not make blind obedience right. "It is no worse than war; Ireland cannot go to war, but she may choose her own moral weapons.' True, but moral force owes its influence and power to working upon the highest feelings of our nature, and we cannot lay aside spiritual as we lay aside carnal weapons. Supposing such methods to be successful, how might they not be turned with effect upon Ireland herself? We seek only the highest good of Ireland. Nationality is not a fetish. If Irish nationality be but a hysterical phase, it is of small account. If it be a deep and abiding principle, we surely may trust it will assert itself without the aid of casuistry.

To be just to the rank and file of the "party," we must—whether we agree with them or not—understand their real feelings. With one or two exceptions they are Catholics. To them Catholicism is light and Protestantism is darkness. Not that they have any ill feeling toward individual Protestants, or that they have any sinister intentions toward them. But how can they feel heartily toward a nation that has been the bulwark of all they believe to be error? Politically, animosity toward England is ingrained in them. This is very sad—but there it is, honestly ingrained. "I'll tell you what," said a Catholic clergyman to me a few weeks ago, "there is no use in your talking of moderation or reconcilement with England. They hate us and we hate them. So long as I have the power I'll work, and I'll work for Home Rule; and then I'd work and I'd strive for separation; and then I'd strive and I'd work for the destruction of the British Empire." These extreme sentiments cannot be the average feelings of his class. Many of the most active and dominant spirits in the Irish party have suffered imprisonments which would raise the devil in an English politician. And most of them are actually or in spirit sprung from a peasantry who were spoliated and degraded by a land system against which resistance seemed hopeless until the Land League took the matter in hand.

The economic spirit of the movement in Ireland is uneducated, as if the world never had had the experiences of the French Revolution; as if Adam Smith, and Darwin, and Herbert Spencer never had written a line. Perhaps we have no right to expect the results of experience in a country which has never been allowed to learn its own lessons, try its own experiments, and suffer for its own mistakes. Nevertheless, it is not surprising that many men of moderate views, however ardently attached to the cause of Ireland, find it increasingly difficult to give themselves to politics, especially now that the incentive of living under a régime of coercion no longer exists, that the worst features of the land system are put an end to by the Land Act, and that a degree of hope of a permanent settlement is opened by the passage of the Purchase Act. Moderate men were prepared to make every allowance for the inevitable exacerbations and exaggerations of party warfare; but they cannot work in an atmosphere where their reason and independence have no free play or influence.

The basis of the desired settlement with England must be friendly. It is not likely that one entirely distasteful to her could be extorted by any political manœuvring. Yet much that is said by responsible members of the party upon public platforms would appear inconsistent with an amicable settlement. The talk about "complete independence," the "throwing off all control," the "hoisting the green flag," the "removal of the burthen of English taxation," can signify only one thing, and is inconsistent with the spirit of Grattan, of O'Connell, and the philosophic Nationalists. Mr. Parnell says our demand must be for "Grattan's Parliament at the least." This might mean something better and wiser than Grattan's Parliament, for Ireland in Grattan's Parliament had no control whatever

over the affairs of the Empire: it represented only the Protestants of the country, and in it the Executive was entirely under the control of the Cabinet in London. Mr. Parnell, at Arklow the other day, declared that, "without a free elected National Assembly, with power to control all the affairs of Ireland, and with power to protect her struggling industries, I give it as my opinion as a practical man, for what it may be worth, that it is impossible for us to revive our native industries." This speech has been enthusiastically received by the National public opinion of Ireland. A tariff between Great Britain and Ireland would appear inconsistent with anything short of separation. Ireland's position in this respect is widely different from that of Canada and Australia. A policy of high if not unreasonable demands might be deliberately entered upon in the hope of widening the scope of possible concessions. But it is not likely to be deliberately adopted by any one who desires a statesmanlike settlement, a permanent settlement of mind of the Irish people at home and abroad. It is right to say that many who desire an amicable and friendly arrangement believe that, under present circumstances, an uncompromising if not haughty attitude is the only one that will have any effect upon Englishmen.

A recent turn in the West and North leads me to feel more than ever hopeful regarding the material future of this country. Still, some economic principles and ideas that are being presented to the people must be productive of disastrous consequences. Philanthropists tell us that the reason we drink too much is because the Government does not shut up the public houses. Politicians tell us that the reason we are not all happy and comfortable is because we have not a native Parliament to do everything for us. We are to regard ourselves as lay figures, to be manœuvred and made happy or miserable by act of Parliament. To those who have travelled, or thought on the principles that lie at the basis of individual and national greatness, who have considered the political wrecks in South America and the failures and disappointments in European States, there is something sadly ludicrous in these platform utterances regarding national prosperity, and their acceptance by the people. As a reverend chairman had it at a public meeting the other day:

"Let them get Home Rule, and their country would prosper; their barren mountains would be cultivated; their marshy swamps would be drained. They would moor their vessels in their ports, and their rivers would carry their goods backward and forward. They would unlock the treasures of their country, open their mines, make provision for the bone and sinew of their land, give employment to willing hands; have no one exposed to idleness or the temptation to become idlers.

It would appear difficult to subscribe to the proposition that if a united Parliamentary party of eighty members be returned, there must ensue a speedy, satisfactory, and complete settlement of the Irish national question. Yet that is the view taken by *United Ireland*, the organ of the party. That is the burthen of most platform utterances at present. Take a late speech by T. P. O'Connor, Mr. Parnell's right-hand man:

"There is something extremely solemn and there is something dazzling in the thought that after all we belong to the generation who are about to close the struggle that has endured for no less than 700 years, that has been opposed by such tremendous obstacles and odds. There is, further, something I will say bewildering in the thought that we are about to close a history which in many respects is as sad and as disastrous as the story of any nation in the history of mankind."

Such strange and unlooked for political events have occurred in our time that we must not dogmatize. But we cannot hope for any such speedy settlement of the question. The roots of misery and difficulty are too old, too deeply and widely diffused, to make it possible for any action of one generation to finally eradicate them. Most of us must be content to work in our own ways, and wait and hope, longing for a settlement in the interest of both countries—believing that the yearning for nationality is indestructible, that its satisfaction in some form is essential to the happiness of Ireland, but regarding it as perfectly consistent with an amicable understanding and a sincere union with England. D. B.

Correspondence.

PROHIBITION IN IOWA.

To the Editor of The Nation:

Sir: You seem to be giving some attention to the subject of prohibition in Iowa; but as your information seems to come mostly from one quarter and from the partisans of one opinion, I think a few facts respecting our town may be of interest, and perhaps contribute to a fairer judgment in the case.

I think we have a representative inland town. It numbers about 3,700, about one-fourth of whom are railroad employees. I think we ought to encounter a fair share of the difficulties that obstruct the enforcement of the law. I have given some attention to the matter, and I am confident that the prohibitory law has made a great change in our town, and I think it is accomplishing all its sober advocates ever expected of it. We do not hang our heads, or confess in any sense that the law is a failure. It would be well to remember that we have no great cities in Iowa, and not many towns in which the law has a large public sentiment against it; and small towns, and even the rural districts, have rights which even large cities are bound to respect. I think in these the law is a success.

I have to confess that I am a minister, and a minister of the Methodist Church, and I fear that will greatly lower the value of my testimony in your estimation; but I cannot see why a minister should be an offensive partisan any more than a brewer or a saloon-keeper.

Respectfully, J. H. Rigby.

Mason City, Iowa, September 14, 1885.

CAPITAL PUNISHMENT IN MINNESOTA.

To the Editor of The Nation:

Sir: In No. 1054 of the *Nation* you state, in referring to the recent hanging in Minnesota, that the last Legislature of this State (1885) changed the law in regard to the death penalty, making it absolute for murder in the first degree. The only change made was to embody the law of 1882 in the new Penal Code of the State. The provision permitting the Judge to certify, as a matter of record, that the circumstances were so exceptional as to warrant a mitigation of the sentence and to imp se a sentence of imprisonment for life, still forms a part of the new Code. The recent hanging at Duluth, however, was done under the authority of the law of 1883, as the new Penal Code does not come into operation until January, 1886.—Respectfully yours,

J. J. D.

Faribault, Minn., September 17, 1885.

POSTAL SAVINGS BANKS.

To the Editor of The Nation:

Sir: The great objection to the Postal Savings Bank so highly recommended by "M. C. L." in your issue of September 3, is the difficulty of investing these savings after the national debt becomes extinct. The European Governments which have instituted these banks, are so hopelessly in debt that there is no chance of the savings outrunning the bonds; and the main object in starting the Postal Bank was to bind the lower classes more firmly to the Government, and thereby discourage revolutionary inclinations. That object of course does not exist in this country, and the rapid decrease of our bonded debt during the last twenty years makes its entire extinction in the not distant future more than likely. What will then be done with the enormous sums constantly accumulating?

The directors of savings banks in San Francisco, and probably in other cities of the United States, find it difficult to invest safely the large sums intrusted to them. They guarantee no fixed interest, but simply pay their depositors as much or as little as they make.

The Government would probably have to guarantee a fixed rate of interest, and if large sums should lie idle in the Treasury for want of good securities, the Government might have to levy a tax on the nation to pay the interest to depositors. The handling of such large sums by a Government like ours is a dangerous experiment.

Would it not be best to stick to the American principle of keeping the Government as much as possible from interfering with private business and enterprise? The Government might as well go into railroading, telegraphing, life insurance, banking, and what not.—Yours respectfully,

F. O. Layman.

San Francisco, September 12, 1885.

SENATOR SHERMAN'S PROSCRIPTIVENESS.

To the Editor of The Nation:

Sir: Apropos of Senator Sherman's "general cussedness" theory of Democratic incapacity, one is reminded of the vigorous language of Burke in his speech to the electors of Bristol:

"This way, of *proscribing the citizens by denominations and general descriptions*, dignified by the name of reason of state and security for constitutions and commonwealths, is nothing better at bottom than the miserable invention of an ungenerous ambition, which would fain hold the sacred trust of power, without any of the virtues or any of the energies that give a title to it; a receipt of policy, made up of a detestable compound of malice, cowardice, and sloth. They would govern men against their will; but in that government they would be discharged from the exercise of vigilance, providence, and fortitude; and therefore, that they may sleep on their watch, they consent to take some one division of the society into partnership of the tyranny over the rest. . . . Crimes are the acts of individuals, and not of denominations; and therefore arbitrarily to class men under general descriptions, in order to proscribe and punish them in a lump for a presumed delinquency, of which perhaps but a part, perhaps none at all, are guilty, is indeed a compendious method, and saves a world of trouble about proof; but such a method, instead of being law, is an act of unnatural rebellion against the legal dominion of reason and justice; and this vice, in any constitution that entertains it, at one time or other, will certainly bring on its ruin." T. D. C.

Arkadelphia, Ark., September 14, 1885.

THE DIVISION OF DAKOTA.

To the Editor of The Nation:

Sir: Please allow a few lines from Dakota for the benefit of your readers. It is useless to tell them that the paramount subject of discussion in our politics is with regard to the division and admission, or admission as a whole, of this vast Territory into the Union. A great many people in both northern and southern Dakota desire division—the politicians are almost agreed on that point. A question of such vast import should

doubtless be decided, as Governor Pierce suggests, by the vote of the people. It is highly probable that a majority want one State of it, and why should they not? Evidently it would be less expensive to control the affairs of one than of the two. Some protest that the size of it makes it impracticable; also, that the sections are already divided in the minds of the people, and only need the line drawn.

In the first place, is it square miles or is it population that have to be governed? Population, of course. Who ever heard of New York having any grievous difficulty in governing her five millions? It will be a long day before Dakota has even *that* many. And why could not twice as many be under one government? The difficulties about getting to the capital will be lessened as more railroads come in.

With regard to the sectional feeling in the minds of the people, whatever there is of it has been created by politicians—or, more properly, demagogues—for obvious reasons. Admit the Territory as a whole, and a short time will entirely obviate such feeling. Admit the Territory as a whole, and it is destined to become the Empire State of the West in a few years. What a grand, mighty State Dakota, with her unparalleled resources, will make in a short time!

Respectfully, GEORGE A. COOKE.
JAMESTOWN, NORTHERN DAKOTA.

THE SILVER QUESTION.

TO THE EDITOR OF THE NATION:

SIR: There is no subject which more clearly illustrates the necessity of Cabinet responsibility than the coinage of silver. In your last number you say that the Administration has abandoned the hope of the passage of a bill simply stopping the coinage of standard dollars, or leaving this coinage discretionary with the Secretary of the Treasury, and is preparing a compromise of which the central idea is the suspension of silver coinage and the deposit of bullion. In other words, an Administration elected on a reform basis, and thoroughly convinced of the danger of an evil policy—which conviction is echoed by nearly every financial authority in the country, nobody of any standing venturing openly to take the opposite side, while the whole country is looking forward with dread to the placing of our currency at no distant day upon a basis of depreciated silver—this Administration is about to confess publicly that it is powerless against a single interest in the lobby, and can only hope at best for a compromise which will mitigate the evil. If this is true, we are confronted with a danger greater even than depreciated silver—an avowed helplessness of the Government to maintain the national interest against that of private persons and combinations.

What are the means of defence against the silver interest? Of course only public opinion making itself felt upon Congress and the Executive; and the only public opinion which is really effective is that of the great mass of voters. But there is no subject on which it is more difficult to arouse public opinion than the working of currency. Not one voter in a thousand has any clear idea of what the danger from silver really is, while the commercial and financial interests which do understand and have a very lively perception of it are in a small minority of votes. Many people make this an objection to universal suffrage, but it is of no use to discuss that institution, because we have it and must make the best of it. The only way in which the mass can be aroused to any decided action is through some prominent person in whom they have confidence telling them to take it. The people take very little interest in measures, but they take very great interest in men, of which last month furnished a very striking illustration. I remember that after the war certain persons, much interested in the state of the currency, used to hold public meetings for discussion when hardly a dozen listeners could be got together, and those nearly always the same ones. It happened a few years after that General Butler was a candidate for the Governorship, taking for that particular occasion the greenback as his standard. Immediately the Massachusetts halls were crowded with audiences, hungry for information on the very subject which for years we had been trying in vain to get them to listen to. The reason we have had so many soldiers for Presidents is not because the people are especially fond of soldiers or war, but because war has been the only thing which, with us, allowed individuals to become prominent in public life. Let the President travel through any State in the Union, and see what crowds will gather to meet him simply because he is the President; and then consider what an immense force is lost by refusing to give the President any voice in the conduct of the Government. The people ask for bread, and we give them a stone. We remit a vital question like the continuance of silver coinage to the darkness of a committee-room, where an impersonal body carries on secret negotiations, to use a mild word, at once with the lobby and the Treasury, and then makes a majority report for which nobody is responsible, to a House of which the rules are organized to suppress personality and strangle debate; and then we reproach the people because they do not step in and settle a question which they do not understand, and as to which they have no guide.

The very first requisite is, that the Secretary of the Treasury, the highest financial official in the Government, speaking for and to the whole country with an authority which no newspaper and no local representative can possess, should stand up in Congress, the rostrum of the nation, and make a statement as plain and simple as possible of the merits of the case. If Congress then proceeded in silence to vote him down, the indignation of the people would be aroused, and all defenders of honest money, instead of dealing with abstractions, would rally in support of the Secretary. The contest at elections would take on a different character, the position of individuals would be defined and called in question, and the lobby no longer have everything in its own way.

If we expect public opinion to prevail against private interest, we must furnish some leverage through which public opinion can act, and that can be found only in giving the Executive a voice in the direction of policy and a power of appeal to the national will. G. B.
NORTH ELBA, N. Y., September 14, 1885.

THE COAST SURVEY ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: The name of Professor Agassiz will necessarily give great weight to the letter published in your last number, on the recent Coast Survey investigation. It is therefore of especial importance that attention should be called to the two ways in which that letter may have a bad effect.

It may give a false impression of the character and object of the investigating commission, by not clearly distinguishing between their report and matter from other sources, or between their judgment on particular scientific operations and a judgment on the class of such operations. For instance, it would be taken as referring to them in saying, "Their dictum upon the late Superintendent, at least as far as his professional career is concerned, is answered by his position as an investigator in the scientific world." Since the commission say that "*of late years* he has manifested a general unfitness," etc., it cannot be they that are "answered" by pointing to his career in the past. Again, it appears to refer to them, or one of them, when it says, "A Treasury expert has seen fit to condemn valuable experiments and to indulge in a few cheap jibes about 'swinging the pendulum.'" In other passages, also, the letter seems to expose them as having condemned pendulum researches in general. Whatever other Treasury officials may be reported as having said, this commission concerned itself only with the pendulum researches of Assistant C. S. Peirce, and expressed an opinion based on comparison of the published results with the cost of those particular researches. Whether their opinion in this case was a correct one, depends largely on whether their statement of Assistant Peirce's expenses—by him publicly denied—was correct; and this is not a matter so recondite that the opinion on it even of a "Treasury expert" is without weight.

The Professor's other mistake is a more serious one: he places science itself in a false position by the question he asks, "Is the Superintendent of the Coast Survey, the head of the Nautical Almanac, the Director of the Geological Survey, or the Secretary of the Smithsonian to submit the scientific expenses of these bureaus [*sic*] to the judgment of a clerk in the Auditor's Department? The necessary appropriations having been made, is that Department or any member of it to decide upon the value of the scientific work thus provided for, or upon the method of its execution?" First, what the law-making power means when appropriating public money is to be inferred from the general consensus of laws governing expenditures; and if according to law the Auditor has a certain control over expenditures, that control must be taken as a necessary condition of the appropriation. Second, the Professor's reasoning leads, since he must regard the Auditor's knowledge as similarly inferior to that of the Commissioner of Agriculture or the Postmaster-General, etc., etc., as to the expenditures of his Department, naturally and inevitably to the conclusion that there is an absurdity in having Government accounts audited at all. Third, there is no impropriety in requiring that scientific work shall approve itself to unscientific men, because it is easy to prove to men of the intelligence of American citizens that next after the payment of its honest debts in honest coin, scientific work is the best investment that a Government can make. Fourth, such a requirement is necessary to the very life of scientific work under Government, at the time when appropriations for its support are sought. Are auditors to be thought less capable of judging than Congressmen, after Congressmen have constituted auditors for that very purpose?

We may agree with Professor Agassiz in his estimate of the general value of trigonometrical surveys and pendulum experiments, without accepting his views on the action of the Government as to the Coast Survey. * *
WASHINGTON, September 19, 1885.

Notes.

DR. D. G. BRINTON, Philadelphia, has now in press Vol. 6 of his "Library of Aboriginal American Literature," being 'The Annals of the Cackchiquels,' written by a native about 1560, and hitherto unprinted. The tribe in question was found in Guatemala by the Spaniards.

White, Stokes & Allen announce: Palgrave's 'Golden Treasury of Songs and Lyrics'; Seyppel's 'He, She, It,' and 'Sharp, Sharper, Sharpest'; a collection of poems of the civil war, both Federal and Confederate, edited by Mr. F. F. Browne, editor of the Chicago *Dial*; and an al-

phabetical 'Guide and Select Directory to New York City.'

Schliemann's 'Tiryns'; a new edition of Schuyler's 'Turkistan'; a new edition of Griffis's 'Corea'; 'Colonial New York: Philip Schuyler and His Family,' by Geo. W. Schuyler; a complete collection of the Poems of R. W. Gilder; a translation of Wilhelm Scherer's 'History of German Literature'; and Stockton's 'Rudder Grange,' with illustrations by A. B. Frost, must be added to the list of fall announcements already made by Chas. Scribner's Sons.

Cupples, Upham & Co. will issue immediately a popular edition of Mr. Rideing's novel, 'A Little Upstart.'

D. C. Heath & Co. publish next month 'Kinder- und Hausmärchen der Gebrüder Grimm,' edited by W. H. van der Smissen, of University College, Toronto. The text will be in Roman type, and the orthography will follow the reformed usage in respect to dropping *h* after *t*.

The fourth volume of Mr. Henry Cabot Lodge's fine edition of the Works of Alexander Hamilton (Putnams) is wholly occupied with this statesman's official and newspaper writings on the subject of our foreign affairs. These include the trouble caused by Genet and the popular dissatisfaction with the Jay treaty, as to which last Mr. Lodge reprints the "Camillus" papers, but regards the controversial "Philo-Camillus" as too ephemeral to be worth preserving. The entire contents furnish profitable reading in international law and American history. Noticeable is Hamilton's treatment of the complaint that the British had carried off negro slaves in withdrawing from the country, in violation of the treaty. Since an index is reserved for the final volume, it would have been a great service to make the table of contents somewhat analytic, however briefly. "Hamilton to William Short," "Hamilton to Washington," "Hamilton to Jefferson," etc., etc., often repeated, are about as helpful as a blank wall. Dates in the running-titles of the pages would also be desirable; and Hamilton's own foot-notes (see pp. 307, 341), are not distinguished from those of the present editor, which are clear and helpful.

The edition of the Waverley Novels, in six volumes, which now bears the imprint of Baker & Taylor, of this city, as well as that of Adam & Charles Black, is in fact the Edinburgh edition of 1871. It is none the worse for age, unless the steel plates have suffered, and still makes a handsome and convenient set, neatly bound in dark blue cloth. Each volume has a special glossary and an index, and the illustrations are numerous and chiefly of Scottish scenery.

It is always hard to keep one's hands off the 'Biglow Papers,' but their latest dress in the Riverside Aldine series makes abstention still more difficult. These two little volumes are fitted to go anywhere—in the pocket, on the library table, or on the shelf. The second series, with its intimitable introduction, forms the larger of the two.

The mystification concerning the authorship of the 'Saxe Holm Stories' appears to have ended with the death of the late Mrs. Helen Hunt Jackson, so that it is to her own admirers, as well as to those of her pseudonym, that the fresh issue of these stories is addressed by Charles Scribner's Sons. The two series are in two volumes bound in paper.

We must refer our readers to No. 988 of the *Nation* for an appreciation of Halkett and Laing's 'Dictionary of the Anonymous and Pseudonymous Literature of Great Britain,' of which the third volume, O to Tis, has just appeared after an interval of two years (Edinburgh: William Paterson; Boston: Lockwood, Brooks & Co.). The range is broader than that part of the title which we have just quoted, for the editors take cognizance of all works in English, even to translations from foreign tongues. Hence Lowell's 'Fable for Critics,' for example, appears here, unexpectedly, under the letter R—"Reader! walk up at once," etc. One remarks the large number of "Thoughts" in this catalogue—there are five pages of them, including, among more distinguished names, the Rev. George Allen's Thoughts on the Free-Masonry excitement, in reply to Edward Everett (Worcester, Mass., 1833). "Review" and "Reflections" are still more frequent. "Three" appears to be a favorite number with pamphleteers, especially if they have letters, discourses, or dialogues to offer the public. "Plain" thinking and speaking are the boast of plenty of them. Presumably the fourth volume of this excellent work will be the last.

A list of the Canadian voyageurs who served under Lord Wolseley on the Nile is given in Mr. Henry J. Morgan's *Dominion Annual Register* for 1884. This coöperation in the Sudan campaign was the most real and memorable contribution to "Imperial Federation" during the year. But Sir John Macdonald's visit to England and the meeting of the British Association at Montreal were looked upon as part of the same general drift. The home sky was not particularly bright. Immigration fell off markedly, as did the surplus, which proved smaller than the estimate. The rural opposition to a bankruptcy law could not be overcome. In spite of amendments to the homestead laws, the trouble began in the Northwest Territory that was to end in Riel's rebellion. Reciprocity with the United States made no advance, nor was anything done, by improving the extradition understanding, to diminish Canada's attractiveness for American defaulters. Meantime, the fisheries clauses of the treaty of Washington were about being abrogated upon notice from the United States. The freedom of the Erie Canal led to a demand for the abolition of tolls on the Canadian canals, but without avail. The literary product of the year was insignificant. Mr. Morgan has greatly enlarged his biographical list or Canadian "Men of the Time." His indexes, also, are noticeably full; but think of putting "Biggest bag of *ducks*" under B, and "Better observance of the *Lord's Day*" under the same letter!

A neat little pack of cards, combining instruction with amusement, has been prepared by Mlle. Sée, Professor of French at Wellesley College. She calls the game "Jeu des Académiciens" (Boston: Schoenhof). Each card has on it the name of a prominent French author with dates and four quotations from his works. The names of George Sand, Mme. de Sévigné, and Mme. de Staël are included by courtesy, probably. Descartes, Pascal, Michelet, and Molière are added from a sense of justice, perhaps, as they were not Academicians, and never filled any place in the learned body of the forty immortals, except the imaginary "Quarante-et-unième fauteuil."

The second volume of Flaubert's 'Éducation Sentimentale' is now issued, the fourth (in arrangement, the fifth in publication) of Quantin's solid *édition définitive*. This is much the longest of Flaubert's works, and is none the better for its length. Its value is chiefly historical, as the autobiography not of its author, but of his generation. But those of its readers who already care for Flaubert may catch here and there, more than in his other books, a touch of personal experience, as this: "Peu à peu la sérénité du travail l'apaisa. En plongeant dans la personnalité des autres, il oublia la sienne, ce qui est la seule manière peut-être de n'en pas souffrir."

Some amusement may be had from the five lectures delivered last year in the Salle des Capucines by Amédée H. Simonin, laureate member of the National Society of Encouragement to Good. They make a small volume under the title 'Psychologie Humaine Appliquée' (Paris: J. Michelet; New York: F. W. Christern). Applied to the late Edmond About, M. Simonin's psychology discovers that though this genial writer was an avowed sceptic, he was infinitely less harmful than Malthus and Darwin, who, in his opinion, by erecting dogmas in negation of the existence of a soul, "did more injury to humanity than Neros and Attilas." M. Taine's materialism is rebuked by contrasting his conclusions on certain moot historical questions, as whether Danton instigated the September massacres, with the opposing views maintained by Henri Martin. "There is something melancholy," says M. Simonin, "in this contradiction between two famous historians and Academicians. Knowledge of the psychic laws can alone prevent a recurrence of such incidents hereafter."

Nos. 508–510 of *L'Art* (Macmillan & Co.) bring the conclusion of Mr. Charles Diehl's interesting and well-illustrated papers on Ravenna. The most significant of the remaining articles is a long one on the contemporary engraving of medals, with many pictorial specimens. Paul Leroi writes of "St. Mark's in Venice," but chiefly by way of calling attention to the great work on that monument now publishing by Ferdinand Ongania. The engravings *hors texte* are less striking than they are apt to be, but the drawing of a portrait of a lady by Piquet, and the photogravure of a mortuary piece of sculpture, "Le Souvenir," arrest attention. The accompanying *Courrier de l'Art* is, as usual, readable in all its departments, of which the scope is very catholic.

Nothing pictorial in the *Portfolio* for September (Macmillan & Co.) approaches the heliogravure of the classic statue of Demosthenes. On the other hand, Mr. Joseph Pennell's etching of Paul's Wharf, on the Thames, with the Cathedral in the background, is much the more interesting and valuable of the two full-page illustrations in this vein. It is a print which is sure to find its way into the antiquarian's portfolio as a faithful memento of the London of 1884. But its picturesqueness was the first thought of the artist. Mr. W. M. Conway continues his papers on the influence of the mendicant orders upon the revival of art, treating this time of Giotto as a Franciscan artist.

Noticeable in the October *Magazine of Art* are engravings after the forcible designs of the German painter, Arnold Böcklin, and after Whistler's full-length portrait of the violinist, Pablo Sarasate.

The *Dramatic Review* is a London weekly which is now in its second half-year. It is exactly what its title declares it to be, and it endeavors to be a journal which the playgoer and the student of the stage can read weekly without being annoyed by personalities or by philistinism. The theatrical organ, the *Era*, familiarly known as the Actor's Bible, is simply a trade paper; and both in England and here the more lively theatrical papers are given to vulgarity and abuse. The *Theatre*, which started with promise, is narrow, untrustworthy, and incomplete. The *Dramatic Review* has faults, and not a few, but it is an endeavor in the right road. Some of its signed articles, by Mr. William Archer and Mr. Sydney Grundy, have been admirably incisive.

Science for September 11 is wholly devoted to the proceedings at Ann Arbor of the American Association for the Advancement of Science. The meetings appear to have been exceptionally pleasant.

A meeting of the Executive Committee of the New York Library Club was held at "The Sagamore," Lake George, at the close of the conference of the American Library Association, and the following permanent officers were elected: R. R. Bowker, of the *Library Journal* and the

Publishers' Weekly, President; Miss E. M. Coe, of the New York Free Public Library, and Wm. A. White, President of the Brooklyn Library, Vice-Presidents; C. Alex. Nelson, of the Astor Library, Secretary, and Jacob Schwartz, Librarian of the Apprentices' Library, Treasurer. The first meeting of the club will be held at Columbia College Library on the second Tuesday in November. The topics for consideration will be: Local coöperation of New York libraries in—1. A union list of periodicals in these libraries. 2. Inter-library loans and courtesies. 3. Book thieves. 4. Disposition of duplicates. All librarians or persons engaged in library work in New York and vicinity are eligible for membership in the club.

Baker, Voorhies & Co. have published in an attractive shape Mr. Daniel H. Chamberlain's Essay on the doctrine of "Stare decisis," which won the prize offered by the New York State Bar Association last year. It is a clear and interesting statement of the history, reason, and limitations of this great fundamental doctrine of the common law. Those of us to-day who sympathize with Bentham's exposure of the fallacy of the "Wisdom of our Ancestors," and who not only think but know that we are wiser than they were, will be inclined to smile at Blackstone's statement of the reason of the doctrine of Stare decisis, to wit, that "we owe such a deference to former times as not to suppose that they acted wholly without consideration." The true reason of it is, of course, as Mr. Chamberlain points out, the necessity of establishing as great a degree of certainty as possible as to what shall be the legal results of men's different transactions with one another.

Dr. Joseph Jirecek, the Bohemian literary historian, and Austrian ex-Minister of Education, has recently published, in the reports of the Bohemian Academy, an essay on "Culture Relations between the Hungarians and Bohemians in the Fourteenth and Fifteenth Centuries, and on the Hussites of Hungary," which presents many interesting facts. He shows from documents that Hungary contributed a large contingent of students to the University of Prague shortly after its foundation by the Emperor Charles IV., in 1348. The University students being divided into four "nations," the Hungarians formed a part of the Bohemian. Between 1372 and 1410, the juridical faculty numbered twenty-eight "jurists" from Hungary, and the philosophical, between 1367 and 1420, ninety-eight "artists," including twenty-eight licentiates. Briccius, of Buda, became Academic Rector in 1415. This dignity he owed to his Hussite sentiments. All the Hungarians who at that time remained in Prague, sympathized with Huss and his avengers. The "Compacts" concluded between the Bohemian Estates and the Council of Basel were published not only in Latin, Bohemian, and German, but also in Hungarian. The Hussite creed had found numerous adherents in Hungary, both among Slovaks—kindred of the Czechs—and Magyars. Two Hussite scholars of southern Hungary, seeking refuge from persecution in Moldavia, translated there the Bible into Hungarian. This was probably the oldest translation of the Scriptures into that language.

—The October *Harper's* contains an interesting variety of matter, in which there is nothing of special prominence. The story of the perilous canoe voyage along the coast of Labrador is finished, and happily it proves a tale, not of danger and accident, but of the wonderful changes in that simple landscape of rock, sea, and sky, and of the pathetic life of the miserable inhabitants who cling to the beach and crag, like wild things, notwithstanding the offers of Government to remove them to more favored parts of the Queen's dominions. The series of articles on American Industries is continued with "A Glass of Beer," devoted to hop-culture, malt-making, and beer-brewing; and that on American Cities finds one of its best members in the account of Hartford, in which Mr. Lathrop has very skilfully set forth the features of the city of the Charter Oak and the Insurance Policy, and added a literary charm that belongs to the home of Warner, Mark Twain, and Mrs. Stowe. Politically, a vivid description is given of the scene in the Mexican Chambers when the youthful Salvator Diaz Miron bearded the authority of Gonzales, and so unexpectedly vindicated the right of the legislature against the executive, and for once afforded his country the sight of the true working of constitutional government; and in a brief and telling paper the general question of the state of our land-laws is dealt with, particularly with reference to the lapsed railroad grants and the timber preserves, if the latter word be not a misnomer. The "Easy Chair" prints two new letters of Carlyle to the Hon. Beverly Tucker, of Virginia, in regard to slavery, one of which contains, as is said, the "most complete, serious, and restrained expression" of Carlyle's views on the subject; but, however temperate it may be, it is as worthless in point of fact as his wildest ejaculations on that theme.

—*Lippincott's*, together with its other travel-sketches, of which there is the usual allotment, has an extremely well-written and attractive account of a Texan sheep-ranch, in which vivid and close description is admirably blended with instruction; and the rest of its space is mainly taken up with short stories which illustrate, though negatively, the analysis of the "short story" which is contributed by Mr. Brander Matthews. This is the only piece of literary work, and exhibits what we are accustomed to expect from this writer—the scholarly basis of careful and industrious study, and the encyclopædic information in regard to the realities of his subject, whether it be drama, novel, or, as here, the "short story." It is a pleasure to observe, too, in connection with such an equipment of knowledge in a writer, the sensibility to and insistance upon formal art as the essential without which no imaginative work can become a part of *belles-lettres*. The "short story" he correctly declares to be peculiarly relished by our public, and to be one of the provinces of literature in which our work is equal to the best of other lands. Poe and Hawthorne are names to conjure with when there is any question of our excellence in this department; but in his explanation of how this form of fiction came to be particularly practised by those two, and has held its own since their day, Mr. Matthews seems to tell only half the story. The fact that Hawthorne's early efforts were meant for the "annuals," then popular, though it may be regarded as accidental, counts as accidents will even in the evolution of genius. We fancy, too, that, generally speaking, the timidity which seems the one common national characteristic of our literature, has more to do with the genesis of these "swallow-flights" of fiction than all other causes put together, such as the magazine demand, and the needs of a public whose life often exposes their reading to haste and interruption. We may hope, without fear, for the continuance of this bent of the American genius which forcibly economizes so much material of the author and time of the reader. In these days of literary long-windedness, it is something to thank heaven for.

—In the new chapters of Mr. James's serial in the *Atlantic*, the characters have taken on several years of age, and the story unfolds with an interview between the young hero of twenty, now tormented by the knowledge of his parentage, and a thoroughly vulgarized London girl, which ends in "the dusky by-street in Pimlico." New characters are introduced—a French workman and his wife, spiritually united, Socialists of course; and a light-eyed young Englishman, "with the complexion of a ploughboy and the glance of a commander-in-chief," who belongs to a mysterious club, and follows his occupation in the ominous shop of a wholesale chemist. The remainder of the number is staid enough. Mr. Scudder continues, and seems to conclude, his papers on "the Child" in the history of literature and art, who in the present form (with the capital "C," we suppose) is declared to have been discovered by Wordsworth and emancipated by the French Revolution. Mr. Warner advances a step in his jaunt through the mountains of North Carolina and Tennessee, not without some signs of fatigue; and the issue winds up with several pages of book reviews.

—"Southerner" writes us:

"Cannot some one induce Mr. Henry James not to put into the mouth of his chivalrous Mississippian the exclamation 'Lord!' used twice in 'The Bostonians' (August number of the *Century*)? On page 554 Basil Ransom says to Mrs. Luna, 'Lord, how few reasons there must be!' Again, on page 567, this type of the Southern *gentilhomme de province* replies to a remark of the brilliant Verena, 'Lord! you must have had a happy life!' Perhaps this has been a frequent lapse of Ransom's throughout the story, but I have only read the chapters in the August magazine. While not professing to know how 'The Bostonians' talk or 'lecture,' I think I may pronounce *ex-cathedra* that in polite circles at the South the expression attributed to Basil Ransom, at once inelegant and irreverent, is not to be met with."

—While the Robins-Pennell pretty 'Canterbury Pilgrimage' is still fresh in mind, it is worth while to say that there is much more of the veritable old pilgrim road to be found than might be interred from their story. In the *Saturday Review* for February 28 and March 14, 1874, there is a full account of the road as it might then be traced, and, with it, much curious detail about the old Roman Road, Watling Street, which it followed in the main. The present coach route by which the cyclers travelled leaves Chaucer's Road to the south for about fourteen miles between Dartford and Strood Hill, and about nine between Ospringe and Harbledown. It seems fit for driving except for about a mile and a half through Swarscombe Park Wood, which must be crossed on foot. The little journey offers unusual interest for the increasing number of Americans who like to see England away from the beaten tracks. A long summer's day would do it, though two were better. Experience justifies the belief that the tale of the sorrows of the tourists in their visit to the shrine of St. Thomas itself is only too true. Whether or no it is to be accounted for by the near neighborhood of London, and the consequent liability to be overrun by cheap excursions, it is a fact that the opportunity for seeing and studying the wonder and beauty of the Cathedral has been in pitiful contrast to the liberality displayed by authorities elsewhere in England.

—Walter Bentley Woodbury, the well-known photographic inventor, died at Margate, England, on September 5, suddenly, and, it is believed by the physician who was called in, of an overdose of laudanum. Woodbury was a remarkable example of the race of inventors—inexhaustible in devices for the perfection of photography, but singularly incompetent in the management of the business department of his enterprises, so that his genius never kept him long from financial disaster. In the latter part of his life he was often called on to endure extreme want, hunted by debts and duns, working out his last process with an execution in his house, slowly failing

from diabetes and need of the comforts of life, but persisting in his invention and its perfection with a tenacity which seemed to make him forget his troubles. In some other branches of industry his genius might have brought him fortune, but the artistic side of photography had such an irresistible attraction for him that he would not leave it. The process of printing known under the name of the Woodburytype will remain a monument to him. It is thus far the most perfect process of mechanical reproduction of a photographic image known to industry. The simplification of it known as the stannotype was his last perfected invention, but failed, in the multitude of processes now under notice, to get the aid of capital to bring it into use, and his incompetence in matters of business deprived him of his interest in it before it became known. A large-brained, warm-hearted man, singular combination of the genius and the child, he was the victim of circumstances, of his fellow-men, and even of his own heart; yet no disaster seemed to embitter him, and trouble or injustice seemed alike incapable of making him misanthropic or less confiding. The manner of his death will excite profound grief and pain among those who knew him well. He deserved prosperity, but desired it mainly for the sake of his inventions, and then for his family.

—The colonization fever in Germany continues to call forth numerous works of all degrees of length and value. 'Die Kolonialreiche und Kolonisationsobjekte der Gegenwart' (Leipzig; F. Frohberg; New York: Westermann) brings into convenient form the colonial statistics of all countries, but its special object is to direct German emigration to southern Brazil, whose chief recommendation is that the Germans will there be able to maintain their customs and language for an indefinite period—the attracting and assimilating power of Portuguese culture being vastly inferior to that of English. Baron Waltershausen's paper, in the *Deutsche Zeit- und Streit-Fragen* (Berlin, 1885, 40 pp.), on "Die Zukunft des Deutschthums in den Vereinigten-Staaten," recommends no other field for emigration, but holds up a picture of this country such as to make a pure-blooded "Yankee" shake in his shoes, to say nothing of an untravelled German. The unfortunate immigrants are forced, by custom and convenience, to change everything—not merely religion, politics, and language, but food, clothes, and domestic habits. In fact, beer and wine are the only peculiar institutions they are able to retain, and these only by constant exercise of that vigilance which is the price of liberty. So far they have been successful in the struggle, their latest victory being the defeat of Blaine, who represented the temperance fanatics. Perhaps the worst feature of American life is the position of women, who, owing partly to the climate and partly to their scarcity, are treated with absurd consideration, wife-beating being severely punished, and it being impossible long to hold wife and daughters to the performance of the various forms of labor which they uncomplainingly yield at home. With those who are better off the same evil obtains, though in a different form. Girls are spoiled by their fathers, receiving a better education and growing up with more refined habits than their brothers and future husbands, so that there is neither intellectual union nor community of purpose between husband and wife—not, at any rate, until the former has earned enough to retire from business, and even then, the Baron observes, the marriage is not free from the ill effects of twenty or thirty years' want of harmony. As to home comforts, the natives' idea of such things consists solely in furniture—their food being beneath criticism. But worst of all, perhaps, are the clothes which natives and immigrants have alike to adopt—these being made and fitted together like the parts of a watch, and sold, ready-made, in great shops to which resort all Americans "except the upper ten thousand." The Baron is careful to say that even Yankees were not always attired with the present uniform ugliness. Till within forty years, their national dress consisted of a dress-coat and cylinder hat; they all were clothed in these picturesque garments, "from the shopman behind the counter to the farmer behind the plough." But in factories and on the overland journey these (especially, we may suppose, the hat) were found inconvenient, and have disappeared.

—'Zur Beleuchtung des Stöcker-Mythus' is the title of a pamphlet (2d ed., Berlin, 1885; New York: B. Westermann & Co.) by Dr. M. Schwalb, Protestant preacher at the St.-Martini-Kirche in Bremen, and author of 'Der Apostel Paulus,' 'Christus und die Evangelien,' and other theological writings. The production before us has certainly the merit of being "ein freies Wort," as which it is offered; but it is equally remarkable for its sound reflections, pith, and fairness. The Herr Hof- und Domprediger's Christianity, theology, and anti-Semitic demagogy are dissected in it without mercy, and without the least regard for his standing at court, in the fold of orthodox Evangelicals, or in ultra-Germanic circles. The rampant agitator is shown up as equally shallow and untruthful as a divine, a politician, and a man, though possessed of certain attractions as a preacher, which explain the favor he has attained in high spheres. This favor, in its turn—together with the means of home-missionary benevolence of which it is the source—explains the prestige which he enjoys when descending among the lowly and ignorant, among whom he propagates his crude and vague notions, religious and political, "meeting half-way their socialistic aspirations, flattering their German chauvinism, feeding their Jew-hate, and thus producing in them an intoxicating excitement." He has some good qualities, Doctor Schwalb thinks, for a pastor of a naïvely-religious rural congregation, but he has missed his vocation—"it matters not through whose fault"—has become a court preacher, popular orator, the loudest spokesman of German hyper-orthodoxy, a chief of "die Christlich-Socialen." "That this has taken place, that this man has been able to occupy and fill such a position, will be one day recognized—perhaps in a near future—as one of the most melancholy signs of our time; it will reflect credit neither on our Evangelical church nor on our fatherland." Stöcker, as a politician, has meantime been thrown overboard by his own party, who have refused to renominate him.

CONGO FREE STATE.

The Congo and the Founding of its Free State: A Story of Work and Exploration. By Henry M. Stanley. With over 100 full-page and smaller illustrations, two large maps, and several smaller ones. New York: Harper & Brothers. 1885. 2 vols., 8vo.

It is to be regretted that the experiment of the Congo Free State has been made with such a flourish of trumpets. An enterprise of this character, if successful, must naturally be of slow growth. The publicity and undue importance given to it, therefore, by the Berlin Conference have done it an injury in fostering extravagant hopes as to immediate results which are necessarily doomed to disappointment. Its history, from its origin to the close of the Conference by which its position as a State was established, shows plainly that the simply pioneer work has been done. Whether any substantial building shall rise upon the foundations laid by Stanley and his companions remains to be proved. He returned to Europe in January, 1878, with a strong desire to open to civilization the rich and populous country which he had discovered in tracing to the sea the course of the Congo from the furthest point which Livingstone reached from the east. With the help principally of King Leopold II., the "Comité d'Études du Haut Congo" was formed, and $100,000 was raised for an expedition under Stanley's lead "to obtain accurate information" as to the commercial value of the Congo. In August, 1879, he was again upon the river, prepared to carry out the following instructions: "Three stations were to be built, a steamer launched on the Upper Congo, and communications were to be kept open to the sea." The force at his disposal consisted of less than twenty whites and about two hundred natives, including sixty-eight Zanzibaris, the most of whom had been with him in his voyage down the river, and were now his main reliance in his new undertaking.

Communication between the Upper Congo and the sea is interrupted 110 miles from the river's mouth by two series of rapids, the one 52 miles, the other 95 miles in extent, with a stretch of 88 miles of navigable water lying between. To launch a steamer, therefore, in Stanley Pool at the head of these rapids, it must first be dragged for 150 miles through a wilderness intersected by numerous ravines and streams, and so barren as to be nearly incapable of supplying the simplest food. It was a task from which a general with a regularly organized engineer and transport force might well have shrunk. The first obstacle to be overcome was the hostility and cupidity of the natives, and accordingly negotiations were immediately opened for securing the land for a station at the foot of the rapids to serve as a base for supplies. These negotiations, it may be said here once for all, were preliminary to every proceeding in which the natives were concerned, whether it was buying land or food, or getting permission to open a market, make a road, or even go through the country. They were always tedious, and required the greatest tact and patience, as well as shrewdness. "In the management of a bargain," says Stanley, "I should back the Congoese native against Jew or Christian, Parsee or Banyan, in all the round world." Judging from his own account simply (and we know of no reason to distrust it), these transactions were uniformly conducted with an honest consideration for the rights of the native. A site having been secured on the hill of Vivi, a station was built, consisting of a house for the whites, magazines for stores, and huts for the employees. In clearing the ground from stones, Stanley showed so much energy that the natives gave him the name of Bula Matari, Breaker of Stones, by which he is now universally known on the Congo.

In March, 1880, he began to make a road, fifteen feet wide, and practicable for heavily-laden wagons. It is impossible in a few words to give an adequate idea of the difficulties of this work, for which he now had only 106 effective men. Small as this force was, however, in six months he was able to report: "We have made three bridges, filled up a score of ravines and gullies at the crossings, graded six hills, cut through two thick forests of hard wood, and made a clear road thirty-eight miles long." At the end of a year they had reached the head of the lower rapids, and had launched upon the river two steamers, forty-three feet and thirty feet long respectively; two steel lighters, the one sixty feet, the other forty feet long; together with many tons of machinery and stores. The labor was greatly increased from the fact that, having but three wagons, four round trips were required

before all the material could be hauled to any given point:

"Computing by statute miles the various marchings, and as frequent counter-marchings, accomplished during the year, we find they amount to the grand total of 9,353 English miles, according to tape-line measurement of foot by foot, making an average of six and a half miles performed throughout each day in the year, to gain an advance into the interior of only fifty-two English miles. . . . That it was not a holiday affair, with its diet of beans, and goat-meat, and sodden bananas, in the muggy atmosphere of the Congo cañon, with the fierce heat from the rocks, and the chill, bleak winds blowing up the gorge and down from sered grassy plateaus, let the deaths of six Europeans and twenty-two natives, and the retirement of thirteen invalided whites, only one of whom saw the interior, speak for us."

The wonderful strength of the leader of this remarkable band was not equal to the strain put upon it by this terrible task. Scarcely had he reached the foot of the upper rapids, when he was stricken down by fever and brought to the verge of the grave. At one time his despairing followers gathered at his bedside to receive his farewell words. It proved, however, to be the crisis of the fever, and in less than two months he had regained his strength and energy. The country next before them did not present so many difficulties for road-making as that which they had already gone through, and, as they had now only two boats to transport, rapid progress was made: "By noon of the 3d of December, 1881, the wagons had been drawn to the landing place, and the steamer *En Avant* was floating in the quiet haven of the Kintamo baylet, with no rapid or impediment intervening between her snug cove and Stanley Falls, and with open navigation of about 5,000 miles before her."

The most difficult part of Stanley's work was now done, and that which remained to him was to find out whether the natives, who in 1877 so fiercely opposed his descent of the river, could be induced to permit white men to live among and trade with them. In this less arduous, but possibly more dangerous, task he seems to have been equally successful. For three years he was employed in exploring the river and its great tributaries, in negotiating treaties with the chiefs, and establishing stations, besides exercising a general superintendence over the whole service of the "Association Internationale du Congo," as the enterprise was by this time called. The treaties were frequently ratified by the rite of "blood brotherhood" performed on Stanley and the principal chief of the district:

"The fetish-man pricked each of our right arms, pressed the blood out, then, with a pinch of scrapings from my gun-stock, a little salt, a few dusty scrapings from a long pod, dropped over the wounded arms, and the black and white arms were mutually rubbed together. The fetish-man took the long pod in his hand and slightly touched our necks, our heads, our arms, and our legs, muttering rapidly his litany of incantations. What was left of the medicine Mangombo and I carefully folded in a banana leaf, and we bore it reverently between us to a banana grove close by and buried the dust out of sight."

On the upper river these treaties appear to have been simply to win the confidence of the natives in order to secure friendly intercourse. Between Vivi and Stanley Pool the chiefs, to the number of 450, ceded the sovereignty of their districts to the Association in return for a monthly subsidy. On its part this "promises: To take from the natives of this ceded country no occupied or cultivated lands, except by mutual agreement. To promote to its utmost the prosperity of the said country. To protect its inhabitants from all oppression or foreign intrusion. It authorizes the chiefs to hoist its flag; to settle all local disputes or palavers; and to maintain its authority with the natives." The limit of the explorations was Stanley Falls, 1,068 miles from the Pool. Here a station was built and left under the charge of a single white man with a guard of thirty-one armed "soldier-laborers." Notwithstanding he was twenty days' journey from the nearest station, and "doomed to at least six months' isolation" from the civilized world, this man, the engineer of the steamer, volunteered for the service. Stanley left him with many misgivings, but on the steamer's return it was found that the choice was a wise one. The engineer "had built an entire village; he had been planting and making gardens, and the savage natives round about him acknowledged him as their friend. Binnie was the umpire in all arguments, the arbiter in all political controversies—in short, he was the general referee in all the disputes which occurred in the locality." Another station in which Stanley's ideal appears to be reached, is the Equator Station, founded by two Belgian officers with forty-six men. In a hundred days this transformation took place:

"We had left it a jungle of worthless scrub; we returned to find an Equatorial hotel—commodious, comfortable, rain-proof, bullet-proof, burglar-proof, and almost fire-proof. In the domestic adornments and fittings one might have imagined a lady had lent her skilful taste in the arrangement. . . . Imitating their young chiefs, the colored men had also developed singularly good faculties. Each of them had built for himself an impregnable clay hut in the centre of a garden wherein the Indian corn was already over six feet high; the sugar cane was tall and thriving; plats of sweet potatoes carpeted with their leaves; while pumpkins, brinjalls, cucumbers, etc., etc., exhibited prodigious vitality. Lieutenants Vangele and Coquilhat also possessed a garden of European vegetables, which supplied onions, radish, carrots, beans, peas, parsley, lettuce, cress, beets, sweet potatoes, cabbage, etc., etc., for their soups and salads daily. There were also a large kitchen, servants' hall, goat park, and fowl-houses."

These stations, it may be said, are intended to serve two special ends, the one scientific, the other hospitable—to collect information about the country, its inhabitants, fauna, and flora, and to make meteorological and astronomical observations; and to give aid to all deserving travellers.

The treaties having been made by which the Association secured an open road to the interior, Stanley considered that his work was finished. In April, 1884, he was at Vivi awaiting the arrival of his successor in order to return to Europe. This successor was to be no other than General Gordon, from whom he had received the following characteristic letter:

"BRUSSELS, 6th January, 1884.

"MY DEAR MR. STANLEY—His Majesty has asked me to go out and join you in your work, which I have gladly assented to, and come from Lisbon on 5th February. I will serve willingly with and under you, and I hope you will stay on, and we will, God helping, kill the slave-traders in their haunt, for if we act together in the countries where they hunt, and make treaties with the chiefs, we can prevent their raids and truly stop the slave-trade. All the slavers are now engaged with Baker & Co., and so if we can (*D. V.*) push on we will find the field free. No such efficacious means of cutting at root of slave-trade ever was presented as that which God has, I trust, opened out to us through the kind disinterestedness of His Majesty.—Yours sincerely, in haste,

"C. G. GORDON."

It is useless to speculate as to how the history of the world would have been written if Gordon, instead of going to the Sudan, had gone to the Congo. We are inclined to doubt, however, whether the work of organizing and superintending the service of the Association would have proved a congenial one. His single idea in coming out appears to have been to suppress the slave trade. But this would have been impossible without losing sight, for the time, at least, of the main end for which the Association was founded, and it is improbable that he could have raised and armed a force at that time capable of destroying a band of slave-traders. Stanley's own experience shows this plainly. Some days before reaching Stanley Falls, the natives along the river bank began to act very strangely, deserting their villages at his approach, and refusing to have any intercourse with him. At one point all the people of a district seemed to have taken refuge in their canoes, which stretched in one huge flotilla nearly three miles along the shore. Soon after he came to a place

"where a whole town had been burnt, the palms cut down, bananas scorched, many acres laid level with the ground. . . . In front of the black ruin there were a couple of hundred people crouched down on the verge of the bank, looking wofully forlorn and cheerless, some with their hands supporting their chins, regarding us with a stupid indifference, as though they were beyond further harm. . . . Our guide, Yumbila, was told to question them as to what was the cause of this dismal scene, and one old man stood out and poured forth his tale of grief and woe with an exceeding volubility. He told of a sudden and unexpected invasion of their village by a host of leaping, yelling men in the darkness, who dinned their ears with murderous fusillades, slaughtering their people as they sprang out of their burning huts into the light of the flames. Not a third of the men had escaped; the larger number of the women and children had been captured and taken away they knew not whither. . . . 'And who are all those people we saw yesterday in hundreds of canoes near the islands?' 'They are our people, from our side and from the other, who have gathered together for protection. At night they go to their fields to get food, but in the daytime they live on the islands, with their canoes ready lest the wicked and fierce people come back. But go away, go away; strangers are all bad. Go to them if you want ivory; go and fight them. We have nothing—nothing.' And the old man's gesture, with open palms, was painfully expressive. We continued on our journey, advancing as rapidly as our steamers could breast the stream. Every three or four miles we came in sight of the black traces of the destroyers. The charred stakes, upright canoes, poles of once populous settlements, scorched banana groves, and prostrate palms, all betokened ruthless ruin."

At length "the bodies of two women bound together with cord," floating in the stream, only too clearly showed that the slave-traders' camp was near. The band numbered 300 fighting men and as many more camp followers. In eleven months they had raided over about 35,000 square miles of country, having captured upward of 2,300 slaves, all women and children. We will spare our readers Stanley's description of the horrors of this slave camp. He considered it necessary to enter into friendly relations with the Arab leaders, as it was in their power to check his further advance. On his return from Stanley Falls, for reasons of polity, he says:

"I set about persuading the chiefs to send with us to the coast a few of their confidential men, that they might witness for themselves what influences were advancing up the river on whose banks they had created such widespread havoc. It appeared to me the best mode of suggesting to them, rather than saying so in many words, that it would be wiser to abstain from committing these sanguinary battues, than to risk meeting some day a gunboat with a police force on board, who probably might deal summarily with such a slave-raiding band as we had found housed so openly on the river banks."

This proposal they accepted, sending with Stanley ten of their confidential slaves. Whether his policy was a wise one, we are not prepared to say; but it will be evident that, as there were at that time other similar bands raiding in the Congo basin, a very large force would have been required to carry out General Gordon's purpose to "truly stop the slave trade"—a force far beyond the means then at the command of the Association.

In one of the last chapters of his book, Stanley pays a deservedly high tribute of praise to the Europeans who had aided him during these five years of arduous toil. At the same time he is by no means silent, though he gives no names in this case, in respect to others who, by their in-

competence and disobedience, have added to his labors and greatly hindered him in his work. In close connection with this subject is a discussion of the important question of the climate. In a very simple way, and with many valuable illustrations from his own seventeen years' experience in Africa, he shows how the health may be preserved on the Congo, emphasizing especially the three rules, to avoid exposure to the noonday sun, to keep out of draughts when heated, to totally abstain from all spirituous liquor during the daylight. At the same time, while we are not disposed to question the truth of his assertion that the "avoidable" deaths among the whites employed by the Association were due to reckless disobedience of these rules, we are inclined to lay considerable stress upon the depressing effects of the scenery of the Congo upon the health. In one place he speaks of "that austere and sombre region of Vivi," the station at which the mortality was greatest. Of Manyanga, "another unhealthy station," and the scene of his own nearly fatal illness, he says, "a more lifeless, cheerless, unlovely scene than that around Manyanga it is scarcely possible to conceive." Another characteristic of the scenery is the feeling of "unspeakable loneliness" which it inspires. To some temperaments this cause alone would be fatal to the health. From a table given, it appears that, out of 263 Europeans employed on the river up to the spring of this year, 24 have died from sickness. "The deaths were in many cases avoidable. Some have been the result of downright madness."

In the last chapter there is a brief account of the sessions of the Berlin Conference, and, in an Appendix, the text of the conventions between the various countries as well as the General Act of the Conference establishing the Free State of the Congo. There can be no doubt as to the fact that this new State, occupying a million square miles of territory, with an estimated population of over forty millions, is very rich in articles of commerce, and could be made to produce enormous quantities of grain, sugar, coffee, rubber, etc., etc. But whether the necessities of the "worldly-wise traders" to whom Stanley looks for aid are sufficient to overcome the obstacles presented to a development of these resources by the hostility of the natives, the climate, and the interruption to navigation by the Livingstone Falls, remains to be proved. He estimates that a railway connecting the upper river with the sea could be built for $5,000,000, and would soon pay large profits from the trade which would be attracted by it. The amount of trade at present is shown by the fact that "to-day £52,000 are paid per annum for porterage between Stanley Pool and the coast by native traders, the International Association, and three Missions." One great advantage which the new State possesses is that it is founded on the principle of free trade. Commerce on the Congo is to be unrestricted and free from every expense, save what is absolutely essential for the safety of navigation.

It is hardly necessary to attempt any criticism of Mr. Stanley's literary style. In some respects the book is disappointing. The Congo is not an interesting river. The people who live on its banks are savages pure and simple with little individuality. It requires, therefore, more literary skill than the author possesses, to make his record of the work of dragging wagons, of tedious negotiations, of founding stations, and exploring rivers with low, monotonous banks, and water as black as ink, entertaining to the general reader. His haste to publish his book has also done much to prevent his doing justice to his subject. This may also be apparent in numerous errors which we have noted, though many of them are merely typographical. With this exception we can speak in high terms of the manner in which the work has been produced by the American publishers, and especially of the excellent index.

RECENT FRENCH BOOKS.

PROF. MARTIN PHILIPPSON, in 'La Contre-Révolution religieuse au XVIe Siècle' (Brussels: C. Muquardt; New York: F. W. Christern), has proposed to himself to describe the character of the Catholic counter-revolution which followed so close upon the first rapid progress of the Reformation. This reactionary movement embraces three series of events: the foundation of new religious orders, especially that of the Jesuits; the reëstablishment of the Roman Inquisition; and the three phases of the Council of Trent. For Philippson, "Catholicism in its modern form dates from the second half of the sixteenth century." After rapidly tracing the rise of some new religious orders, he passes on to the Jesuits, showing how the Company of Jesus, more consistent, more energetic than the monastic orders, gained its influence by remaining true to the principles of its founder. The rapid progress of this new body, which, six months after its recognition in 1540, numbered its members by hundreds, is followed in Italy, Spain, and throughout the German Empire. The new militia, the "Legion of God," had vowed to fight against heresy by every possible means. Its strength lay in the strict, the absolute obedience of the members to their chiefs. To the ordinary vows of the other orders they added that "of consecrating their lives to the continual service of Jesus and of the popes, . . . in such wise that they should be obliged to carry out, . . . without any hesitation, whatever the Pope . . . might command." At last the sovereigns of Europe thought they had found the ideal priests so much desired by them to help them to rule their people—men who, instead of seeking wealth and enjoyment, were devoted to poverty and obedience, and to the reformation of the clergy and the laity. This is all well brought out, with a certain impartiality, but with a strongly manifested dislike for the new society. For the rest, the author does full justice to the eminent qualities and energy of Loyola himself, to the indefatigable zeal and extraordinary ability of a man who thought himself above all human motives. The opinion of some historians, Macaulay among them, who attribute to the Jesuits the first check given to the rise of Protestantism, M. Philippson does not share. He thinks, on the contrary, that the Society of Jesus played only a secondary part, the first belonging to the Spanish and Roman Inquisition in southern Europe, and to the Council of Trent elsewhere.

In Italy the remnants of the Inquisition of the twelfth and thirteenth centuries had no central direction until in 1542 the Commission of the Holy Office was established. The work of the Congregation, the unrelenting extirpation of all heresy in Italy and Spain, the final crushing of whatever the Church did not approve, are fully detailed by Philippson. On his way he meets the noble figure of Michael Servetus, the victim of both Calvinistic and Roman intolerance.

The third and most important part of the 'Contre-Révolution' relates to the work of the Council of Trent. This it was that reformed the Church *in capite et membris*, that strengthened the hierarchy and reëstablished the much-needed discipline. As to the settling of difficulties between Catholics and Protestants, the Council did nothing, nor did the Church wish that anything should be done. Charles V., frustrated in all his hopes of reaching a satisfactory solution of the religious questions by an assembly "presided over and influenced by Rome," seeing his political system a failure, retired to the monastery of Yuste four years after the second suspension of the Council. With him the causes and aspirations that had brought about the convocation seemed to pass away.

Philippson dwells at length upon the details of the various sessions of the Council, the proceedings of which were not at all unlike a modern political assembly controlled by a ring. The first two had not been recognized by France, and had utterly failed as far as conciliation went. After many difficulties the third was finally convened in 1562. It was then that the theologians of the Society of Jesus came to the rescue of the strict traditional orthodoxy and of the papal omnipotence, so bitterly attacked, not only by the innovators, but by the old Catholic partisans of episcopal independence. The conversion of the Cardinal de Lorraine to the side of the papal interests brought about the final decisions of the Council, that were promulgated as decrees in 1564. They were gradually accepted in the Catholic countries of Europe, but never in France, where the Gallican Church maintained its privileges, forgotten only in recent times. Although the hierarchic tendencies of the Assembly at Trent found little favor with the ruling powers of the sixteenth century, in the vast domain of faith and of Catholic doctrine its influence was immense. Its action in this respect was greatly if not exclusively due to the Spanish clergy. Philippson sums up his judgment of the results attained thus:

"It may be said that it saved the Church, that it gave to Catholicism a constitution and a direction. . . . It was a real transformation and a resurrection. . . . The Church had proved that it did not despair of maintaining itself against the formidable assaults of the innovators. . . . It is at the Council of Trent that the hitherto irresistible shock of the Reformation stops. Soon the garrison of the Roman fortress, having again become numerous, courageous, well-disciplined, enterprising, resumes the offensive, and drives its adversaries from a great number of positions where they had thought themselves safe from all attack."

In its whole action the Roman Curia was perfectly logical and true to its own interests, and this the author fully recognizes. Since the Council of Trent, the Church has become much more exclusive and strict—our author says "étroite, sombre, haineuse." Thus it was that while the Reformation seemed for a moment to threaten the very existence of Catholicism, the work of internal reform, urged on in a great measure by the disciples of Loyola, was the beginning of a new epoch of the Church of Rome. Abuses of all kinds disappear, all become filled with an unbounded devotion and enthusiasm. Henceforth the clergy recognize that their true force lies in unity, in unquestioning submission to the great central direction of Rome.

A fresh breath of modern life might certainly be expected in a book treating of clubs, but nothing of the kind is to be found in M. L. de la Brière's 'Au Cercle' (Calmann Lévy; New York: F. W. Christern). There is, throughout the work, and notably in the preface by M. de Pontmartin, an odor of closed, aristocratic salons, which have never been cleared of a most ancient Bourbon mustiness by any democratic breeze. In spite of the assertion of the arch-conservative writer of the preface, that democracy has unfortunately found its way everywhere, "even among those who groan over its triumphs," it has not found its way into the pages of M. de la Brière, unless it be to make him speak with disdain of Mignet, Renan, and Henri Martin. Lavish of the titles of S. A. R. and LL. EE., his mouth full of counts and dukes and princesses, devoutly respectful to the Comte de Chambord, whom he calls "le Roi," prostrate before S. A. R. le duc d'Aumale, S. A. R. le duc de Chartres, he thinks he does too much honor to

le citoyen Spuller and *le citoyen* Félix Faure, when he barely mentions them. The aristocratic clubs, the Union, the Jockey Club, the Cercle Agricole, the Cercle des Champs-Élysées, naturally occupy the place of honor, very little space being given to the various artistic or literary clubs, several of which are not even mentioned. It may show the author's bias to state that he thinks it necessary to excuse the action of some of the above clubs in illuminating their balconies on the national fête of July 14. Seeing the façades thus *flamboyer à contre-cœur* on this date ominous to Legitimist hearts, M. de la Brière could not help thinking of the marquises of 1793, who donned the plebeian carmagnole "so as to be able to circulate freely and enjoy the rights common to all." The latter part of the work is devoted to the clubs of London, Madrid, Berlin, Rome, etc., about which the author has very little information to give. It must in justice be added that the sixty pages devoted to the Cercle de l'Union, "le refuge exclusif où s'est fièrement cantonnée l'élite du Patriciat français," are interesting, full as they are of whiffs of an aristocratic perfume and of an odor of incense.

A club to which the author of the preceding volume reluctantly devotes a few paragraphs is the Cercle Saint-Simon, inaugurated in 1882. This society is eminently "eclectic," as he tells us, which with him means not exclusively Conservative, nor Legitimist, nor Clerical. By the side of such "antipathetic names" as Renan, Jules Ferry, Cartier, "le Magistrat des expulsions," and several other notabilities designated as *citoyens*, M. de la Brière can cite celebrities like M. Desprez, "fils de l'ambassadeur auprès du Vatican"; M. de Bonnières, "l'écrivain monarchique"; and M. Lamy, "l'ancien député catholique." But these names are not enough to compensate for the fact that the association chose for its honorary presidents Mignet and Henri Martin, and appointed on its committee MM. Monod, Reinach, Zevort. He fears that Saint-Simon was but little consulted before inscribing "beneath the ægis of his noble name" such plebeians and so many Hebrews and Huguenots. Whatever may be M. de la Brière's opinion as to the composition of the Cercle Saint-Simon, it has thriven well since its foundation. The *Annuaire* for 1885, just received, presents a list of 741 members, among them many of the most celebrated men in France. It would take many pages to run through this list with the comments which the names deserve, but the celebrities of the Cercle Saint-Simon do not need introduction to the outside world. They are the historians, the publicists, the critics, the poets, the thinkers of France: Cherbuliez, Coppée, Renan, De Lesseps, Bréal—to mention only a few, known here. The object of the Cercle, as stated in the statutes, is "to facilitate intercourse between men of study outside of all party spirit." It offers the usual advantages of clubs, games of chance excepted. It has lecture halls, a library, reading-rooms rich in periodicals native and foreign, a restaurant and café, a billiard-room, and a fencing hall. It is accessible to non-residents of Paris, who, under the name of *adhérents*, may become entitled to all the essential privileges of its association.

The previous Bulletins contained lectures given before the society by MM. Taine, G. Paris, Maspero, Léon Say, Renan, and others. Beginning with this year, the Cercle publishes, besides its *Annuaire*, monographs on historical, literary, and scientific subjects. 'Le Pacha Bonneval,' by M. Albert Vandal (Paris: Au Cercle Saint-Simon), is the first number of the series. This is a short but exhaustive sketch of the not very edifying career of the Comte de Bonneval, who, after distinguishing himself in the armies of Louis XIV., passed over to the Austrians and acquired a European celebrity. Disgusted with the service of the Emperor, he became a Mussulman, and was made Pasha, in which position he did all he could to teach the Turks how to resist their Christian neighbors.

The second publication of the Cercle Saint-Simon is 'L'Expansion de l'Allemagne,' by M. Jules Flammermont. This is a lecture showing the progress made in the extension of the German language and of German influence over certain regions not originally Teutonic. It is a cry of alarm, needless, it may be said, as by the author's own showing the Czechs in Bohemia and the Slavic populations generally have successfully resisted all attempts at Germanization. Nor need America be over-anxious at the thought that the ten millions of Germans established in the United States "will succeed in preserving their nationality." The author is wiser when he reflects upon the fact that Bismarck does not seem to believe in this result, "since he is seeking to acquire colonies in order to direct German emigrants thither 'à fin de les conserver au germanisme.'"

M. Philippe Daryl contributed to the *Temps*, under the heading "La Chine contemporaine," a series of articles upon the government, literature, philosophy, military and financial resources, commerce, and manners of China. These have been collected under the title 'Le Monde chinois' (Hetzel; New York: Christern). M. Daryl has nothing very new to say, but his book is pleasant, easy reading. He has taken the pains to bring together many facts which throw light on recent events in China. He has freely and intelligently used the information given of late by some of the best newspaper correspondents. He seems to have relied especially upon English sources.

'Jacques Bonhomme chez John Bull' (Calmann Lévy; New York: F. W. Christern) is not a book that will further international good-feeling between England and France. The author, who signs himself Fernand de Jupilles, has much to say in a very flippant style about many things of which he knows very little. His first chapters might have been made up from Thackeray's 'Four Georges,' with the genial humor left out and replaced by acridity and personal rancor. Why discuss seriously a book that can be taken seriously by no one? The author has much to say (the portions in quotation marks being by far the best) of the French colony in London, which counts no less than twenty-four thousand souls. He grows quite serious, and almost pathetic, when he relates the disappointments of French masters in London. The book has been but little noticed in France, in spite of the well-deserved reputation of the publisher.

A small memorial volume, containing extracts from the immense mass of Victor Hugo's prose and poetry, has been published (Hetzel-Quantin; New York: F. W. Christern). It is called 'L'Œuvre complète de Victor Hugo: Édition du monument.' The selection is well made, the pieces chosen being very characteristic—too much so, in several cases, to admit of the use of the book in the class-room. This is to be regretted, as the volume costs only one franc.

RECENT LAW BOOKS.

MR. GEORGE F. TUCKER'S 'Monroe Doctrine: A Concise History of its Origin and Growth' (Boston: George B. Reed) is designed to present "a concise and impartial history of a subject which for more than sixty years has been of importance to the nation and of interest to the people." His history embraces an account of the causes which led to the declaration of the doctrine, the declaration itself, the Panama Congress, the Yucatan trouble, the Clayton-Bulwer Treaty, and the Canal correspondence. It is important to bear in mind, he thinks, that the Monroe Doctrine has never received legislative assent; even if it had, it might be repealed to-morrow. It is a principle, we may say further, of national policy rather than a doctrine of international law, and therefore legal discussions of its precise scope and limitations such as Mr. Tucker and others have attempted, though perfectly proper in the case of a statute or a rule under the Law of Nations, seem here out of place.

The important point to ascertain with regard to it, is what it meant when it was announced, and in any practical application of it to-day, to make up our minds how far we can usefully resort to it. Mr. Tucker is very clear as to what the doctrine is. According to his analysis it embraces three points: 1. No more European colonies on these continents. 2. No extension of the European political system to any portion of this hemisphere. 3. No European interposition in the affairs of the Spanish-American Republics. Now, says Mr. Tucker, in concluding his résumé, "There never was a period when an adherence to the principles of the Monroe Doctrine was more likely to be productive of beneficial results to the people of both American continents than the present." This refers apparently to the Clayton-Bulwer difficulty, for Mr. Tucker is among those who think the Clayton-Bulwer Treaty should be abrogated or modified. But he fails to show what the connection between the Monroe Doctrine and the Treaty is. As far as can be made out from the correspondence on the subject, the Treaty was at one time supposed to be in conflict with the Doctrine, because it provides for a joint guarantee of neutrality by England and the United States. Such a guarantee implies enforcement, and enforcement brings a European Power over here to interfere in an American question. But this would neither be establishing a new colony nor extending the European *political* system to any portion of this hemisphere, nor would it be an interposition in the affairs of the Spanish-American Republics. It would simply be discharging an obligation toward the United States, which in the absence of the Treaty would be non-existent.

There is, of course, a correlative obligation upon the United States to prevent other countries from interfering with the canal; but can it be that any one seriously maintains that the Monroe Doctrine requires the United States to take care of all canals built across the Isthmus, and at the same time to abstain from getting European Powers to promise to help them? If the Clayton-Bulwer Treaty were torn up, and Great Britain were then to undertake to police the canal, or keep it open, or shut it up, or assume *exclusive* charge of it for any purpose, the Monroe Doctrine would certainly be invoked to prevent her; therefore it would seem as if a treaty which obliges her to refrain from anything of the kind could not be in contravention of the Doctrine. This is a matter into which we should have been glad to see Mr. Tucker go more fully, especially as he dwells at some length upon the proposed tripartite guarantee of the integrity of Cuba, and the reasons which led the United States to refuse to enter into that compact. If we want the canal as part of our "coast line," does the Monroe Doctrine require us first to purchase or annex Central American territory, and then build the canal ourselves? All these questions, raised by the Canal correspondence, Mr. Tucker glides over rather too smoothly. In fact, his book is chiefly valuable as a means of putting any one who desires to reach a right conclusion on the right track. The author cannot be said to reach any distinct conclusions of his own.

'The Power and Authority of School Officers and Teachers in the Management and Government of Public Schools and over Pupils out of

School, as determined by the Courts of the several States'—such is the large title of a small, useful and well-devised book, prepared by "a member of the Massachusetts bar" and published by Harper & Brothers. The body of the book, which a man might carry without knowing it in his pocket, is made up of a selection, very well stated and abridged, from the decisions of fourteen States. An appendix follows, with brief abstracts from the statutes of all the States in the Union. This seems to be the least useful part of a work which can be safely recommended.

Mr. G. Thomann, the author of 'Liquor Laws of the United States; their Spirit and Effect,' appears to share the opinion to which Lord Coke has given expression in one of his reports: "And it was said that it was very necessary that brewers should have skill and knowledge in brewing good and wholesome beer, *for that doth much conduce to men's health.*" This book is published in New York by "The United States Brewers' Association"; so that he who runs may read its general purpose. It is a review of the legislation of the United States bearing upon the subject of distilled and malt liquors. Its collection of statistical tables and its apparently well-prepared and fairly stated abstract of the history of national legislation upon the subject, make it a valuable contribution to one of the most important subjects of the day. The author regards his book as being material toward the end of "establishing a scientific basis for future legislation." He proposes hereafter to consider the legislation of the different States. He says: "The experiments made in our country range from one extreme to the other—from total non-interference to absolute prohibition. The result of both has been 'free whiskey.' In the case of prohibition it is 'free whiskey' to the exclusion of malt liquors, and for this reason the policy of protection and non-interference, to which, at the dictation of the rural population, the national Government adhered during half a century, would be preferable on temperance grounds to the realization of the Maine idea. . . . The proper policy, as we have seen, lies midway between these two extremes." The account of the Whiskey Insurrection in Pennsylvania and of the rise of the "Washingtonian" temperance reform are interesting episodes in the narrative. The lack of an index is an inexcusable fault.

Mr. Hiram T. Gilbert, of the Illinois bar, has put out a work entitled 'The Railroads and the Courts' (Ottawa, Ill. : published by the author), in which the gravest criticisms are made upon the administration of justice in Illinois ; and it must be added that, in a great degree, these criticisms appear to be supported by the statistics and by the review of judicial opinions which the author presents in this volume of nearly six hundred pages, octavo. If the book can shame the people of Illinois into prohibiting the free-pass system by which high officials are bribed by the railways, and into abolishing the petty and degrading requirements by which their judges are hampered in dealing with jury cases, it will have done an excellent work. And then, while their hand is in, the aroused population may as well end the vicious system of popular elections for the judiciary, and make their salaries and the dignity of the place such as to attract the most learned and the strongest men. It is true that Illinois is not alone in her degradation as regards judicial and legal administration, but she has the misfortune to have her faults now put under the electric light for universal observation.

'The Law of Presumptive Evidence, including Presumptions both of Law and of Fact, and the Burden of Proof both in Civil and Criminal Cases,' is the title of a law book prepared by Mr. John D. Lawson, and published at San Francisco by A. L. Bancroft & Co. The industrious author has undertaken to classify under 122 rules and 17 "sub-rules" the mass of judicial utterance in England and here upon the perplexed and ill-understood topic of "presumptions." Stephen has well remarked that most of these are rules of substantive law, and do not belong to the subject of evidence. To deal with them as is done by Mr. Lawson and by others, as so many rules of evidence, is to give to that subject a complexion of great artificiality and intricacy; it involves a distortion of things, which affects the mind much as an ill-adjusted stereoscope affects the eyes—things are out of focus. Look, for instance, at Mr. Lawson's first rule, standing in all the pomp of black-faced type: "Every one is presumed to know the law when ignorance of it would relieve from the consequences of a crime or from liability upon a contract." What is meant is, that knowledge of the law or ignorance of it is in such cases immaterial; that ignorance of it furnishes no defence—that is to say, there is no presumption at all. It is true that judges have said just what this rule says; but they have also said a hundred other things that are not worth repeating. What is needed in any book on "presumptions" that aspires to be of permanent use, is a much more careful analysis of terms than Mr. Lawson has gone through. Something of that sort would have saved him from the notion that rules of law are to be spawned at will by stating ordinary logical inferences—as in his rules numbered 48-52 inclusive. There is no end to a process of that kind. This book, however, has the practical merit of grouping a good many cases in a way which makes them easily found; and poor as it is in some points of view, the lawyers will often find it convenient.

Mr. Sidney E. Williams's handsomely printed 'Forensic Facts and Fallacies' (Macmillan & Co.) is described by the author as "a popular consideration of some legal points and principles." It aims, with very moderate success, to give the unprofessional reader a better general knowledge than he (presumably) has already, on eight or ten topics, *e. g.*, "libel and slander," "customs, clubs, and the Stock Exchange," "the whole duty of a trustee," "evidence," etc. The book is too diffuse and too dull to be very useful; it runs on thus, for instance: "When we remember how much we owe to law—how our lives, our liberty, our property depend upon it, it may seem a strange thing that the legal profession should have incurred so much public odium. . . . That the law should not be popular is not perhaps to be wondered at, seeing that it is human nature to love the partisan rather than the judge," etc., etc. The best of the twelve chapters appears to be that which deals, among other things, with the law of "Clubs." The chapter on "Evidence" shows but a slight knowledge of the subject; the writer does little but reproduce what he finds in the useful but gravely objectionable work of Mr. Justice Stephen. He acknowledges his obligation to that book, designating it with peculiar infelicity as "the *masterly* digest of that learned Judge." Stephen's 'Digest of Evidence' has very good points, but it is anything but "masterly"; it is one of his poorest books.

John William Smith's 'Law of Contracts' is now published in a "seventh American, from the eighth London edition" (Philadelphia: T. & J. W. Johnson & Co.). Previous American editions have been edited by such competent and well-known lawyers as Rawle and Sharswood, whose notes are retained ; and very intelligent work has been added in the present edition by Mr. J. D. Brown, jr. It may be doubted whether it is best to try to keep up 'Smith on Contracts.' It was written some forty years ago. Upon no part of the law has such careful and illuminating work been done during that period as upon this. Leake and Anson and Pollock in England, and in this country Holmes, and preëminently Langdell, have thrown such light upon this topic as to give to the best of the older treatises a certain fatal cast of obsolescence. Still, a law book that was once good dies hard, and the publishers probably know what they are about when they reproduce Smith. It is skilfully written, its arrangement is familiar, and it has useful American notes. But it should be stated that the English editors have taken the utterly unpardonable liberty of tampering with the original text. They have introduced long passages, with no indication whatever to warn the reader what part was written by Smith and what was not. To a very appreciable, but not easily ascertainable extent, therefore, this book is *not* 'Smith on Contracts.'

Hawkins's excellent 'Concise Treatise on the Construction of Wills' never, we believe, passed to a second edition in England. Having been published in 1863, it was reprinted here with notes by Mr. Sword in 1872 ; and now a second American edition (T. & J. W. Johnson & Co.) appears, with additional notes and references by Frederick M. Leonard. The editor has been too sparing of his labor ; such leading English cases, *e. g.*, as Charter vs. Charter and Grant vs. Grant, ought not to have been omitted. 'Hawkins on Wills' was the work of a very thoughtful and intelligent man. It was a contribution of permanent value toward a clear, just, and scientific view of the subject, and the publishers have done well to keep this little book in the market.

Mr. Henry Flanders's 'Exposition of the Constitution of the United States' (T. & J. W. Johnson & Co.) is announced as the "fourth edition revised." This seems to indicate that it has found the success which it deserves. It is a small, attractive pocket volume, containing the Constitution, a compact and accurate exposition of it, and an appendix which has the Declaration of Independence and a few other documents. It was the author's aim "to supply a convenient manual of instruction to the youth of the country ; to make clear and intelligible to the unprofessional reader the fundamental law, . . . and at the same time to produce a work which might also be useful to the bar." There is a dryness about the 'Exposition' which was perhaps unavoidable in the endeavor to make the work so brief ; but any one who wishes to know the import of the national Constitution, as explained by the latest decisions, will find this book a safe, convenient, and condensed authority. It does not give the cases, and has not at all the aspect of a law book.

In M. Louis Bridel's 'La Femme et le Droit' (F. W. Christern) we have in 148 octavo pages the first part of a threefold work which the author purposes—"un livre historique, un livre philosophique, un livre consacré à l'indication des principales réformes à réaliser dans la condition légale des femmes." These words are from a brief preface dated at Lausanne, August, 1884. It is a generous and high-minded book, and worthy the attention of those who follow the literature of the "woman's-rights" question. It is also very readable. At the same time, in point of learning or of thought it appears to contribute little to what is already well known. The author is a Socialist. On p. 76 the following singular tale is given as illustrating the survival of certain ancient ideas in some parts of England. It is as quaint as the architecture of the town itself:

"En 1864 les assises de Chester étaient appelées à juger une femme accusée de bigamie. Or elle avait été menée, la corde au cou, sur la place du marché de la localité, et livrée par son mari, pour le prix d'un schelling, à un autre homme qui l'avait épousée. Sur l'observation du juge que le droit de vente du mari avait longtemps existé, et que la croyance en un mode de dissolution du mariage pouvait avoir subsisté dans l'esprit po-

pulaire, la prévenue fut déclarée non coupable, et libérée de l'accusation de bigamie."

One would like to have the original authority for that story. M. Bridel quotes it from Doctor Stammler, a German legal writer. But Stammler gives no authority, at least in the place in which he originally published it, 'Sammlung wissenschaftlicher Vorträge,' xii, 137. Doctor Stammler's account is circumstantial: he fixes it in August, 1864, and mentions that the accused set up the invalidity of the first marriage.

Nimrod in the North; or, Hunting and Fishing Adventures in the Arctic Regions. By Frederick Schwatka. Cassell & Co. 1885. 198 pp., small 4to, illustrated.

READERS of *Forest and Stream* have already had a taste of Lieutenant Schwatka's sporting adventures by field and flood. The general public will welcome and enjoy the present instalment of lively narration, which, in part, covers much the same ground. There is nothing monographic, scientific, or profound in the book, but it is pleasant reading, the illustrations are fairly good, and the cover is nothing less than "gorgeous." A chapter on the polar bear opens the series, and is followed by one devoted to the walrus and the varieties of hair seal, one on the Barren-ground caribou or reindeer, on the musk ox, on feathered game, on fishing in the Arctic, on dogs and sledging, and two on hunting and fishing during the author's well-known raft-journey down the Yukon. There are incidental quotations from several Arctic travellers, and numerous details as to Innuit methods of hunting, among which the ethnologist will find matter for his note-book. The coöperation of a trained naturalist would have made the book of more permanent value to others than the professional sportsman, and eliminated a few doubtful or misleading expressions. Such a statement as that on p. 35, where it is said, "Some writers have claimed that [the walrus] possess the power of suction in these members [the flippers] as the houseflies are supposed to possess it in their feet," deserves a more emphatic disclaimer than that it "needs confirmation"; and the alleged figure of a blue Arctic fox (p. 127) gives no idea of the appearance of that calumniated Vulpes; but such faults are not numerous, and the public to whom the book naturally addresses itself will easily overlook them. An index and map would have been convenient for the reader, and it is to be regretted that they are not supplied.

BOOKS OF THE WEEK.

Alden's Cyclopædia of Universal Literature. Vol. I. J. B. Alden. 60 cents.
Adams, O. F. Brief Handbook of American Authors. 2d ed. Boston: Houghton, Mifflin & Co. 75 cents.
Adams, O. F. Brief Handbook of English Authors. 2d ed. Boston: Houghton, Mifflin & Co. 75 cents.
Arber, E. The First Three English Books on America. [? 1511]-1555 A. D. Scribner & Welford.
Art Handbooks 2 vols. G. P. Putnam's Sons. $1.25 each.
Bates, A., A Wheel of Fire. Charles Scribner's Sons. $1.
Bigelow, J. The Writings and Speeches of Samuel J. Tilden. 2 vols. Harper & Brothers.
Birchwood. Thomas Y. Crowell. $1.25.
Boswell, J. The Life of Samuel Johnson, in 5 vols. New ed. Scribner & Welford.
Black, C. C. Michael Angelo. The Story of his Life and Labors. Boston: Chautauqua Press.
Browne, L. Voice Use and Stimulants. Chicago: A. N. Marquis & Co. 60 cents.
Cervus, G. I. A Model Wife: A Novel. Philadelphia: J. B. Lippincott Co. $1.
Cazin, Prof. A. The Phenomena and Laws of Heat. Charles Scribner's Sons.
Chency, J. V. The Old Doctor: A Romance of Queer Village. D. Appleton & Co. 50 cents.
Cooley, T. M. Michigan. [American Commonwealths]. Boston: Houghton, Mifflin & Co. $1.25.
Crane, Lucy. Art and the Formation of Taste. Boston: Chautauqua Press.
De Schweinitz, Bishop E. The History of the Church Known as The Unitas Fratrum, or The Unity of the Brethren, founded by the Followers of John Huss. Bethlehem, Pa.: Moravian Publication Office.
Denison, Prof. C. Moisture and Dryness; or the Analysis of Atmospheric Humidities in the United States. Chicago: Jansen, McClurg & Co.
De Lanoye, F. Rameses the Great, or Egypt 3,300 Years Ago. Charles Scribner's Sons. $1.
Drysdale, W. In Sunny Lands: Out-door Life in Nassau and Cuba. Harper's Franklin Square Library. 25 cents.
Edwards, M. B. The Flower of Doom and Other Stories. Harper's Handy Series. 25 cents.
Eliot, George. Adam Bede. Harper's Franklin Square Library. 25 cents.
English, T. D. The Boy's Book of Battle Lyrics. Illustrated. Harper & Brothers.
Fenn, G. M. The Parson o' Dumford. Cassell & Co. $1.
Fleming, G. Andromeda: A Novel. Boston: Roberts Brothers. $1.50.
Foster, E. Abraham Lincoln. Cassell & Co. 50 cents.

Fine Arts.

ASIATIC TERRACOTTAS IN THE LOUVRE MUSEUM.

ABOUT half a century ago the learned German archæologist, Eduard Gerhard, directed the attention of his pupils to the interest which Greek terracottas have for the history of ancient art. If Gerhard could have lived as long as his well-known Belgian friend, Baron de Witte, he might have seen a single figure from Tanagra reach, in a Paris auction, the price of $1,200, and would gladly have acknowledged that his advice had not remained unnoticed. Indeed, the rage for Greek terracottas has been the prevailing passion of amateurs and museum officials in Europe for the last ten years, and many a fortune has already been built on these fragile and costly relics of Greek industry. It is not my purpose to relate how the Bœotian necropolis of Tanagra was discovered by some Greek peasants of Stanistais about the beginning of 1870, and with what marvellous rapidity the fame of the Tanagræan terracottas spread from Athens to Paris and from Paris to the rest of Europe. The tale of the discoveries in Tanagra would be, on the whole, a very sad one. If they have enriched most of the collections in Europe with a large number of masterpieces, justly styled by a French poet, *Praxitèles de vitrine*, they have in return led to the irretrievable destruction of a far greater quantity of figures, broken to pieces by the hasty and ignorant peasants who used to dig by night secretly, for fear of attracting the notice of the Greek Government. When the Government did interfere it was too late: 8,000 tombs had been blindly plundered, nobody had taken note of the exact contents of each grave, and the few places in the necropolis which had yet remained untouched afforded but little opportunity for systematic archæological research. Ever since 1874 the necropolis has been guarded by a body of Greek soldiers, and secret digging has been absolutely suppressed; but official digging has yielded meagre results, and the necropolis of Tanagra, the finest and richest in the Greek world, may now be considered as exhausted. The scanty information which could be gathered from the peasants as to the course of their lucrative labors has been embodied by Messrs. Rayet, Martha, Lüders, and Haussoullier in four interesting papers; but their statements are more calculated to excite curiosity and regret than to satisfy the requirements of those who, while admiring the terracottas of Tanagra, are eager to know when and how the choicest pieces have come to light.

It is only by an unexpected chance that the splendid necropolises of Asia Minor have not, or have not all, shared the fate of the Tanagræan tombs, by falling a prey to reckless *tymborychia*, as the Greeks of ancient days used to style the practice so familiar to their degenerate descendants. As early as 1842 an English gentleman in Smyrna, Mr. Borrell, possessed a few beautiful specimens of terracotta figures discovered in Ionia. In 1845 Messrs Ainsworth and Barker enriched the British Museum with a large collection of fragments from Tarsus, where they had been found, heaped up and broken to pieces, in a kind of Monte Testaccio outside the town. A French traveller, M. Langlois, proceeded to the same place in 1852 and brought a number of valuable specimens to the Louvre. But all these,

as well as a few gilded heads purchased in Smyrna by M. Piot, and described under the name of "terracottas from Sardes" by M. F. Lenormant, were only fragments and did not attract much notice. It was not until 1876, when figures from Tanagra began to get rare in the markets of Athens and of Paris, that the Asiatic terracottas made their appearance in the world of amateurs and archæologists. About fifty figures, quite different in style from the Bœotian ones, were brought to Europe, and, professedly discovered at Ephesus, found their way to the Berlin Antiquarium and the private collections in Paris. Encouraged by their success, the Greek dealers subsequently sent a large number of so-called Ephesian figures, to the great surprise of Mr. Wood, who, having digged for six years in Ephesus, had never met there with a single fragment resembling the figures which were now assigned to the metropolis of Ionia.

Meanwhile forgery had been at work, and suspicion soon began to arise both in Berlin and in Paris as to the genuineness of the new-comers. It is very interesting to follow, in the archæological periodicals of that period, the various opinions expressed by learned scholars on this most delicate matter. M. F. Lenormant remarked that some of the *Ephesian* terracottas were copies from Vogelberg and Thorwaldsen; M. Rayet maintained that the greater number of them were genuine, but that *none* had been discovered at Ephesus. Messrs. Rayet and Lenormant likewise acknowledged that the genuine figures must proceed from several necropolises in the neighborhood of Smyrna; but, as little or nothing was known about their site, many people came to think that the *several* necropolises were only the *several* workshops of able forgers in Athens, Constantinople, and Smyrna. At the Paris Exhibition in 1878 a number of Asiatic terracottas appeared in the glass cases of the Trocadéro Palace beside the most admirable specimens from Tanagra; public attention was especially drawn to the latter, and the Asiatic ones were almost left one side, or considered as suspicious intruders.

The most unfriendly judge of Ephesian terracottas was, at that moment, M. Adrien de Longpérier. This illustrious scholar, who had been director of the Louvre under Napoléon III., indulged during the last years of his life in a most alarming hypercriticism. It was Longpérier who used to say that, out of a dozen engraved gems purporting to be Greek, eleven were modern and the twelfth a forgery. He never liked to state his scepticism too openly, but made no secret about it to his friends, who soon divulged his opinion and often exaggerated it with the rashness of confident admirers. A Paris dealer, M. Hoffmann, had just then received an important collection of Asiatic figures; the rumor spread that M. de Longpérier pronounced them to be forgeries. M. Hoffmann immediately appealed to M. Waddington, the then Minister of Foreign Affairs, who retained, amid the absorbing duties of politics, that enlightened taste for archæology which has given him so high a rank among European scholars. M. Hoffmann knew that M. Waddington had many friends in the Levant, and might easily secure reliable information about the discovery of terracottas in Asia Minor. Accordingly, M. Waddington wrote to M. Aristides Baltazzi, a rich merchant in Constantinople, who possessed extensive property in the neighborhood of Smyrna; in return, he received a few terracotta figures, identical in style with some of those which had previously reached Paris, and which, M. Baltazzi asserted, had been discovered on an estate of his between Pergamon and Phocæa. The Greek gentleman added that if such figures interested French archæologists, he willingly consented to put at their disposal the Greek necropolis included within his estate.

Such were the circumstances which fortunately led to the excavations at Myrina by the French School at Athens. But before proceeding to give an idea of these excavations, we must return to the suspected terracottas to which we are indebted for M. Waddington's intervention.

In my opinion, the great mass of Asiatic figures which existed in Paris previous to 1880 may be classified as follows: 1, wholesale forgeries, manufactured in Athens; 2, partial forgeries, consisting of genuine heads, arms, legs, or bodies, arbitrarily united, by skilful hands, to fragments of other figures or to made-up material; 3, many genuine heads and some very few entire statues from Mount Pagus, in Smyrna; 4, figures from Pergamon, Cyme, and Myrina. The Greek dealers in Smyrna and in Athens invented the legend about the necropolis of Ephesus in order to divert the attention of Turkish officials from the real headquarters of their researches. Hence it happened that a volume was published in Berlin under the title of 'Griechische Terracotten von Tanagra und Ephesos,' in which the so-called Ephesian terracottas are nothing but much-restored figures from Smyrna and the neighborhood of Phocæa.

Little is known as yet about the discovery of terracottas at Pergamon and Smyrna. I myself picked up, on the slope of the acropolis of Pergamon, a few fragments of terracotta figures, and noticed many places there where graves had previously been opened; but the German archæologists who spent four years on the site, have not succeeded, so far as I know, in discovering the Pergamonian necropolis. It is reported, however, that a good number of figures were collected during the last campaign and claimed by the Turkish Government; whether they were found on the acropolis or elsewhere, I am unable to tell. Strange to say, the same uncertainty prevails about the exact origin of the terracottas found in Smyrna. The dealers in antiquities, who are very numerous in that city, are certainly very well informed about it, but if you question them, they will invariably give some vague answer or try to mislead you. I believe that only a very small number of Smyrna terracottas have been discovered in graves, most of these having been dug up by treasure-seekers in the Byzantine period; this accounts for entire figures being so exceedingly scarce. The heads and other fragments which are to be seen in museums have been picked up somewhere on Mount Pagus, among the rubbish heaped up by previous explorers, who attached no importance to terracottas. The Louvre possesses a very rich collection of heads, which was purchased in 1882 from an English gentleman in Smyrna; but no regular search whatever has ever taken place on Mount Pagus, and the recent planting of vineyards on the slope of the hill removes all hope of a methodical investigation. This is very much to be regretted, as the terracottas from Smyrna are generally copies from statues of the Alexandrine period, and surpass in beauty of style all the figures from other parts of Asia Minor.

It is useless to enumerate the different sites in the neighborhood of Smyrna which have yielded, or are said to have yielded, similar terracottas, as none of them, excepting Tarsus, has ever been seriously explored. For the last ten years archæological magazines and books on art have repeatedly published interesting terracottas as discovered in Grynium or in Cyme. In fact, the necropolis of Grynium is utterly unknown, and the greater number of figures assigned to Cyme either come from Myrina or from very modern workshops. Up to the year 1880, no mention is to be found of the burial-ground of Myrina, where diggings had, however, taken place for ten years or more. This proves how admirably the dealers in Smyrna understand keeping secrets, and accounts for most figures having been sent to Europe with quite arbitrary indications of origin. In 1880 I dug in Cyme for two months, and only found three terracottas of a very common style; the finer fragments I could collect did not bear the slightest resemblance to most of the so-called *Cymæan* terracottas in Continental collections. The latter are generally large groups, which appear to have been stuck together from very numerous fragments. Strangely enough, no fragment is missing, and the heads, especially, are always in a perfect state of preservation. Now, any one who has witnessed diggings in a Greek necropolis, knows that entire terracotta figures are very seldom to be met with, and that the greater part of them seem to have been purposely mutilated when buried in company with the dead. Moreover, the *Cymæan* groups are covered with a kind of yellowish varnish, alternating with large white spots and exceedingly vivid colors on the heads and attributes of the figures. Again, the draperies are quite different from what might reasonably be expected: instead of the bold and simple movements familiar to Greek sculpture, we find a mass of minute folds which recall the wrinkled surface of a troubled sea.

Now, these *Cymæan* groups are of uncommon beauty and size, some of them numbering five or six figures worked out with the utmost accuracy. For a year or two past they have been simply styled "Asiatic terracottas," and the dealers have dropped the name of Cyme, just as they had previously suppressed the suspicious name of Ephesus. One thing is, however, quite certain: the groups in question come neither from Cyme nor from Ephesus. It is whispered among dealers and amateurs that the real origin of these figures is kept a secret by some privileged diggers, who naturally wish the Turkish Government not to interfere with their business. The precious statuettes find their way to Europe in passing through Athens, but no one can tell what route they have followed on their way to Athens from Asia Minor. A German archæologist, Von Duhn, recently published in the *Archäologische Zeitung* two very beautiful groups of the Cymæo-Ephesian class, representing a young maiden led by Hermes to Charon's boat—a representation not uncommon on white *lecythi* discovered in Attica. Herr von Duhn, justly struck by so close an analogy, ventures to suppose that the so-called Asiatic groups, and particularly the two specimens he describes, originate in Attica and not in Asia Minor; they are styled *Asiatic* by the dealers, on account of the severe laws existing in Greece against secret digging and the export of antiquities. The German scholar may be right, and even more so than he himself seems to believe. I agree with him in thinking that these celebrated groups come from Athens, but I am by no means certain that they were discovered in tombs.

The question remains whether *Asiatic* groups are patchwork or original achievements—whether some parts of them or the whole must be assigned to a recent period of Greek history. This difficult problem cannot be met with a general answer. I have seen groups belonging to either class. But this is only a personal and subjective view of the matter. I sincerely hope that the mysterious necropolis may yet be discovered—somewhere perhaps between Ephesus and Cyme—and that its discovery will oblige me to confess that I am a very poor judge of Greek terracottas. I will now confine myself to the description of the burial-ground in Myrina and of the discoveries made there, *quarum pars parva fui*, and which have no mystery whatever connected with them.

SALOMON REINACH.

HENRY HOLT & CO., 29 West 23d St., N. Y., have now ready a new descriptive catalogue of their Educational Publications and will send it to any one who applies, referring to this advertisement.

A. N. MARQUIS & CO.

HAVE JUST PUBLISHED:

THE FIRST THREE YEARS OF CHILDHOOD. [A Study of Infant Psychology.] By Bernard Perez. Edited and translated by Alice M. Christi, with an introduction by James Sully, M. A., author of 'Outlines of Psychology,' etc. 12mo, cloth, 32+292 pp. Price, $1 25.

This is one of the fullest, if not indeed the very fullest, monograph on its subject. It treats copiously on the various phases of child-life, abounds with practical hints on the proper training of the very young, and forms a practical guide to the parent and the teacher. "In places the author ventures a few steps into the darker recesses of metaphysical psychology, but he never long forgets that he is writing a popular work. And he has succeeded in producing a volume which, while it will be of special interest to the scientific student, will attract the general reader as well."

VOICE USE AND STIMULANTS. Containing the Experience in Abstract and Detail of nearly 400 Professional Singers, Actors, Statesmen, Ministers, etc. By Lennox Browne, F. R. C. S., Senior Surgeon to the Central London Throat and Ear Hospital, Surgeon and Aural Surgeon to the Royal Society of Musicians, author of 'The Throat and its Diseases,' 'Medical Hints on the Singing Voice,' 'Science and Singing,' etc. Joint author of 'Voice, Song, and Speech,' and of 'The Child's Voice.' 16mo, cloth. Price, 60 cents.

A book for all who use the voice in any professional way, and all who desire to have a pure and enduring voice.

THE CHILD'S VOICE: ITS TREATment with Regard to After Development. Containing the Experience in Abstract and Detail of over 200 Teachers and over 60 Students. By Emil Behnke, Lecturer on Vocal Physiology and Teacher of Voice Production, author of the 'Mechanism of the Human Voice,' co-author of 'Voice, Song, and Speech,' and of 'Voice-Training Exercises,' and Lennox Browne, F.R.C.S. 16mo, cloth. Price 60 cents.

Treats of the use and abuse of the child's voice, with rules for its care and treatment, with special reference to proper development.

GEO. MANVILLE FENN'S NEW SENSATIONAL STORY

THE DARK HOUSE: A KNOT UNraveled. 12mo, paper covers. Price 25 cents. A highly dramatic story, bordering on old-time sensationalism. Keeps the reader engrossed from the beginning to the end. It is recommended to all who love an exciting romance.

*** For sale by booksellers, or any book will be sent by mail postpaid on receipt of price by the publishers.*

A. N. MARQUIS & CO.,
Clark and Adams Streets, Chicago, Ill.

New, Revised, and Enlarged Edition of

Scientific Culture,

and other Essays. By Josiah Parsons Cooke, LL.D., Professor of Chemistry and Mineralogy in Harvard College. 12mo, cloth. Price, $1.

"These lectures possess more than a special interest. . . . Though they are general in their character, and present no new theory, nor any new development of an old theory, yet they have the snap and vigor of an original thinker, the bloom of an unimpaired enthusiasm, at once, and the reserve of a trained scholar, who tells only what has been tested in the crucible of thought."—*The Critic.*

D. APPLETON & CO., Publishers,
1, 3, & 5 Bond Street, New York.

NOW READY:

The Hazen Court-Martial.

The responsibility for the disaster to the LADY FRANKLIN BAY POLAR EXPEDITION definitely established, with proposed reforms in the law and practice of courts-martial. By T. J. MACKEY, Counsel for Brig.-Gen. W. B. Hazen, Chief Signal Officer U.S.A. Octavo, cloth extra, 364 pages. Price, $2.50.

D. VAN NOSTRAND, Publisher,
23 Murray and 27 Warren Street, New York.
Copies sent by mail on receipt of price.

TO UNEMPLOYED EDUCATED Men—Young men of energy (college graduates preferred) seeking employment will do well to write to EXTENSION, care publisher of the *Nation*. Only energetic men need apply.

ROBERTS BROTHERS'
NEW BOOKS.

The Life and Letters of John Brown,

Liberator of Kansas and Martyr of Virginia. By Frank B. Sanborn. With two portraits of John Brown and a portrait of his son, Owen Brown; an engraving of Brown's birthplace, and facsimiles of important documents. 1 volume, 8vo, $3.00.

The volume contains over 650 pages, small octavo, of which more than half comprise Brown's own letters and other writings by him written during the twenty-five years before his death in 1859. There is also a brief autobiography of his father, Owen Brown, of Hudson, Ohio, telling the story of life in Connecticut a hundred years ago, and there are letters and reminiscences by the children of John Brown. A volume quite indispensable to all libraries and historical collections.

"After carefully reading the 'Life and Letters of John Brown,' by F. B. Sanborn, we consider it the most complete, impartial, and *truthful* record of father's life and acts that can be written by any person now living."
(Signed) JASON BROWN,
HENRY THOMPSON,
RUTH B. THOMPSON.

"My expectations in regard to the book, wh. were very high, are more than realized. It is a most worthy production in every respect—worthy of the subject, worthy of yourself as its author, and worthy of high praise as a specimen of printing and binding."
(Signed) JOHN BROWN, JR.

"A full and trustworthy biography of this remarkable man had long been wanted, and Frank B. Sanborn, of Concord, Mass., could alone write it. He is a scholar and a well-known author, but his special fitness for this work is found in the fact that he was John Brown's confidential friend; that he was one of a half-dozen persons who knew that Capt. Brown would strike the blow at Harper's Ferry, and that he raised the money to enable the brave man to do it, and thus carry out the purpose of his life.

"The book is entirely free from sensationalism; it is calm and quiet throughout, but crowded with interest. The full story had not been told before, and you follow the narration to the end with absorbing attention. In some way, by some unknown spell, it brings back the feeling and temper of the times before the war or no other book has done. Its moderation and calm tone will disarm offensive criticism. In fact, the little coterie that has endeavored, with malice aforethought, to make a 'revaluation' of history, will find here hard facts and proofs against which even malice and envy will fight in vain. The book is built on the rock of truth, and it will stand."—*Topeka Commonwealth.*

"Mr. Sanborn's 'Life of John Brown' tells the whole story of that heroic man and his extraordinary deeds. The story has been told again and again by friends and by enemies, by those who thought Brown inspired, by those who thought him a villain, and by those who thought him mad. Now his character and his acts can be judged fairly. He has been dead a quarter of a century; the freedom of the slaves, for which he died, has been accomplished; and the record of his whole life, gathered in great part from his own letters, has been made public by one of his most trusted friends. Love of freedom was in John Brown's blood; he came of a race of strong, hard-working, religious men, who hated oppression and fought against it. He was a born Puritan, soldier, and fanatic. He believed that God called him to destroy slavery in the United States, and he had no hesitation in obeying that call. . . . Mr. Sanborn has put the whole case before the public. A great deal of it is of singular interest and of historical value; and the one dominant figure was unquestionably a great man, a hero, strong and simple, a martyr for the sake of freedom, an utterly obedient servant of the God whom he consistently worshipped. In him was no trace of the adventurer or of the madman. In this Life, Mr. Sanborn has done him a service worthy of their friendship. The book is admirably arranged with dates at the head of each page, and an index."—*Boston Daily Advertiser.*

Memoirs of Karoline Bauer.

From the German. An excellent translation and unmutilated, containing one-third more matter than any other. 1 volume, 12mo, cloth, price, $1.50.

"One of the rarest treats ever offered to lovers of biography. It gives some striking pictures of the court and theatrical life in England of fifty years ago. Scandal, where great people are concerned, is eagerly discussed, and the scandal which salts these 'Posthumous Memoirs' of the celebrated Berlin actress happens not to be of a kind to vex the fastidious. They demolish a reputation which once stood second to none among kings and kaisers."—*St. James's Gazette.*

Stories of Invention Told by Inventors.

Collected and edited by E. E. Hale. This book, which was unavoidably delayed last season, completes Mr. Hale's series of "Stories for Boys." 16mo, cloth, price, $1.

The complete set in five volumes, uniformly bound, price, $5.

Sold by all booksellers. Mailed, post-paid, by the publishers,

S. B. S., Box 235, Boston, Mass.

WANTED.—A Harvard Graduate, resi- dent in Berlin, to prepare a boy for his final entrance examinations (preliminaries already passed).
Address "H. V.," Kurfürstendamm 3, Berlin.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them.

The publishers no longer undertake to buy or sell old numbers or volumes, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1885.]

Binder for the Nation

(RUSSELL'S PATENT),

To receive the current numbers in a convenient form. Substantially made, bound in cloth, with *The Nation* stamped on in gold. Holds one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of $1.

Address Publisher of the *Nation*, Box 794, New York.

Unmounted Photographs

OF ANCIENT AND MODERN WORKS OF ART,

Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 6-cent stamp for new catalogue. 5,000 subjects.

SOULE PHOTOGRAPH CO.,

Publishers, 338 Washington Street, Boston, Mass.
Please mention the *Nation*.

NEW BOOKS.

I.

The New Godiva, and Other Studies in Social Questions.

Crown 8vo, cloth, $1.25.

CONTENTS.—The Sanction of Pureness. Puissance Oblige. New Godiva. Western Harem. Zola in England.

"A volume of Essays dealing with several aspects of the question of the hour issued in a popular form by Mr. T. FISHER UNWIN. One at least of these Essays has appeared in the 'Westminster Review.'"—*Pall Mall Gazette.*

II.

Egypt and Syria.

Their Physical Features in relation to Bible History. By Sir J. W. DAWSON, Principal of McGill College, Montreal, F. G. S., F. R. S., author of 'The Chain of Life in Geological Time,' etc., being No. VI. of 'By-Paths of Bible Knowledge.' With many illustrations. Crown 8vo. Cloth, $1.25.

Sir William Dawson has recently visited Egypt and Syria, and in this little work he shows what light geology and physical geography throw upon the sacred records. The book contains much new and valuable information put in a clear and interesting form.

3. *ENGLAND UNDER GLADSTONE.* 1880-1885. By JUSTIN H. MCCARTHY, M.P. Entirely New Edition. Brought down to the Fall of the Gladstone Administration. Crown 8vo, cloth extra, $2.40.

4. *SCEPSIS SCIENTIFICA; or, Confest* Ignorance, the way to Science; In an Essay of the Vanity of Dogmatizing, and Confident Opinion. By Joseph Glanvill, M. A. Edited, with Introductory Essay, by JOHN OWEN. Elzevir 8vo, Choicely Printed on Hand-made Paper, Cloth Extra, Gilt Top, $2.40.

'Scepsis Scientifica' is one of the rarest products of English Philosophical thought in the 17th century. The book is comparatively unknown, the greater part of the original impression having been destroyed in the great fire of London; but from its combination of subtle thought and quaintness of style, it has long been a favorite with students of our lesser-known literature, as Hallam, Whewell, Dugald Stewart, &c. Hallam, in the 'History of the Literature of Europe,' is profuse in his commendation of the work, of which, however, he could only hear of three copies; and expresses his opinion that "few books are more deserving of being reprinted than the 'Scepsis Scientifica' of Glanvill."

OLD LONDON STREET CRIES and the Cries of To-day. With heaps of Quaint Cuts, including hand-colored Frontispiece by ANDREW W. TUER Square 16mo, boards, 50 cents.

*** Very quaint, curious, and interesting.

A HISTORY OF MONEY IN ANCIENT Countries, from the Earliest Times to the Present. By ALEXANDER DEL MAR, C.E., M.E., formerly Director of the Bureau of Statistics of the U. S.; Member of the U. S. Monetary Commission of 1876, etc., etc. 8vo, cloth, $3.50.

Bohn's Libraries.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY. New Musical Catalogue preparing.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons'

NEW BOOKS.

The YELLOW PAPER SERIES, 12mo, Paper, 50 cents each:

SAXE HOLM STORIES. 2 vols.

THE LADY OR THE TIGER? By Frank R. Stockton.

THAT LASS O' LOWRIE'S. By Frances Hodgson Burnett.

GUERNDALE: AN OLD STORY. By "J. . of Dale."

NEWPORT. By George Parsons Lathrop.

AN ECHO OF PASSION. By George Parsons Lathrop.

IN THE DISTANCE. By George Parsons Lathrop.

THE DIAMOND LENS. By Fitz James O'Brien.

THE RUSSIANS AT THE GATES of Herat. By Charles Marvin. With Maps and Portraits.

JOHN BULL AND HIS ISLAND. By Max O'Rell.

THE AMERICA'S CUP. By Capt. R. F. Coffin.

NEW DOLLAR NOVELS:

A Wheel of Fire.

By Arlo Bates. 1 vol., 12mo, $1.00.

Mr. Bates's novel is so unusual in its conception and plot, that it would make a very strong impression on this account alone. But, in addition, the way in which the strange and striking story is told—with remarkable power and intensity, and with a lighter plot developing constantly beside the strongly contrasted action of the main history—will give this book no ordinary circle of readers.

Within the Capes.

By Howard Pyle. 1 vol., 12mo, $1.00.

"Mr. Pyle, who is well known as an artist, deserves to be better known as a writer of fiction. . . . The book indicates a reserve of power which the author may use in more ambitious works of fiction. But this one is so thoroughly good as to satisfy all readers."—*Philadelphia Bulletin.*

Across the Chasm.

1 vol., 12mo, $1.00.

"The anonymous writer has a delicate hand. Nothing can be more freshly and prettily written than the last few pages, when Louis and Margaret meet and peace is made. It is a little idyl of its kind. . . . 'Across the Chasm' not being an impalpable story, but having a live young woman and a live man in its pages, deserves hearty commendation."—*New York Times.*

Color Studies.

By Thomas A. Janvier. 1 vol., 12mo. $1.00.

This dainty little volume contains the four stories by "Ivory Black" which brought Mr. Janvier so wide a reputation as a writer of novelettes of very striking qualities. The titles are: "Rose Madder," "Jaune D'Antimoine," "Roberson's Medium," and "Orpiment and Gamboge."

The Book-Buyer.

A Monthly Summary of American and Foreign Literature. 50 cents a year. October number, with portrait of Mr. R. H. Stoddard, ready. Send for sample copy.

The Nation

VOL. XLI.—NO. 1057. THURSDAY, OCTOBER 1, 1885. PRICE 10 CENTS.

ANNOUNCEMENTS OF THE CENTURY CO.

THE LIFE AND TIMES OF

WM. LLOYD GARRISON,

BY HIS SONS,

Comprising a History of the Anti-Slavery Movement in America, and touching upon the leading Reformatory Schemes of the first half of the present Century—The Total-Abstinence Movement, the Doctrine of Peace, the Non-Resistants, Woman Suffrage, Prison Reform, the Abolition of Capital Punishment, etc., etc.

This work, composed by Wendell Phillips Garrison, literary editor of the *Nation*, and his brother, Francis Jackson Garrison, is in form strictly a personal narrative; but the relation of the editor of the *Liberator* to the anti-slavery agitation, which he began in 1831 and directed till the downfall of the slave system, was such that the story of his life is necessarily the story of the cause. For the history of this movement in the United States this biography must always be the standard work of reference, but it has many other permanent claims upon public attention. The career of Mr. Garrison was peculiarly romantic and at times dramatic, and the recital of it possesses the interest of a novel, and is full of inspiration.

In two vols., 1,000 pp., 8vo. Price, $5 in cloth binding; $7.50 in half morocco. Illustrated with portraits.

A TRADE EDITION, PRICE $5.00.

SPORT WITH GUN AND ROD

In American Woods and Waters.

Edited by ALFRED M. MAYER.

Large 8vo, 888 pp. Profusely Illustrated.

This book, containing fifty separate and distinct articles by experts, describing adventures in the forest and by the streams of North America, has been before the public for the past two years, but only in expensive form. In order to supply the great demand for a cheaper book, and to place it within the reach of a larger audience, this edition has been prepared, containing all the original matter, printed on paper of less weight and with the pictures hitherto on India paper printed with the book.

It is universally considered the finest and most perfect compendium of American sports ever published, and the issue of this edition places it within reach of a wider audience.

The New Edition, in handsome binding, with illuminated cover-linings. Price, $5.

The *Edition de Luxe* will be continued and sold by subscription only. Price, in single volume, cloth, gilt top, $10; embossed leather, $15. In two volumes, cloth, $12; embossed leather, $18.

(READY SOON.)

THE LIFE AND TIMES OF

SAMUEL BOWLES,

BY GEORGE S. MERRIAM,

Comprising a Condensed History of American Politics, from the Annexation of Texas to the Inauguration of President Hayes, including the events which led to the Civil War, Reconstruction, Grant's Administration, the Disputed Presidency, etc., etc.

As its name indicates, this work is not only a portraiture of that man of strong and many-sided personality, who was called by the world "Sam Bowles," for so many years editor of the *Springfield Republican*, but will cover the wider field of his "Times."

In this book are described the events which led up to the Civil War, the motives and feelings of all parties—Abolitionists, Union-lovers, Republicans, the two wings of the Democracy, and the Secessionists. The war is described in its significance and spirit rather than in military detail. The process of Reconstruction; the questions of the new era; Grant's two administrations; the Greeley campaign; the vicissitudes of reform and specie resumption; the disputed Presidency and Electoral Commission, etc., are all treated by Mr. Merriam in this book.

In two volumes. Price, in cloth, $3; in half morocco, $5.

A Musical Novelty.

ST. NICHOLAS SONGS.

ORIGINAL MUSIC BY THIRTY-TWO COMPOSERS,

Including Leopold Damrosch, W. W. Gilchrist, J. L. Molloy, Samuel P. Warren, Richard Hoffman, Joseph Mosenthal, Harrison Millard, Homer N. Bartlett, Arthur E. Fisher, Albert A. Stanley, J. W. Palmer, and many others.

Written for the Poems and Jingles of "St. Nicholas" Magazine.

All the music in this book was composed expressly for it, and appears in no other form. Contributions were invited from a number of composers, and from the great quantity of music submitted this choice selection has been made. The collection is especially intended for home use—not only for children, but for all whose tastes are still young; and the music is designedly of various degrees of difficulty. With two exceptions, the composers represented are American, and the book probably contains the choicest collection of original music by Americans that has ever been made.

"ST. NICHOLAS SONGS" contains 200 pages (the size of sheet music), with 112 songs and 140 illustrations. The binding is very attractive. The prices are as follows:

In cloth binding, leather back, illuminated linings, $3.50; in full leather, semi-flexible, put up in box, $5.00.

For Children.

THE BOUND VOLUMES

OF

ST. NICHOLAS

Containing the numbers for the past year, from Nov., 1884, to Oct., 1885, are now ready, bound in two parts, with beautiful covers of red and gold. Price, $5.00. Of this volume 6,000 are sold annually, and it is among the most popular of Holiday books.

BABY WORLD.

Stories and Pictures for Very Young Folks.

A charming book, compiled by Mary Mapes Dodge from the Little Folks' Department of that "best of children's magazines, St. Nicholas." Price, $2.00.

The supply for the season of 1885-6 is now ready.

THE OCTOBER

ST. NICHOLAS

Contains a delightful story by Frank R. Stockton, called "The Griffin and the Minor Canon." During the coming season St. Nicholas is to have a serial story by Mrs. Burnett; a series of illustrated articles on the great English schools; stories by W. D. Howells, Miss Alcott, and scores of other writers; some new "Bits of Talk of Young Folks," etc., etc. Price, $3.00 a year; 25 cents a number.

(IN PREPARATION.)

ESSAYS ON

THE ART OF PHEIDIAS.

By CHARLES WALDSTEIN, M.A.,

Director of the Fitzwilliam Museum, and Reader of Classical Archæology in the University of Cambridge; Ph.D., Heidelberg; M.A., Columbia College, N. Y.

The discoveries of Charles Waldstein in the field of Greek art, and especially in the art of Pheidias, have stimulated a wide interest in the appearance of this volume of essays, published in England by the University Press, and in America by The Century Co.

The first two essays in the book are of a general character, the one on the methods of the study of archæology, the other on the spirit of the art of Pheidias. The sculptures of the Parthenon are dealt with in five essays as they naturally follow one another in time and in the growth of the artist's own development; the eighth deals with the gold and ivory statues, while the ninth and last considers the influence of the work of Pheidias upon the Attic sculpture of the period immediately succeeding the age of Pericles.

The general principles and theory of art, and Greek art other than that of Pheidias, are also treated; and in the appendix are four reprinted papers, touching upon the works of Pythagoras and Praxiteles, the influence of athletic games upon Greek art, etc.

The volume is richly illustrated with plates and woodcuts. It will be issued during the month of October. Price, $7.50.

*** *The above are sold by dealers everywhere, or will be sent, prepaid, to any address, by the publishers. Specimen pages, etc., sent on application.*

A COLLEGE GRADUATE, WHO FOR two years has been studying Teutonic languages at Berlin and Leipzig, desires situation as teacher.
For particulars address "H. L.," care of the *Nation.*

A GRADUATE OF YALE DESIRES a few private pupils. Best Yale references.
J. W. P., 17 E. Park St., Newark, N. J.

ALFRED N. FULLER, TUTOR FOR Harvard, 26 West 43d Street, New York.

A LADY RESIDING IN ONE OF THE most beautiful locations on the Hudson would take two or three pupils to educate with her two daughters, aged 10 and 14. Address MRS. M. W. HUGHAN, Milton-on-Hudson, N. Y.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

*EXPERIENCED TUTOR.—College Pre*paratory, etc., accomplishments; best of New York city references. Address * *, *Nation.*

PRIVATE LESSONS PREPARATORY for college, etc., by a graduate of Kenyon College. Best references. E. M. B., 369 W. 7th St., Cincinnati.

RECENT HARVARD GRADUATE, experienced and well-recommended, wants several pupils to prepare for college in Philadelphia.
P. H. GOEPP, 62 Cedar St., N. Y.

TO COLLEGE OFFICERS WHO ARE looking for an instructor in Latin, who could also take work in Greek, modern languages, and Hebrew. Please communicate with L. D., care of the *Nation.*

TUTORING IN ALL BRANCHES FOR Harvard and other Colleges by GAMALIEL BRADFORD, Jr., Cambridge, Mass.

*WANTED—A GENTLEMAN OF EX*perience in the care and instruction of boys would like to take two or three into his family for the coming school year; references given. Address M., Quincy, Mass.

GOLD MEDAL, PARIS, 1878.
BAKER'S
Breakfast Cocoa.
Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.
Sold by Grocers everywhere.
W. BAKER & CO., Dorchester, Mass.

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

*SCHOOL BOOKS IN FOREIGN LAN*guages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals.

NEW BOOKS.

Microcosmus:

An Essay Concerning Man and his Relation to the World.

BY HERMANN LOTZE.

Translated from the German by Elizabeth Hamilton and E. E. Constance Jones. Two volumes, thick octavo, *net* $10 50.

"I am glad to learn that a translation of Lotze's 'Microcosmus' into English has at last been published. I have repeatedly used some effort with translators and publishers to bring this about. I am very greatly rejoiced to know that it has at last been accomplished. The work fills a peculiar place in modern philosophy, in that it covers so wide a field of topics in physiology, logic, metaphysics, ethics, and theology. It treats them all in a masterly way, with entire freedom from technical terminology, and a sincere though thoroughly liberal religious spirit. The ordinary reproach against German metaphysics does not hold against the discussions in this volume, which are singularly clear, though never other than learned, profound, and masterly. For these and other reasons it may be earnestly recommended to all students of natural and moral science in their modern contents." (President Porter, Yale College.)

ON THE SENSATIONS OF TONE AS A PHYSIOLOGICAL BASIS FOR THE THEORY OF MUSIC. By HERMANN L. F. HELMHOLTZ, M.D., Professor of Physics in the University of Berlin. Second English Edition. Translated, thoroughly Revised and Corrected, rendered conformable to the Fourth (and last) German Edition of 1877, with numerous Additional Notes and a new Additional Appendix bringing down information to 1885, and especially adapted to the Use of Musical Students. By ALEXANDER J. ELLIS, B.A., F.R.S. With 68 Figures engraved on Wood, and 42 Passages in Musical Notes. Royal 8vo, cloth..... $12 00

LOVE LETTERS BY A VIOLINIST. Square, 12mo, parchment.....$3 00

BARTOLOZZI AND HIS WORKS. By ANDREW W. TUER. A Biographical and Descriptive Account of the Life and Career of Francesco Bartolozzi, R.A. With some observations on Print Collecting—Judging, Handling, etc. Sq. 12mo, vellum, silk ribbon bands..... $5 00

ESOTERIC BUDDHISM. By A. P. SINNETT. Fifth Edition. Annotated and enlarged by the Author. 12mo, cloth.....$2 40

THE PURPOSE OF THEOSOPHY. By Mrs. A. P. SINNETT. 12mo, cloth.....$1 25

NEW AND CHEAPER EDITION.

THE RIVER CONGO, FROM ITS MOUTH to Bolobo. With a General Description of the Natural History and Anthropology of the Western Basin. By H. H. JOHNSTON. With numerous full-page and other illustrations, a new map of the Congo, also a Physical Map of the West Coast of Africa and three etchings. 8vo, cloth, $4.50.

IN THE HEBRIDES. By Miss C. F. GORDON CUMMING. A new edition, with autotype frontispiece and 22 illustrations. Demy 8vo, cloth, $3.50.

"HAWBUCK GRANGE"; or, The Sporting Adventures of Thomas Scott, Esq. By the author of 'Handley Cross.' With Colored Illustrations by Phiz. 8vo, cloth, $5.

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELINA. 1 Vol., Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S AIDS TO REFLECTION. Confessions of an Inquiring Spirit, and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected, a Life of the Author, and Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. III., containing The Citizen of the World, Polite Learning in Europe. *Now ready.* $1.40.

GILBART'S THE HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.00.

PLUTARCH'S MORALS: Theosophical Essays, Translated by C. W. King, M. A., author of 'The Gnostics and their Remains.' $2.00.

GOETHE'S EARLY AND MISCELLANEOUS Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS TRAVELS, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

LESSING'S WORKS. Translated from the Ger- man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. & Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.50. With portrait, &c.

KANT'S PROLEGOMENA AND METAPHYSI- cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

**** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW CATALOGUE OF CHOICE, RARE, AND SECOND-HAND BOOKS, READY. New Musical Catalogue preparing.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

A REMARKABLE BOOK.

Two Years in the Jungle.

The Experiences of a Hunter and Naturalist in India, Ceylon, the Malay Peninsula, and Borneo. By William T. Hornaday. 1 vol., 8vo, with maps and illustrations. $4.00.

From the N. Y. Sun:

"Since the visit of Mr. A. R. Wallace to the Malay Archipelago, no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation in a seldom penetrated field. . . . Owing to the writer's descriptive skill and animation, he is nearly as entertaining as Defoe; the reader has the satisfaction of knowing that the minute attention to details is no mere literary artifice, but the hall mark, so to speak, of honest scientific investigation.

"The twofold fascination of this book for the sportsman and the man of science arises from the fact that Mr. Hornaday was truly, as he calls himself, a hunter and a naturalist. He did not content himself with the collecting of harmless animals, and rely upon the assistance of more adventurous persons for examples of species whose pursuit is attended with considerable danger. To the account of tiger hunts and elephant hunts several chapters are allotted, and other varieties of big game receive due consideration in that large part of the volume which sets forth the author's experiences in India and the Malay Peninsula. But no section of the book appeals quite so forcibly to scientific interest and popular curiosity as the 150 pages stored with the products of his study of animals and anthropology in the great island of Borneo. How comprehensive and thorough his investigation was, compared with any previous survey of the same field, may be inferred from his ethnographic map of Borneo, on which he has noted the location of thirty sub-tribes of the Dyaks, who occupy, we know, much the largest part of the island."

From the N. Y. Times:

"Mr. Hornaday, without the least pretension, has written a most amusing and instructive book. He may not go into esthetic spasms over the Taj Mahal, but still his descriptions of the life of the hunter in India, of the people he consorted with, and especially of the Dyaks, are exceedingly good. In this country we have many whose acts of prowess only extend to the killing of such large animals as the moose or elk, and who find it difficult to preserve their pelts. Under the most adverse circumstances in a tepid climate Mr. Hornaday saved every skin, and tells you precisely how he did it.

"Because Mr. Hornaday's 'Two Years in the Jungle' is so unpretentious, and for the reason that the author faced so manfully many mishaps, and is so Mark Tapleyish in his humor, the volume under notice is to be highly commended. Mr. Hornaday is at least one of those rare taxidermists who stuff a tiger, not by the light of their inner consciousness, but because they have seen the creature under natural conditions."

From the N. Y. Journal of Commerce:

"Mr. Hornaday is a born Nimrod and naturalist. No journey too long, no privation too severe when engaged in his favorite pursuits. . . . The effect of his original and independent observations appears on every page of his work."

From the Brooklyn Union:

"From every point of view Mr. Hornaday's book is of extreme value and should interest naturalists no more than the lay reader."

**** For sale by all booksellers; or sent post-paid, on receipt of price by*

CHARLES SCRIBNER'S SONS.

The Book Buyer.

A Monthly Summary of American and Foreign Literature.

Annual Subscription, 50 Cents.

THE OCTOBER NUMBER CONTAINS:

PORTRAIT OF R. H. STODDARD.

London Notes.
Readings from New Books.
The Origin of "Rudder Grange."
News and Notes.
Editorial Notes.
Reviews of New American Books.
Foreign Notes.
Books of the Month.
Special Articles, Etc., Etc.

Beginning with the October number a series of portraits of famous authors whose pictures have not become hackneyed by frequent reproduction will be issued. A portrait of G. W. Cable, engraved by Tietz, will be given in the November number.

"An honest, diligent and capable expositor of current literature at a low price, keeping the reader abreast with the best works of the best authors, and supplying an interesting miscellany of information and criticism."—*The Literary World.*

The Nation.

NEW YORK, THURSDAY, OCTOBER 1, 1885.

The Week.

THE selection of George Bliss for Chairman of the Platform Committee at the Saratoga Republican Convention was perhaps the most telling and incisive expression of the Convention's contempt for the principles of civil-service reform. Mr. Bliss was not slow to perceive the significance of his mission, which he improved by applying a derisive epithet to the friends of reform while reading the resolutions. This was received with laughter and applause by his fellow-delegates. The scene was in some of its features like that in which Mr. Flanagan of Texas took so conspicuous a part in the Chicago Convention of 1880, with the difference, however, that Flanagan met with a prompt rebuke at the hands of General Garfield, and was summarily extinguished by the Convention, while the impudence of Bliss met with no remonstrance from any quarter. The occasion of this gratuitous insult is found in the first resolution of the platform, which, after commending the civil-service laws of the State and nation, and calling for their enforcement, "as far as possible," endorses the Earl bill, which was defeated in the last Legislature. "Honorably discharged soldiers and sailors," says the platform, "who are shown by competitive examinations to possess the necessary requirements, should be given the preference in certification and in appointment." It was upon this paragraph that the question was put to Chairman Bliss, "whether soldiers would have to compete with college graduates," to which that humorist replied that the resolution meant that "if the soldier stood at 80 and the dude stood at 100 in the examination, the soldier should get the appointment." This interpretation of the platform was accepted by the Convention with hilarity, and nobody had a word to say in opposition.

The Earl bill thus endorsed attacks the vital principle of civil-service reform by substituting in the place of fitness for the office something entirely different, as for instance horsemanship, marksmanship, gunnery, infantry tactics, wounds received in battle, or a certificate of honorable discharge from the army or navy. The friends of the reform have not objected to the rule that a preference should be given to veterans upon an equal showing proved by competitive examination; but they perceive as clearly as Mr. Bliss does, that when something else is made by law superior to the examination as a test for appointment, the essential principle of civil-service reform is gone, and that the door is open for the introduction of any other test. It is a small step from the exemption of veterans to the exemption of the sons of veterans, and after that to the exemption of all sorts of disabled and worthy people; and after a sufficient number of exceptions have been made on military and humanitarian grounds, the transition will be easy to exceptions on political grounds. If exceptions are allowed in any one case, the resisting force in all other cases will have been dissipated. The friends of civil-service reform can no more allow a dispensation in favor of soldiers and sailors from competitive examination, than the temperance societies can admit tippling heroes or the Christian church swearing dragoons.

The friends of revenue reform will find as little encouragement in the platform adopted at Saratoga as those of civil-service reform. The resolution on the tariff, while appearing to endorse the Republican national platform of last year on that subject, is distinctly inferior to and more reactionary than the latter. The Chicago platform pledged the party to "correct the inequalities of the tariff." This was a promise of tariff revision which has not yet been fulfilled. The Saratoga platform pledges the party expressly not to correct these inequalities. It opposes any revision whatever, and also any agitation for revision, "until the full effects of the revision of 1883 can be fairly estimated." The full effects of that revision have been not merely estimated, but officially ascertained to be equal to less than 3 per cent. of reduction, where 20 per cent. had been recommended by a Republican Commission backed by a Republican Administration.

The Republican State ticket is remarkable for its uniform excellence. Every man on it not only is unobjectionable, but has a positive fitness for the office for which he is named. It is a long time since either party in this State has put before the voters a list of names for which an honest man could take a greater pleasure in voting than he can for this. What is the meaning of it all? Why, simply that the discipline to which the Independent voters subjected the Republican party last year has done its managers a vast amount of good. If there had been no revolt last year, there would have been no such ticket as this now. The delegates, who came together with no very sanguine hopes of victory, separated with the general belief that their ticket would be elected because it deserved success—that is, because they had acted in such a way as to win back the voters whom they drove away last year. They had let the Convention run itself, and they have treated the voters of the State to the extraordinary spectacle of a ticket which has not on it a single name that was put there by Machine influence, or through the familiar agency of a "deal." The Independent voters may well plume themselves upon the good effect of their "recreancy." Instead of being "bounced" from the party as traitors, they have been permitted to "dictate" the nomination of the party's entire ticket.

The resolutions adopted by the Democratic State Convention on the subject of civil-service reform are less satisfactory than those of the Republicans, and their shortcomings are emphasized by the contrast which they offer to the platform drawn up by Mr. Hewitt, whose endorsement of President Cleveland's course and policy could not well be improved upon. Let the Civil-Service Act be honestly executed as it is, says Mr. Hewitt; let there be an equitable division of all non-political offices, to be accomplished by filling vacancies as they occur "with Democrats of approved character and fitness, until the fair division of offices favored by Jefferson shall have been reached." Then let the principles of the Civil-Service Law be extended to all offices of a merely ministerial character. "Believing," he continues,

"that President Cleveland is acting and intends to act upon the doctrines proclaimed by the highest Democratic authorities and approved by the people, we tender to him our hearty support in the execution of the reforms upon which he has entered, and which we hope he will follow up until the administration of the Government shall be placed upon the firm foundations of honesty, capability, and economy."

Such a platform as Mr. Hewitt's would have satisfied every reasonable aspiration, and would have strengthened the President in his honorable endeavor to live up to his ante-election pledges. Instead of this, or anything like it, we are greeted with a demand that the work of the Civil-Service Commission up to the present time shall be declared null and void; that the lists of eligible candidates for the civil service, which have been open to Democrats as freely as to Republicans from the beginning, shall be torn up, and this demand backed by a perfectly unfounded charge that the Commission has performed its duties heretofore in an unfair and partisan spirit. Through the whole of this tirade against the Commission it is easy to see that what the Convention wanted was a beginning of the work of civil-service reform "on the ground floor," to the end that the Democrats may get into the position of advantage which they say the Republicans now enjoy. The consequence and corollary of such a proceeding would be that the Republicans would overturn the doings of the Commission on the first opportunity, and the opportunity would not be long in coming.

The completed Democratic ticket has one fairly good name upon it, that of Mr. Chapin, the renominated Comptroller, but that will be an insufficient leaven for the salvation of the whole lump. Mr. Chapin was slated "to go" by the Hill wire-pullers, but the necessity of making some concession to public sentiment finally compelled his nomination. The remainder of the ticket is not to be compared for a moment with the same portion of the Republican ticket. Mr. Flower's name in the second place supplied a needed ray of humor to the combination. Anything funnier than the rise, progress, and collapse of the Flower boom has seldom happened in our politics. There was never anything behind it except Mr. Flower's pocket-book. One year ago the boom was lifted by this backing alone into national prominence, and was labelled, at the owner's expense, "Presidential Candidate." It was taken to Chicago and placed in a "Headquarters," and when the balloting began in the Convention it disappeared. This summer it was again put in working order and la-

belled "Candidate for Governor." It was paraded all over the State and finally placed in a "Headquarters," with a beautiful banner on the outer wall, at Saratoga. When the balloting began in the Convention it polled just one vote.

The Hinckley attempt to test the constitutionality of the Civil Service Act by a quo warranto ended on Saturday, as was expected, in a farce, in which the lawyer, Mr. Miller, made a sad exhibition of folly or ignorance. Judge Wallace declined to hear arguments from the defendants' counsel as unnecessary, and Hinckley's counsel was able to produce no precedents that would give his client any standing in court, so the Judge shut him up incontinently. We predicted some such termination as this to the affair weeks ago. The amount of attention the Jeffersonians gave the proceeding, and the delight over it which some of them exhibited, were melancholy but not surprising exhibitions of senile childishness on the part of these aged men.

The President's letter to Mr. Dorman B. Eaton is an admirable statement of his position and its difficulties, and at the same time a rebuke under which Republican politicians even more than Democrats ought to wince. Nothing truer about the means of establishing the merit system in the public service on a sure and lasting foundation has ever been said than this:

> "The success which thus far has attended the work of civil-service reform, is largely due to the fact that its practical friends have proceeded upon the theory that real and healthy progress can only be made as such of the people who cherish pernicious political ideas, long fostered and encouraged by vicious partisanship, are persuaded that the change contemplated by the reform offers substantial improvement and benefits. A reasonable toleration for old prejudices, a graceful recognition of every aid, a sensible utilization of every instrumentality that promises assistance, and a constant effort to demonstrate the advantages of the new order of things, are the means by which this reform movement will in the future be further advanced, the opposition of incorrigible spoilsmen rendered ineffectual, and the cause placed upon a sure foundation."

The whole letter, in fact, is conceived in a spirit of frankness and statesmanship which entitles it, short as it is, to the careful study of politicians of both parties—both the humbugs who use the reform simply as a means of making trouble, and the honest men who apparently still live under the baleful superstition that a reform is not a reform unless we get it from Republicans. Republicans must, if they are sincere about this matter, welcome all changes in the right direction, from whatever source they come, and instead of rejoicing over the opposition which a reforming Democratic President experiences from his own party, help him to overcome it.

Instead of any such encouragement and recognition, Republican newspapers and conventions, though knowing well that what the President has done and is doing for reform is being done in the teeth of strong opposition from his own party, have nothing for him but flouts and sneers and denunciation. Senator Warner Miller, in opening the Republican Convention at Saratoga, gave his audience to understand that the only change President Cleveland had made in the service was to appoint "jail-birds." And the platform actually gave out that all he had done was to remove "faithful Republican officers" on the plea of offensive partisanhip, and put bad characters, some of them jail-birds, in their places. Is this fair? Is it honest? Is it calculated to give people any confidence in the sincerity of anything which men guilty of such talk say about civil-service reform? What are we to think of abuse of a Democratic President for not keeping 100,000 Republican partisans in their places, from men who in their twenty-five years' tenure of office probably never gave a place to a Democrat which a Republican of any kind could be got to fill?

The *Herald* publishes a bill purporting to be a copy of Congressman Warner's silver compromise measure. The authenticity of the copy is not vouched for by any responsible person. We infer that it is the first draft of Mr. Warner's ideas, embodying its outline, rather than the perfected plan which he desires to substitute for the existing silver-coinage act. The first criticism to be passed upon the measure as printed is that it is in some parts quite incomprehensible. The second is that it would introduce endless and interminable confusion into our already heterogeneous currency system. A third and greater objection is that it proposes to make the Government an insurer of the price of silver bullion, not merely from month to month, but for all time—that is, as long as the law remains in force. The latter provision is couched in these words:

> "They [the bullion certificates] shall be redeemable on presentation at the Treasury or Sub-Treasury in the city of New York, in lawful money, or, at the option of the Secretary of the Treasury, in silver bullion at its market value at the time of redemption."

Although the bill provides for a monthly ascertainment of the market price of silver, and gives the Secretary of the Treasury the option of redeeming the certificates either in lawful money or in bullion, it is clear that he must give a thousand dollars' worth of bullion for a thousand dollars' worth of certificates. If silver has declined between the time of issue and the time of redemption, he must deliver not the same number of ounces that were deposited, but the same value, or dollars' worth. The option given to the Secretary is therefore of no importance. It can make little difference to the Government whether it pays a thousand dollars' worth of gold or a thousand dollars' worth of silver, the two things being equal to each other in the market. This is not such a compromise as the opponents of the Bland bill can safely accept. A measure making the certificates "redeemable by the Government in an equal weight of silver bullion to that named in the certificate or in lawful money," at the option of the Secretary, as stated by Mr. Edward Atkinson in his speech at the Bankers' Convention, would be unobjectionable in principle.

It seems as if Secretary Manning was either a little too hard or too soft on poor Mr. Hedden, in writing to the District Attorney to call his attention to "the scandalous and very defective condition of affairs respecting the examination of the baggage of passengers arriving at this port"—*i. e.*, the lavish way in which the inspectors take bribes from the passengers. The inspectors are Hedden's subordinates. It is his business to look after them, and see that they do their duty, and punish them for not doing it, and to report them to the District Attorney, in any case calling for criminal prosecution. If, therefore, Mr. Hedden is competent to control them, it is unjust to him to ask the District Attorney to look after them. If he is, however—as we suspect—not competent, if his poor, weak head has been more occupied of late with "politics" than with the duties of his office, is it not Mr. Manning's duty to dismiss him promptly and put a fit man in his place? We are, in truth, inclined to believe that this letter to Mr. Dorsheimer is a sort of indirect warning to poor Hedden to prepare for a tragic ending to his official existence.

We trust Mr. Manning has had his attention called to the objections to the appointment of Marcus Hanlon to be Treasury Agent. It is an appointment so bad as to be almost ridiculous. He is no more fitted to be a supervisor of others than a wolf is to be a watch-dog. He was in serious trouble about whiskey frauds, if he was not indicted for them, as long ago as 1864, and his career since has not been such as to win the confidence of the more judicious. Moreover, considered from the political point of view, he is an absurdity also. He edited a rabid Blaine paper, called the *American Protectionist*, during the late campaign, in which he produced the usual silly arguments of his kind against Mr. Cleveland's election. We hope Mr. Manning will investigate him.

Secretary Whitney's letter to Captain Matthews, President of the board of appraisal appointed to make an estimate of the amount due to John Roach & Son for work on the unfinished cruisers, *Boston*, *Atlanta*, and *Chicago*, cannot be considered unfair in terms or inimical in spirit to the contractors. He instructs the appraisers to consider the contract as a valid and binding one on the Government, and mentions incidentally that the Attorney-General's opinion upon the *Dolphin* contract does not apply to the cruisers, since there was no requirement as to the speed of the latter. He also cautions them to bear in mind that the Department has neither formed nor expressed an opinion as to the character of the work performed upon these vessels to the prejudice of the contractors. He suggests, that in reaching the value of the work as it stands on each of the cruisers, the contract price be taken as the starting-point, and an estimate be made of the cost of finishing them as per contract, and that the difference between the two sums, less the amount already paid to Mr. Roach, be taken as the sum still due him; and that, in arriving at the amount necessary to complete the ships, it will be proper to take into consideration the opinions and suggestions of the contractor, his counsel, and his assignees. Finally, that the contract itself is to be their guide, and that their judgment is to be made up on their own responsibility. These instructions are entirely fair upon their face, and it is to be hoped that the appraisers will leave no room for a lawsuit to grow out of their action. In estimating

the cost of finishing the ships according to contract, the opinion of the assignees, if backed by an offer to do the work under Government inspection, ought to be decisive, and it is only fair to Mr. Roach and to his bondsmen and creditors that the appraisement should be made with the least possible delay.

The white men who mine coal at Seattle, Washington Territory, having served notice upon the Chinamen at work there that they must leave the place within twenty-four hours, and the warning having been obeyed, the former promptly burned and pillaged the property of the latter. The Rock Springs method of dealing with objectionable characters and complexions has now been put in practice at Duquoin, Ill., where the white men employed in coal mining have served notice on the colored men, not Chinese, but American citizens of African descent, that they must leave within a given time, or take the consequences. The Sheriff of the county has been called on to protect the colored miners, and the Governor of the State is to be called on if the Sheriff is unable to afford the necessary protection. The Kuklux outbreak at Duquoin will probably be suppressed without difficulty, public opinion in Illinois being ranged pretty decisively on the side of the colored man when his equal rights are denied to him. The Republican officials of the State will scarcely allow anybody to say that they insist upon a measure of fair dealing and humane treatment to the blacks in Mississippi which they are not prepared to enforce at home; and this must be well known to the white miners who have taken upon themselves to drive the colored men out. The fair inference is that the Rock Springs massacre has whetted the tigerish instincts of race prejudice everywhere, and that unless an efficient public example is made of the villains concerned in that horrible butchery, there will be no security for life in any place where two or three different classes or nationalities are working together.

A telegram from Rawlins, Wyoming, from what is believed to be an official source, says that there will be no general strike of the Knights of Labor on the Union Pacific Railway, since such a proceeding would practically endorse the killing of the Chinese at Rock Springs. The public will gladly take notice of the fact that the Knights do not approve of murder. However much they may be opposed to Chinese labor, they are not in favor of forcibly expelling them if the employment of force leads to bloodshed. In a communication dated September 14, from Mr. Thomas Neasham, who signs himself Chairman of the Executive Committee of the employees of the Union Pacific Railway, to the General Manager and the President of the Company, a demand is made for "the removal of the Chinese from the system." The Committee add their belief that "nothing less will suffice to prevent a repetition of the treatment." Treatment, in this case, does not, as a hasty reading of the document might lead one to suppose, mean the massacre of peaceful men, women, and children, but refers to the bad treatment which the Committee complain they have themselves suffered at the hands of the Company, and of which they desire to prevent a repetition by the expulsion of the Chinese. The communication of September 19 is in the usual form which betokens a general strike if the demands of the petitioners are not complied with, but it neither approves nor disapproves of the Rock Springs massacre. If the threatened strike is not to take place, although the Chinese have been reëmployed, there has been a distinct gain to the cause of humanity and of the supremacy of law in the Western Territories, which, whether ascribed to an aroused public opinion or to a sense of moral responsibility among the Knights of Labor, is equally beneficial.

A bolt is said to be organizing in Pennsylvania against Mr. Matt Quay, the Republican nominee for State Treasurer. According to information received by the *Times*, the movement is led by certain prominent supporters of Mr. Blaine, and bears the character of an anti-Cameron revolt. Mr. Quay is certainly a most objectionable candidate for the office of State Treasurer, or for any office, election to which implies popular approval of the act which has made him notorious, viz., the pardon of Kemble and the other bribers of the Pennsylvania Legislature. But we have little confidence in the efficiency of any bolt on the part of men who were able to swallow Blaine last year. It is not by fighting the devil with fire that such characters as Quay and Cameron are to be exorcised. Such fighting is their game; it is what they best understand; there is no kind of warfare that suits them better. They are the superiors of the Blaine crowd in Pennsylvania in numbers, in tactics, in discipline. The only thing they are afraid of is the sign of the cross. When the State of Pennsylvania takes thought of her moral dignity, and swears by the Apostles or by the Tariff, or whatever she holds most sacred, that the men who hanged the poor and ignorant Molly Maguires, and allowed Kemble and his underlings to go free, shall not stand before the world as representing the standard of her civilization, Mr. Matt Quay and his tribe will disappear in smoke, and better men will take their places than the admirers of Mr. Blaine.

The Republican politicians who complacently count all the negro voters of the South as the slaves of their party, may study with profit an incident of the pending municipal canvass in Nashville, Tenn. A call was issued a few days ago for a mass meeting to select five candidates for the City Council upon a non-partisan platform, and about 300 voters of both races responded. The Committee appointed to report a ticket brought in a list consisting exclusively of whites. The negroes objected to this discrimination, and made a strong plea for representation upon the ticket. Their position was stated with the utmost frankness by the Rev. G. W. F. Bryant, the most prominent colored man in Nashville, as follows:

"Do this and you can get our votes, refuse to do it and you lose them. We are no longer the wards of any political party; we have paid the last debt of gratitude; we stand as untrammelled freemen, and I tell you that the party which recognizes our rights, our manhood, our privileges as citizens, will get our votes. We will cling to those who treat us best. You have our position; act and we will know what to do."

The whites promptly recognized the situation. A leading Democrat declared his conviction that, as the negroes were a constituent element of the population, paid their taxes and were good citizens, they should be recognized in such a movement, and his motion to substitute the name of a representative colored man for that of one of the whites was carried by an overwhelming majority. It may once have been true that the Southern negroes could be depended upon to vote en masse for any Republican ticket, but in the light of such incidents as this it is evident that the era of their political servitude is ended.

Mr. Stead, of the *Pall Mall Gazette*, and his confederates in the abduction of the Armstrong girl, have been committed for trial, after listening to a long rigmarole address from the "Director" himself. A more disgusting performance and a more absurd one has seldom come before police courts. Mr. Stead's sensational thesis was that the abduction or purchase of young girls for immoral purposes was carried on in London on a great scale. To say that it was done now and then would have created no sensation at all. So, to prove this, he procured the purchase or theft of one child of thirteen, had her carried to a brothel and indecently assaulted, and then produced her. This as a piece of logic is very like producing one bale of cotton as a proof that there is a crop of 7,000,000 bales, or one murdered body to show that there is no safety for life in London.

The committal of Mr. Stead has not been followed by the disclosures of names of titled libertines, members of Parliament, public officials, and "bald-headed mashers who live in the West," that had been so freely proclaimed as one of the awful consequences of the legal proceedings. But the affair has prompted a lady of distinction, the Hon. Mrs. Jeune, who has given the labor of a lifetime to the rescue, so far as rescue was possible, of the fallen women of London, to tell what she knows about the causes of their ruin and the value of their testimony, in an article in the *Fortnightly Review*. Mrs. Jeune says that it is within her positive knowledge, and within that of all persons who have been engaged in labors like her own, that ninety-nine out of every hundred of the fallen women of London have been brought to ruin by men of their own rank and station in life. She denies that any greater proportion than 1 per cent. of the crime and misery which has been so fearfully stirred up by the *Pall Mall Gazette* can be traced as to its origin to the upper classes; and she adds, what is known to almost every body except the Cardinals and Archbishops whom Mr. Stead took into his confidence, that the testimony of women who have fallen to the level of degradation reached by Mr. Stead's witnesses is utterly untrustworthy, and ought not to be regarded for an instant. It is becoming clearer every day that the *Pall Mall's* exposition was as destitute of truth as of decency, and it will probably turn out that Eliza Armstrong was the only "victim" whom Mr. Stead will ever be able to identify.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 23, to TUESDAY, September 29, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND, in accepting the resignation of Dorman B. Eaton, from the Federal Civil-Service Commission, wrote a complimentary letter in which he said: "I believe in civil-service reform and its application in the most practicable form attainable, among other reasons, because it opens the door for the rich and the poor alike to a participation in public place-holding. And I hope the time is at hand when all our people will see the advantage of a reliance for such an opportunity upon merit and fitness, instead of a dependence upon the caprice or selfish interest of those who imprudently stand between the people and the machinery of their Government. In the one case, a reasonable intelligence, and the education which is freely furnished or forced upon the youth of our land, are the credentials to office; in the other, the way is found in favor secured by a participation in partisan work, often unfitting a person morally, if not mentally and physically, for the responsibilities and duties of public employment."

The President has, through the Secretary of the Treasury, asked Mr. A. Agassiz to take the office of Superintendent of the Coast and Geodetic Survey, vice Prof. Hilgard, resigned. Mr. Agassiz is unable to accept the appointment.

The President on Tuesday afternoon appointed Edward A. Stevenson, of Boise City, Idaho, to be Governor of the Territory of Idaho, and Wm. B. Webb, of Billings, Montana, to be Secretary of the Territory of Montana.

On the President's return from the Adirondacks he found awaiting him the following letter from Mrs. Helen Jackson, dated August 8: "From my death-bed I send you message of heartfelt thanks for what you have already done for the Indians. I ask you to read my 'Century of Dishonor.' I am dying happier for the belief I have that it is your hand that is destined to strike the first steady blow toward lifting this burden of infamy from our country, and righting the wrongs of the Indian race. With respect and gratitude."

President Cleveland on Monday received an elegantly framed photograph of Prince Bismarck. It was a present from Prince Bismarck himself and bore his autograph. It is probable that the President will return the compliment.

The order to show cause obtained by James H. Hinckley against Dorman B. Eaton, Leroy D. Thoman, and John M. Gregory, Civil-Service Commissioners, in which the relator petitioned for leave to begin a quo-warranto action to have the Commissioners removed and the office abolished on the ground of the unconstitutionality of the act creating it, was on Saturday denied by Judge Wallace in the United States Circuit Court in this city. There is no appeal except to the Supreme Court, and the case will probably be dropped.

The New York Republican State Convention finished its work at Saratoga on Wednesday. The platform declares that the provisions of the existing civil-service laws of the State and nation should be strengthened and extended to all grades of the public service to which they may be applicable, so that the selection of administrative officers in the civil service shall, so far as possible, be governed solely by capacity and fitness. Honorably discharged soldiers and sailors, who are shown by competitive examination to possess the necessary requirements, should be given the preference in certification and in appointment. It demands the maintenance of the gold standard and the restoration of silver to parity with gold, protection to our industries, maintenance of the free and untrammelled ballot; strict enforcement of the law prohibiting the importation of contract labor, and national assistance in deepening the Erie Canal. It condemns the Administration of President Cleveland for removing tried and faithful public servants, and replacing them with disreputable political workers, and for "obvious willingness to abandon" the opinions it has expressed on the silver question. It denounces the State Executive for calling an extra legislative session in reference to the census. The Committee on Resolutions decided not to commit the party to any position on the temperance question. A second ballot for Governor was then taken, Davenport receiving 214 votes, Carr 194, Warren 113, Bliss 66, Seward 54, Swinburne 29, Drexel 12, Morton 8, Cornell 2, Evarts 1. A number of changes were immediately made, and Davenport was nominated by acclamation. The following is the ticket as completed: For Governor, Ira Davenport; for Lieutenant-Governor, Joseph B. Carr; for Secretary of State, Anson S. Wood; for Comptroller, James W. Wadsworth; for Attorney-General, Edward B. Thomas; for State Engineer, William V. Van Rensselaer; for State Treasurer, Charles F. Ulrich. The Convention adjourned *sine die* about 3 P. M.

Ira Davenport, the candidate for Governor, was born in 1841. He is a man of large wealth, was State Senator in 1877, and was reëlected two years later. In 1881 he was nominated by the Republicans for State Comptroller, and was elected by 14,084 majority, leading his ticket. In 1883 he was renominated, but was defeated by Mr. Chapin (Dem.). Joseph B. Carr is the present Secretary of State. James W. Wadsworth was elected Comptroller in 1879 and has since served in Congress. Anson S. Wood is the present Deputy Secretary of State.

The New York Democratic State Convention met at Saratoga on Thursday. All indications at its opening pointed to an easy victory for Governor Hill. The Convention numbered 384 delegates, of which he seemed to have a clear majority. The appearance of President Cleveland's letter to Mr. Eaton on civil-service reform angered the supporters of Hill, who said it was intended to head off his nomination. The Convention was called to order at 12:30 P. M., and George Raines, of Monroe, was made temporary Chairman. He delivered a rhetorical speech which pleased the delegates. A representative of the anti-Monopoly League was permitted to present the cause of his party to the Convention. The usual committees were selected, and at 2:15 the Convention took a recess until 7:30 P. M.

At the evening session the Convention nominated David B. Hill, the present incumbent of that office, for Governor, his vote being 338; Abram S. Hewitt received 33, Henry W. Slocum 8, Roswell P. Flower 1. The Convention adjourned about midnight. It reassembled on Friday at 12:30 P. M. In the meantime, Roswell P. Flower, it was asserted, had been persuaded to accept the nomination for Lieutenant-Governor. Before the nominations were proceeded with, the platform was read and adopted. It heartily commended the Administrations of President Cleveland and Governor Hill, reaffirmed the declarations of the Democratic National Conventions of 1876, '80, and '84 in regard to the necessity of reforming the civil service, but condemned the actual administration of the existing law as it has been executed by the Republican party, and asked for a reorganization of the Commission so that the majority shall be in sympathy with the Administration; demanded the repeal of the compulsory silver-coinage act, but welcomed any practical agreement with other nations by which the ratio of value between gold and silver may be made less fluctuating; pledged the party to revise the tariff in a spirit of fairness to all interests; favored limiting the hours of labor for women employed in factories to ten; and opposed all sumptuary laws that interfere with the constitutional right of personal liberty.

The ticket was then rapidly completed as follows: For Lieutenant-Governor, R. P. Flower; for Secretary of State, F. Cook; for Comptroller, A. C. Chapin; for Attorney-General, D. O'Brien; for State Treasurer, C. J. Fitzgerald; for State Engineer, E. Sweet. Chapin, O'Brien, and Sweet are renominations. Cook is a popular German of Rochester. The Convention then adjourned *sine die*.

On Saturday Mr. Flower wrote a letter absolutely declining the nomination. The County Democracy are not enthusiastic over the ticket, and a serious disaffection is indicated.

The Democratic State Committee, at a meeting in this city on Tuesday, nominated General Edward F. Jones, of Binghamton, for Lieutenant-Governor, in Mr. Flower's place. General Jones was in the Federal army during the war. He is understood to be Governor Hill's personal selection for the place. At present he is a manufacturer of scales. Twice he has been defeated as a candidate for Congress.

At the Maryland Republican State Convention on Thursday, Francis Miller was nominated for Comptroller, and William M. Marine for Clerk of the Court of Appeals. In the platform a protective tariff is advocated, and a protest is entered against the employment of convict labor. The appointments of Thomas and Higgins are denounced. Civil-service reform is commended, and the desire expressed that it may be applied to State and municipal appointments as well as to those of the general Government.

The opposition among Republicans in Pennsylvania to Colonel Quay for State Treasurer will, in a few days, take shape in a mass meeting, when a bolt will be formally started.

One of the Department civil-service examiners, commenting upon the charges of the New York Democratic platform that favoritism is shown in the preparation of the certified lists, said that the charge was wholly untrue as to all the executive departments in Washington. It is not possible for the examining boards to know the politics of the applicants, for they do not even know their names.

General Miles, Commander of the Military Department of the Missouri, in his report to the Adjutant-General of the Army, says that before the late Indian trouble New Mexico was a pandemonium, the haunt of outlaws, with the Indians crowded into bad camps; but the control of the military has stopped the issuing of 20,000 more rations than the Indians needed, saved $100,000 a year to the Government, and driven off the outlaws. The Territory is a block in the pathway of civilization and perpetuates barbarism, costing hundreds of thousands of dollars to maintain between 60,000 and 80,000 Indians. It is capable of supporting many millions of white people, and ought to be opened to settlement, with land enough reserved to the Indians to give each a farm. They can be made self-sustaining. He urges the carrying out absolutely of all promises to the Indians.

A large meeting of the Cleveland rolling mill strikers was held on Sunday night, and the great strike was declared off. The mills started on Monday at June prices.

The workingmen of Cheyenne, Wyoming, have warned all Chinamen to leave that city before October 1. At the Newcastle mines, Washington Territory, on Saturday evening, the Chinamen were warned to leave within twenty-four hours.

Bryn Mawr College, Pa., the new institution for women, was formally opened on Wednesday. Thirty-five students were in attendance. A distinguished company was present, including James Russell Lowell, Philip C. Garrett, Wayne MacVeagh, G. W. Childs, President Gilman of Johns Hopkins, and President Chase of Haverford. Mr. Lowell made a brief address.

The British yacht *Genesta* reached the Sandy Hook Lightship at 5:19:40 Wednesday afternoon, thus winning the Brenton's Reef challenge cup. The *Dauntless* was about thirty-three miles behind her. The *Genesta* also won the Cape May cup.

Goldsmith Maid, the famous trotter, died near Trenton on Thursday, aged 28. Her record was 2:14.

The Rev. Dr. Rufus Ellis, a distinguished Unitarian clergyman of Boston, died on September 22 at Liverpool. He had just completed a tour of Norway with his family. He was the first scholar in his class graduating in 1838 at Harvard. For thirty-one years he had been pastor of a Boston church, and was greatly beloved by his congregation. He was sixty-one years of age.

FOREIGN.

The Porte on Wednesday issued a circular to the signatory Powers of the treaty of Berlin, protesting that the conduct of Prince Alexander of Bulgaria in relation to the rising in Rumelia is a violation of the stipulations of the treaty of Berlin, and declaring that the Sultan has resolved on efficient action to carry out the rights of the Porte, contained in Article 16 of the treaty, which provides that in the event of the internal or external security of Eastern Rumelia being threatened, the Porte, after notifying the Powers of the exigencies that require it, may send Ottoman troops into the province.

Prince Alexander, of Bulgaria, has issued a circular to the Powers in which he announces the union of Eastern Rumelia and Bulgaria. He says he has accepted a popular election in no hostile spirit to Turkey. He recognizes the Sultan's suzerainty, and holds himself responsible for the public security. He asks the Powers to intervene in order that the union may be recognized as an accomplished fact; otherwise the people are resolved to do everything that lies in their power to uphold the union. Prince Alexander has also sent a respectful despatch to the Sultan, asking him to recognize the union. In Macedonia grave events are feared. The Porte is embarrassed to obtain funds for the transportation of troops. The Island of Crete is in a state of revolt. The Rumelians on Wednesday attempted to blow up a railway bridge over the Maritza River, but were prevented by the arrival of Turkish troops, with whom they had a slight skirmish.

On Thursday it was reported that the Marquis of Salisbury had obtained a promise from the Porte not to send Turkish troops into Rumelia, until the signatory Powers to the treaty of Berlin had been consulted as to the advisability of the Sultan adopting such a course. It was also rumored that Turkey had sent 60,000 troops to the frontier.

It was reported on Friday that the feeling in St. Petersburg regarding the Rumelian question was hourly becoming more warlike. The sympathy of the masses is strongly with the Bulgarians. It was stated that the Czar had telegraphed the Minister of War to prepare plans for a campaign in the event of the opening of hostilities between Bulgaria and Turkey, as he was determined to support Prince Alexander's scheme of unity between Bulgaria and Rumelia. On the same day the Turkish Ministry was dismissed and a new cabinet formed, which is in favor of a peaceful settlement of affairs.

Prince Bismarck being opposed to a formal conference of the Powers on the Rumelian question, Lord Salisbury has agreed that the scope of the proposed meeting of Ambassadors at Constantinople be limited to an exchange of views on the question at issue, without any formal voting and without the drawing up of any protocols. The meeting will be held on October 5. The *Journal de St. Pétersbourg*, commenting on Tuesday on the Rumelian difficulty, said: "There is no question but that the conference of the Ambassadors at Constantinople will arrange for united diplomatic action toward both Turkey and Bulgaria, so as to prevent a conflict between them, and thus allow the signers of the Berlin treaty time to discover a solution more in harmony with the interests of Turkey and the balance of power in the East."

The Rumelian and Bulgarian Parliaments have sent telegrams and addresses to the Czar of Russia entreating him to protect the union. Servia is actively negotiating with Rumelia and Greece with the view of taking common action against the extension of Bulgarian dominion. Advices from Bucharest report that fighting occurred on Friday near Adrianople, and that during the engagement thirty Rumelians were killed and 300 wounded.

Prince Alexander has ordered the civil and military authorities on the frontiers of Bulgaria and Macedonia to maintain order in their respective districts.

The British Cabinet council which was to have been held on Tuesday has been postponed for a week. The London *Times* in a leading editorial regrets the postponement, as it considers that the condition of Ireland requires immediate attention.

Recent investigations by a committee of the Irish National League have resulted in the discovery that a number of persons have been unjustly persecuted by the present system of boycotting, by outsiders giving damaging information against neighbors through private spite. The Leaguers, therefore, propose to restrict boycotting to offenders against the League.

Mr. Frank Hugh O'Cahan O'Donnell, Home Rule Member of Parliament for Dungarvan, Ireland, has retired from the canvass for Parliamentary honors in his district. He declares that the Parnellites have persistently insulted Mr. James C. McCoan, Liberal candidate for Lancaster; Mr. John O'Conner Power, Member of Parliament for Mayo; and himself. Parnellism, Mr. O'Donnell claims, has reduced the popular organization both in Ireland and America, by its schemes for obtaining money, sapped the foundation of self-government by abusing nominees, and fostered deceptive confidence by claiming triumphs on the adoption by Parliament of every worthless Irish measure.

Archbishop Walsh, of Dublin, has sent circulars to the priests in the various parishes throughout Ireland advising them in regard to the Parliamentary election campaign. He cautions them to beware of surprises at the coming conventions for nominating candidates for seats in Parliament, and to resist any attempts to stampede the conventions in favor of any outside candidate.

Lord Rosebery, in a speech at Reigate on Monday evening, said that in addition to the planks of Mr. Gladstone's manifesto the Liberal programme included the acquisition of land by tenants, free education, and colonial federation. Lord Rosebery thus, undoubtedly with the sanction of Mr. Gladstone, recognized and adopted the salient features of Mr. Chamberlain's programme.

An immense popular meeting was held in London on Thursday night, at which speeches were delivered by Messrs. Bradlaugh, Morley, Chamberlain, and others. The hall in which the meeting proper was held was packed by an audience of 7,000 persons, and outside the building fully 20,000 more were assembled. Mr. Chamberlain made a fine election speech, the only new and important point in which was his vehement declaration that he would never become a member of a Cabinet which did not adopt reform measures, including reform of the taxation laws, free elementary education, and the acquisition of land by local authorities in order to create small tenants.

The great Socialist meeting was held without disturbance on Sunday in London. The police did not interfere. About 70,000 persons were present.

Rebecca Jarrett, of the Salvation Army; Thomas William Stead, editor of the *Pall Mall Gazette;* Sampson Jacques, one of the staff of that paper; Mrs. Combe, Mr. Bramwell Booth, of the Salvation Army, and Louise Mourey, the defendants in the abduction case of Eliza Armstrong, were committed for trial in London on Saturday.

There is a rumor in Vienna that England is about to cede Heligoland to Germany.

Prince Bismarck has accepted the apology of Spain for the recent insult to the German Embassy at Madrid.

All the documents relating to the Carolines dispute between Spain and Germany have been delivered to the Pope, who will act as arbitrator. Besides Cardinal Jacobini, the Pope will consult various experts in regard to the matter.

Marshal Serrano, the Spanish soldier and statesman, is seriously ill.

The Austrian Emperor's speech was read at the opening of the Reichsrath in Vienna on Saturday. He says that the bill creating a Landsturm will bring Austria to a military level with other countries; that the foreign relations of Austria are good, and that there is full concord among the Powers to maintain the peace of Europe, a necessity which is universally felt.

Prince Jerome Napoleon (Plon Plon) has issued a manifesto to the French people, in which he says that he neither desires the restoration of the monarchy nor the adoption of Utopian plans of reform. He accuses the Imperialists of pandering to the wishes of the Bourbons, and of fomenting a revolt, and concludes by saying that he and all the members of his family will withdraw from participation in the elections until France summons a Constituent Assembly or assigns to the people the task of nominating a head for the Government.

Mme. Nilsson sang at a concert in Stockholm on Wednesday. After the concert 30,000 people appeared before the hotel where she was staying. When she appeared the excitement became so great that the crowd was uncontrollable. Seventeen people were crushed to death and many were seriously injured.

Disastrous floods covering an area of 3,500 square miles have occurred in the presidency of Bengal.

The Brazilian Senate and Chamber of Deputies have passed a bill for the gradual abolition of slavery in that country.

Wandering Spirit, Dressyman, and two other Indians engaged in the recent Northwest rebellion, have been sentenced, at Battleford, to be hanged for murder. A number of others have been sent to prison for horse-stealing and arson.

Terrible suffering from lack of food and shelter is reported among the half-breed women and children of the Northwest, on account of the death, imprisonment, or flight of their husbands who were engaged in the Riel rebellion.

The bitter feeling between the French Canadians and Anglo-Saxons in Montreal over the smallpox regulations, especially compulsory vaccination, resulted on Monday night in serious disorders. A mob of 2,000, mostly boys, attacked the City Hall where the local Board of Health was meeting, the Central Police Station, and the private residences of Dr. Laporte and other Public Health officers. Many windows were broken with stones. An attempt was made to burn Dr. Laporte's house. Many of the rioters were severely injured by the police in dispersing the mob. On Tuesday the alarm throughout the city was general and all business was suspended. The rioters threatened to sack and burn all English newspaper officers. The military were called out. A proclamation was issued by the Mayor asking all good citizens to assist in keeping the peace. Proof is not wanting that the disgraceful riot was the outcome of an organized conspiracy on the part of two corruptionists of the City Council, who have, ever since the outbreak of smallpox, pandered to the prejudices of the ignorant French Canadians, and sustained them in their opposition to remedial measures. The active ringleaders were four French Communists. The precautions taken were effective in preventing any serious rioting on Tuesday night.

THE NEW YORK DEMOCRATIC NOMINATION.

THE nomination of Mr. David B. Hill by the Democratic Convention in this State we consider to be, in view of his character and antecedents, and in view of the character and antecedents of his supporters, the first outpouring of dissatisfaction with President Cleveland's course with regard to the offices, on the part of the baser elements in his party. It expresses most emphatically their disgust with the President's policy. Their selection of Hill is due mainly to the fact that as a candidate he is nearly everything that Cleveland is not. They are disgusted with the President both because he leaves fit Republicans in office, and executes the Civil-Service Law, and because, even when appointing Democrats, he take so little account of party "work." They are disgusted with him, too, for his failure to interfere in New York politics, or at least for his refusal to allow the Custom-house and Post-office to be used in packing the Convention. The suspension of Sterling on the eve of the Convention was a heavy blow to them. So was the appearance of the President's admirable letter to Mr. Eaton, while they were actually sitting. They seek, therefore, if possible, by Hill's election to discourage him by making it appear that he has not in his own State the support of his own party, and that it is more truly represented by a jobber, intriguer, and spoilsman like Hill.

Now, at such a crisis, the duty of the Independents and of all friends of good government seems to us very clear. It is their duty to support the President, and the way to support the President is to vote for Davenport.

We have very little confidence in the Republican sincerity in the cause of administrative reform, or in the Republican platform. But the proceedings of the Republican Convention and the character of its nominations show that the Republican managers, in this State at least, have learned wisdom by the events of 1884 and 1882. In the first place, the Convention was, what all Conventions ought to be, but seldom are, a deliberative assembly, convened to reach decisions through conference, and not to record decisions already made. The proceedings were not prepared beforehand and managed by a boss. This is in itself a great improvement, which deserves encouragement. In the second place, the candidates are men of high character and eminent fitness, or, in other words, the kind of candidates which Machine work never produces. The lesson of 1882, in this State at all events, has evidently been fruitful. The nominations show that, in spite of the assignment to a mercenary trickster like Mr. George Bliss of the task of drafting the resolution about civil-service reform, the delegates felt that civil-service reform is in the air, and that salvation for political parties in our day lies through diligent search for the right man for every place.

The Democratic Convention, on the other hand, was one of the most carefully packed conventions we have seen for many years, and was packed by Hill's own personal exertions. To elect him would, therefore, be a direct encouragement to the pernicious arts by which intriguers of the type to which he and Quay and Blaine belong, have been gradually making our nominating machinery an instrument for the defeat rather than the expression of the popular will. To elect Davenport will be to give to the enemies whom Cleveland has made in his own State—to the jobbers, tricksters, loafers, thieves, liquor dealers, and Jeffersonians generally—such a knock-down that they will be quiet for the remainder of the Presidential term. All who voted for him last year, believing him to be an honest reformer, owe it to him now to deliver him from the noisy opposition of the Democratic spoilsmen, of the fools and knaves in his own party, whose only notion of politics is that it is a mode of getting $1,200 a year for light work. And a good majority for Davenport, such as that which elected Cleveland in 1882, will give them their quietus for three years at least. They will be as mild and unobtrusive in 1886, 1887, and 1888 as John F. Smyth, Tom Platt, Steve French, and the like were after 1882.

Happily the Republicans have furnished the Independents an admirable opportunity for doing this. To elect their ticket is not only to show the Democrats that although they can win victories with a man like Cleveland, they cannot win them with a man like Hill, but to show the Republicans that although they cannot carry this State with a man like Blaine, they can carry it with an honest gentleman like Davenport. To administer these lessons impartially is, at this juncture, and until new political combinations arise, the true function of the Independent vote. It is, by impartially supporting or opposing each party, as it deserves, to break up the traditions of the spoils system, to show that elections cannot be carried by traffic in offices, and thus gradually to turn the attention of politicians to other means of influencing the popular vote. One of the greatest calamities which could now happen to the cause of reform would be a failure to show President Cleveland that, whatever party conventions may say or do, the majority of the people of this great State are wedded to the cause which he has at heart and to which he is rendering—after all his mistakes and shortcomings have been taken into account—service such as none of his predecessors has ever dreamed of.

Moreover, Hill's election would be the election of a Tammany tool. It would be the resuscitation of the organization in this city, and would be regarded by the baser element in the Democratic party, which has fought Cleveland from the beginning, and is now trying to coerce him into complicity in its designs against the Government, as a rebuke to him for his refusal to deliver the offices over to the Democratic spoilsmen. Does any intelligent business man in this city suppose for one moment that the Gradys and Cockrans and Ecclesines and Spinolas, by objecting in their platform to the impairment of "the constitutional power of the Executive and heads of departments to make appointments," through the Civil-Service Law, really fear that the efficiency of the civil service will be diminished thereby? Does he not know that their idea of the appointing power is a power which can turn competent officers out of the places, and fill them from the nearest groggeries and slums? Does he not know that the expulsion of Captain Bacon to make way for Sterling, the barkeeper, was profoundly gratifying to them, and was the very sort of thing they wish to see going on in every post-office and custom-house in the land? Does he not know that the Tweed régime was their ideal city government, and that, if they had their way, there would not be an office in New York or in the Union which would not be filled by a loafer, a thief, a trickster, a liquor dealer, or an ignoramus? These men are, in fact, not simply the enemies of Cleveland, or the Civil-Service Act, or of good government: they are the enemies of civilization itself, the apostles of disorder, corruption, and violence, and Hill is to-day in this State their chosen captain.

THE NATIONAL BANKING SYSTEM.

NEARLY a year has passed since the Treasury has issued a "bond call." The last call, for $10,000,000, matured November 1, 1884, and Secretary McCulloch acknowledged in his annual report that his gold reserve had been trenched upon. Since that time it has been a struggle to maintain the gold reserve and pay current expenses, the public income having fallen *pari passu* with nearly all private incomes. The discontinuance of bond calls has temporarily relieved the national banks from the pressure caused by the gradual disappearance of the security upon which their circulation rests. For this reason there has been a cessation for a full year of the discussion of means for preserving the system from eventual decay and dissolution. Even the Bankers' Convention which met at Chicago the other day, passed over the subject as no longer a stirring one. There were papers on the silver question, on extradition treaties, on defalcations and the means of preventing them, and on a great variety of kindred subjects, but none on the permanency of the national banking system itself. We are apt to lose sight of the things nearest to us and most important to us when nothing happens, out of the ordinary course of events, to call our attention to them. With the cessation of controversy concerning means for preserving the national banking system there has been also a remarkable silence on the part of the enemies of the system. The banks have been subjected to no attacks worth mention or consideration, for a long time. On the other hand, they have been made the subject of encomium at the hands of a foreign writer, so pronounced and well-merited that it deserves republication on this side of the water. In a recent article on American finance contributed to the London *Times* the national banking system is thus signalized:

"Their system of national banks, viewed as a whole, and taking into consideration not only the scanty materials out of which it was created but the desperate circumstances in which it had its birth, is a *tour de force* which only Americans could have conceived. It is at once a magnificent and invaluable addition to the banking resources of the world; an effort of genius by which the flower safety was plucked from the nettle danger. In the first bitter throes of the Civil War the Government of the day had three apparent impossibilities to grapple with in national finance. They had to create channels for the rapid issue of untold millions of forced cur-

rency; they had to create a home market for Government bonds which were practically unsalable abroad; last, but not least, they had to fortify the country against financial panic by strengthening the hitherto shaky foundation of its banking system. The National Bank Act of 1863 achieved all these objects with a success far exceeding the most sanguine anticipations of its authors. In a sense it was too successful, as it encouraged a younger generation of currency reformers to tack on to it new experiments which have been saved from fiasco only by its protecting strength."

This tribute from a competent and disinterested foreign observer is certainly high praise (but not too high) for the authors of the banking system, which has now passed its first generation, having achieved all and more than was promised for it, and has entered upon the third decade of its existence without the loss of one dollar to the holders of its circulating notes, and without the possibility of loss at any future time so long as the present basis of security is maintained; having also paid in taxes to the National Government upwards of $125,000,000 in this period of time.

At the Chicago meeting of the Bankers' Convention a paper was presented by Mr. W. W. Flannagan, Cashier of the Commercial National Bank, of New York, which deserves something more than passing notice. It suggests a plan for protecting the depositors in national banks, by creating a fund to be contributed by the banks themselves, for the immediate liquidation of claims against failed banks, so that the creditors of such banks need give themselves no more concern about a suspended bank than the note-holders now do. Such a guarantee would be the last expression of a perfected system of banking. The plan is exceedingly simple. It proposes that the tax on bank circulation shall be maintained and converted into a special fund for the payment of claims against failed banks, the existing remedies of law being kept in full force as against the officers and shareholders of the banks. The total amount of claims against failed banks since the national banking system went into operation, Mr. Flannagan shows, have been $38,479,810, and the total amount of losses on those claims have been only $9,524,553. The taxes paid on circulation during the same period have been $58,356,991, or more than five times the amount of the losses sustained by depositors. Take the proceeds of this tax, says Mr. Flannagan, until it reaches in the aggregate the sum of $20,000,000; set this apart as a special fund to be invested in Government bonds, and hold it for the liquidation of claims against suspended national banks, such claims to be paid in full as fast as proved, and the United States to be subrogated to all the rights of the creditors against the assets and the liability of the shareholders.

That this plan, if carried into effect, would perfectly secure the deposits of all national banks and relieve the public from all apprehensions regarding the safety of the money intrusted to their safekeeping, is quite certain. Two questions as to its practicability arise: Can the Government spare the money which it now realizes from the tax on circulation, say, three millions per annum? If this question is answered affirmatively, will the banks which issue circulating notes consent that their money (the proceeds of the present tax) shall be applied to the protection and payment of deposits in banks which do not issue circulating notes? The country banks issue the bulk of the circulation, while the city banks hold the bulk of the deposits. The latter question may be answered by saying that the right to issue circulating notes to take the place of money is a legitimate source of public revenue—none more so—and that the disposition of the money so collected is wholly within the discretion of the Government. It may be added that the national banking system is a unit and cannot be broken into two parts—one of circulation and another of deposits — and that whatever goes to strengthen and perfect the whole is advantageous to all of its parts. The ability of the Government to dispense with the $3,000,000 of revenue, which it now receives from the tax on circulation, is not so apparent as it was a year or two ago, when the Treasury had an annual surplus of $80,000,000 to $100,000,000 per annum. But the present straightened condition of the public finances is not likely to continue. The stoppage of the silver coinage alone will be equivalent to an addition of $25,000,000 per annum to the Government's resources. It may be said, at all events, that whenever it becomes entirely clear that the tax on circulation can be spared, no better disposition can be made of it than to use it for completing and perfecting the national banking system on the lines suggested in Mr. Flannagan's paper.

THE COURSE OF PRICES.

In the advance sheets of the forthcoming report of the Director of the Mint, we find the results of calculations as to the general course of prices for the years 1883 and 1884. Calculations of this kind were undertaken in a previous report issued by Mr. Burchard, the former Director; and to that gentleman is credit due for their continuation to date in this year's report. The investigation of prices perhaps did not lie strictly within the province of the Mint Department; neither has it been carried out with the care and discrimination which would have been exercised by one trained in the practice of thorough inquiry into economic questions. Nevertheless, the results obtained are of value, and deserve to be mentioned with appreciation of Mr. Burchard's efforts. They are based on a simple computation of the average rise or fall in price of some eighty articles. It would be easy to point out defects in the methods used in computing the averages, and to show that the figures which are given as indicating the course of prices cannot be accepted without a good deal of allowance for errors. Yet, though hardly to be trusted for details, they probably represent with sufficient accuracy the general course of events.

We reproduce the figures for the last ten years, as they are given in the Mint reports. In parallel columns we also give the similar figures calculated for English prices in the annual commercial history of the London *Economist*. The figures of the *Economist*, while more carefully prepared in some respects than those of Mr. Burchard, have yet defects of their own, and can also be used as indicating with accuracy only the general course of things. Both tables are based on a common standard, by which the number 100 denotes the average range of prices in the respective countries during the six years 1845–50. These six years form the period just before the great disturbances begun by the Californian and Australian gold discoveries, and the average for these years has been used in the *Economist* and by most other investigators of the subject, as the standard by which to measure general fluctuations in prices since that time. It should be said that the original figures in the Mint reports are based on a different standard, and have been reduced by us, for the sake of simpler comparison, to that used by the *Economist:*

Year.	United States.	England.
1875	114	126
1876	109	123
1877	113	123
1878	102	116
1879	109	100
1880	104	115
1881	119	108
1882	120	111
1883	114.5	106
1884	106	101

A steady fall in price appears from these figures to have taken place in both countries from 1875 to 1878. In this country the lowest point was reached in 1878, when prices were (as compared to 100 in the period of 1845-50) at 102. The lowest point in England was reached in 1879, when prices were precisely at 100—that is, were on the average the same as in the period 1845-50. At no time, in either country, did prices go below the level of 1845-50. The revival began in this country as early as 1879, and shows itself in a gradual rise of prices till in 1882 the point of 120 is reached. Since the latter year there has been a steady decline to 114.5 in 1883, and 106 in 1884. In England the rise of prices in the last few years set in later, and reached its highest point more quickly. There was a sharp rise from 100 in 1879 to 115 in 1880; while the tendency since 1880 has, on the whole, been downward, until in 1884 a point (101) almost as low as that of 1879 and of 1845-50 was reached.

Although, as we have already said, these calculations must be taken with allowances for their imperfect methods and incomplete materials, and although the figures for any one year may misrepresent the change in average prices which actually took place in that year (we suspect, for example, that the average for the United States in 1880 is much too low), nevertheless they may be safely taken to establish some general conclusions. They show that in the revival of trade in 1879–81 a general rise in prices of something like 15 or 20 per cent. took place. They show that, in the reaction of the last two or three years, prices for the year 1884 have gone down, both in this country and in England, to nearly as low a point as they reached at the time of greatest depression in 1878 and 1879. With the additional fall in the first half of 1885, it is safe to say that the level of prices now is quite as low as in 1878-79. Finally, the tables show that even in the times of greatest depression prices have always been higher than they were in the period before the gold discoveries in 1845-50. The only exception is for the single year 1879 in England, when, under the combined influence of agricultural depression and the great Glasgow bank failure, a level just as low as that of 1845-50 was reached. Of course the only proper method of comparison with the older period would be to take a similar six-year period in recent times; and if any such period were taken—say the years 1879-84—

the combined average of the six years would be found considerably higher than that for 1845-50.

Most men would be likely to say that they could have reached these conclusions, at least so far as the last ten years are concerned, from their own observation and experience, without the aid of elaborate statistical investigations. Nevertheless, a considerable number of intelligent persons have been agitating and appealing to the public on the assumption that a very different state of things existed. The bi-metallists have been telling us that the supply of gold in the world was inadequate to the demands of the world for a circulating medium; that an appreciation of gold—*i.e.*, a steady fall of prices—was taking place in consequence; and that calamitous results would ensue if we did not resort to silver to eke out the insufficient gold. Yet when we investigate prices we find no such steady fall as they complain exists. Prices have their ups and downs; they fluctuate with the ups and downs of trade, which seem to be inevitable in the industrial organization of modern civilization; but on the whole there is no distinct tendency to a rise or to a fall. We seem to be as near as is practically possible to that state of a stable value of money, and an unchanging general level of prices, which is the ideal of economists. For the last three or four years prices have been falling; but for the three or four years preceding they had been rising; and hardly any careful observer would deny that the probabilities in the immediate future are for another general rise. As compared with the years in the middle of this century, just before the disturbances in prices caused by the Californian and Australian gold discoveries, we have even at the present time no low range of prices. It looks as if we could rest for a while without being frightened by the predictions of our bi-metallic friends.

ITALIAN POLITICS.

ITALY, September 9, 1885.

THE last great fight in Parliament was concerning the sale of the railroads managed by the State during the last nine years to private companies, and the contest bid fair to overturn the Ministry. As to the merits or demerits of the case, I venture no opinion. Honest, patriotic members of extreme parties—such as Silvio Spaventa, a fierce Moderate of Bourbon-dungeon renown, and Agostino Bertani, the surgeon-soldier and Garibaldi's *alter ego* in 1860—denounced the affair as a job. Military and naval men affirm gravely that to-day, when the capacity of rapid and orderly mobilization is the question of supreme importance—when Italy is far from being able to mobilize on a large scale rapidly and without friction—it is a fatal error to transfer the railway property to private companies. Even now Italy is behind France, Germany, and even Austria in this important item of military efficiency; and where will she be when the owners of her Mediterranean and Adriatic lines consult their own interests before those of the State? The general answer is, that the State is a bad administrator, and that the interest of private companies is to provide the shortest and rapidest communication from one point to another. Anyhow, the cession is an accomplished fact, and the experiment must last for the next twenty years.

But if the taxpayers hoped that the sums received by the State would enable the Minister of Finance to lessen the taxes, they are direly mistaken. Signor Magliani, the same Minister who presided over resumption, has answered the municipal deputations, one and all: "I can abate nothing of the *dazio e consumo* [the tax paid on food entering the city walls]. So much you must each pay, and if you don't pay up, I shall send a Government Commissioner to collect." And he is right in saying: "You insist upon an efficient army; you clamor for big ships and plenty of them; you choose to have compulsory and gratuitous elementary education in one sense, you must pay for it in another." And paying and grumbling go on apace. The one dark spot on the horizon is the agricultural distress. All taxes, or nearly all, fall on the land. Not only does the State carry off 124 millions, but all the municipal taxes fall upon the land also, and, what is worse, they fall unequally: some provinces paying—to state it roughly—three francs per acre, others sixteen; this because no national land census has been taken, and each province pays pretty much as it did in the bad old times. The thirty huge volumes published by the Agricultural Inquiry Commission reveal unknown, unthought-of distress among the rural populations; and not merely, as Socialistic agitators (the very pest of society, in Italy at least) would have it believed, among the actual tillers of the soil, but small farmers, peasant proprietors, and even holders of land who were once well to do, are in about as sorry a plight as Irish tenants yesterday, Irish landlords to-day. The causes of agricultural depression are not far to seek. The failure of the silk-worm crops; the fall of prices for Italian cocoons; the ever-recurring vine disease; the increased expenditure in every department, necessitating the aforesaid increased taxation; and, above and before all, American competition in cereals—each of these causes would occupy a separate letter to show which can be removed, which lessened, which must be borne. The fact remains, and furnishes the opponents of the Government with constant arguments against what Mr. Bright once termed that "infernal foreign policy."

It must be remembered that, as it is the duty of the Opposition to oppose, the same party which now protests against "our African expedition" taunted the Government in past times with Italy's isolation and her last-rate position in Europe. To sum up the Irredentists' cry we had at the Milan mass meeting, "The aspirations of Italian soldiers are directed, not toward Africa, but toward the Italian Alps"; but as long as the Italo-Austro-German alliance lasts, these aspirations can only be spoken with bated breath, and even should that not too strong alliance break up, the "aspirations" of the Italian-speaking populations still subject to Austrian rule must decide the question for themselves. But, these Irredentist agitators apart, there is a very large body of Italians who think and say that Italy ought to keep entirely clear of the craze for "colonial empire" which has again broken out in Europe; that she needs all her resources for the development of her industrial and agricultural resources; and that really popular banks for lending money to landholders and farmers, so that they may transform their systems of culture, is the one thing needed. This cannot be gainsaid. Italy, according to competent authorities, now only produces grain at a loss of thirty per cent. The idea of protection, or even "fair trading," is scouted, save by a portion of the interested parties. Consequently, wheat and maize fields will have to be "transformed" into orchards and vineyards. As yet, the rice plantations seem able to hold their own, but pasture and grazing lands must be increased if Italy is to look to cattle rearing for her future well-being. All this requires large and ready capital, and capital is what scarcely any land cultivator possesses. No one gainsays these statements; no one denies the gaunt misery that prevails, not only in the southern provinces, but in the fertile Lombard plains and in the Paduan and other Venetian provinces, once the granary of Italy. Hence the very slight enthusiasm for colonial projects, and for alliances that might lead to little wars and great expenditure.

On the other hand, there is a very strong party in favor of Italy taking her due share in the good things that seem going to other nations. Colonies, like land, say they, are limited in quantity. When France, Germany, Austria, Russia (to say nothing of England) have snapped every available port and bay and desert tract, what will be left for us? Very cautiously indeed has the Government proceeded in the "African expedition," and now its steps seem even more uncertain, because there is a general impression that while English Liberals, and Mr. Gladstone especially, are favorable to Italy, and like her "as a neighbor," the Conservatives, on the contrary, who objected to her ever becoming a nation, still retain their prejudice, and will lose no opportunity of snubbing her. But this impression is, in my belief, unfounded. Lord Beaconsfield permitted himself, and was permitted, certain likes and dislikes and caprices which are not characteristic of the English Conservatives. Interest and not sentiment governs political alliances, and, looked at from this point of view, Italy has no interests which clash with those of England: both are concerned in preventing the Mediterranean from becoming a "French lake." Hence the rumor that Sir H. Drummond Wolff has proposed that Italy should occupy "Tripoli" is not a surprising one, and it is said that the 15,000 men now summoned are destined for Tripoli, and not for Massowa. If this be the case, the Irredentists will double their hue-and-cry; but Depretis, who has been one of them, knows how much or little that cry is worth. Of course Italy can do nothing without England's consent, and will do nothing to offend Germany. No one objected to her taking Assab; she was clearly invited by England to occupy Massowa, and both these occupations are justified by her "commercial interests." But she will do well to think twice before accepting a mission to Tripoli, as it may involve her in a dilemma from which she will find it difficult to extricate herself, should the Tories be defeated and the Liberals come in at the next general elections in England. J. W. M.

SWITZERLAND.—SIGHTS AND SOUNDS.

CAMPFÈR, ENGADINE, August 31, 1885.

ALTHOUGH in some parts of Switzerland the natives complain that there are more hotels and stores, and fewer visitors, every season, other places seem to have been more frequented this year than ever before. Especially is this true of localities which have become summer colonies, as it were, of Germany, France, Italy, or England. Switzerland, notoriously, consists of three national divisions, in which the language, customs, and names of towns and mountains are respectively German, French, and Italian. The tourist tribes, as a rule, are much more international still; but there are certain localities which have been practically annexed by one country, so that visitors from another appear almost like intruders. At Engelberg, for instance, nearly all the visitors are Germans, who, in fact, are in a large majority throughout the Bernese Oberland. To find out which nationality prevails, it is not necessary to consult the list of arrivals in the local paper or hotel register. The dinner hour indicates it. If it is at 1, the guests are Germans, if at 7, English.

Evening dinners are customary throughout the Engadine, which appears to be quite as much a British colony as Gibraltar. At Pontresina one addresses a stranger in English, as a matter of course. At some of the hotels, however, a few Germans and French are admitted on probation. The Germans have a table of their own, while the French are wisely placed with the English, doubtless in order to avert a local Franco-Prussian war. Along the St. Gothard one encounters large numbers of Italians, while Americans, who do not seem to take to Switzerland as naturally as to Paris and Italy, are to be met chiefly at Chamounix and Zermatt, in the neighborhood of the "biggest" mountains—though those places are by no means so interesting for a prolonged sojourn as some others where the mountains are less "big." As for the French, they do not seem to predominate anywhere, except, perhaps, at Bad St. Moritz. With the French, patriotism assumes the form of a monomania which neutralizes even the instinctive craving in man to travel; and it is only a few days since I saw in a Paris paper an article "cracking up" the scenery along the Seine at the expense of Switzerland and Italy. Foreigners, it seems, are beginning to retaliate by ignoring the French. Indeed, nothing strikes one more in travelling through any part of Europe at present than the rapidity with which English is displacing French as the world-language. The Italian families one meets here all speak English and have English governesses for their children; the head-waiters and porters always speak English, but not always French, and the French will, no doubt, discover before long that the world no longer revolves around Paris, and that if they go to a foreign country, they will have to learn foreign languages, like other educated folks.

English influence, though great enough to eclipse the French language and postpone the German dinner hour, has not yet proved sufficiently powerful to reform the Continental barbarians in the matter of breakfast—probably on account of the extra expense that would be involved. In these bracing regions, where the extinct bears seem to have left their appetites to the tourists, one is still expected to put up with a breakfast consisting of coffee, two rolls, butter, and "honey." About this last-named, mysterious substance volumes full of interesting details might no doubt be written by expert chemical analyists. Swiss grocers, if you ask for honey, show you two jars, one of which is labelled "bee-honey," the other "table-honey." *Honey soit qui mal y pense!* Apart from this *obbligato* yellow glycerine, however, Swiss hotels are remarkably good, and cheap too. A good room with full board (including honey) may be had anywhere for $2 to $3; in less frequented places only half that sum is asked. It is the great Baedeker himself—whose guide book of Switzerland is a marvel of perfection and practical sense—who pronounces the Swiss hotels the best in the world; and as he has a habit of attaching stars to whatever is commendable, the pages of his 'Switzerland' have almost the appearance of a Milky Way. This is what makes Switzerland such a glorious resort for tourists and weary city folks. The Andes and the Himalayas may contain higher peaks and bigger glaciers; but one cannot, among them, as here, climb all day across rocks and snow fields, and in the evening return to a first-class dinner of six or eight courses, the best Italian, French, and German wines, interesting company, the latest newspapers, and a comfortable bed. It appears, it is true, as if the climate of Switzerland were becoming warmer. There is less snow on the mountains this year—especially on those which frame in the Engadine valley—than at any time within the memory of residents; and the guide-books tell one concerning almost every glacier that it "used to extend much further into the valley." Unless some very snowy and prolonged winters come on, therefore, ambitious tourists will possibly, in a few generations, betake themselves to the Himalayas, as some of the English are already doing. But ordinary mortals, who are satisfied with one or two snowstorms in August, and who prefer to enjoy the sublime and the beautiful without dispensing with the comforts of civilization, will not turn their backs on Switzerland for some time yet. Every year access to interesting points is made more comfortable. The two railways up the Rigi (on the same system as that on Mt. Washington, after which they were modelled) have proved so successful that next year a similar road is to be built up the gloomy Pilatus, and still another up the Niesen (near Interlaken), from which the view is hardly inferior to that from on top of the Faulhorn. The Rigi railways are absolutely safe, but very slow, and therefore a ride on them is not nearly so exciting as coming down the switchback at Mauch Chunk by the force of gravity alone.

Several hundred tourists go up the Rigi every day during July and August, but few stay longer than one night at the summit, or Kulm, because the hotels are very expensive, and the scores of people who get up to see the sun rise, wake up everybody in the house soon after 3 o'clock. But there are several hotels within a few hundred feet of the summit where prices are more reasonable, and the view of the mountains is almost equally extensive. The best of these is Rigi-Scheideck, to which a branch railway leads, and which has even a better view of the mountain ranges than the Kulm, though that summit shuts off part of the view of the plains. The Scheideck Hotel has more than 200 guests in the season, many of whom remain two or three weeks. It is managed by a gentleman who, in the winter, teaches natural history in a high school, and whose knowledge of the Alpine flora and fauna is found a great convenience by the guests. The disadvantage of living on top of this mountain, 6,000 feet high, is that one is apt to be wrapped in dense clouds for two or three days at a time; but even for this he feels amply repaid by the magnificent glimpses he gets of the lakes, valleys, and mountains when the clouds dissolve into various grotesque shapes, and chase one another, suspended midway between the summit and the valley. Sometimes one sees a snow-white cloud a few hundred feet above a lake, moving along majestically, and so dense and opaque that one can readily understand the belief of the ancients that the clouds were solid, and that thunder was caused by their collisions. The clouds, indeed, afford as much entertainment, and more variety, on the Rigi, than the terrestrial scenery. In the account of his ascent of the Brocken, Heine mentions some students who were intoxicated, and who consequently must have had a double enjoyment of the scenery. On the Rigi one needs no such magic potion to see the scenery double—at least so far as the cloudscape is concerned. The mountain is surrounded on all sides by lakes, on which every moment a new shadow picture is painted. Sometimes the clouds are reflected in their native snowy whiteness, sometimes as purple patches. In one respect, however, the Swiss clouds are disappointing: they are no Venetian colorists; and though I have spent two summers in Switzerland I have never seen a sunset to compare in gorgeousness and variety of coloration with those that may be enjoyed in New York State, especially in the lake region. As for sunrise—I cannot tell a lie—I have not seen one on the Rigi; but in this place I have enjoyed the rare privilege of seeing at four o'clock, and without getting up, the first rays of the rising sun gild the snowy summit of Mount Corvatsch, over 10,000 feet high. Yet it must be admitted that the noonday color-symphonies—the emerald lakes, the varied green of the forests, the brilliant colors of alpine flowers, the spotless white of the vast snow fields, and the deep blue of the celestial dome, contrasting with the gray monotony and grotesque wildness of the savage rocks—are more than a compensation for the rarity of gorgeous sunsets.

Such color-symphonies can nowhere be better enjoyed than in the Engadine; for here the mountains and the lakes, the snow fields and the forests are nearer together than in any other part of Switzerland. A tourist who goes from the Rigi to the Engadine, via Zürich, Chur, and the wildly romantic Schyn-strasse (a stage road mostly cut into the rocky side of the mountains and along which it is proposed to build an electric railroad to the Engadine and down to Como), rises again to exactly the same altitude that he started from. Yet one cannot imagine a greater contrast than that between the Rigi and this valley. There one cannot walk ten minutes without going down the mountain; here one has before his eyes a valley more than twenty miles long, with green meadows, groves, half-a-dozen villages, and as many picturesque lakes—everything 6,000 feet above the ocean, and higher than the highest summit of the Adirondack peaks. By living in a valley 6,000 feet high, instead of on an isolated peak of the same altitude, one loses, indeed, one of the greatest charms of the Rigi scenery—the contrast between the gigantic mountains and the Liliputian valleys beneath; for the towns look like toy villages, and the steamboats on the lakes like toy vessels. One loses, also, part of a mountain's grandeur, for peaks 10,000 feet high are only 4,000 above the visitor in the Engadine; but, to compensate for this, one can get on some of the highest mountains in Europe by climbing only 6,000 feet. This is what makes Pontresina such a favorite resort; nowhere else can so many glaciers and peaks be visited with such a slight expenditure of energy, and the wonderfully bracing air adds to the facility of mountain climbing. "Just like champagne," is the unvarying exclamation of all visitors, temperance folks included, paradoxical as this may seem. Winter flannels may be worn all summer without a moment's feeling of discomfort, and it is a positive luxury to bask by the hour in the noonday August sun, whose rays are just warm enough to raise to a pleasant temperature the stiff breezes that always blow from the snow fields. The air is so dry that it is apt to produce an alarming effect on the size of wine bills; but to compensate for this, there is a great saving in blotting paper to those who write many letters or do other literary work. This is probably the reason why many German professors and others come up to the Engadine in summer to write books. Among those present at St. Moritz this season were Dr. Brandeis, Dr. Schliemann, and Mr. Story, the sculptor.

As for the natives, who are burdened neither with present cerebral waste, nor with the restoration of nervous energies wasted through the excitements of city life, they seem obliged to find some special outlet for the animal spirits engendered by the bracing mountain air. This outlet is almost invariably the vocal cords. It is one of the most remarkable phenomena of life among the mountains that one feels an almost irresistible impulse to sing. The Swiss peasants and shepherds never resist this impulse; but in most cases their notions concerning musical pitch are so vague that their "yodling" adds to the

bliss of those only who are ignorant of music. Nor have I ever been able to sympathize with the old notion that the harsh, dull-sounding cowbells add to the poetry of Switzerland; yet there is a man at St. Moritz who sells them in large numbers to visitors, who take them home. The cowbell interferes with the enjoyment of an unique Alpine experience—the emotion inspired by absolute silence. Nowhere but in the high Alps can this emotion be enjoyed: the ocean, the desert, the plain are rarely so absolutely silent as the Alpine snow fields—when the bells of the adventurous cows are at rest, for they are heard at an enormous distance. It is no rhetorical trick to say that one often stands still to listen to the Alpine silence. Just as the eyes which look at white after being fatigued with green, see not white but the complementary purple; so the ear, fatigued by city noises, perceives in Alpine silence not a negative blank, but a positive sensation of joy; and it is this glorious symphony of nature that unpoetic souls willingly and gladly sacrifice for the "poetic cowbells." H. T. F.

DIDEROT AND THE ENCYCLOPÆDIA.

PARIS, September 11, 1885.

THE novels of Diderot are more often read now than the 'Encyclopædia'; but, in the eyes of his contemporaries, Diderot was eminently the author of the 'Encyclopædia.' The history of this great publication has been recently told by M. Maurice Tourneux. It had been quite forgotten, as well as the 'Encyclopædia' itself: who thinks now of buying the huge volumes which are hidden in some old bookseller's shop on the Quai Voltaire? The history of the 'Encyclopædia' has become more interesting to us than the work itself, which had the fate of all cyclopædias, and could only serve for a time.

Diderot is not named in the letters of privilege, which are dated January 21, 1746; but he was recognized by D'Aguesseau as the director of the publication. The "Associated Booksellers" (*libraires associés*), who published the *Almanach Royal*, had accepted the offer made to them by the Abbé Gua de Malves, who undertook to give an alphabetic account of all human knowledge in the eighteenth century. The prospectus, which gave a sort of genealogical tree of the various sciences, was attacked by the Jansenists as well as by the Jesuits, who were then very powerful at Court. The "Academy of Sciences" remembered, and suddenly that Colbert had asked its members to make a "Description of the *arts et métiers*," and Réaumur was charged with this mission.

The first volume of the 'Encyclopædia' appeared in 1752 and sold well: 4,300 subscriptions had been received. The philosophers worked at once for the new enterprise, which appeared to them, as Sainte-Beuve says, the wooden horse that was to enter into Troy. Diderot secured the good will of Voltaire (who asked to be called the "encyclopædic waiter"), of Montesquieu, Holbach, Grimm, Marmontel, Morellet, De Brosses etc. A little scandal helped the sale. A young abbé, who had written the article "Certitude," presented to the Sorbonne a thesis in which he drew a parallel between Jesus Christ and Æsculapius, and was severely censured by the Faculty. But the scandal was too great, and a judgment of February 7, 1752, suppressed the 'Encyclopædia.' After three months, the Comte d'Argenson, to whom the great work was dedicated, obtained the repeal of the interdiction, and seven volumes were allowed to appear quietly till Helvetius published in 1758 his work 'L'Esprit.' The impious book was condemned and burned before the staircase of the Grande Chambre, and Helvetius was obliged to sell his place of fermier-général. The *Parlement* appointed a committee to examine the 'Encyclopædia.' There is, in the "Cabinet des Estampes" of the Rue Richelieu, a printed copy of this judgment, surrounded with allegorical figures—Incredulity proscribed, Religion having her foot on False Philosophy, covered with beasts' skins. As Grimm said, the committee chosen by the *Parlement* had to taste the poison. Meanwhile, the Council of State revoked the privilege, and ordered the booksellers to refund to the subscribers the money already paid for the volumes which were still to appear.

So far, D'Alembert had given his time and his aid to the great undertaking; but he became discouraged and Diderot remained alone. The difficulties were immense, and the printing of the remaining volumes had to be done in the dark. Diderot had, fortunately for him, invisible protectors in the persons of Choiseul, Malesherbes, and Sartine.

"It is true, as Grimm said, that many distinguished persons charged themselves generously, without interest and without glory, as they were neither paid nor named, with a great part of the work. . . . Diderot himself, having as before the entire work of the revision and of the editing, and being obliged to hurry the publication for fear of some new storm, was constrained to act the laboring man more than the author. Many articles, and some very essential, were left to the Chevalier Jaucourt, a man of great zeal and indefatigable industry, but a pitiless compiler, who only copied the best-known and often the most mediocre books. The general plan of the work, of course, suffered much by this forced clandestinity, and it happens that on the same page you can read black and white on the same object, from two different pens, to say nothing of the general confusion, the irreparable omissions, the inevitable faults and mistakes."

Diderot had one copy, of course, reserved for himself. One day, when he had to consult a philosophical article under the letter S, he found it, to his surprise and horror, completely mutilated. He was dumfounded. He reread the articles, his own and those of his most valued collaborators, and found everywhere the same mutilations and changes. He became almost frantic with horror. The mischief had been done by the printer, Le Breton, who wished to purchase at this price the tolerance of the Government. With his assistant he made himself a sovereign arbiter and censor of all the articles. They were printed first as the authors had sent them, but, after Diderot had seen the last proof, and given his "bon à tirer," Le Breton cut, changed, suppressed in the most arbitrary manner. Le Breton was not only a coward, he was an ignorant and silly man, having no idea of literature or of philosophy; and when Diderot found him out, the mischief was done. Curiously enough, none of the mutilated authors had ever complained to Diderot; which proves that if there is such a thing as "le plaisir de se voir imprimer," few authors read themselves in print.

On July 25, 1765, Diderot was able to write to Mlle. Vollaud: "I shall no longer go much to this infernal office where I have used my eyes for men who will not give me even a stick to help me to walk. . . . In eight or ten days I shall see the end of this enterprise, which has occupied me for twenty years, which has not made my fortune—far from it—which has several times made me liable to leave my country or to lose my liberty, and which has consumed a life which I might have rendered more useful and more glorious." And a few days afterward: "I shall soon scream Land! land!"

Diderot could not be consoled for the mutilation of the 'Encyclopædia.' In a memoir to Catharine of Russia he offered to make her a new edition: "It would be well worthy of your Majesty to do the reverse of what has been done in France, and to bring the 'Encyclopædia' to the state of a fine work. I should take pleasure in writing on the frontispiece: 'The French wished it to be bad; the sovereign of Russia has made it good.'" He offered to dedicate to her the new 'Encyclopædia.' In this memoir Diderot complains much of Choiseul, who had been at first one of his protectors. "M. de Choiseul," he says, "who hates us, I don't know why, has dragged out of obscurity a poor devil, very wicked, without knowledge, without talent, without principles, and excites against us this sort of Aristophanes, who is as perverse as the ancient one, but has not his wit. We have been dragged on the stage, and the people have seen Rousseau on all fours, Helvetius teaching his valet to steal, myself I don't know how. All this is fallen into the mud, along with the author, who remains under this inscription, 'Pâlis, sot!'" This was the anagram of Palissot, the author of "Les Philosophes," a comedy which was represented on May 2, 1760, at the French Comedy, and which excited the anger of the philosophical school. In his memoir Diderot gives some curious details about his work: "The expense, when all was finished, amounted to 1,500,000 livres or 300,000 rubles. There have been 4,500 copies printed, which were all sold at an average price of 900 francs. The editors have therefore received more than 4,000,000, and, all expenses paid, had a residuum of 2,500,000 francs, and they admit it."

We need not enter into all the details of Diderot's scheme, but the finances of Russia were low. Catherine had just waged a long war against Turkey. General Betzky, who was the confidant and factotum of Diderot, was very irresolute in character. Perhaps Diderot himself grew alarmed at the great work which he had offered to undertake: his health was a little impaired. His attention became turned to other subjects. There is no further trace in his correspondence of the new edition of the 'Encyclopædia.' Diderot used his influence with Catherine for political objects. On November 12, 1773, Sir Robert Gunning, then British Minister in Russia, wrote to his Government: "Count Panin has told me in great confidence that M. Diderot, who has free access to the Empress, has been asked to give the sovereign a paper containing proposals of peace with Turkey, which the Court of France engaged itself to enforce if the good offices of that Court were accepted. M. Diderot said that he could not go out of his sphere and expose himself to being shut up in the Bastile on his return, and he absolutely refused to accede to the desire of the French Minister." A few days afterwards, Diderot had changed his mind, and Sir Robert Gunning wrote: "Notwithstanding, says M. Panin, the way in which the Empress received the papers transmitted by M. Diderot in the name of the French Minister, M. Diderot is at this moment at Tsarskoe-Selo, which proves that he has disarmed the anger of the Empress."

M. Alfred Rambaud was the first to study Diderot, the diplomat, in his important work: 'Recueil de la Société historique russe.' Diderot was carried away by his admiration of Catherine. He was somewhat too imaginative, as is well shown in the curious paper entitled "Ma Rêverie," a paper which differs completely from ordinary diplomatic memoirs. The peace with Turkey seems only a pretext: the imagination of the writer rambles on a hundred subjects:

"We look very sincerely on the partition of Poland as an *affaire faite*. I doubt not, however, that the partition of this sheep will become some day the occasion of a long quarrel between the three wolves. My three wolves are the Russian, the Austrian, the Prussian. France is a fourth wolf, and reasons thus: 'If ever the Austrian wolf, my neighbor, should one day show his teeth, I should be glad if, while he had his face turned towards me, the Russian or the Prussian wolf threatened him from behind."

Catherine was very cynical, as is well shown in her correspondence. She amused herself with French philosophers, as the King used to have court-fools. Catherine did not judge Diderot badly when she said that "on some

points he was a hundred years old and on some others he was hardly ten years old." Speaking one day to Diderot of the partition of Poland, she complained of having been somewhat taken in by Frederic of Prussia: "You don't like this Prince?" she said. "No, he is a great man, but he is a bad King and a *faux-monnayeur*." "Well," said she, "I have some of his *monnaie*." It is difficult to imagine the degree of Diderot's adulation:

"I will tell my compatriots," says he in his 'Rêverie,' "that you unite the soul of a Roman with the seductiveness of Cleopatra; force with sweetness, contempt of danger with good judgment, dignity with affability—the affability of Benedict XIV. when he took off his tiara, and said, 'Ecco il papa!'—a warm, nay, an impetuous soul, with patience and with moderation. And oh! my friends!" he exclaims, "suppose this woman on the throne of France! what an Empire, what a terrible Empire she would make of it, and in how short a time. And you, what a man would you not be. You are a spring which the weight of a bad administration bends down and will always bend down. Do come if only to spend a month in Petersburg."

I don't know who said to a young man: "Plaster thick, and some will stick." The philosopher certainly did plaster thick. Shall we go over the reforms which he recommends in his 'Rêverie'? It is hardly worth while. His advice on every subject is of a very vague character. My object has been chiefly to tell the history of the publication of the 'Encyclopædia,' and to point to the valuable publications of the Russian Historical Society. The greatest part of these volumes published by this Society is, of course, in Russian; but there are many letters and documents in French, as French was at that time the language of polite society.

Correspondence.

THE WARNER BILL.

To the Editor of The Nation:

Sir: The discussion of Mr. Warner's Silver Bill, while it has revealed a general appreciation of some of the evil consequences likely to flow from it, has entirely overlooked one very serious feature of that remarkable measure, viz, its probable effect on the future price of silver. The bill provides that any holder of silver bullion may deposit the same with the Treasurer of the United States and receive therefor certificates receivable at par for customs, taxes, and all other public dues. The ratio to gold at which such certificates shall be issued shall be the actual market value of silver bullion at the time of deposit, to be determined by the Secretary of the Treasury for each month by taking the average selling price during the preceding month, or for each day by taking the mean selling price on the first [meaning the *last*] preceding day on which actual sales were made. But if at any time silver rises to a value equal to the ratio of the two metals in existing standard coins, the holder of silver bullion may, at his option, have it coined into standard dollars, on the same terms as provided for the coinage of gold.

Now, if this bill became a law, what would be its effect on the price of silver? Suppose a law were passed requiring the Government to buy at market value all the wheat, or all the cotton, or all the iron offered, and pay therefor in certificates receivable in payment of all public dues; what would be the effect on the price of the commodities so selected? Obviously the price would at once rise, for the advent of a new customer ready, nay, compelled, to buy unlimited quantities could not fail to stimulate the market. The mere expectation of the future advent of such a customer would suffice to "boom" the price of silver.

But that is not all. When silver once began to rise, it could never again decline. Suppose that the bill goes into effect on January 1, 1886. The Secretary of the Treasury will have to announce on that day at what price he will receive silver during the day or during the month, as he may elect. Suppose any price you please in that first announcement, remembering that it must be fixed either by the last sale or by the average during December, 1885. Let us assume this initial price to be 52d. per ounce. Now, it is self-evident that nobody would sell silver for less than 52d. on any day after January 1, being certain that by waiting till the following day he could get that price from the United States Treasury, and at the same time enjoy the benefit of any rise in the price that might in the meantime accrue. In other words, the Government would gratuitously insure against loss all operators for a rise in the price of silver; and any competing buyer of silver would have to bid above the Government price in order to get his supply. The actual legitimate demand for silver, combined with the facility afforded to the "bulls," would therefore inevitably carry the price of silver, more or less gradually, up to the point when any holder of silver could demand to have it coined into standard dollars which would be a legal tender for all purposes.

Long before this point had been reached, however, the Treasury would be full of silver certificates received for duties in place of gold, and would have been drained of its stock of gold; and even if not entirely so drained, that process would soon be accomplished when any holder of silver could have his bullion coined into dollars. Of course, silver could only remain at the price necessary for this purpose until the whole country had parted with its gold and received "standard" silver dollars in exchange at par. In other words, the customer whose unlimited purchases of silver had driven up the price being bankrupt, and therefore out of the market, the commodity would, after the most violent fluctuations, find its natural level of value. The net result of Mr. Warner's bill would thus be that we should be transformed into a mono-metallic silver-currency country, in the same category as India and China, while all the countries of Europe would have a mono-metallic gold currency; and Germany would have dumped her whole unsalable load of silver on the back of the patient American donkey, and received good gold in exchange.

It is true that the bill provides "that coins struck at European mints, and ingots and bars made by melting down such coins, shall be excluded from the provisions of this act," but this provision, like most of "the provisions of this act," is perfectly puerile, for it would be utterly impossible to identify any particular bar or ingot as to its origin or previous condition. The bill is really nothing but a device to precipitate public and private financial disaster and bankruptcy upon our country in order to enable holders and producers of silver all over the world to find a market for their merchandise. For the limited coinage of the Bland bill it would substitute unlimited coinage.

New York, September 28, 1885.

THE SOUTH AND THE SILVER QUESTION.

To the Editor of The Nation:

Sir: The various recent manifestations at the South establish beyond a doubt, I think, that public sentiment among our business men is very decidedly set against the continued coinage of the Bland silver dollar. The petition to the President from our South Carolina bankers and merchants, the very decided action of the Commercial Convention at Atlanta, the equally emphatic resolutions of the Cotton-Growers' Convention at the Virginia Springs, the voice of the better portion of our Southern press, all tend to clearly establish the fact that those most capable of comprehending and judging the situation are fully alive to the imminence of the danger threatening the country from the continued issue of a debased currency, and are anxious for the immediate and unconditional repeal of the foolish and wicked silver law. On this point I doubt not that the opinions of our intelligent business men are quite as clear and decided as are those of the same classes at the North.

Why, then, one naturally asks, were Southern Congressmen almost solid in favor of the passage of the Bland bill, and why do they, after seeing the harm it is doing the country—the South at least as much as the North—continue almost unanimous in opposition to its repeal? To my mind there is but one correct and satisfactory answer to this question, and that is that since the overthrow of radical rule at the South in 1876—indeed, I might say since reconstruction—there has been but one prominent issue in all elections, national, State, or municipal. That one issue has been "radicalism." Our candidates of high and low degree have got in the habit of recommending themselves to their constituents by the bitterness of their denunciations of radical rule, and they continue to harp on the same old tune, though all danger of the return of that rule has long since passed away in every Southern State; for "Mahoneism" in Virginia, objectionable as it certainly is, is led and largely supported by native whites. Our politicians seem no more inclined to give up "radicalism" as a dead issue than Mr. Blaine or Mr. Sherman to give up the "bloody shirt." Important living issues that agitate the popular mind in the North and West have received little or no consideration at their hands.

It is true that, during the last election campaign, civil-service reform was now and then heard of, not because of any love for it among our active politicians, but solely because a few of them were sagacious enough to see that the balance of power between the two great political parties lay in the hands of the reformers. But now that they have succeeded in electing their President, I believe it very safe to say that there is hardly a politician of high or low degree at the South (I except, of course, Mr Lamar) who would not desire to see civil-service reform utterly ignored by the Administration, and the corrupt and corrupting Jacksonian "spoils system" reintroduced in all its purity. Even some who pretend to favor reform have been most active in soliciting and obtaining their share of the spoils, utterly regardless of every principle of the reform movement. Our papers, for the most part, denounce reform and reformers in unmeasured terms. It is true our leading paper, the Charleston *News and Courier*, pretends to be a strong advocate of reform, for which it gets much credit among reformers at the North. But so great is the want of confidence in its editor's sincerity, that I doubt if its advocacy of reform, as well as of the repeal of the Silver-Coinage Act, does not rather tend to injure both measures in the popular estimation.

But neither civil-service reform, nor the silver question, nor the tariff, nor our foreign trade, nor our shipping interests, have been an issue, or have received any adequate attention in any election at the South since the war. The natural result is very general ignorance of all such questions, both among our politicians and the people generally. As a specimen I may mention that I heard one of our most intelligent and useful South Carolina Congressmen seriously advocate the idea of mixing gold and silver in certain proportions, and out of this extraordinary amalgam coining money. He imagined in this way to be

able to force silver on the world at more than its value. Few of our Congressmen, perhaps, would so openly confess their ignorance on important public questions as does our senior Senator. General Butler, who, in a recent letter to the Charleston *News and Courier* on the subject of the silver question and our foreign trade, did not hesitate to admit his ignorance of what was best to be done, and to call on his friend, Colonel Trenholm, of Charleston, for light to guide him. This light Colonel Trenholm endeavored to give him on the silver question in his very able and lucid letter published in the *News and Courier* of August 24, and which has received such favorable attention in Northern papers.

At the conclusion of his excellent argument Colonel Trenholm appeals to Senator Butler to do one thing which he could do effectively, namely, "to get up a movement among Southern members of Congress to put an end to this silver oppression." He adds:

"Representative men in Congress from the South are, with respect to this matter, under greater responsibility than others, because they supported the Bland measure, and because they could in thirty days restore confidence to the entire country and unlock the wheels of industry by announcing a change of opinion as to its merits. There can be no doubt that if 100 Southern Senators and Representatives, who could be named, would now unite in declaring their purpose, upon the assembling of Congress, to vote for a repeal of the Bland law, and to oppose thereafter all further legislation affecting the currency, an immediate change for the better would take place all over the country."

The entire argument of Colonel Trenholm is most clear and convincing as to the evils and dangers of the continued coinage of silver, and causes one to wish that we had even one representative of the South in the United States Senate capable of taking such a high stand and maintaining it with such ability. But, unfortunately for us and for the whole country, this is probably not the case. A narrow and bitter partisanship has prevailed so long that statesmanship has been crushed out, and our Southern Congressmen will probably as heretofore continue to follow blindly what they regard as the dictates of their party, regardless of its effects upon the country. We have as yet no intimation that Senator Butler will act on the appeal made to him by Colonel Trenholm, and he probably will not. I should much sooner expect such independent action from our other Senator, General Hampton, though he probably has no clearer comprehension of the situation than Senator Butler. But he is more capable of kicking in party traces.

My only hope for independent action on the silver question from any considerable number of our Southern Congressmen depends upon the action of the Administration. If the Administration stands firm on the principles announced in Mr. Cleveland's letter to Mr. Warner of February 24, and insists upon the prompt and unconditional repeal of the Silver-Coinage Act, so as to convince Southern members that this can no longer be regarded as a party measure, I have little doubt that there would be at least a sufficient division among them to secure the repeal. But let the Administration waver, and show a disposition to accept Mr. Warner's or some other compromise measure, and all hope of such action is lost. Notwithstanding recent rumors of such compromise have seemed to emanate from trustworthy sources, I am not yet disposed to credit them. Mr. Cleveland clearly showed, in his famous letter, both his sound financial judgment and his full comprehension of the dangers of the situation. He has shown on many occasions his firmness and decision of character. It will therefore be a great surprise to many if he should "weaken" a particle on this all-important silver question. Mr. Bayard has always shown himself thoroughly sound and firm on financial questions, even when he had to stand almost alone of his party. It is not at all likely that he would now yield on the silver question, when he has the President and the best portion of his party to sustain him. Secretary Manning, as a representative of the State of New York, is not likely to show any weakness on this question. We may, then, I prefer to think, take it for granted that all these rumors of compromise are inventions of the silverites, and that they are without any foundation in fact.

What the good of the country requires is the prompt and unconditional repeal of the Silver-Coinage Act, and this I have no doubt the Administration will insist upon on the opening of Congress. And if it does, I entertain little fear but that it will be supported by a sufficient number of Southern Congressmen to accomplish its purpose. When this is done, and we are freed from the danger threatening us at home, we shall be in a better position for negotiating with other countries as to what shall be the permanent status of silver in the world's currency.

B. O. D.

NEWBERRY, S. C.

GROUNDS OF REFLECTION FOR SENATOR SHERMAN.

TO THE EDITOR OF THE NATION:

SIR: When the bill for the abolition of slavery in the District of Columbia was under discussion in the second session of the Thirty-seventh Congress, I well remember that the Hon. John Sherman, then, as now, a distinguished member of the Senate from the State of Ohio, while giving his zealous support to the measure, was very emphatic in expressing his opposition to the political rights of negroes *outside of Washington*. After remarking on the exceptionally kind consideration and benignant treatment accorded to free negroes by the white people of Washington even before the war, he proceeded to say:

"In the State where I live *we do not like negroes. We do not disguise our dislike.* The whole people of the Northwestern States are, for reasons whether correct or not, *opposed to having many negroes among them*, and that principle or prejudice has been ingrafted in the legislation of nearly all the Northwestern States. . . .

"I am willing to give the free negroes here [in the District of Columbia] the highest possible development. Here they do not interfere with the peculiar prejudices *that will always mark them as a degraded caste in other communities. In States they must always be on a lower level.* Here they have rights, and those rights are more respected than in any portion of the United States" (*Cong. Globe*, 2d Session 37th Congress, Part II., pp. 1491, 1492).

The italics are mine in the foregoing citation. In view of these former opinions of Mr. Sherman as compared with his present complaints against "the South," would it not be more graceful, as well as more gracious, if he should practise toward his Southern fellow-citizens a goodly measure of that mercy which he must expect the colored voters of Ohio to show to him if they shall forgive his former want of faith in their political capacity? Nobody in the South, not even the veriest Bourbon, would be bold enough to proclaim to-day in the halls of Congress that negroes must "*always*" be "marked as a degraded caste," because of the white man's "peculiar prejudices"; or that they must "*always* be held on a lower level." And if Senator Sherman will reflect on the influences which have wrought a beneficent change in his uncharitable opinions, he will, we may be sure, frankly ascribe it to the meliorating pressure of moral ideas and social conditions, rather than to any penal statutes of Congress mitigating his judgment or coercing his conduct. When he remembers that little more than a score of years ago he, in common with the whole people of the Northwestern States, "did not like negroes," "did not disguise his dislike," and, "for reasons, *whether correct or not*, was opposed to having many negroes" in his community; and when he considers to-day that he is entirely redeemed from his unworthy prejudices, there would seem to be hardly any limit to the high hopes which *he* might reasonably cherish with regard to the progress of humane opinion in the South during the next twenty years.

And if even in Washington, this "Paradise of negroes," as Senator Sherman called it in the speech above cited—if even in this city, where free negroes, before the war, "had rights, and those rights were more respected than in any [other] portion of the United States"—if even here, where the Senator was "willing to give the free negroes the highest possible development," negro suffrage was found so intolerable that it had to be abolished by act of Congress (and white suffrage with it), under the full splendor of Republican ascendency, it may indeed be a source of regret to everybody that such a crucial experiment in applied politics should have failed under the very eaves of the national Capitol; but it can scarcely be a ground of surprise to anybody, outside of Ohio, that negro suffrage, thus doomed to perish under law in Washington, should sometimes perish without law in Mississippi. The latter contingency presents, it is true, a sad anomaly under our institutions; and what makes it still sadder is the fact that it comes to us as a reaction from the saddest anomaly of all—violence done by statute to the civilization, property rights, civil security, and social progress of blacks and whites alike in such of the reconstructed States as were temporarily placed under the domination of negro suffrage. Senator Sherman should see that an anomaly for bad or for worse is inherent in the political situation at the South, until it can be cured by the same moral forces which have wrought such a happy regeneration in his once reprobate State, as he must now view it from the moral eminence he has reached.

W.

WASHINGTON, September 26, 1885.

ASKING TOO MUCH OF THE CHURCHES.

TO THE EDITOR OF THE NATION:

SIR: The remarks made in several recent numbers of this journal regarding the intellectual status of the Protestant churches, particularly the Methodist and Baptist, in the South, naturally lead to a consideration of the question whether it is the province of any ecclesiastical organization to concern itself with high intellectual culture, and whether we are justified in condemning the action or inaction of a religious denomination for opposing certain scientific doctrines, or wholly eschewing science proper. The church is an historic institution, based on an ancient creed, formulated under conditions of meagre historical knowledge, yet in its fundamental elements unchangeable. Its existence is owing to a well-nigh universal human need, which, therefore, it seeks to supply. The needs which in its purest form it undertook and still claims to supply are, primarily, spiritual; secondarily, temporal and external. It may therefore, without overstepping the bounds within which, by virtue of its constitution, it exists, concern itself with elementary education, and even promote to some extent the cause of intellectual culture, if by so doing it can enlarge the sphere of its influence. But the highest culture and original investigation can be pursued solely for their own sake, for the truth that in them is. From their intrinsic nature these aims are appreciable by but few, and of abiding interest to still fewer.

A church, however, is chiefly efficient in pro-

portion to its numbers. It must not, therefore, concern itself with—it must even keep aloof from—that which would impede its numerical growth. A religious denomination would be preparing the way for its own destruction if it should encourage researches tending to cast discredit on its fundamental doctrines. Its policy will therefore be consistent as long as it multiplies colleges and universities for the diffusion of intelligence, but inconsistent when it encourages original research in certain directions.

True, the defenders of denominational colleges claim, for the most part all in good faith, that certain teachings are forbidden in them in the interests of truth, but the fallacy of their reasoning is so obvious that one hardly sees how they can be blind to it. When a board of trustees removes an original investigator from his professorial chair for teaching falsehoods upon a subject of which, from its very nature, only he and his like can competently judge, it is amazing that they do not see the farcical character of their action. Yet this has often happened and will continue to happen. Men of real intelligence sometimes abet such performances, or at least acquiesce in them, from a fear of the consequences of teachings that threaten to uproot well-established beliefs. Social order and certain opinions have existed so long side by side that we are apt to think the former dependent upon the latter, and perhaps it is. Who can tell what the effect upon society would be if a hundred theological seminaries and sectarian colleges in our country should officially teach the doctrines of Herbert Spencer, and the religious press assist in giving currency to such teachings? It is the instinct of self-preservation that makes members of churches conservative, even though they be not often fully aware of it. To see sectarian colleges posing as the champions of scientific truth would be amusing if the effects were not frequently painful; yet why is this more surprising than to see the leaders of rival political parties in a like attitude toward what they claim to be good government? A man's intellectual horizon is not enlarged by a certificate of church-membership. The Christian Church can encourage intellectual training only so far as such a course raises up defenders, and no further. The most ardent churchmen are usually persons of a certain narrowness of mind, however large their hearts, and one-sided mental development. In proportion as men's views enlarge, their ecclesiastical or denominational zeal grows less. As the world has grown more enlightened it has grown more tolerant. A man of high scientific attainments and yet a zealous churchman is not often met with.

The time will probably never come when scientific research will be a matter of interest to many. The average man cares nothing for investigations to which there can, from their very nature, be no limit. On the other hand, a dogma is a thing fixed and unchanging; once assented to, people need concern themselves no further about it. The further it transcends reason, the stronger the faith required to believe it, and the less the danger of losing that faith.

Scientific research, no matter in what department of human knowledge, if it is not of a practical character, will never flourish where it must depend upon the encouragement of large numbers. If the endowment of original research depended upon popular votes, it would be overwhelmingly defeated in the most enlightened country in the world. Its beneficent results are usually too remote and intangible for any but the select few, neither ought we to expect a religious denomination to interest itself in that to which most of its members are indifferent or hostile. S.

Athens, Ohio, September 23, 1885.

THE TYRANNY OF STRIKES.

To the Editor of The Nation:

Sir: The frequency with which striking workmen resort to violence or intimidation for the purpose of enforcing their demands, or preventing others from taking up the work which the strikers refused, shows an alarming state of feeling upon the rights of employer and employed. These violent strikers ignore the rights of the employer, and of the other workman who should have the liberty to choose his occupation and accept compensation satisfactory to himself.

The disregard of law and order, and the lack of courage on the part of public men and the press in denouncing these outrages, encourage those who perpetrate them to boast that public opinion justifies their action, and that those charged with the enforcement of the law dare not do so. Political leaders and organs coddle the workingman and dare not tell him that he is intolerant and tyrannical, that he is a monopolist in seeking to prevent another from entering into competition with him, that he is supremely selfish in his desire to prevent his neighbor from learning a trade, and that he is a ruffian for assaulting a man who, having equal rights to secure work with others, presumes to exercise his right.

Unless there is a better understanding and adjustment of the rights of the employer, the employed, and the unemployed, there cannot fail to follow embittered feelings and lawlessness, which are the foes of industrial progress.

I am, respectfully, G. S.

Albany, September 27, 1885.

THE SAXE HOLM NOM DE PLUME.

To the Editor of The Nation:

Sir: Will you allow me space in your columns for the correction of certain misstatements which have lately appeared in various New York and Boston newspapers in connection with the newly vexed question of the authorship of the Saxe Holm stories? I have always held to the validity of a wide privilege of conjecture with regard to anonymous publications, and should not interfere with its free exercise in the present case did it not involve other persons besides myself, and such an ingenuity of misrepresentation. This being so, I should like, with your permission, to say seriously and distinctly:

1. That not a word of the Saxe Holm series, either prose or verse, was written by me, nor am I in the secret of their authorship.

2. That the lady in Brooklyn alluded to in a Boston newspaper, at whose house H. H. and myself are said to have frequently met and "made no secret of the matter," exists, so far as I am concerned, only in the imagination of the journalist. I never heard her name until the appearance of the article.

3. That the dear young cousins (not sisters) who died in Jerusalem fourteen years since, and whom a correspondent of the Springfield *Republican* credits with complicity in the mystery, had never, to my knowledge, written a single line for the press, or read a page of the Saxe Holm stories, most of which appeared after their death.

4. That the claims made by E. R. Champlin in the *Beacon* in behalf of "an intimate friend of Miss Marietta Holly, residing in the State of New York, not *many* miles from Utica," to the authorship of "Esther Wynn's Love Letters," and of the other young lady who is "sure that sister wrote another of them," but is not at liberty to betray confidence, were disposed of some years since, together with others equally vague and idle, by Saxe Holm over her own signature, and by her publishers, speaking for themselves as well as for her.

I would add, if I may be allowed one word more, that no one, as it seems to me, who was intimately acquainted with H. H., or who, either by instinct or by trained perception, is qualified to detect those subtle peculiarities of literary style which defy concealment, is likely to doubt that the Saxe Holm stories were largely her work—the poetry of them altogether so. That some copartnership existed which made it possible for her, when questioned, honestly to deny the full responsibility for them, is doubtless true also. The secret was well kept during her lifetime, and if it was her desire that it should be continued after her death, those who shared it are bound to respect the desire.

Susan Coolidge.

Jackson, N. H., September 22.

Notes.

Macmillan & Co. have nearly ready 'Lectures Introductory to the Study of the Law of the Constitution,' by Prof. A. V. Dicey, of Oxford. It deals with two or three guiding principles which pervade the modern constitution of England, with a view to preparing the student's mind for the profitable study of Blackstone and kindred authors. As illustrations are freely drawn from the constitutionalism of the United States and of France, the work promises to be as useful here as in England. It is based upon Professor Dicey's lectures.

Dodd, Mead & Co. publish early in October 'Sakoontala'; 'From Shakspere to Pope: an Inquiry into the Causes and Phenomena of the Rise of Classical Poetry in England,' by Edmund Gosse—his American lectures revised and amplified; and 'Mustard Leaves,' a novel of London society, by D. T. S.

'The Story of a Ranch,' by Mrs. Alice Wellington Rollins, is announced by Cassell & Co., as is also a 'Handy Commentary on the Old Testament,' edited by Bishop Ellicott.

Getchell & Fuller have in press, to be sold only by subscription, 'Our Nation's Executives,' an illustrated "historical, biographical, and statistical conspectus of the National Government from its foundation to date," compiled by George H. Getchell. The form will be royal quarto.

Scribner & Welford will be the American publishers of Mr. Andrew Tuer's new edition of his monograph on Bartolozzi, the engraver. It will be bound in solid vellum, and be otherwise peculiarly attractive. Only five hundred copies are allowed for both the English and American markets. The same firm will have their imprint on the edition of Glanvill's much-praised 'Scepsis Scientifica; or, Confest Ignorance the Way to Science,' brought out by Kegan Paul, Trench & Co.

'Brattleboro' in Verse and Prose,' a brochure compiled by Mr. Cecil Hampden Howard, of the Astor Library, will be issued early in November by Frank E. Housh, publisher of the *Woman's Magazine*. It is designed to be a souvenir of one of New England's most beautiful towns.

There is already in English a translation of Barbou's life of Victor Hugo. Since the poet's death two other biographies have appeared in English, one a careful, critical study by Mr. Cappon, and the other a very faulty compilation by Mr. G. Barnett Smith. Now Chatto & Windus announce "Mr. Swinburne's new prose work, 'Victor Hugo,'" which is, we take it, a collection of the English poet's essays on his French master.

Besides writing the life of Darwin, which is to be the first volume of Mr. Andrew Lang's new series of "English Worthies," Mr. Grant Allen has found time to try his hand at fiction. Only last year he declared himself the author of a

volume of 'Strange Stories,' signed by the singularly individual name of "J. Arbuthnot Wilson." Now he acknowledges the authorship of two full-grown novels, 'Babylon' and 'Philistia,' which have been signed "Cecil Power."

The holiday edition of 'Childe Harold' prepared by Ticknor & Co. will be issued in London by Chatto & Windus.

Thomas Y. Crowell & Co. have reprinted, from the seventh London edition, the late W. Hepworth Dixon's 'Her Majesty's Tower,' in two volumes, with illustrations. Since the author's death the modern spirit has made some queer invasions of the Tower of London, lighting it with electricity and blowing it up with dynamite. Tourists still find it standing, and for such as need historic associations in order to be impressed by its architectural complex, Mr. Dixon's sensational pages are good to cram with before visiting it.

The Chautauqua Press, Boston, is a department of Chautauqua University, and in pursuance of its mission of providing books for the students it has issued four volumes, called (from the color of the binding?) the Garnet Series. The form is handy and the print clear. The several books are 'Readings from Macaulay,' 'Readings from Ruskin,' Lucy Crane's 'Art, and the Formation of Taste,' and C. C. Black's 'Life and Works of Michael Angelo.' The extracts from Macaulay include his essays on Dante, Petrarch, Machiavelli, and his "Lays of Ancient Rome" and "Pompeii." Introductions have been contributed by Mr. Donald G. Mitchell, Professor Beers, of Yale, and Mr. Charles G. Whiting.

Mr. Oscar Fay Adams's two 'Handbooks'—viz., of American Authors and of British Authors—are issued anew, with revisions and enlargements, by Houghton, Mifflin & Co. Both represent research which has not been confined to books of reference already existing, and are especially valuable as a supplement to 'Men of the Time.' The addenda in each are considerable.

Every public library and every intelligent student of American history should possess Mr. W. E. Foster's 'References to the History of Presidential Administrations: 1789-1885.' These references were originally printed in Mr. Foster's monthly lists, but he has since greatly elaborated them, so that they may fairly be called exhaustive, and they have very fitly been adopted and put forth in their present shape by the Society for Political Education (G. P. Putnam's Sons). They have a quality rare enough in bibliographies—an intrinsic readableness: one actually gets the physiognomy of the time from Mr. Foster's annotations. The dullest student must receive an impulse to explore from suggestions like those as to the origin of the use of the designation "Republican" for the existing party of that name; or as to the discharge of executive functions in case of a President's disability, as during Garfield's lingering death.

The responsibility of trustees of public libraries for the reading of youth was earnestly discussed in Boston a few years ago. The Public Library of that city shows, in its thirty-third annual report, that the managers of that institution have been led to establish a censorship of juveniles entered, or liable to entry, in a new catalogue now passing through the press. Works of doubtful or injurious tendency are excluded from the catalogue. From the same report we learn that Poole's 'Index to Periodical Literature' has, in the three years since it was issued, increased the demand for periodicals by nearly one hundred per cent.

The *American Architect* for September 26 should be in request. It contains a number of designs for the New York memorial to Grant, offered in competition at the instance of the editors, who complain because so few of the profession joined in it. The prizes seem well bestowed, but the collection is more curious than inspiring.

In the August number of *Walford's Antiquarian* Mr. C. P. Johnson, the author of 'Hints to Collectors of Original Editions of the Works of William Makepeace Thackeray,' has an interesting paper on Thackeray's projected works which never attained completion. These were (1), 'The Whitey-Brown Paper Magazine,' originated by Hood's collaborator Reynolds, and taken up by "Ingoldsby Legends" Barham and Thackeray, who seems to have written an introduction and to have made a series of nine sketches; (2) 'Sketches by Spec'; (3) 'Dinner Reminiscences; or the Young Gormandizer's Guide in Paris,' actually announced at the end of the 'Second Funeral of Napoleon,' but never published, although its materials seem to have served in the composition of the *Fraser* paper on "Memorials of Gormandizing"; (4) 'The Count and Countess des Dragées,' a fragmentary series of sketches; and (5) the 'Life of Talleyrand,' which was to have been the first of Chapman and Hall's "Monthly Series of Original Works of Fiction and Biography." Of the 'Sketches by Spec,' only a single copy of No. 1 has been preserved, and this Mr. Johnson has most generously had reproduced for lovers of Thackeray. It is entitled 'Britannia Protecting the Drama,' and beneath the drawing is an "Explanation of the Hallegory," written in the choice speech of the cockney showman. It is not one of Thackeray's best drawings.

The British Archæological Association held its annual meeting in Brighton in August. Among the entertainments given to the members was one by Mr. J. O. Halliwell-Phillipps, the veteran Shaksperian author. As a souvenir of the occasion the genial host printed a little pamphlet, one of the titles of which reads: "Brief notices of a small number of the Shakespeare Rarities that are preserved in the Rustic Wigwam at Hollingbury Copse, near Brighton. Printed for the use of Literary Visitors—1885." This collection "includes numerous early manuscripts and books that refer to the literary history of the great dramatist, but its main feature is the largest assemblage that has ever been formed of objects illustrating his biography. The latter alone, consisting of more than fifteen hundred separate articles, would require the disposal of a week or more for a studious examination." The most interesting of the forty-eight articles described are a unique proof copy of the Droeshout portrait of 1623, all the other known copies being from a retouched plate; the original deed of the house in Blackfriars purchased by Shakspere in 1613; and some extremely rare books printed during his life-time, and having some reference to him or his works. There is also an engraving of the painted glass, "having the letters W. A. S. for William and Anne Shakespeare, tied in a true lover's knot, and the date, 1615, the year before the poet's death, beneath," supposed to have been taken from New Place, Stratford. Mr. Halliwell-Phillipps states that all attempts (with his best wishes) to reproduce the Droeshout engraving, even by photograph, have signally failed. The deeds signed *Shaxpere* and *Shaxpeer* seem to confirm Mr. Furnivall's preference for the spelling *Shakspere*. No. 45 is the earliest authentic playbill of a Shaksperian character extant (1697). Names of actors were not entered on playbills, we are told, before the time of George II.

A timely work, 'La Nuova Austria,' by G. Marcotti, which has newly appeared in Florence, is highly praised in the *Perseveranza*, not only for its picturesque style, but for its profound appreciation of the condition of Bosnia and Herzegovina under six years of Austrian "occupation." It is modestly called "Impressions" by the author, but it is rather a monograph than a mirror. The prevailing tone of the work is melancholy. Little good as yet is ascribed to Austrian rule, and amid the medley of faiths and nationalities Signor Marcotti was naturally most touched by the hard lines of the sober Italian laborers who make the roads, cultivate the soil, and are generally the most efficient toilers.

The larger 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt) finished its eleventh volume with Parts 161–165 and the title *Murray*. There is not much to remark upon in the contents, but there are two fine colored maps of the battle-field of Metz and of London and vicinity. The lesser Brockhaus reaches *Entada* with Part 20, having covered just one-third its course. Here we can mention a colored geological map of Germany, and a political map of the Balkan Peninsula.

The fourteenth part of the 'Diccionario Tecnológico' (New York: N. Ponce de Leon) ends with *Tappet*.

With the volume presenting the events of 1884, Schulthess's 'Europäischer Geschichtskalender' completes a course of a quarter of a century. Of all political annuals known to us and still continued this is by far the most valuable. It generally appears late in the year following the one it historically sketches, but the delay in publication is an additional guarantee of its accuracy. Each recent volume—generally of about 500 or 600 8vo pages—contains a "General Chronicle," briefly indicating the more important occurrences of the past year all over the world, in the order of months and days; a very ample diary of the year's events, debates, etc., in the German Empire; similar, but much less extensive, chronological records for all the other independent European States, as well as for Bulgaria, Egypt, and the United States (the narrow title notwithstanding); a supplement on some subject demanding fuller elucidation (in the last volume, on "Germany's Colonial Policy"); and a general "Review of the Political Development of the Year . . ." In the diaries many paragraphs are marked with headings indicating the countries or provinces specially concerned, as, under "German Empire"; "Prussia," "Bavaria," etc. (in parenthesis); under "France"; "Tonquin," "Tunis," "Madagascar," etc. Thus the history of every State and of almost every political complication can be with ease separately surveyed. The style of the work is plain and concise, and the mechanical execution excellent. The tone is strongly German-national, and the compiler is not at all anxious to hide his own opinions concerning matters in almost any country. The complete collection is now offered by the publishers at a greatly reduced price.

Of the 'Preussische Staatschriften aus der Regierungszeit König Friedrichs II.,' published under the auspices of the Royal Academy of Sciences at Berlin, the second volume has appeared, bearing the names of J. G. Droysen and Max Duncker as general editors—although the former died long before its completion—and that of Dr. Reinhold Koser as special editor. Doctor Koser is a pupil of Droysen, was long his colaborer, and has been called to occupy his chair of history at the University of Berlin. The first volume embraced the eventful and often-described period of the Silesian Wars; the second covers the decade of peace, 1746-56, which elapsed between the second Silesian and the Seven-Years' War. This peaceful period has hitherto been comparatively neglected by historians, but its diplomatic side, presented by the correspondence just issued, is highly interesting. The last volume of Droysen's 'Geschichte der preussischen Politik,' as yet unpublished, but left by the historian in almost complete readiness for publication, treats of the same years of the reign of Frederic the Great.

In 'Der Papua' (Berlin: Weidmann) a few pages descriptive of New Guinea serve Dr. A. Bastian for an introduction to a treatise on psychology in which a vast amount of learning is displayed, but very little literary skill in arrangement. His work is a treasury of observations on the modes of life, superstitions, religious and social customs, not only of the Papuans, but of all the wild races of the earth. To understand many of the references, however, requires quite as much knowledge in the reader as is possessed by the learned writer. The last chapter contains a reprint of a paper on burial customs read before the Berlin Anthropological Society in January. There are also several papers on the new colonial possessions of Germany in Africa and Melanesia, the author insisting particularly on the opportunity which they present for collecting facts for psychological study.

—In 'The First Three English Books on America' (New York: Scribner & Welford) Mr. Edward Arber has brought together within some 400 quarto pages about all the printed information regarding the new geographical discoveries which was open to Englishmen of the first sixty years of the sixteenth century in their own tongue. The general reader will be most attracted by the last two of Mr. Arber's "Books," which are literal reprints of two famous works of Hakluyt's forerunner, Richard Eden: 'A treatyse of the newe India' (1553), a great rarity, and 'The Decades of the newe worlde' (1555), the first English collection of voyages, wherein are to be found translations of the first three decades of Peter Martyr, Oviedo's 'Natural History of the West Indies,' and much matter from Ramusio, Gomara, Figafetta, and others. Special students will be pleased to find in the first "Book" a reprint, without the cuts, of the tract, 'Of the newe landes and of ye people founde by the messengers of the kynge of portyngale named Emanuel,' with its two companions, from the unique copy in the British Museum. The three were printed at Antwerp by Jan van Doesborch without a date—very unfortunately, because in the first, which contains some inaccurate extracts from the letter of Vespucci describing his third voyage, the word Armenica (*sic*), wanting in all other early versions of this letter, is applied to the new regions. The date 1522, given by Herbert and adopted by Harrisse and the new British Museum catalogue of early English books, rests upon a supposed allusion to Luther in one of the tracts. An earlier date seems more probable from the connection existing between these tracts and four Dutch pamphlets printed by Jan van Doesborch in 1506-9, one of which was a rendering of the "duplicate" version of Vespucci's third voyage (now one of the treasures of the Carter Brown Library, at Providence, R. I.). Not satisfied with carefully reprinting his texts, Mr. Arber has added a useful chronological sketch of Eden's life, a summary of English voyages under Henry VIII., and a note on the Dutch printer mentioned above. The extract from "A new interlude and a mery of the nature of the iiij elements" (pp. xx, xxi), written within twenty years of the discovery of the New World, is particularly noteworthy. Our gratitude for the Index was somewhat chilled by the discovery of compact blocks of from fifty to eighty page numbers following the more important entries.

—Messrs. Roberts Brothers propose to give us Balzac's novels in translations, and have just issued 'Père Goriot.' This is a tolerably careful rendering; but it is worlds away from true accuracy, from *la vérité vraie*. The whole quality of atmosphere is lost; and we must condemn the (quite unconfessed) expurgations. A translator has no more right than a witness on oath to withhold or alter an important passage. We cannot here give proof of the indescribable effect of such deceiving delicacy in this case, but a few illustrations will indicate the character in other respects of this translation. The immortal description of Mme. Vauquer suffers greatly by the simple omission of the last words in the phrase, "sa personne dodue *comme un rat d'église*," while "ses yeux ridés" are turned into "her eyes and wrinkled *brows*," and the expression of her eyes is given as "the hollow smile of an *actress*," whereas it was "the smile prescribed to *danseuses*." And Balzac never said that Mme Vauquer's petticoat "gives an inkling of the cookery and the character of the guests," but that it "annonce la cuisine et fait pressentir les pensionnaires." In a conversation we come across this: "Le grand oncle de monsieur et mon grand-père se connaissaient," says the count. "Enchantée d'être en pays de connoissance," answers the countess. "Charmed to be so nearly connected," is her American reply. And this: "Ah! c'est moi qui suis l'auteur de ta joie, comme je suis l'auteur de tes jours. Les pères doivent toujours donner pour être heureux. Donner toujours, c'est ce qui fait qu'on est père." "It is I who planned all this pleasure. Fathers should give their children everything, just as they gave them life. Give all, give ever—that is a father's motto." But the most remarkable passage we have happened on is this: "Addressons-nous en haut. Quand on s'attaque à quelque chose dans le ciel, il faut viser Dieu!" "Aim high and put your trust in the Lord!" (!!!) If this is simple stupidity, it is laughable; if it is intentional, as the expurgations make us fear, it is unpardonable. The numerous other forms of error apparent, such as introducing parenthetical explanations as if they were part of the text, we have not space to touch upon, and no great inclination, since on the whole the translation is a fairly good one.

—To fix the date of composition of 'Les Chouans' is but one of the services of M. R. du Pontavice de Heussey in his article "Balzac en Bretagne" in *Le Livre* for September. It was at the close of the summer of 1828 that Balzac's huge Paris enterprises as publisher, printer, and type-founder came to a disastrous end, involving him and his parents heavily in debt, and driving him to his pen to make head against his sea of troubles. An historic incident of 1798 touching the war of the Chouans and Vendeans gave him a likely theme, and he betook himself to Brittany to become saturated with the local color. Here he enjoyed the kind hospitality of an old friend of his father's, to whom he afterwards dedicated the story, the first which he published under his own name, and the beginning of the "Comédie Humaine." The five hitherto unpublished letters which M. du Pontavice de Heussey prints, grew out of this delightful episode in Balzac's career, and are eminently creditable to him. The last but one exhibits him as a political aspirant wishing to stand for the arrondissement of Fougères in the elections of 1831. The deputy *in petto*—the possible premier in his own estimation—signs himself no longer H. Balzac, but H. de Balzac. He sends to his benefactor, for distribution in his vicinity, a political tract of which all trace has been lost. We are told, of his stay in Fougères, that every Sunday evening he tasted the "joies du boston, jeu très à la mode en province," and which he afterwards described in 'Une Ténébreuse Affaire.' More interesting still is the fact that Balzac, deploring the meagre punctuation of the French, introduced the English dash for the first time in 'Les Chouans.' The other leading article in *Le Livre* is a literary curiosity, being the first French translation of Petrarch's discourse on his crowning at the Capitol in Rome, April 8, 1341, only printed in the original in 1874. It takes a text from the 'Georgics' and develops it as in a sermon, in the most artificial and uninspired manner, with abundant citations from classic authors, many of which are still the world's commonplaces. Even the sun-myth makes its appearance in an extract from Macrobius. Noticeable is the incidental discourse on the Laurel and its virtues.

—In the volume of the Collections of the Nova Scotia Historical Society just issued, the first part of Col. John Winslow's "Journal" is printed from a copy of the original MS. in the library of the Massachusetts Historical Society. This gives a documentary history of the expedition to Nova Scotia in 1755, the siege and capture of Fort Beauséjour by the Provincial troops, bringing the story down to Winslow's arrival at Grand Pré. The part which relates to the removal of the Acadians was printed in the third volume of the Collections. Sir Adams Archibald contributes a short paper on the "Province Building" of Halifax. An account of Samuel Vetch, the first English Governor of Nova Scotia, by the Rev. Geo. Patterson, D.D., of New Glasgow, is an important contribution to the early history of the country after its capture from the French. Vetch was for a short time a very prominent character in the Northern Colonies, and his adventurous career deserves more attention than it has received from our historians. His father was a Scotch Covenanter minister, who barely escaped with his life during the persecutions of the Presbyterians in the reign of Charles II. His mother was a woman eminent for her piety, as her diary, published some years ago by the Free Church, shows. He was born in 1668, and when three years old was carried by his mother in a "creel" to England, where his father was then hiding. From thence they fled to Holland, and he studied for the ministry in the college at Utrecht. At the outbreak of the Revolution of 1688, however, he obtained a commission in the army and served till 1697. The next year he went to Central America as a Captain of the forces of the ill-fated Darien company. On the failure of that colony, he came to New York and settled in Albany, where he married, in 1700, the daughter of Robert Livingstone. During the next few years he was engaged in trading with Canada, and apparently in connection with this was employed by Governor Dudley of Massachusetts in 1705 to negotiate an exchange of prisoners with the Governor of Canada. The next year he was sent on a similar mission to Nova Scotia, and used the opportunity to do some trading there also, for on his return he was accused of supplying the French "with ammunition and stores of war," and was sentenced by the General Court of Massachusetts to pay a fine. In these illicit transactions it was believed by many at the time that Dudley himself was concerned. Vetch went to England and obtained a reversal of the sentence, and, at the same time, succeeded in gaining the approval of the Ministry of a scheme for the conquest of Canada, and returned to this country in 1709 with instructions to the governors of the Northern colonies to raise a force to be joined by troops to be sent out from England. In carrying out these instructions he displayed great energy, and succeeded in raising the required number of regiments. The promised aid, however, did not come, and the expedition was abandoned. Nothing daunted by this failure, Vetch persuaded the New England governors to raise a force the next year, which, with the aid of a small fleet, captured Port Royal in Nova Scotia, he being appointed Governor as a reward for his services.

—In July, 1711, the ill-fated expedition against Quebec under General Hill and Admiral Sir Hovenden Walker sailed from Boston, Vetch ac-

companying it in command of the New England troops. From his "Journal of the Voyage," printed with other documents in an appendix to this paper, it appears that he piloted the fleet in safety from Canso to the mouth of the St. Lawrence; and it is probable that had he acted in the same capacity in the ascent of the river, as he was well fitted to do from his frequent trading voyages, the disaster which overtook the fleet would have been averted, and Quebec, being wholly unprepared to resist so large a force, would have fallen. The conquest of Canada was postponed nearly half a century, apparently, because of a freak of ill-temper toward Vetch on the part of the British Admiral. His administration of the government of Nova Scotia was not a success. A sturdy Scotch Presbyterian was even less fitted than a New Englander of that day to conciliate French Roman Catholics. There appears also to have been some very suspicious irregularities in his accounts; and accordingly, in 1712, he was removed, and Nicholson, his successor, was ordered to make an investigation. Before this was completed, however, Vetch escaped to England, where his influence at court secured his reappointment to the office, which he held till 1717. There is no record of his return to America, and the remainder of his days were passed in obscurity, embittered by poverty. No. 353 of Bradford's New York *Gazette* contains this brief announcement: "London, May 2, 1732.—Last night was interred at St. George's Church, in Southwark, Colonel Vetch. He died a prisoner in King's Bench, and was formerly Governor of Annapolis." His daughter and only child, Alida, married Samuel Bayard, "of New York, grandson of Col. Nicholas Bayard, nephew and secretary to Peter Stuyvesant, the last and most eminent of the Dutch Governors of the New Netherlands." Following Doctor Patterson's sketch are a number of interesting documents, printed from the Nova Scotia archives preserved in the Province Building at Halifax.

Madame de Presnel. By E. F. Poynter. [Leisure Hour Series.] Henry Holt & Co.

A Millionaire's Cousin. By the Hon. Emily Lawless. [Leisure Hour Series.] Henry Holt & Co.

'AULNAY TOWER' has had not undeservedly some pleasant commendation. "A pretty story," says the reader, and to-morrow forgets it. Were it the author's only book, this were enough to say, but after 'Guenn' Miss Howard's work must waken some inquiry. Why is it so much and yet nothing more? 'Guenn' was a series of strongly etched outlines that, taken by themselves, told the immediate incident forcibly, but, taken as sequences of character, failed in the correspondence to each other which is essential to the transcript of real life. More thought, more work was needed to shape the raw material. Only a great genius works luckily, not laboriously. In 'Aulnay Tower' the treatment is too light for the gravity of the subject. While the distant chords of a dirge are sounding in our ears, the frolic of a scherzo or the mock-heroic of the opéra bouffe jars. France and Germany in deadly struggle, and, against this grim background, love of country, pride of race, honor, vainly struggling against the sweep of passion, make no genteel comedy, but a black, bitter tragedy. The main point of the story might be proved true as an isolated fact, but that does not make it any more credible. That a woman who is, so far as Miss Howard's intention can make her, French to the last fibre, should within a few weeks consent to give herself to a German whom she has known only as an invader, a destroyer, a conqueror, is not within that degree of probability that is accepted as the basis of fiction. There might be a style, a manner of treatment, which could impress the reader in spite of this inherent difficulty, but it would presuppose more acquired skill, more direct study, than has been bestowed upon the book. It is not good art to use the same method to portray the high-born mistress and the flippant maid, yet the most we know of either is through her soliloquies or her dreams. The expression of deeper feeling is apt to be only what the abbé calls rhetoric. Some of it, if not rhodomontade, is bathos. The English of 'Guenn' was not beyond question. That of 'Aulnay Tower' ought not to pass without it. It is not pure, running sometimes into French constructions and oftener into German. How many novel readers know what a diopter is? In what is it better to talk of the "foreposts" of an army than of the outposts? "The dislocations" of an army would puzzle every one not something of a linguist.

The author has, again, put herself at a distinct disadvantage by furnishing such obvious opportunities for comparison. No one who knew 'That Lass o' Lowrie's' or 'The Village on the Cliff' could keep them out of mind while reading 'Guenn.' The present book, with its conventional figures of mistress and maid, marquis and abbé, is like forty French stories, but it was a hazardous venture on Miss Howard's part to enter upon ground which so deft a wonder-worker as Alphonse Daudet has made peculiarly his own. If anything of contemporary French fiction survives as an historical picture, it will be from his sketches of Paris and the suburbs during the siege by the Germans. More than this, 'Robert Helmont,' perhaps the best of his larger works because the simplest, is for *mise-en-scène* strikingly like 'Aulnay Tower,' and wherein they differ it is at the expense of the probability of the latter. No suggestion is implied that Miss Howard has only copied. Rather, we should say, it were worth her while to study what the masters of the art she attempts have done.

These likenesses to other work, the extreme diversity of the subjects and characters she has chosen, the similarity of the defects in all four of her books, make some inference as to mental characteristics inevitable. Her power seems not to be one of independent creation. There is no intuition, no masterly grasp of human motives and passions. The work is not self-suggested, but waits upon some felicity of surrounding or companionship. It is like a theme in music that a quick ear and ready hand catch and vary to their own purpose—sweet and strong, perhaps, but the trained faculty recognizes it as born not of that brain but of another.

No one need be at any pains to overcome the repugnance which the very unpleasant title 'A Little Upstart' is sure to excite. By the use of common names of people and places Mr. Rideing has produced the same pretence at local color which the Englishman of his type gets by sprinkling Belgravia with Howards and Seymours. Into this he has thrown one or two well-known actual occurrences, and made a grotesque picture of what Boston is *not*, as if there were not a thousand ways already of finding that out. The hero is a writer of "strange little introspective studies." Being "not dramatic, but cold and intellectual," "he liked yielding and demulcent women," so at first sight he falls in love with a face of "unharrowed fulness" and a figure "as incapable of angularity as a wreath of vapor which, driven here or there, cannot be beaten out of its flexuous beauty." "Her loveliness lifted him out of the indigo in which he had been steeping." What wonder that the two "at once launched out on those aerial waves of sympathy over which young people of congenial natures rapidly propel themselves to paradises from which other voyagers are shut out by the arctic wall of their own incompatibility"? Similar nonsense might be quoted indefinitely, but we spare our readers.

Parts of 'Adrian Vidal' are good enough to rank with first-class novels, so it is a pity that the rest of it was made up of stock incident and hackneyed motive which drag the whole below the average. Mr. Norris does not copy outright, but there are such resemblances, now to Thackeray, now to Black, and now to some one else, that he must have found his suggestions in books rather than in real life. The best of the story is in the portraits of the hero and his friend. 'Vidal' is the young author whom his clever society novel floats for a moment almost on the top of the tide. He is flattered by fashionable ladies till his head is nearly turned. Having, however, a *fond* not of Bohemianism but of sound English sense, he rescues himself (though, we must own, with no little help from his friend), and bids fair when the tale ends to become a solid man of letters. Mr. Norris's difficulty is the want of invention sufficient to supply adequate incident for the development of such a character. The devices he adopts are the common properties of drama and novel, while he understands little of the alchemy that transforms all it touches. Picked up here and there, the causes and effects that he presents are in no proportion to each other. Mere boyish folly is made to pay only less dearly than downright wrong, and escapades daring enough to be ruinous fall flat. A clearer perception of the comic would have saved him from some absurdities. What laughter would ring in the clubs over Lord St. Anstell, who is at once "an exceptionally sharp man of business" and "a roué of phenomenal wickedness," if it were told that in one of his first calls upon a lady of perfect innocence and modesty, he had ventured to offer her, with the blankest inferences, a diamond pendant? A knave is a knave, not a fool.

'Colonel Enderby's Wife' comes from a hand that is skilful in the setting of a piece; that creates out of glimpses of landscape, bits of interiors, and fragments of toilet an attractive surrounding, in which we are prepared to watch with attentive sympathy the action of the story. Unfortunately there is little more. The figures that walk along the Italian terraces or through the English garden are worse than puppets. They are distorted images, as impossible in their perfections as they are repelling in their faults. The Colonel's wife is obviously a crude study after Rosamond Vincy in 'Middlemarch': crude because the writer has neither the genius nor the experience which enabled George Eliot to reproduce the tangled web of human emotions. Her selfishness is impossible in a creature so young; for, to the credit of humanity, the like could only come after a long life of hardened scheming for personal ends. She is a wilful child, and caprice by its very nature, as caprice, cannot be consistently and constantly evil. The flying whim must sometimes be caught by the good. The Enderby marriage is brought about by the girl's stepmother, who is afraid of her influence upon a man little better than worthless, whom she herself loves. His life has been avowedly bad, and hers, for all its respectability, is nothing better than ignoble. There is so little to choose between them that they are well mated, but even the superficial reader will be surprised at the com-

fortable and prosperous career the author marks out for them and for Mrs. Enderby, while the poor Colonel lies dead and forgotten. We make no plea for poetic justice: every one knows that the wicked flourisheth like the green bay tree. But he flourishes after his own kind. The calm happiness of home life, the sweet joy of parental affection, are never the outcome of lives like those of Bertie Ames and his wife.

'Adrian Vidal' and 'Colonel Enderby's Wife' are not to be classed together either as to kind or quality, but each does furnish an illustration of a side or an element in English fiction that more and more compels attention. It is a matter about which many readers whose instincts are for the right find it hard to give reasons. Both Mr. Norris and Lucas Malet mean to be moral in intent and decorous in expression. In the latter they succeed. As to the first, they gain their point only at the sacrifice of all logic in facts and in morals. In neither case, in real life, could things be so bad and not be a great deal worse. There is no middle ground in the treatment of such subjects. If a man is to give the truth, he must push to the inevitable conclusions. The only other alternative is to leave the subject entirely. The school for which certain French names stand as representatives, says it is just here we find our great opportunity. In the struggle between passion on one side and moral duty or legal bond on the other, human nature is shown at its utmost, be it at best or worst. If the artist leaves all this unstudied, he has left out the most intense of human experiences. This is like many other arguments to which the answer is not made directly. It is formed by weighing other considerations and determining the preponderance.

The theory to which the English mind is accustomed, and which is adopted more or less by all Saxon races, is that the representations of art are but the lesser part of life—that there are sanctities, like the purity of women, the piety of home, that are of far more consequence—and that for their sake it is best to sacrifice whatever risks their perfection or their permanence. Experience has proved that these depend upon the control and restraint (not the suppression) of one side of human nature. What power fiction may have over that control every one knows, and hence the obligation laid upon every writer of it. In this spirit consciously or unconsciously worked Scott and Miss Austen, and to them is due the withdrawal of the ban under which fiction had been placed wherever the protest of the seventeenth century against dissolute life had prevailed. Their immediate successors followed the same path, and it is almost within the memory of the living only, that the other theory, that all things are fit for art, has begun to be asserted at all hazards. The great minds in England have never fallen victims to it; but a host of lesser writers, some of them unfortunately only too clever, have caught at it with consequences beyond our present purpose to trace. Far too many books like the two before us attempt situations and characters which are only evil in themselves and in their effects. Conscious that to carry out their plots would shock moral sense, they shrink from their own conclusions, perverting the truth, with the double result of spoiling their own work and drawing from the other side accusations of prudishness, straight-lacedness, and hypocrisy. There are other ways of enforcing the same truth, but there is the same outcome to all. No man, still more no woman, has the right to touch such themes who cannot draw from them, without dangerous excitement the warning, the lesson, that life teaches.

We turn with pleasure to 'Madame de Presnel' as a fine example of what can be done to make a deeply interesting story with no appeal to such motives. Hero and heroine are again an elderly man and a very young woman in Italian surroundings, but the difficulties they encounter, the doubts which separate them, are of the kind that often recur in the course of virtuous lives. Youthful enthusiasm that gladly sacrifices itself, maturer judgment that will discharge honorable obligation at any cost, sanguine recklessness, more self-deceived than deceiving—out of these elements are evolved situations that are none the less stimulating because they are elevating. Though we have to speak from memory rather than from recent examination, the impression is strong that this story is the best the author has given us. The balance of all the parts and the clearness of the separate outlines give a vivid effect to the whole. The side figures are not less attractive than the central group. The young Laure and her Italian husband are delightful. There is no need to credit the author with deep intention of showing the results of mingling classes or races. Such as there is, falls naturally into the course of the tale, and it is pleasant to find again that refined, high-minded side of foreign life, both French and Italian, which had so admirable a presentation in 'Miss Bretherton.'

'A Millionaire's Cousin' is so slight an affair that we need not delay to do more than give it hearty commendation. The argument is by no means a trite one. That poverty should be no hindrance to true love is an old theme. Wealth has its rights too, and the author has made out her case very forcibly. The scene is Algiers, lightly but picturesquely sketched, and it still has the charm of novelty even after 'Mlle. de Mersac.'

BANCROFT'S HISTORY OF MEXICO.

History of Mexico. Vol. V. 1824-1861. [Vol. XIII. of the Works of Hubert Howe Bancroft.] San Francisco: A. L. Bancroft & Co. 1885. 8vo, pp. 812.

For Mr. Bancroft, Briareus, not Clio, is the muse of history. Coöperative industry has seen no more remarkable development than the "two-story fire-proof building" on Valencia Street, San Francisco, where the historian of the Pacific States, with the aid of a score of trained assistants, is busily at work. It is a manufactory of history, whose output is three or four stout octavos each year. One cannot but think of poor Buckle, with death made bitter to him because he was able to show only a splendid portico and rough-hewn stones scattered about in the place of the stately building he had hoped to rear, and contrast his method of writing history, unaided, and its disappointing results, with that of Mr. Bancroft, which is so steadily moving toward its goal. It might have seemed presumption in the San Francisco bookseller to plan twenty-five years ago to write a series of historical works in thirty-nine volumes. But with one-third of the work already done, and as much more in an advanced state of preparation, the project seems now to have been no less well considered than daring.

'The Native Races of the Pacific States,' which appeared in 1874, was intended by the author to serve merely as an introduction to his main work, namely, histories of Central America, Mexico, the North Mexican States and Texas, California, and the Northwest Coast. Vol. I. of the 'History of Mexico' was published in 1883, containing a list of authorities consulted in the preparation of the series. Some idea of the unequalled material of which Mr. Bancroft has had command may be gained from the fact that this list of authorities fills ninety-one pages. Add the fact that it includes only the more important works in Mr. Bancroft's possession, and that authorities already cited in his history of Central America are excluded, and we shall not be disposed to dispute the author's claim that no part of his collection is more satisfactorily complete than that pertaining to Mexico. It is simple fact that no historian of Mexico has had such resources.

It is a pleasure to find, too, that the danger of being overwhelmed in the abundance of the material has been very successfully evaded. It is true that there are pages, perhaps some chapters, where it is hard to see the forest for the trees. Sometimes the notes are overloaded, as, for instance, where six authorities are assigned for a mere date about which there is no dispute. Cross references and reminders and promises seem unnecessarily numerous, though not more so, it should be remembered, than was almost inevitable where so many different hands were at work. Yet on the whole the reader gets the impression that the vast material has been mastered and well handled.

Especial skill and good judgment have been shown in balancing conflicting authorities, and in drawing a conclusion from disagreeing witnesses. A good instance of this is found (p. 195) in the estimate put upon the varying testimony of Rincon, Baudin, and Farragut—Mexican, Frenchman, American—as to the assault upon Ulua by the French fleet in 1838. A far wider field for the display of these high qualities of the historian, fairness in listening to all witnesses and ability to assign the proper weight to each, is found, of course, in writing the history of the war with the United States, and the success there is certainly great.

We can think of no more severe test of a historian than to ask him to write an orderly and perspicuous narrative of Mexican affairs from 1824 to 1861. The more one studies that period, the more does it seem chaos come again. Carlyle, at one time, in his search for a strong man to glorify, seems to have been attracted to the wars and tumults of Mexico as a promising place to look for his hero, but finally turned in despair from what he called "the great confused phenomenon" to find a subject in Paraguayan Doctor Francia. The history of Mexico is like some parts of its topography—that of Tabasco, for instance, or the other low-lying States along the Gulf, where jungle and morass, lake and river, all run together in inextricable confusion, with no watershed to gather the streams into the valleys, and without sufficient elevation above the ocean to give the rivers a definite current. Mr. Bancroft has gone manfully at the work of ditching and draining. With a full survey of all the events, he has set himself to describe their logic, to refer the endless insurrections and revolutions and pronunciamientos to the political principle which gives them significance, to indicate the divergent party tendencies and opposing forces which have given for resultant the existing political institutions of Mexico. In all this he has been wonderfully successful—in fact, too successful. He takes, as the clue to the labyrinth of Mexico's internal struggles since her independence, the antagonism of political ideas, the contest for supremacy between the Centralist or monarchical party and the Federalist or democratic. Now, we would be far from applying to this theory the Italian proverb, "so good that it is good for nothing," for undoubtedly it contains a great deal of truth, and yields a satisfactory solution of many an intricate feature of the main problem; yet it must be set down as the result of but a partial induction. In fact, it breaks down in the very application which Mr. Bancroft gives it, as he himself tacitly confesses more than once. For example, he acknowledges that Santa Anna cannot fairly be classed with either of these parties, as he was always willing to use either for his own ends, and was attached by principle

and conviction to no party but that of Santa Anna. But to yield the point in the case of such a figure in Mexican affairs is seriously to damage the theory. Like admissions would have to be made in the case of many other leaders. In short, it seems to us that our author, while he recognizes the power of individual selfishness combined with unscrupulous and reckless ambition on the part of Mexico's Generals and Presidents, does not emphasize sufficiently the influence of these personal causes over that of abstract political conceptions. Add a venal army and a restlessly scheming hierarchy, and we have the main elements in the ferment of Mexican history.

The 250 pages devoted to the war with the United States are a very model of compact, accurate, and impartial writing. Mr. Bancroft is, of course, under the necessity of treating that shameful aggression from the standpoint of a historian of Mexico, and consequently his discussion of the foregoing attitude of men and parties in the United States is not full. With this exception, his account of the whole period seems to us the best yet written. The campaigns of Taylor and Scott are intelligently followed and lucidly described. The principal contribution which Mr. Bancroft makes to this part of the history is the judicious revision of the estimates of opposing forces on the various battle-fields, and of the vindication of the real patriotic bravery of the Mexican troops, even with their wretched handling. His general estimate of the moral position of the United States in that unjust war is undoubtedly the Mexican estimate, yet just as undoubtedly the correct estimate. It is carved upon the granite shaft which marks, in the grounds at the foot of Chapultepec, the burial-place of the cadets of the Military Academy who fell, so the sternly simple inscription runs, "in the North American Invasion."

We can specify but a few of the excellences of this work. Mooted questions are discussed with such a fulness of information as to compel assent to the cautious conclusions drawn. The relations of the State of Chiapas to Guatemala and to Mexico are so clearly set forth (pp. 22-25) that we do not believe even Mr. Blaine could read and remain unconvinced. Altogether admirable is the account of the way a military oligarchy sustains itself under the mask of democratic institutions: "Having been kept so long under the yoke of a foreign despotism, its equivalent is continued now in the form of military rule; moral courage and independence in certain quarters are paralyzed; and there is presented this singular state of things, namely, a people with a representative government, nominally sustained by universal suffrage, held in helpless subjection by a one-thousandth part of their number armed and organized" (p. 568).

The style of the book presents as much unevenness as would be expected, coming from so many hands. On the whole, if not particularly elegant or luminous, it moves on with straightforward simplicity. One at least of Mr. Bancroft's collaborators, however, has a tendency to highly metaphorical writing which ought to be promptly checked. He it is, no doubt, who alludes to "the fondled vision of lighter burdens," etc. (p. 238), who pictures the "persecuted monarchists wagging their tongues under the protecting folds of clerical gowns" (p. 283), tells us how, on one occasion, "harmony between the general and his division was interrupted by a quagmire of mutual disgust" (p. 366), and who finally throws off all restraint and describes the assault on Chapultepec in the following terms: "It is a music of the spheres; but death wields the baton beneath a lurid canopy, wherein Valkyries chant the dread refrain while watching for their prey" (p. 509). Noticeable are two or three instances of inadequate translation: *solemnidad*, rendered "solemnity" (p. 10), where the meaning is rather festivity; "the pious fund" (p. 239) as the equivalent of the fund of *piedad*, that is, charity; and the universal literal, and because literal, misleading, translation, "Minister of Relations," which in English would be Secretary of State. The mechanical part of the book is, as a whole, beyond criticism. A very strange fault, however, is the total absence of method in the printing of Spanish words. Usually they are thrown into the text unitalicised, just as if they were well-known English words. At other times they are put in italics or within quotation marks. On one page (133) we get the same word now in italics, now in roman. It seems a needless oversight. We have noted a few misprints: *rial*, invariably except page 415, where it is right, *real;* "come" for came (p. 245); "weighed" for weighted (p. 263); "the person" for no person (p. 293). Note 17, on page 192, gives a reference entirely wrong.

From what has been said it may be inferred that we think this book fully able to stand upon its own merits. We therefore regret that the publishers, in the pamphlet which they issue to accompany the volumes of this series, think it proper to appeal pathetically to "all good men for sympathy and support"—that is, the purchase of Mr. Bancroft's works. When they finally declare that "it should be deemed a solemn duty by every father of a family" to buy their publications, they reach a point in the art of bookselling beyond which it does not seem possible to go, except, perhaps, in the case of "religious" works.

Musical History; with a Roll of the Names of Musicians, and the Times and Places of their Births and Deaths. By G. A. Macfarren. Edinburgh: Adam & Charles Black. 1885. Pp. 220.

THERE are, in the new edition of the 'Encyclopædia Britannica,' not a few articles which constitute complete treatises on their subjects, and a separate reprint of which would prove very acceptable to those who cannot afford to buy the Cyclopædia itself. Macfarren's 'Musical History' appears thus, but it cannot be said that its separate publication was especially desirable, for it is one of the most unreadable and inadequate articles that have appeared in that admirable work; and its acceptance can only be accounted for by the eminent position occupied by its author among English musicians. The principal fault of Macfarren's book—at least the first part—is that those who need it will not understand it, while those able to understand it will not need it. It would be unfair, however, to lay too much stress on this objection, for an inability to make their meaning clear is a characteristic of almost all theoretical writers on music. A more serious objection is the pedantic minuteness with which the author discusses certain insignificant technical points, to the exclusion of other much more important considerations—a matter of some importance in a treatise which endeavors to compress musical history and theory into 143 pages, in large type. Thus, to take one case, a page is devoted to the verbal errors made by Boethius in translating the Greek principles of music into Latin; and why? Because Boethius was for some time used as a text-book at English universities—institutions which, we need not say, have played an absolutely insignificant rôle in the history of music.

In a treatise on musical theory and history the reader would hardly look for the statement of a new principle of logic, or for humor; yet both these qualities are present in Macfarren's book and constitute its unique charm. It is on page 63 that modern logic is enriched by a new method of reasoning. The author does not agree with the "common supposition that Puritan influence impelled the decadence of music in England." This notion is refuted by the fact that "an *entirely* musical composition," "The Siege of Rhodes," was performed in 1656 "under the express license of Cromwell." "In truth," the author continues, "this [Puritan] influence stirred the spirit of opposition in persons of a different tendency, and was virtually the cause of a very powerful counteraction, and through this of many highly significant things as to the perpetuation of our music of the past, if not of the continuance of our music in the future." Henceforth it will be understood that the modern clergy did not oppose Darwinism, since they actually benefited science by the counteraction they caused in the minds of men of science by their opposition.

The author's humor comes in, also, in his treatment of Wagner, to whom he devotes almost a page, not, however, without apologizing for such a waste of space—almost as much as he had given to Boethius and to Purcell! In his eagerness to prove that Wagner stole all his principles from his predecessors, and at the same time that they are fallacious, he involves himself in a neat contradiction. No less than three times he points out that Wagner's "principles were all gathered from antecedent reformers," and in speaking of another composer he alludes to them as "the true faith of the operatic composer." In the case of Wagner, however, he changes his mind—"Ja, Bauer, das ist was Anderes"—and informs the puzzled reader that it is "the opposition of one writer to all the musicians in the world," etc. This passage, which occurs on page 132, deserves to be remembered, for it will be mentioned among the curiosities of musical literature some day.

Shakespeare-Notes. By F. A. Leo. London: Trübner & Co. 1885.

IN this volume a well-known student of Shakspere has brought together the various emendations he has proposed to the text of that author, which have hitherto been scattered through divers periodicals. To them he has added a number of new readings heretofore unpublished. The work does not differ materially from the hundred others on the same subject which have been produced, and the thousand similar ones that are yet to be produced. The emendations are directed very largely to the crucial points against which commentators have raged for generations and have not as yet prevailed. Still, the most determined stickler for the sense or nonsense of the original reading can hardly fail to be disarmed by the tone the author assumes. One cannot cherish much wrath against a man who frankly confesses in one place that he has in the past proposed some rather extravagant readings; who in another place asserts that he does not look upon it as a crime "to give the merely one-hundredth emendating reading of a passage where ninety-nine have been given by others"; and goes on to add that among these ninety-nine sinners he has twice sinned himself, but considers that, after all, his own readings, now rejected by himself, are better than the "ridiculous nonsense" perpetrated by others.

Of the emendations contained in this volume, it may be said in general that a very few are good, some are ingenious, and some are grotesque. The author is seen at his best, for illustration, in his treatment of the noted crux in the first speech of the *Duke* to *Angelo* at the very opening of "Measure for Measure." By his rearrangement of the words and lines he makes good sense. Could we only feel reasonably confident that it was Shakspere's arrangement and Shakspere's sense! On the other hand, he is at his

worst in an emendation over which he chuckles with delight. The last part of the speech of *Hamlet's* mother, "What act that roars so loud and thunders in the index?" is changed into "thunders in thy chest." After this delicious piece of bathos there cannot well be anything to cause surprise. One need not be astonished, therefore, at the reasoning found on page 54. The fact that a certain manuscript has been discovered to be a forgery is adduced as a strong evidence of the accuracy of a form found in it, "for, no doubt, the forger will have explored all existing material, to give the most genuine form then in use, 'the better to beguile.'" This is something honestly worthy of the peculiar logic by which the Baconian theory is supported.

The Philosophy of Disenchantment. By Edgar Evertson Saltus. Boston: Houghton, Mifflin & Co. 1885.

THIS volume contains an exposition of the pessimistic dogmas of Leopardi, Schopenhauer, and Hartmann, with a slender biography of each. But the author does not present his subject merely as matter of information: with all his seeming diplomatic reserve he writes in a proselytizing spirit. Pessimism is the youngest of men's faiths, he says; but his belief in its future, in its capability of self-correction and expansion and its sufficiency to become the permanent expression of intellectual conviction, at least among the exquisite tasters of the fruit of the Tree of Life, is not concealed. Buddhism transplanted, and, in obedience to the dictate of the practical West, shorn of its myth, is to be a system regulating the lives and ordering the thoughts of men in the enlightened districts of America, as well as among German students and anomalous Englishmen. Certainly an increasing amount of attention is being given to the theories here under review, by thoughtful as well as merely curious readers; and to the uninitiated the present primer of the latest suicidal faith serves well enough for edification. The kernel of the nut is here, and after eating it and digesting it duly the reader may sit down in his novitiate; and, seeking thereafter not pleasure but the avoidance of pain, he may reach a qualified repose in that region of contemplation which is the home of genius, among the creations of art, music, and poetry, and may find the hope and purpose and consolation of life in the imaginative foretaste of that blessed day when the earth, according to Renan's suggestion, shall be made to blow out its own bowels by some gigantic explosive, or in some other way the harakiri of the universe shall be committed.

Pessimism is not so young as is plausibly represented. The snake has got a new skin, perhaps not more than twenty-five years old, as is said, but the creature is no less the same old serpent that has lain coiled about Igdrasil since the gray dawn of time. The substance of what the newcomers say of the burden of existence is nearly as ancient as suffering itself: all bibles, all sages have doled it out. Now it reappears systematized, as they say, in obedience to the requirement of the modern scientific spirit, and with a fanciful metaphysic on which to hang its rags and shreds of truth. It is because it is essentially so trite that it is difficult to combat; it is because its facts are as old as the nervous system and the selfish heart, and all its quotations are from the most unexceptionable standard authors, that it is plausible—in fact, that it is undeniably true in large portions of its practical criticism on life as now lived broadly and among all the tribes of men. But in its attitude toward this mass of truth, in the spirit evoked in it by contemplation of these facts, in the sheer absurdities of its schemes for salvation by what is practically a self-mutilation of the whole race, or by a species of dynamite the discovery of which might make Rossa die of joy, modern pessimism has an evil preëminence.

In reading these pages, which set forth the state of continual want and consequent misery in which all men by nature are, one often thinks that the normal man in this system is a sort of Brocken shadow of Carlyle's famous Shoe-Black, who required all the starry spaces and their worlds, all this universe altogether, for himself alone, to make him happy. Such voracious avidity the pessimist seems to think belongs to man. Health, youth, liberty, and well-being, we are told, are the greatest blessings of life and the material of happiness; whereupon follows the conclusion that, as these are negative, happiness is negative—or, what amounts to the same thing, a state of indifference. Now, to hazard an affirmation, might not one say that these truly are four more or less necessary conditions of happiness, but the element of joy is of the soul itself; and one must have great confidence in the largeness and universality of his personal experience, and in the wisdom of his interpretation of it, to assert that joy which fills the spirit to the full is not independent of these conditions? This affirmation is merely to call to mind the opposing conceptions of happiness under which one asks whether every deprivation is a pain; whether every desire is felt with a pang; whether the existence of a Higher toward which men strive means that they suffer because they can look above; whether the law of progress is in its structure a sentence of misery to those who profit by it and are made subject to it. The Shoe-Black is deprived of the moon, to be sure, and if it is a real pain to him, he may sit in the corner undisturbed and have his cry out; but of the disciple of Buddha and Plato may not one require a more sensible proceeding? The necessary delimitation of human desires by place, and age, and station, and birth, and fortune is soon learned; and, of old, philosophers were expected to be the first and most easily reconciled of the babes who had found out how far the human hand will reach toward heaven.

But it is not our purpose to pursue the suggestions which the recurring apparition of the humorous Shoe-Black brought with it, as we read the details of the theory that the sorrow of the world springs from the powerlessness of men to appropriate to themselves all they see and covet. If that be the case, little pity need be expended on their travail. This and the other cognate theories exhibit the face of the world as it looks when viewed, from a standpoint of unmixed and disappointed selfishness, by minds to which spirituality is a word without meaning. If there is no supplementary revelation, the new faith may well sigh for its own destruction, even if other things should happen to survive. It is amusing to notice that the worst enemies of the "young" religion are said to be the Socialists, to whom the folly of trying to possess themselves of things is not evident. The author plainly looks on them as necessarily prejudiced against the pessimistic doctrines, though probably no group of men is more profoundly convinced of the misery of general life throughout the world, or believes more entirely that cardinal doctrine of Schopenhauer that compassion is the basis of ethics. The Socialist, it seems, may be abandoned by the proselytizing pessimist to his perverse belief that it is not the death of the body for which the whole creation groans, not extinction that shall be the final consummation of all things; he will not hope for the annihilation of the will, nor work at the problem of universal emasculation. Witless, blinded Socialist! he, too, will fall into the pit, will marry and have children, and trust in the ancient promise that when he has justified his hope for the regeneration of men by such work as his hand can do, and has gone to his rest, his seed shall rise up and call him blessed.

Lessons in Elementary Practical Physics. By Balfour Stewart and W. W. Haldane Gee. Vol. I. General Physical Processes. Macmillan & Co. 1885.

THIS very pretty little volume is the first of three. The two which are promised are to be concerned, vol. ii, with electricity and magnetism; vol. iii, with heat, light, and sound. The work does not distinguish itself very noticeably from other text-books of physical manipulation. It contains the usual superficial counsels concerning the details of measurements. The student is not supposed to have any training in the instrument-maker's shop, or to know what is and what is not likely to be accurately constructed; nor is he taught to make any mathematical study of the errors of his instruments. Instead of going through a large number of easy manipulations, he had much better be confined to the thorough study of a small portion of the more difficult apparatus. In everything relating to computation the book is peculiarly weak. Kater's old value of the metre is used (being attributed apparently to Mr. Warren De la Rue), and barometer scales are corrected accordingly. On page 88 is a table the third and fourth columns of which contain respectively the arithmetical and geometrical means of the numbers in the first two columns. The true difference between the two means of these numbers would amount in no case to more than two in the seventh place of decimals; and yet the means are given only to the fourth place of decimals, and in one case the geometrical mean is represented as the larger. An example of ciphering for ciphering's sake, such as it would be difficult to match, is said to be borrowed from Merriman's Method of Least Shares. It is worth notice as a curiosity. An angle is four times measured with a theodolite reading to every fifth second, the mean having a probable error of 1″.4; six times with a transit reading to minutes, the mean having a probable error of 0′.4; and five times with a sextant reading to every tenth second, the mean having a probable error of 6″. These three determinations are then combined with weights as 277 : 1 : 16! It luckily happens that the measure with the transit accords with that by the theodolite; otherwise the weighted mean of the three determinations would not be so good as that by the theodolite alone, as could be mathematically shown by taking account of the probable errors. It is to be hoped that Mr. Merriman gives this as an example of how observations ought *not* to be treated.

BOOKS OF THE WEEK.

Anderton, T. Yule-Tide: A Cantata. Words by Julia Goddard. Novello, Ewer & Co. 63 cents.
Barrett, R. F. Heaven Revealed; A Popular Presentation of Swedenborg's Disclosures. Philadelphia: Porter & Coates. $1.

Wise, Dr. D. Boy Travellers in Arabia: or, from Boston to Bagdad. Illustrated. Phillips & Hunt. 90 cents.

Fine Arts.

ASIATIC TERRACOTTAS IN THE LOUVRE MUSEUM.—II.

MR. BALTAZZI's estate is situated on the borders of the Ægean, about half-way between Smyrna and Pergamon. The chief village within its boundaries is Ali-aga, lying five miles south of the ruins of Myrina, which are now a desert place called Kalabassary. The town of Myrina is familiar to numismatists for its fine silver coins, but scarcely anything worth notice is known about its history. It seems to have been a quiet provincial city, politically thrown into the shade by its two powerful neighbors, Cyme and Pergamon. The necropolis of Kalabassary extends over two adjacent hills, one of which is crowned with the ruins of an ancient acropolis. The site was first visited by M. Pullan in 1861, who spent some hours there on his way from Ali-aga to Elæa. M. Pullan reports that he collected on the spot a few coins of Myrina, but says nothing about the necropolis, which had not yet been discovered. This only happened about ten years later, when the hills surrounding Kalabassary began to be ploughed. At first the peasants took no heed of the terracottas, and broke them to pieces. One man, however, carried off a little figure to Ali-aga, and gave it to his child for a doll. This attracted the notice of M. E. de Baltazzi, the proprietor's brother, who was living at the time in Ali-aga; he immediately went to Kalabassary, and proceeded to make regular excavations in the necropolis. After having collected a number of figures, he commenced digging at Cyme, the site of which was not yet, as is now the case, planted with vines, and discovered some statuettes which he told me were of archaic style. Unfortunately, he was not aware of the artistic and commercial value of Greek terracottas, which only just then began to excite interest in Europe. Some specimens from Myrina were sent to M. Aristides Baltazzi, the proprietor, at Constantinople; the rest were left unguarded in the house at Ali-aga, and, after M. E. de Baltazzi's departure, were stolen and sold at Smyrna, whence the figures made their way to Athens and Paris. When M. Waddington, as we have related in our former article, wrote to M. Baltazzi to inquire about Asiatic terracottas, this gentleman could only send him the few figures which he had previously secured in his town seat on the Bosphorus. Meanwhile, the peasants of Kalabassary, who had become acquainted with the dealers in Smyrna, began to excavate and to collect terracottas on their own account; thus it happened that a great many figures were sent to Europe previous to 1880, and enriched private collections under the name of Cymæan, Grynian, Phocæan, or Ephesian. Ever since 1883, when the French excavations were interrupted, the peasants have continued to dig secretly upon the spot, and terracottas from Myrina are by no means rare in the current traffic in antiquities.

Early in the summer of 1880 M. Pottier and myself were sent to Myrina by the direction of the French School in Athens, with the object of exploring methodically the necropolis, which had hitherto been abandoned to unscientific pillage. Our excavations lasted, with some interruptions, till the month of October, 1882, when a great misfortune put an end to them: the young archæologist, M. Veyries, to whom the continuation of the work had been intrusted, fell ill in Myrina and died at Smyrna. Our firman, too, had now expired, and a final division of our booty was effected: one-third of the discoveries was given over to the Turkish Government, one-third to M. Baltazzi, and the rest to the French School. M. Baltazzi most generously abandoned his share to the School, which now possessed a collection of more than 900 figures, vases, bronzes, and other objects. The unfortunate terracottas which fell into the hands of the Turks were carried off to the Tchinly-Kiosk Museum in Constantinople, where they have been treated with utter neglect and most arbitrarily restored. The rest of the collection was transferred to Athens, whence the choicest part of it, numbering about 500 pieces, was sent to the Louvre. A special room has been devoted to the spoils of Myrina and will be opened to the public about the 15th of October. Reports on the excavations, accompanied by photographs, have been published in the *Bulletin de Correspondance Hellénique*, the journal of the French School in Athens; and a volume embodying the results of the whole campaign is now in preparation, together with a general catalogue.

Our chief object during the diggings was not to discover a great many terracottas, but principally to ascertain the manner in which they were disposed in the graves. The dead were generally buried, rarely incinerated; when this was the case the terracottas seem to have been burnt on the same pyre with the body. Many tombs contained small tablets of bronze on which the name of the deceased is inscribed *en pointillé*. About nine graves out of ten yielded no objects, or nothing but paltry earthenware; others, especially children's graves, were brimful of terracottas, as many as fifty having been discovered in a single tomb. The offerings are not arranged in any order, but lie pell-mell in the pit, especially about the head and the feet of the deceased. The survivors certainly had no desire, as was the case in Etruria, to adorn the sepulchral resting-place on the model of the terrestrial dwellings. It even seems certain that they often smashed the statues before throwing them into the grave, for the head of a figure has many times been discovered at a great distance from the body. In numberless cases the head or some limb was broken off and not to be found in the grave, which proves that the mutilations had taken place before the burial.

The sepulchral furniture of the tombs comprises two classes of objects: the domestic implements which may have belonged to the deceased, and the votive offerings brought by his relations and friends. In the first class we notice strigils, bronze mirrors, vases of every shape, glass implements; in the second, which is the more important, we find terracottas, coins, very thin golden and silver jewels, amulets, beads, etc. Many of the former give us a curious insight into the perfections of Greek pottery at that period, viz.: in the three centuries which elapsed between the death of Alexander the Great and the Christian era. With the exception of a few archaic and a few late sepulchres, the 5,000 graves which we opened in Myrina all belong to the Alexandrine and Greco-Roman epoch, when the city seems to have reached the highest degree of wealth and prosperity.

The Myrinæan *coroplasts*, or manufacturers of terracottas, were certainly influenced by the models of their brethren in Tanagra. The same fact had already been noticed in Cyrenaica and in Southern Italy, and goes to prove that the moulds used in Tanagra freely travelled through the whole Hellenic world. Almost identical figures have been discovered in Myrina and in Tanagra: the difference of style is only due to the retouching and painting, which seems to have been more carefully done in Bœotia than elsewhere. Among the figures of Tanagræan style that have been discovered in Myrina, we may mention here an admirable set of fourteen draped maidens, all found in a single grave, which, when placed in a certain order, take the general aspect of a triangle, and remind one of the sculptured figures on the pediments of Greek temples.

By far the greater number of statuettes found at Myrina are quite unlike the figures of Tanagra, and belong to an entirely different school of art. In Tanagra, the prevailing type, if we consider the terracottas of the best period, is that of a draped maiden or woman, standing or sitting in the attitude of repose. The subjects generally belong to private life; nude figures of gods and goddesses are exceedingly rare. In Myrina, on the contrary, resting or sitting figures are an exception; the statues of Venus, Eros, Bacchus, Victory, and Hercules are very numerous; and the influence of the Pergamenian school of sculpture may be traced with perfect certainty in nearly all the more important figures. The terracottas from Myrina stand to those of Tanagra in the same relation as the Pergamenian frieze of the great altar to the exquisite statues of the Nike temple in Athens. Again, while replicas of celebrated statues are not to be found in Tanagra, the necropolis of Myrina has yielded several copies of the Cnidian and Coan Venus by Praxiteles, of the Herakles type created by Lysippus, of athletes, hermaphrodites, and other subjects, the models of which must have enjoyed great reputation, as we possess marble copies from them of the Greco-Roman period. Most of the larger statuettes are winged, and their movements are exceedingly bold. The draperies, too, are treated in a free style very much resembling that of the Pergamenian high-reliefs. The two most frequent types—some tombs contained thirty or more specimens of each—are the Siren and Eros with folded wings; but none of these are of superior workmanship, and they seem to have belonged to the poorer sort of votive offerings. Tanagræan figures rarely exceed ten inches in height; many statues from Myrina are three or four times as large. Another characteristic feature is the frequent mention of the artist's name on the basis of the terracotta or on its reverse, no signature having yet been discovered on the statuettes from Tanagra. Finally, we must mention a considerable number of large groups, banquets, scenes of love, and the like, which also betray the influence of the Rhodian and Pergamenian school of sculpture, where similar complicated arrangements had come into fashion.

Some figures might, at the first glance, be taken for works of the archaic period; but it is easy to perceive that they are only pseudo-archaic, and repeat, with intentional awkwardness or stiffness, a model of ancient times to which religious ideas were attached. Such are a beautiful bust of Demeter, with her hands pressed on her bosom, and many curious statues of naked goddesses, adorned with high gilded diadems, with heavy bracelets on their arms and thighs, who recall, by their childish and silly smile, the works of Greek

sculpture before Phidias. But these, like the imitations of Bœotian models, are only exceptions, and by far the greater part of the terra-cottas from Myrina bear the mark of a quite definite and particular style, intermediate between the noble simplicity of Athenian art and the picturesque tendency to effect of the Greco-Roman school. Indeed, there exists a close analogy between many graceful terracottas from Myrina (representing Erotes, dancers, flute-players, followers of Bacchus) and the paintings discovered on the walls of the Greco-Roman villas in Pompeii.

The charming qualities of our Asiatic terra-cottas are counterbalanced by many serious defects, which may be traced both in Greek literature and art after the age of Alexander the Great. Their grace is not free from mannerism, nor the boldness of their movements from violence. The heads are generally too small, the legs too long and too slender. From a purely artistic point of view, they are certainly inferior to the delightful figures found at Tanagra; but, on the other hand, they can claim a variety of motives, an appearance of vigor and physical health, which contrasts with the dreamy and almost melancholy exquisiteness of their brethren from Bœotian tombs. On the whole, we may fairly admire a people among whom humble workmen, not unlike our manufacturers of paltry religious emblems, succeeded in bringing forth such charming and graceful images, to shed a ray of joy and beauty on the silent resting places of the dead. Thus every new conquest of archæology on Hellenic ground, however modest and unpretending the recovered works of art may be, adds a new lustre to the eternal radiancy of Hellenic art.

Houghton, Mifflin & Co.'s
NEW BOOKS.

THE PROPHET OF THE Great Smoky Mountains. By Charles Egbert Craddock, author of 'In the Tennessee Mountains,' 'Down the Ravine,' etc. 16mo, $1.25.

This is one of the most noteworthy of American novels. The striking figure and fate of "the prophet," the cave and stealthy operations of the "moonshiners," and the engaging love story which runs as a golden thread through it all are depicted with great force and fascination.

POEMS OF NATURE. By John G. Whittier. A Notable Holiday Volume. Illustrated with Engravings from Nature by Elbridge Kingsley. 4to, tastefully bound, cloth, $6; full Persian levant, with cover design in antique and gold, $12; full polished calf, tree panel inlaid, with sprinkled border, a new and elegant style, $15.

GENTLEMAN'S MAGAZINE LIBRARY. Edited by George Laurence Gomme, F.S.A. Vol. IV. English Traditional Lore: To which is added Customs of Foreign Countries and Peoples. 8vo, cloth, $2.50; roxburgh, $3.50 net; large-paper edition, $6 net.

RICHARD VANDERMARCK. A Novel by the author of 'Rutledge.' New and Revised Edition. 16mo, $1.25.

THE LIFE OF JOHN DE WITT, Grand Pensionary of Holland; or, Twenty Years of a Parliamentary Republic in the Seventeenth Century. By M. Antonin Lefèvre Pontalis. Translated from the French by S. E. and A. Stephenson. 2 vols., 8vo, $9.

De Witt exercised so potent an influence in Holland, and had so close relations with England during the years 1650-1672, that the story of his career, in connection with the republican government which he so largely secured and controlled, possesses a permanent interest. It is told anew in these volumes, with great fulness and vigor.

LIFE AND WORKS of GOETHE. Selected Works of Goethe, including Wilhelm Meister, in two volumes; Faust (translated by Bayard Taylor), in two volumes; Correspondence with a Child; and The Story of Goethe's Life, by George H. Lewes. New Editions in uniform binding. 6 vols., 12mo, $10.

THE

HISTORICAL REFERENCE-BOOK.

COMPRISING:

A Chronological Table of Universal History, a Chronological Dictionary of Universal History, a Biographical Dictionary.

WITH GEOGRAPHICAL NOTES.

FOR THE USE OF STUDENTS, TEACHERS, AND READERS.

By LOUIS HEILPRIN.

"A small library in itself."—*Chicago Dial.*

"An invaluable book of reference, useful alike to the student and the general reader. The arrangement could scarcely be better or more convenient."—*New York Herald.*

"The conspectus of the world's history presented in the first part of the book is as full as the wisest terseness could put within the space."—*Philadelphia American.*

"We miss hardly anything that we should consider desirable, and we have not been able to detect a single mistake or misprint."—*The Nation.*

"So far as we have tested the accuracy of the present work, we have found it without flaw."—*Christian Union.*

"The conspicuous merits of the work are condensation and accuracy. These points alone should suffice to give the 'Historical Reference-Book' a place in every public and private library."—*Boston Beacon.*

"This cyclopædia of condensed knowledge is a work that will speedily become a necessity to the general reader, as well as to the student."—*Detroit Free Press.*

"For clearness, correctness, and the readiness with which the reader can find the information of which he is in search, the volume is far in advance of any work of its kind with which we are acquainted."—*Boston Saturday Evening Gazette.*

"The dates are brought down to 1884. *The geographical notes which accompany the historical incidents are a novel addition, and exceedingly helpful.* The size also commends it, making it convenient for constant reference, while the three divisions and careful elimination of minor and uninteresting incidents makes it much easier to find dates and events about which accuracy is necessary. Sir William Hamilton avers that too retentive a memory tends to hinder the development of the judgment, by presenting too much for decision. A work like this is thus better than memory. It is a 'mental larder' which needs no care, and whose contents are ever available."—*University Quarterly.*

Crown 8vo, 579 pages. Half leather, $3.00.

*** For sale by all booksellers; or will be sent by mail, post-paid, on receipt of price.*

Charles Scribner's Sons

HAVE JUST READY:

The Pentateuch:

Its Origin and Structure. An Examination of Recent Theories. By Edwin C. Bissell, D.D. 1 vol., 8vo, $3.00.

This contribution to the discussion of the character and import of the Hebrew Pentateuch is broader in its scope and scholarship than any book that has hitherto appeared on the conservative side of the question, and it will be welcomed by all who adhere to the orthodox theory of the inspiration of the Scriptures. Every theory that has been presented by the newer school of criticism has been brought under consideration and treated with candor and learning.

The Blood Covenant:

A Primitive Rite, and its Bearings on Scripture. By H. Clay Trumbull, D.D., author of 'Kadish Barnea.' 1 vol., 12mo, $2.00.

Dr. Trumbull's book will be a revelation to many readers. He traces this "blood covenant" to the most ancient races, and the great significance it has always held he now thoroughly sets forth for the first time. It is in every way a remarkable and original work.

Movements of Religious Thought in Britain during the Nineteenth Century.

By John Tulloch, D.D. 1 vol., 12mo, $1.50.

Principal Tulloch's book is one of surpassing interest, and one that was clearly needed. He gives an account of the great movements in religious thought by a concise narrative of the work accomplished by the leaders of the chief schools—Coleridge, Mill, Newman, Maurice, Carlyle, Kingsley, and Robertson. It is a record, also, of important movements in modern English literature. The style is exceptionally readable.

The Last Meeting.

By Brander Matthews. 1 vol., 12mo, $1.00.

A novel which combines successfully the old style of story, full of plot, and the modern, more subtle, analytical methods. The *motif* is most original and clever, and at the same time the author shows an uncommon literary dexterity. The scene is laid in New York, and the book gives an interesting picture of the semi-literary society of the metropolis.

Turkistan.

Notes of a Journey in Russian Turkistan, Khokand, Bokhara, and Kuldja. Illustrated. By Eugene Schuyler, Ph.D. 2 vols., 8vo, $5.00.

A new edition of this valuable and standard work, with a new chapter which brings the narrative down to the present day and adds still further to the value of the book, as it throws light upon the present situation of Central Asia. There are many maps and illustrations.

The Illustrated Library of Wonders.

A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself. Sold separately at $1.00 per volume.

NEW VOLUMES:

MOUNTAIN ADVENTURES.
WONDERS OF THE HEAVENS.
WONDERS OF SCULPTURE.

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Premiums on Policies not marked off 1st January, 1884	1,447,756 70
Total Marine Premiums	$5,405,796 14
Premiums marked off from 1st January, 1884, to 31st December, 1884	$4,066,271 04
Losses paid during the same period $2,109,919 20	
Returns of Premiums and Expenses $787,789 40	

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks	$8,776,685 00
Loans, secured by Stocks and otherwise	2,005,100 00
Real Estate and Claims due the Company, estimated at	440,000 00
Premium Notes and Bills Receivable	1,454,959 73
Cash in Bank	261,544 65
Amount	$12,938,289 38

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives on and after Tuesday, the third of February next.

The outstanding certificates of the issue of 1880 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the third of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of forty per cent. is declared on the net earned premiums of the Company, for the year ending 31st December, 1884, for which certificates will be issued on and after Tuesday, the fifth of May next.

By order of the Board,

J. H. CHAPMAN, Secretary.

THE LITTLE SCHOOLMASTER MARK. Part II. By J. H. Shorthouse.

THE BABY'S LULLABY. After a Picture by L. Alma Tadema.

THE BIRTHDAY. After a Picture by Mrs. Alma Tadema.

THE LONDON RAGAMUFFIN. By Dorothy Tennant.

OUR MISSION TO ABYSSINIA. By Frederick Villiers.

A NEW VOLUME (the Fourth) OF

STEPHEN'S DICTIONARY OF

National Biography. Edited by Leslie Stephen. Volume 4, Beal—Biber. 8vo, $3.25.

"As important and interesting to Americans as to Englishmen. . . . It is perfectly safe to predict, therefore, will find as ready acceptance here as in England. It is quite as necessary to an American as to an English library's completeness."—*New York Commercial Advertiser.*

"This great work will be welcomed as warmly by America as by England."—*Boston Evening Traveller.*

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

TO READERS:

The most remarkable help toward getting the books you want and making your money go far in the getting—that is, keeping you out of mistakes of all sorts, wrong books, editions, and prices—is the monthly BOOK NEWS of Philadelphia, at the absurd price of 25 cents a year—3 cents a number.

It gives the news of the bookstore that is going to have the largest trade in the country shortly—perhaps already has the widest, and is only seven years old! Not in the interest of any publisher, or of any set or class of books—in the interest of the bookstore, that is, of readers.

It isn't the least bit sensational. The books of last month are laid out in a row, the selling price on every one—not one price for you and another for somebody else—and a sentence or two about what is in the books; the most helpful sentence or two in current criticism. That's only a small part of it.

There's nothing local about BOOK NEWS or the bookstore. They are both almost as handy a thousand miles away. Would you know how a book is thought of before its ink is fairly dry? BOOK NEWS will tell you. Would you know the lowest cent that will buy it, including the postage? BOOK NEWS again. And for any book whatever, the bookstore. Address JOHN WANAMAKER.

There's no reason in the world why books shouldn't be sold as fairly as any other merchandise. Wanamaker sells all sorts of merchandise, books included. His trade is growing past all precedent. The largest mercantile trade in the country, and the freest from hindrance by traditional obstacles. Whatever one wants within an enormous range of merchandise is probably there, to be got with advantage a thousand miles away.

READY SATURDAY, 10TH:

Houghton, Mifflin & Co.'s

NEW BOOKS.

LIFE AND LETTERS OF LOUIS Agassiz. By Elizabeth C. Agassiz. With Portraits and several Illustrations. 2 vols., crown 8vo, $4.

Mrs. Agassiz has written in the most delightful manner the story of the great naturalist's life, and has woven into the narrative a large number of his letters, the whole forming a peculiarly attractive biography and a work of remarkable value and interest to all students of Natural History.

AMERICAN COMMONwealths. Vol. VI. KANSAS: The Prelude to the War for the Union. By Leverett W. Spring, Professor in the University of Kansas. With a fine Map. 16mo, gilt top, $1.25.

No one of the United States has a more distinctive and memorable history than Kansas. It was for a few years the battle-ground between Slavery and Liberty, and its early history is crowded with incidents of the desperate conflict. Professor Spring tells this dramatic story impartially, and adds whatever is needed to complete the history of the State, making a book of great significance and interest.

ST. PHILIP'S. A Novel. By the author of 'Rutledge.' New Edition. 16mo, $1.25.

CALENDARS FOR 1886. Six beautiful Calendars, containing selections for every day of the year from the writings of Emerson, Holmes, Longfellow, Lowell, Mrs. Whitney, and Whittier. Price, $1 each.

The Lowell and Mrs. Whitney Calendars are new, the others are newly arranged. Each of the Calendars, except the Mrs. Whitney, has a Portrait of the Author from whose writings the selections are made, with his residence, or ideal pictures of characters from his poems, or other fitting ornamentation.

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1885.

The Week.

THE President's decision that the positions of weighers and gaugers in the customs service can be filled only by applicants who have passed a competitive examination under the Civil-Service Rules, probably disposes of the Sterling case. Nobody who has had the pleasure of contemplating Sterling's portrait in *Harper's Weekly* will have any doubts about his fate before an examining board, if he should venture to appear there. He can devote himself henceforth to a contemplation of the "rubbidge" which he says the newspapers have been printing about him. The President's decision settles a point about which no question ought ever to have been raised. The claim was that a weigher was not within the rules because he was a chief of division, and chiefs of division are exempted from the rules; but a chief of division has a force of trained clerks under him, while a weigher has only ordinary laborers.

This notification from the President to the Collector that he will be required to obey the law is not a sufficient punishment for the latter's disgraceful conduct. He not only removed Bacon, which might have been a justifiable step; but that he did not remove him for the good of the service, and did not care what effect the removal would have on the service, was shown by his appointment of Sterling. A man at all fit to be Collector of the Port of New York would not have been capable of an act like this, and it is useless to hope that Hedden can ever become fit. He has shown himself to be very weak, without the ability to comprehend the responsibilities of his position or to understand its duties. It is not sufficient for the President to tell him that the Civil-Service Law is a statute law and must be enforced without dodge or quibble; he ought to be removed as incompetent.

The Republican platform of Massachusetts differs from that of New York upon an important matter. It favors "any reforms, revisions, or reductions in the customs duties which will benefit our labor or our industries." This is a safe position, and the only safe one for the party to take. It leaves everybody to judge and decide for himself what reforms, revisions, and reductions will be beneficial. In other words, it opens the door to revenue reformers of all grades for the free expression of their opinions, and for the exercise of such influence as they may have in the party councils. It commits nobody to the dull and deadening belief that the present tariff is wise and useful in all its parts. Nobody really holds such a belief. The statement of it in the New York platform is a false pretence, at variance with the facts known to every manufacturer in the United States, the producers of wood-pulp not excepted. The tone of the Massachusetts platform is encouraging, and is sufficient warrant to the friends of revenue reform, whether Republicans or Democrats, to bestir themselves when Congress reassembles, to move for the repeal of the more heathenish duties on raw materials, which now stifle the industries and oppress the labor of the country.

It is an amusing coincidence that on the very day when Senator Hoar was haranguing the Massachusetts Republicans upon the terrible condition of the Southern negroes under Democratic rule, a State Convention of colored men assembled at Lynchburg, Va., which congratulated their race upon the prospects for the future, and formally declared that "we have cause to be thankful for the liberality of the present National Administration to our people in the South." This Lynchburg gathering is a most hopeful sign of the spread of intelligence among the blacks. The Chairman, in his opening address, said that they had not assembled as Republicans or Democrats, but as citizens of Virginia, claiming the right of freemen; and the address, which was adopted, embodied this spirit in a declaration of political independence, and a recommendation that the colored people in future "make such political alliances as will most advance our interests, educationally, financially, and politically." The address expresses entire confidence that there is a general disposition on the part of the white people in Virginia to accord the blacks all their rights before the law, and to assist them in the uplifting of their race, and the convention is the most effective answer to the bloody-shirt agitators which could possibly be framed.

The real "Southern question" of to-day has nothing to do with the claptrap of sectional issues in party platforms. The matter which at present arouses the liveliest popular interest throughout that part of the country is the regulation of the liquor traffic and the suppression of intemperance. This has been the chief topic before the Georgia Legislature during its summer session, and, since the passage by that body of a General Local Option Law, the controversy has been transferred to the chief cities of the State. The canvass which has opened in Atlanta for an election upon the question of allowing the selling of liquor, promises to end in the most hotly contested battle at the polls which the city has ever seen, and an equally vigorous agitation is threatened in Savannah and Augusta, the other chief cities of the State. Race and party lines are disregarded in every such contest, and thus the way is paved for a rational division of voters on political issues in the future.

The result of the Ohio election, which takes place on Tuesday next, is involved in much doubt, the size of the Prohibition vote being the unknown quantity. In so far as national issues have been drawn into the campaign the advantage has been with the Democrats. The attempts of Senator Sherman and Judge Foraker to "hitch up" the wrongs of the colored voters at the South for use in Ohio, have failed to make an effective team. On the other hand, the prudent and conservative policy of President Cleveland has deadened to some extent the animosity of Republicans against their old-time antagonists. The apprehensions of blue ruin have been allayed, and the accents of despair so loudly proclaimed when Mr. Blaine was defeated are no longer heard. The prophets of evil are a little ashamed of themselves. Governor Hoadly has made an energetic campaign, and will gain some advantage in the two joint debates that are to be held to-day and on Saturday next with his antagonist, being on the whole the better debater of the two, although Judge Foraker is an effective speaker. Making proper allowance for varying estimates of the Prohibition vote, the chances seem to favor the re-election of Governor Hoadly. After the present election, Ohio will cease to be an "October State."

In obedience to an official request that specific charges should be filed in the Interior Department against the appointment of Morris J. Thomas, as Indian Agent, against whom oral charges had been made some weeks ago, Mr. J. Holt Pleasants, Hon. J. V. L. Findlay, M. C., Wm. Keyser, Richard M. Venable, and Wm. Winchester, of Maryland, have prepared and forwarded to Secretary Lamar a statement of facts accompanied by proofs. It should be observed at the outset that civil-service reform is not concerned with Mr. Thomas's case except as it is concerned in the general interests of good government. There is no reason why the Democratic party should not have its due proportion of Indian agencies, as well as of postmasters and collectors. The objection to Mr. Morris A. Thomas is that he is a swindler, and that, having cheated his customers and business friends by fraudulent bankruptcy, he is not fit to hold a position of trust under the Government, least of all the position of Indian agent. Charges of ballot-box stuffing are also preferred against Mr. Thomas, for which an indictment was drawn up by Mr. A. Leo Knott, then State's Attorney for Baltimore, now Second Assistant Postmaster-General. The indictment was ignored by the Grand Jury, "but," say the Committee, "this miscarriage of justice was one among many cases of the kind that led to a radical change in the mode of selecting grand juries in this city." The evidence is of such a character that it will be impossible for Secretary Lamar to ignore it, for if he should so far yield to the "pressure" of Senator Gorman, whose henchmen both Thomas and Higgins are, the Senate of the United States, soon to be in session, will undoubtedly call for the evidence and take such action as the case requires. The leader in the movement against Thomas is Mr. Findlay, the Democratic Congressman from the Fourth Maryland District. The Mugwumps of Baltimore, of whom there is a Spartan band, undaunted by the success that has hitherto attended Senator Gorman's efforts to crowd his disreputable tools upon the Administration, of course sustain Mr. Findlay and his friends; but in the main this is a controversy between the decent Democrats of Maryland and the blacklegs.

The Bell Telephone Company is a corporation of Massachusetts. A private litigant has the right to bring suit against a defendant in any place where he gets service, and will naturally choose the place and the court where he thinks he has the best chance to win. The same right belongs to the sovereign authority, but when this right is exercised to the prejudice of the defendant, the action loses the appearance of impartiality and takes on the character of an interested prosecution. We think that fair-minded lawyers will agree that the only fitting place for the United States to appear as a plaintiff against the Bell Company is in the Circuit Court of the United States for the District of Massachusetts, because that State is its legal residence. It may be said that the courts of Massachusetts have already determined the main questions involved in the Bell patent, and that it is desired to have the case tried *de novo* in an unprejudiced tribunal. Such an argument for going to Memphis in order to overthrow a Massachusetts corporation is opposed to the reason of things, because it looks to the multiplication of suits and of costs on the same subject-matter. If the courts of Massachusetts have already spent much time in investigating this patent, they are by so much the better qualified to dispose of the present case promptly and get it before the Supreme Court, where it must eventually come for final determination.

Another fact of no little importance is that the plaintiffs may, under the present suit, avoid a temporary injunction against themselves in Tennessee while the suit is pending, and until it is finally determined in the Supreme Court. Ordinarily, the decision on an action for infringement of patent, in New York for instance, is accepted in the United States courts everywhere as conclusive upon all the points raised in the case. If John Doe gets a decision against Richard Roe for infringement in Maryland, the Judge of the Circuit Court in Wisconsin will grant a temporary injunction against all infringers within his jurisdiction, and will make the injunction permanent unless new matter not introduced on the Maryland trial is brought forward. It would be impossible to do business at all if the rule were otherwise. But if the United States sets up, in a court where the case comes up for the first time, that the patent was obtained by fraud, no injunction for infringement will probably be granted until the question of fraud has been determined. It may be years before the case is decided in the court of last resort. Meanwhile the infringers will be at liberty to make all the money they can, subject to the chance that they may be called upon to refund at some future time, and the further chance that they may be able to do so when called upon.

A somewhat significant editorial article upon President Cleveland's course appears in a recent number of the Rochester *Democrat and Chronicle*, being noticeable chiefly as the first effort by a Republican party journal to give the President credit for his reform work. It opens with the amusing assertion that the "time has come when Republican journals should estimate President Cleveland candidly and fairly, giving him credit for what he has done well, and censure, if need be, for that which he has done ill. He is no longer the candidate of a political party, seeking the suffrages of the people. He is the President of the nation, the President of all the people, of Republicans as well as Democrats. As such he is entitled to and should receive the considerate judgment of his countrymen." That would have been a very timely observation for the editor to make on the 4th of March last. Although he is seven months late, he atones somewhat for his delay by admitting a good deal which few of his Republican associates will have the courage to approve. He admits that the President "was warranted in recognizing Democrats South as well as North in the distribution of Federal offices"; that in his civil-service reform course "he is to be credited with good intentions and with certain good works as well; so far as the mere letter of the Pendleton act is concerned, it is to be admitted that he has fairly enforced it. Some excellent appointments have also been made in accordance with the spirit of the reform."

Northern people are fast coming to have a clearer comprehension of the situation regarding suffrage in the South, and Senator Hoar's neighbors no longer accept his one-sided and prejudiced views. A Republican newspaper published in his own county, the Gardner *News*, makes this just comment upon the Senator's diatribe in the Republican Convention last week:

"Massachusetts places upon her statutes a law, as an embodiment of her sentiment, that, before the privilege of franchise is conferred, certain prerequisites of knowledge shall be required. She does not want a ballot-box founded upon ignorance. There is due to this same sentiment in the South to-day, not embodied in a law, but only reflected in public opinion, what of suppression for the most part exists in that section. It is a natural sequence of adverse conditions and circumstances, to be remedied by an increase of intelligence, and a reaping of the benefits of better facilities for education."

Massachusetts would never permit a mass of illiterate people sufficient to outvote the minority who represent the intelligence and property of the State, to rule the commonwealth, and South Carolina cannot be expected to permit it. Massachusetts, fortunately, has a law requiring every voter to be able to read, which would protect her if enough negroes to outnumber the whites should suddenly be deposited in that State. South Carolina has no such beneficent law, and she protects herself by other means, as Massachusetts would do if she were in the same box. Statute or no statute, ignorance cannot rule intelligence; if it were allowed to do so, both would be landed in the ditch, as South Carolina had come near being before the political revolution of 1876.

The renomination of two Justices of the Supreme Court of this State by the Conventions of both parties, and with scarcely a word of opposition, is creditable to our judicial system in two ways—first, in making prominent the fact that two of the justices whose terms expire this year have so faithfully administered their offices that they disarm opposition on party grounds, and, secondly, that in two judicial districts, which are widely separated, partisan feeling has yielded to the fitness of the candidates. As Justice Barnard was first elected as a Democrat and Justice Hardin as a Republican, the merit of their unanimous renomination must be shared with both parties. The fact should not escape attention that this manner of selecting candidates is the real Mugwumpian method. The Mugwump, whenever he finds that the candidate of the party with which he has been voting is less deserving of support than his opponent, gives that opponent his vote. For this he is roundly abused by the party managers, who set to work despising him just as hard as they can, and urging their fellow-partisans to help them do so. But the individual Mugwump, in transferring his own vote from one party to another in order to support the best of the candidates offered, only does what the two judicial conventions have just done as bodies, in acknowledging that the present judges are better fitted for the offices than any new men they could name. If it is a great piece of treachery not to vote for your party's candidate every time, according to the Blaineites' doctrine, how much more heinous a political crime must it be not to give a body a candidate of his own party to vote for!

The evidence which appears in the *Times* and *Tribune* that Governor Hill was at one time a partner with Tweed in the ownership of a newspaper seems to be conclusive. Documents are given which show that in 1870, while Mr. Hill was a large shareholder in and the President of the Elmira *Gazette* Company, Tweed was induced by a common friend of himself and Hill to buy 200 shares of the paper's stock for $10,000; that he paid in the money and held the stock for about a year, selling it back at the end of that time, at a greatly reduced price, to Hill; that the friend, Colonel Patrick, who arranged the sale to Tweed, was a thoroughly disreputable politician, who was in the Assembly from Elmira in 1869 and 1870, where he was a complete tool of Tweed; that when Tweed had become a partner with Hill, the latter appeared in Albany as the successor of Patrick in the Assembly, and that throughout the memorable session of 1871, when some of the most infamous of Tweed's jobs were put through the Legislature, Hill was the willing servant of his partner.

The Independent Republicans of Brooklyn, who supported Cleveland last fall, were organized during the Presidential campaign under a Committee of One Hundred, which was continued in existence after the election. As soon as the two parties had made their nominations for the coming State election, this committee was convened to consider the situation, and last Friday it adopted a series of resolutions which admirably summarize the present attitude of Independent voters. These resolutions declare that the real issue in this election is the maintenance of the highest standard of administrative reform and executive responsibility; that the very element in the Democratic party which sought Cleveland's defeat at the Chicago Convention has procured the nomination for Governor of a man who opposes the principles which Cleveland represents, while the Republican Convention has nominated a man whose public record and private character give promise that he will administer the office as a public trust; and that,

in view of all this, the friends of those principles which triumphed in the election of Cleveland as Governor and as President should refuse to vote for Hill and should support Davenport, "so that the overwhelming defeat of the spoils candidate for Governor shall declare unmistakably the loyalty of the voters of New York to the cause of administrative reform." The Committee further demonstrates its clearness of vision by condemning the Republican platform for its confusion of dead with live questions and of State with national and sectional issues, for its exaggeration of the mistakes of the National Administration, and for its silence as to its great triumphs for good government; while it condemns the Democratic platform for its ignorant and wilful misstatement of the operations of the Civil-Service Law. The deliverance concludes with a hearty endorsement of the President.

The people of Southern Dakota, a few months ago, elected delegates to a convention for the framing of a constitution for the new State which it is proposed to make out of that part of the present Territory. The body recently completed its work, and there seems to be no doubt that it will be endorsed at the polls. A determined effort will be made to secure from the new Congress favorable action upon the appeal for a division of the Territory and the admission of the lower half as a State. Little hope, however, appears to be entertained that the Democratic House will give its consent to the immediate creation of another strongly Republican State. It will be no occasion for regret if partisan differences between the two branches defeat the movement. There is no excuse for haste in so important and practically irreversible an act as the creation of a new State. The question is usually treated as though it concerned only the people of the Territory interested, and as though some terrible injustice would be done them if there were any delay about acceding to their demands. But all of the thirty-eight States are vitally interested for all future time in the question of an addition to their number, and it is of the utmost possible importance that any new commonwealth shall be so constituted that the wisdom of its creation may stand the test of time. One such experience as the country has had with Nevada, a once promising Territory, which has degenerated into a travesty upon a State, is enough. Dakota may justly claim that her future rests upon a more enduring foundation, but even in her case no satisfactory basis for a final judgment has yet been afforded. The will of the people on the initial question of division has never been so clearly expressed as is desirable, nor can any assurance yet be given that the scheme of division along the forty-sixth parallel would be endorsed by the sober second thought of the people a few years hence.

The agreement of the trunk-line railroads to restore the 20-cent rate on grain from Chicago to New York absolutely on the 15th of October seems likely to be effectual this time, notwithstanding a proviso is inserted in the resolution allowing any road to withdraw on ten days' notice. So much money has been lost by the war of rates, and so thoroughly are the combatants exhausted, that they must needs get their second wind before they can renew the fight. It does not follow that rates oppressive or unreasonable are to be established, merely because a truce has been declared and railway shareholders are to have some return on their investments. The *Railroad Gazette* observes that although rates may be made more remunerative, "they cannot be made higher, and trunk-line profits on through traffic will certainly be much less for a year to come than they were in 1880, 1882, or 1883, though they may easily be and probably will be very much more than during the year past."

The presumption that Ferdinand Ward had a concealed list of names of "Wall Street magnates" who had shared, with himself and Fish and Warner, in the Grant & Ward plunder, is fading away. No names of importance have been mentioned in connection with the liquidation of the failed firm except that of Mr. W. R. Grace, whose transactions with Grant & Ward appear to have been those of a buyer of commercial paper. Whether Mr. Grace was a gainer or a loser by such purchases remains to be seen. It is certain, however, that he was a private citizen at the time, and that the finances of the city are in no way mixed up with his business relations with Grant & Ward. It is well known that the paper of Grant & Ward was selling plentifully in 1882 and 1883 at a rate of discount extremely tempting to capitalists who were willing to take some risk in consideration of unusual profits, and that most of the persons who invested in those insecurities were left with an unpaid balance on hand, and were largely out of pocket when the crash came. Such a dénouement is not consistent with the theory of a conspiracy with Ward on the part of these investors to swindle the public, since they were the main part of the swindled public. That Ward has no list of "magnates" in reserve behind whom he may hope to screen himself, and that he relies upon a different line of defence, is indicated by a curious statement published in the Philadelphia *Press*, purporting to be an extract from a letter of Ward's brother. "What," says Mr. W. S. Ward, "if it should be proved that the Grant family drew out more money than they put in?" This and a half dozen other "what ifs," insinuating that "the Grants" lost money by outside speculations, and that their apparent losses by the failure of Grant & Ward consisted largely of exorbitant gains credited to them on the so-called contracts, make up the bulk of Mr. W. S. Ward's solution of the enigma. The relations of General Grant to the firm are as well known now as they can ever be. He was cheated out of all the money he had and his sons likewise, and his name was used to cheat other people. What is wanted to be known chiefly is the disposition made by Warner of the $1,300,000 that went into his pocket, plus the property that he and Work got from Ward at the midnight meeting in Brooklyn.

A late number of the London *Spectator* affords a curious example of reasoning backward, and a fresh instance of that aptness for missing the point in discussion of American affairs which is inevitable even in the best informed English newspapers. In support of the proposition that "in countries where capital punishment still prevails, both in fact and theory, the horror of murder, the habit of regarding it as the greatest of crimes, are beyond question greatly intensified, if not actually created, by the awfulness of the penalty which it entails," the *Spectator* remarks: "In Texas, horse-stealing is regarded as a more heinous offence than assassination, the reason being that convicted horse-dealers [stealers?] are invariably hanged, while convicted murderers almost as invariably get off either scot-free or with a short term of imprisonment." Now in fact we doubt whether by any law, excepting that of Judge Lynch, hanging is made the punishment for horse-stealing. That the latter is in frontier countries regarded as a "heinous offence" is perfectly true, but this is not the reflex effect of any penalty imposed either by law or custom. Under the conditions of life in such countries, where horses are a necessity in a manner quite unknown in more civilized places, and where, at the same time, they are not kept locked in stables, but are turned out on the range under no protection but that of law and public opinion, the offence of horse-stealing is in fact "heinous," and the people doubtless "make the punishment fit the crime," not the crime fit the punishment—a thing which even the pleasant ingenuity of the "Mikado" does not suggest.

The full text of the message of the President to the Mexican Congress, read at the opening of the third session of that body, September 16, has just come to hand, having been delayed with all the Mexican mails by the extensive washouts on the Mexican Central. General Diaz congratulates the country that the threatened difficulties with Guatemala have been so happily evaded, and that Mexico now enjoys relations of cordial amity with all the world. He informs Congress that a treaty of friendship and commerce has just been negotiated with Sweden and Norway, which is to be sent to the Senate for ratification. He alludes to the continued good feeling between Mexico and the United States, apparently only for the purpose of saying that it has not been disturbed by the recent accession to power of the Democratic party. The reforms and improvements in the postal service promised last spring have been undertaken successfully. The measures of rigid economy in the conduct of the Federal Administration which were declared to be necessary at the last session of Congress, have been thoroughly carried out, and the President rejoices that the employees of the Government have so cheerfully acquiesced in the considerable reductions of salary which all have suffered. The principal thing in the message is the elaborate defence of the financial measures of June 22. These were heroic remedies, the President admits, but the desperate situation of the Treasury demanded them. He does not assert that the crisis is yet safely passed, but thinks there is good reason to hope that, with the strictest economy and greatest prudence, Mexico will be able to meet her obligations.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, September 30, to TUESDAY, October 6, 1885, inclusive.]

DOMESTIC.

THE President has decided that customs weighers must be appointed after a competitive examination. This applies to the Sterling-Bacon position in this city.

The President has issued the following special rule for the regulation and improvement of the civil service: "Special Rule No. 2, approved July 18, 1884, is hereby revoked. All applicants on any registers for the postal or customs service, who, on the 1st day of November next, shall have been thereon one year or more, shall, in conformity with Rule 16, be no longer eligible for appointment from such register." The object of the change is to prevent the eligible lists from becoming too cumbersome. It has been found by experience that the service is not benefited by working from eligible lists which are more than one year old.

President Cleveland has refused to accept the resignation of Dr. J. B. Hamilton, Surgeon-General of the Marine Hospital Service.

Postmaster-General Vilas has issued orders looking to an improvement of the postal service between this city and Brooklyn. The orders follow a report on the post-offices in the two cities, which reflects very severely on the management of the Brooklyn office.

Secretary Manning on Wednesday dismissed seven employees in the Register's office, including five clerks and two chiefs of division, named Charles Neal and N. B. Walker. It is said that the vacancies will not be filled. The reduction of force was made on the recommendation of Register Rosecrans.

Appointment Clerk Higgins has been again overruled. Secretary Manning decides that the female clerks shall not be transferred from his bureau as he requested. The ladies themselves protested against the change.

Civil-Service Commissioner Eaton is prepared to defend the administration of the Civil-Service Law from all attacks. He will prepare a comprehensive reply to the criticism upon its methods made in the Democratic State platform adopted at Saratoga. He says that there is no important amendment of the civil-service rules which he desires to see made before his retirement, and that there has not been any change of principle in the rules since their original adoption. He considers them as near perfection as is possible for a system still in its infancy.

A new complication has arisen in connection with the Chinese question. It appears that the British Government refuses to permit its possessions to be made a dumping-ground for the rejected Chinese of the United States, except upon payment of a fee which it is quite impossible for the United States to pay. One of the customs officers on the Northwestern boundary reports to the Department that while strenuously endeavoring to carry out the instructions of the famous Chinese circular, and to put back upon British soil Chinese who had come into the United States in violation of the provisions of the Restriction Act, he was met with a Canadian statute—whether new or old does not appear—which required the payment to the Treasury of the Canadian Government of $50 for each Chinaman as the condition precedent of readmission to British soil. The officer informs the Treasury Department that he has no money at his disposal to pay for such readmissions.

At the White House on Tuesday it was declared that the letter printed by a number of papers on the New York State election, purporting to have been written by the President to a friend in Buffalo, was a forgery. The only utterance the President has made on the subject was an answer which he dictated to Colonel Lamont, to be made to an inquiry sent him by a correspondent, and which was as follows: "The President is a Democrat, and it is strange that any person should question his position. He earnestly desires the success of his party in the pending elections in New York as well as elsewhere, and any assertion to the contrary is utterly and maliciously false."

The Committee of One Hundred of Brooklyn on Friday evening adopted resolutions in which they said: "We believe that the friends of those principles which triumphed in the election of Grover Cleveland as Governor and as President should refuse to vote for David B. Hill, and we invite all citizens, of whatever party name, to join us in voting for Ira Davenport, so that the overwhelming defeat of the spoils candidate for Governor shall declare unmistakably the loyalty of the voters of New York to the cause of administrative reform. We condemn in the Republican platform its confusion of dead with live issues, and of State with national and sectional questions, and for its exaggeration of the mistakes of the national Administration, while it is silent as to its great triumphs for good government; and we condemn especially in the Democratic platform its ignorance and wilful misstatement of the operations of the Civil-Service Law."

The Democratic Judicial Convention of the Fifth District of this State on Thursday endorsed the nomination of Judge Hardin, the Republican candidate. Judge Joseph F. Barnard, of the Second Judicial District, has received a practically unanimous nomination from both parties.

The Massachusetts Republican State Convention met in Springfield on Wednesday. Senator G. F. Hoar was chosen permanent President, and made a long address, charging that a large part of the negro vote in the South is suppressed. He also said: "I would speak with all personal kindness of the President. I like some things his Administration has done, especially its firmness and courage in protecting the rights of the Indians. I think the remainder of the Poncas will dwell in their homes in safety during his Administration." But he added: "I cannot see how the principle of action on which this Administration has thus far proceeded in the matter of appointments and removals can be satisfactory to any honest civil-service reformer."

The Colorado Democratic State Judicial Convention on Saturday nominated Wilbur F. Stone for Supreme Judge. Resolutions were adopted ratifying the platform adopted by the National Convention in 1884, endorsing President Cleveland's Administration, favoring the free and unlimited coinage of silver, and the strict enforcement of the Preëmption and Homestead Laws, declaring that a policy for the removal of the Ute Indians from Colorado is the only measure which can be adopted for the relief of the people of the southern section of the State, denouncing foreign contract labor in every form, and lamenting the death of General Grant.

The Colored Men's Convention of Virginia on Wednesday adopted an address, which declares: "We appeal to the colored people of our native State to look well to the altered condition of affairs, and in the future to make such political alliances as will most advance our interests, educationally, financially, and politically. We feel sure that there is, throughout the broad limits of the commonwealth, a general disposition on the part of the white people to accord us all our rights before the law, and to meet us heartily in every advance we make for the upholding of our people. It behooves us then to so use our ballots that we may drive out all discordant elements in Virginia, whether they be headed by natives or aliens to the State. We also condemn the raising of the race issue by any class of men who essay to lead the masses, because it can do nothing but prove detrimental to our cause and our interests."

At Salt Lake City, on Monday, Isaac Groo, Alfred Best, David E. Davis, Charles Seal, and Andrew W. Coley, convicted of unlawful cohabitation, all refused to pledge themselves to obey the law in the future, and were sentenced to the full extent of the law, namely, six months' imprisonment and $300 fine.

H. N. Smith and William Heath & Co., two bear firms in Wall Street, suspended on Friday. Their liabilities were estimated at from $1,000,000 to $4,000,000. The failure of Soutter & Co. on September 29 was intimately connected with these events.

Miss Mary Anderson arrived in this city from England on Tuesday with her dramatic company. She will play here for six weeks.

Cardinal McCloskey is critically ill at his home in this city.

William Page, the well-known painter, and formerly President of the Academy of Design in this city, died on Thursday at his home near Tottenville, S. I., at the age of seventy-four. Among his important works are "Ruth and Naomi" (owned by the New York Historical Society), "Moses," "Ruth," "Venus," and portraits of Farragut, Robert Browning, and Charlotte Cushman.

John Light Atlee, M. D., the oldest physician in Pennsylvania, died at his home in Lancaster on Thursday afternoon in the eighty-sixth year of his age. He was a contributor to many medical periodicals.

Brevet Brigadier-General Charles F. Ruff died on Friday in Philadelphia in the sixty-seventh year of his age. He was graduated from the West Point Military Academy in July, 1838, and served with distinction in the Mexican and civil wars.

Frederick Hassaurek, for many years owner and editor of the Cincinnati *Volksblatt*, and one of the most influential Germans in this country, died in Paris on Saturday at the age of 53. He was as a boy engaged in the revolution of 1848 in Austria.

Dr. Thomas C. Durant, President of the Adirondack Railway Company, died at North Creek on Monday. He was prominently connected with the Union Pacific Railroad Company while that road was building.

Judge T. R. Westbrook, of the Supreme Court of this State, Third District, was found dead in bed at Troy on Tuesday morning. His term would have expired in 1887. In the spring of 1882 charges were made that Judge Westbrook had been guilty of improper and corrupt conduct in his judicial actions respecting the Manhattan Railway litigation, and also in relation to the appointment and remuneration of receivers of insurance companies. The charges were investigated by the Judiciary Committee of the Assembly, which presented diverse reports on May 31, 1882. The majority report, signed by six members, concluded with a resolution that Judge Westbrook had not, upon the evidence, been guilty of any impeachable offence.

Ex-Governor Talbot, of Massachusetts, died on Tuesday at the age of sixty-seven. In his youth he worked in a woollen factory, and by and by became the owner of mills. In 1873 and 1874 he was Lieutenant-Governor. In 1875 he was defeated for Governor by Mr. Gaston. In 1878 he was elected Governor by a vote of 134,725 against 109,435 votes for General Butler and 12,141 for all others.

FOREIGN.

The French elections for members of the Chamber of Deputies were held on Sunday. The result created great surprise among the members of the Cabinet and their colleagues. The Conservatives, on the other hand, are wild with enthusiasm over the fact that they succeeded in polling a much larger vote than the most sanguine anticipated, and making changes in the Cabinet requisite. The returns show that the Conservatives have beaten two Cabinet Ministers—M. Hervé Mangon, Minister of Commerce, and M. Goblet, Minister of Public Instruction—and made a second ballot necessary to decide the fate of two others. In Paris the following was the result: M. Brisson, the Premier, and M. Allain-Targé, Minister of the Interior, head the list with 10,000 votes each.

MM. Floquet, Lockroy, Barodet, Delafosse, Clémenceau, and Paul Bert received from 7,000 to 9,000 votes each, and MM. de Cassagnac, and Hervé, editor of the *Soleil*, 6,000. The Opportunists have lost many seats, which have been gained by either the Radicals or Conservatives. In eighty-one departments, 165 Conservatives and 141 Republicans have been elected. The Conservatives have gained 93 seats and lost 5. It will be necessary to have 202 second ballots. The Radicals, under Clémenceau, hold the balance of power.

Commenting on the French elections, the Paris correspondent of the London *Times* says: "Owing to the number of Cabinet Ministers defeated at the elections, it will be necessary for the Cabinet to be remodelled or resign from office before the Chambers meet. If the Radicals ally themselves with the members of the Right, they can overthrow Ministry after Ministry, leaving France in a permanent crisis which will seriously jeopardize the existence of the republic."

Disorders were excited in Paris on Tuesday evening. Fully 4,000 persons assembled in front of the *Gaulois* office shouting, "Vive la République! A bas le *Gaulois!*" Bands of youths paraded the streets singing the "Marseillaise" and waving tricolors. The police finally succeeded in dispersing the mob, being aided by a heavy rain. It is believed that a provisional ministry will be formed containing MM. Clémenceau and Floquet.

Considerable consternation prevails in Turkish official circles over an important discovery made by Alib Sahib Pasha, the new Minister of War. He ordered all the various department commanders to report the strength of their respective commands and their present condition, and detailed several officers to inspect the various posts. Their reports have been received, and show that under Ghazi Osman Pasha, the late Minister of War, who was dismissed on September 25, the army was almost entirely neglected, and the large sums of money voted for military purposes were used in other ways than those for which they were designated. The Adrianople army, which was supposed to be 15,000 strong, contains not half that number of men. The soldiers have no uniforms and are shoeless. The cavalry is unable to march, owing to a lack of horses and the necessary accoutrements.

An *irade* has been issued by the Porte ordering the Turkish troops to mass at Adrianople. Large numbers of Russians are crossing the frontier to join the Bulgarians. It is understood in Berlin diplomatic circles that Austria is secretly supporting Servia. Vienna despatches assert that everything is ready for the entry of the King of Servia into old Servia on October 8. The Servian Government has 80,000 men under arms. It is feared that the King must attempt a *coup de main* before the Conference is concluded, because the finances of the country are unable to stand the present heavy drain. The Servian Skupshtina met on Thursday, and made a demand for an extension of territory.

Advices received in Vienna on Saturday reported fighting on the western frontier of Bulgaria, between Servian and Bulgarian troops, and that seven men were killed and nineteen wounded. The report has not been confirmed.

Turkish troops fired on the Rumelian outposts at Mustapha Pasha, a town in Rumelia, twenty miles northwest of Adrianople, on September 29. The outposts were immediately reinforced and a skirmish ensued, in which the Turks were defeated and forced to retreat, carrying with them a number of wounded.

Six thousand Russians have crossed into Bulgaria. This represents the number of isolated volunteers, and not a compact body of troops.

Bulgaria is described as a great military camp, all the male population between the ages of fifteen and forty-five being under arms.

Anarchy is spreading in Rumelia. The belief is increasing at Vienna that the conference will prove a failure. The Austrian War Office is making preparations for a partial mobilization of the army.

The Ambassadors of the Powers met on Thursday to consider the Rumelian question at the residence of Count Corti, the Italian Ambassador, but adjourned without transacting any business of an important nature, several of the Ambassadors having not yet received formal instructions from their respective Governments. The Powers have resolved to compensate Servia if the Porte accepts the union between Bulgaria and Rumelia. The opinion at Vienna on Thursday was that war was inevitable.

The conference of the Ambassadors on the Rumelian question resulted on Monday in a memorandum being formulated which will be submitted to the Powers for approval before being referred to the Porte, although a disagreement has for a time postponed the presentation.

The report of the Ambassadors to the Powers on the Rumelian difficulty indicates that the tenor of the communication to be addressed to Turkey and Bulgaria will prevent a conflict, leaving to the Powers the duty of solving the question.

Veissel Pasha telegraphed to Constantinople on Sunday that he had completely defeated the Albanians, and captured and promptly hanged the most notable of their leaders.

The British Cabinet met on Tuesday, and discussed the Bulgarian question and affairs in Ireland. The Marquis of Salisbury indicated to the other Cabinet officials the line of argument he would take in the address which he is to deliver at the National Conservative Conference to be held at Newport.

The British Parliament will be dissolved on November 17. The Government will present to the new Parliament a bill to cheapen and simplify the transfer of land. The Cabinet is carefully studying the subject of local government, and intends to submit a bill for the establishment of county boards.

In the course of a recent speech at a Liberal meeting, Mr. Joseph Chamberlain said that further resistance on the part of the Peers to the will of the people as expressed by the House of Commons could not be tolerated. Such a course, Mr. Chamberlain believed, would result in the Speaker of the House of Commons being made a virtual dictator, clothed with powers ample enough to enable him to deal effectively with all cases of obstruction.

Sir Michael Hicks-Beach, the Conservative leader, speaking at Salisbury, England, on Wednesday, said that the Government was preparing to deal with boycotting in Ireland with a strong hand. He believed the Irish people would applaud the action of the Government.

Lord Randolph Churchill, Secretary of State for India, arrived in Dublin on Thursday to consult with Irish officials as to what means can be employed under the common law for the suppression of boycotting.

The first Irish Nationalist County Convention for nominating candidates for seats in Parliament was held at Wicklow on Monday. Mr. Parnell, on the opening of the Convention, delivered an address, in which he urged unity of action and self-sacrifice of political ambitions in selecting the candidates. He also advocated protection for Irish industries and legislative independence.

The London *Times*, commenting on Mr. Parnell's Wicklow speech, says: "It is impossible to disguise or palter with the fact that the government of Ireland has passed or is rapidly passing out of the hands of her Majesty's ministers." The Dublin *Freeman's Journal* supports Mr. Parnell's demand that the Irish people be permitted to raise their own revenue and protect their industries.

Sir Charles Dilke spoke at Chelsea on Tuesday. He taunted Lord Salisbury with submitting weakly to German annexations everywhere, and warned the Government that France intended to dominate Burmah. He advised the Cabinet to confer upon Ireland the widest elective self-government compatible with the integrity of the Empire. It was impossible, he said, to justify the Castle system.

Sir Charles Dilke was married on Saturday to the widow of Prof. Mark Pattison.

The Earl of Shaftesbury died in England on Thursday, at the age of eighty-four. He succeeded to his father's name and estate in 1851. Before that he had served in Parliament, his whole term in both houses being fifty-six years. He achieved distinction by his devotion to social, industrial, and intellectual reform movements, and was comparatively indifferent to politics as such. He agitated for laws reducing the hours of labor to ten; improving workshops, factories, and lodging-houses; relating to the care of children, and affecting the sanitary and moral condition of the humbler classes. He had been President of the Ragged School Union from its formation in 1844 until his death.

Mr. John Ruskin has had a relapse and is suffering from acute mania.

Miss Emma Nevada, the singer, was married in Paris on Thursday to Dr. Raymond Palmer, of Birmingham, Eng. The attendance was large; American, English, and Parisian fashionable society being well represented.

A despatch to a St Petersburg paper from Askabad on Sunday said: "The English have taken entire possession of Herat, and have ordered the inhabitants to quit the town immediately. The inhabitants, angered by the action of the English, have thrown up earthworks opposite the citadel. The English are being strongly reinforced." This report was officially denied in London on Monday. The only foundation for it is that English officers are assisting the Amir to strengthen the fortifications.

The Danish Diet opened its session on Monday. The session promises to be the most stormy that the people of Denmark have ever witnessed. The relations of the contending parties are strained to the utmost, and some violent scenes are anticipated, as an attempt will be made to force the King to comply with the vote of the Diet at the previous session, to dismiss his obnoxious ministers. His Majesty will also probably be a subject of serious discussion for having levied taxes by royal decree when the Diet refused to vote the budget, and saying that he was determined to continue to do so until the representatives of the people returned to a sense of what he conceives to be their duty. The people throughout Denmark are greatly excited at the arbitrary action of the King.

The Danish expedition to East Greenland, after an absence of twenty-nine months, has returned to Copenhagen. The expedition made a special chart of a hitherto unknown coast reaching latitude 66° 8′ north, and named it Christian IX. Land.

The report that Belgium had withdrawn from the Latin Monetary Convention was officially denied on Tuesday.

It is again reported that the Carolines dispute has been definitively settled, through the good offices of the Pope.

Ras Alula announces a great defeat of the followers of El Mahdi near Amideb. It is now believed that it will not be necessary to relieve Kassala.

Rioting was resumed in Montreal on Tuesday evening in front of the Exposition building. Soldiers, who were on guard, drove the French Canadians away. Several of the former were injured by missiles.

The Labrador fisheries have proved a failure, and the inhabitants on that inhospitable shore are starving. Cod and mackerel seem to have vanished from the waters. The sufferings of the women and children are terrible.

A REALLY PRACTICAL STATESMAN.

THE "negro problem," as every one knows, has for half a century greatly vexed the American people. It was in the beginning divided into two parts. One was how to make the negroes free men. This reached a solution through the war, which both Republicans and Democrats carried on. The other was how to make the negroes free voters. Of this the Republican party took exclusive charge in 1865, and tried on it any kind of legislation they pleased. There then followed one of the most extraordinary phenomena in political history. On all other occasions in the history of constitutional countries of which we have any knowledge, whenever the party in power undertook to do a thing, and failed to do it, after a reasonable trial, the job was taken away from them and they had to acknowledge that they had made a failure, or their failure was used by their opponents as a good reason why they should go out of power. In England, for instance, in 1879, the Tories were driven out of office for not pacifying the Transvaal and Afghanistan. At a later period, after Mr. Forster had been furnished with the powers he asked for, for the pacification of Ireland, and failed to pacify it, he had to leave the Cabinet. At this moment one of the arguments which occupy the very front rank in the electoral canvasses in both France and England against the existing ministry in each country, is that it has failed to do a good many things which it undertook to do on assuming office, and therefore ought to be displaced.

It will always remain, however, one of the great curiosities of political argumentation, that the Republican party steadily maintains that the longer it remained in power without securing to the negroes the free exercise of the franchise, the longer it ought to be allowed to remain. Ordinarily the state of things which Messrs. Sherman and Hoar describe as existing at the South to-day, such as the disfranchisement and insecurity of the negro population, after twenty years of Republican rule, would be heard of only from their opponents. In any other country, or any other age of the world, these gentlemen would be engaged in concealing this state of things, or painting the social and political condition of the South in roseate colors, and the Democrats would be engaged in dragging the horrors of the situation to light. Fancy, for instance, Gladstone addressing his constituents as follows, not as a reason for resigning, but as a reason for his re-election: "It is difficult, gentlemen, to give you an adequate idea of the state of Egypt after three years of occupation under my Ministry. From Alexandria to Wady Halfa there is no security for either life or property. The peasantry are taxed and flogged just as they were in the old days of Turkish domination, and the finances are in a deplorable and, to my mind, an irremediable state of confusion. In Ireland things do not look a particle better than when I took office in 1880. Life and property are no more secure; the peasantry are as discontented as ever. The landlords cannot get their rents, and every voter who goes to the polls is escorted by bludgeon men of the Land League, who compel him to support their candidates by means of the most horrible threats. The police and courts are in full sympathy with the offenders, so that convictions for crime are impossible. My various remedial measures, such as the Church Disestablishment, the Land Act, and the Arrears Act, have been wholly ineffective. I therefore ask with confidence for a continuance of your support as the only person competent to set things to rights in these unhappy countries." Of course, the Midlothian voters on hearing this would conclude that the once powerful mind of the Grand Old Man was failing him, and they would look sorrowfully elsewhere for a representative.

Now, as a matter of fact, the talk of Messrs. Hoar and Sherman is much more ridiculous than this of Gladstone's would be, for in England the Prime Minister has unlimited powers of legislation through his majority in Parliament. What the Hoars and Shermans maintain is that this state of things at the South, which they describe, would somehow be cured by putting a Republican President in office, although no President has any legislative power, and although every Southern outrage which they recall occurred under a Republican Administration. The Hamburg massacre happened under Grant, and the Copiah County murders under Arthur. But who that knew nothing of the facts, except what he heard from the Republican stump, would suppose that this was possible?

The climax of this immense historic absurdity was reached at the Massachusetts Convention on Tuesday week, as might have been expected, by Mr. George F. Hoar. No better illustration of the political decline of that great State could be furnished than the fact that this man is taken seriously by his party, and occupies Webster's chair in the Senate. According to him it is not Grant, or Hayes, or Arthur who is responsible for a state of things at the South described as beginning in 1865, and lasting down to our time, but Cleveland, who only came into office last March, and has no power whatever, not so much as Hoar himself, to protect either life, property, or suffrage at the South; and the Democrats, who, during all that period, have only had a majority in both branches of the Legislature during two years. It is to Hoar's credit, however, that he has at last proved himself a true reformer by producing a remedy for the evils he deplores. This is now his plan of accomplishing, under the Democrats, what twenty years of Republican rule failed to accomplish through legislation or administration. We fear a great many light-minded persons will look on it as a contribution to the humorous literature of the day. To them we say Senator Hoar never jokes. He is, above all things, a serious man occupied with serious things:

> The true remedy for this evil is the Republican remedy, viz.:
>
> Take away the great motives to it by preventing the election of any candidate for the Presidency willing to accept office gained by these means;
>
> Have a House of Representatives who will allow no man illegally chosen to retain his seat;
>
> Refuse political affiliation with men who do these things;
>
> Treat a man who would accept an office so gained as unfit to be voted for, as you would treat a man at the North who accepted an office gained by corruption;
>
> Have a Congress who will pass effective laws for the restraint of these things, and who will make appropriations for the enforcement of such laws;
>
> Have an Executive who will do his best to enforce such laws; who will not reward criminals against the purity of elections with high public office, and who will not interpose to prevent such criminals, when convicted, from receiving their lawful punishment;
>
> Promote by every public and private instrumentality education all over the country;
>
> Keep aroused and alive public sentiment, stronger than laws or than armies—that public sentiment with which Daniel Webster threatened to shake the Czar of Russia from his throne if he dared to meddle with Kossuth;
>
> Appeal earnestly and kindly to the men of the South themselves to desist from doing these things; and from training their young men in these processes—an appeal never yet heard from Democratic lips;
>
> Satisfy the white men of the South that we are their truest friends, by emulating their own leaders in heartiest support of every interest.

The first remedy reminds us of an old gentleman in Connecticut before the war, who was disgusted by the noise and uproar of the Presidential canvass, and used to ask "why people could not get together, and agree on the best man, and then elect him." The second is like unto it. We cordially agree with the Senator, but would go one step further. We would have a House of Representatives composed entirely of blameless and wise men, like Mr. Hoar himself. In fact, while about it, we would have a House resembling in character and motives the General Assembly of the Presbyterian Church. The plan of not speaking to Southerners who accept office so gained at the South is also good, and can be easily carried out in Massachusetts. The suggestion of a good Congress, that will always pass the right laws and make appropriations for their enforcement, and a President who will enforce them, is also excellent.

In fact, we make bold to say that these suggestions show Mr. Hoar to be a truly good man, but they seem to indicate a sort of mind better fitted for the superintendence of a Sunday-school than a seat in the United States Senate. They rouse in one, on hearing the Sage utter them, the feeling which prompted Charles Lamb, on hearing a man say that "Shakspere was a great writer," to take up a candle and advance on him for the purpose of examining his bumps. One cannot, too, in all conscience be it said, help feeling anxious for a community which in 1885 has such a particularly pure old man for its foremost legislator. Is it any wonder the ignorant Irish are taking possession of the State, when one listens to stuff of this sort offered as practical politics from one of its elderly politicians, and hears one of the younger ones, like Mr. Lodge, reading a small list of Cleveland's mistakes in minor appointments as a fair illustration of the manner in which he is administering an office into which these very men tried to put the hero of the Little Rock and Fort Smith Railroad, and quibbled, evaded, equivocated and wriggled in order to do so?

SIGNS OF A POLITICAL BREAK-UP.

THE political situation in the three States whose elections this month and next are attracting most attention—New York, Ohio, and Pennsylvania—is unusually interesting. At present the outlook favors a Republican victory in New York and Pennsylvania, and a Democratic victory in Ohio. New York is likely to be carried by the Republicans because they have nominated a ticket which friends of good government in all parties can support. If the Democrats had

nominated a ticket with the same qualification, they would have carried the State without the slightest difficulty, and by a larger majority than the Republicans are likely to get. Pennsylvania promises a Republican victory simply because the party there has so large and so subservient a majority that even the candidacy of a man notoriously unfit cannot be depended upon to overthrow it completely; yet there are slight doubts of Mr. Quay's election, which may increase between now and November. In Ohio the Democrats have the brighter prospects, chiefly because their opponents are weakened by the defection of the temperance element, and have failed to arouse the interest of their own followers by making their campaign chiefly upon dead issues.

In each of these States the result will have a different significance. We notice a continued inability on the part of many newspapers outside this State to comprehend the peculiarity of the canvass here. They cannot understand the Independent position, which is that the best way to sustain the Cleveland Administration is to elect the Republican State ticket. They say that they can understand how the Independents can approve the President's civil-service reform policy by this course, but how, they ask, about protection and free trade? how about the sectional issue? The answer is that the tariff and the sectional issue have nothing to do with the canvass. But they are both in the Republican platform? So they are, but nobody is electing the platform to office, and nobody of any intelligence believes that the declarations of the platform will have any influence upon the candidates after election. What have New York State officers to do with the tariff and with the Southern question? The voters of this State are asked to decide which of two sets of candidates is better fitted to give the State honest and intelligent government, and they are not going to be turned aside from that question by childish allusions to the poor negro and protection to American industry. They are much clearer-headed on this point than many of their professional leaders and advisers, as the great body of voters always are. The tariff and the Southern question were pushed forward incessantly during the last Presidential campaign, and every effort was made by the Republican managers to make them the controlling issues in the canvass; but, though it was a national campaign and these issues were of importance in it, the voters went behind them and decided the election on the more vital issue of the personal fitness of the candidates. They will do the same thing in New York this year.

The same issue of fitness will have its influence in Pennsylvania also, though it may not be powerful enough to defeat the Republican candidate. The party majority is certain to be greatly reduced, and the only cause therefor will be the unfitness of the nominee. It would be a great gain for the cause of good government everywhere if a sufficient number of Republican voters could forget their partisanship sufficiently to subject their own party to the wholesome discipline of defeat, for a lesson of that kind from Pennsylvania would mean more than from any other State in the Union.

There are many peculiarities about the situation in Ohio. At the outset the Republicans seemed to have the better chance for winning at the polls next Tuesday, but they appear to have lost ground steadily from that time. They chose to make their canvass chiefly upon the sectional issue, and this has clearly failed to excite any enthusiasm among the voters. Whatever the result, their experience has already shown that the sectional issue is dead; that the voters no longer care for it; and that if the party is to hold its following henceforth, it must devote itself to the living questions of the day.

The one sign which is apparent in all three States, and in every other State as well, is that the old party platforms have had their day, and no longer mean anything to anybody. The Massachusetts Republicans were progressive enough to recognize this fact, and to construct a declaration on a new model. It is useless to attempt longer to scare off voters from a good candidate by pointing to a stupid plank in the platform, or to win voters to a bad candidate by pointing to a sound plank, for every voter knows that the real platform is the candidate himself. President Cleveland has done more to strengthen this wholesome view than any man who has held high office for years. His enemies in both parties are quarrelling with him because he is keeping his own pledges, and is refusing to consider them as mere platform fulminations. "Whether you were sincere or not," he virtually says to the platform-makers, "in your resolutions favoring reform, is your own affair; as for me, I meant what I said, and I am going to keep my word." That is where character comes into the question of a candidate's fitness, and it is Mr. Cleveland's character alone which is the bulwark of his reform administration. It is Mr. Davenport's character, not the fact that he voted for Blaine, or the fact that he stands upon a protection platform, or the fact that the platform has a stupid sectional-issue plank, or the fact that the whole document was written by Colonel George Bliss, which is the decisive issue in the New York campaign. Every day in every State this question of character is coming to have greater weight in deciding elections, and, whether parties change their names or not, they will be obliged to drop their worn-out issues, and conform to the demands of the constantly growing body of voters who think the cause of good government is a higher one than the welfare of any party, however grand may be its record.

THE HEALTH OF AMERICAN WOMEN.

It is nearly fifty years since Harriet Martineau wrote an account of her travels in this country. Of the various remarkable transformations that have taken place within that time, not the least important is the improvement in health in general, and especially in the health of women. Miss Martineau was greatly shocked, not only at the wide prevalence of enfeebled health, but especially at the apathy which existed in regard to it. "Invalids," she says, "are remarkably uncomplaining and unalarmed; and their friends talk of their having a weak breast and delicate lungs with little more seriousness than the English use in speaking of a common cold." . . . "What is to become of the next, and again of the succeeding generation, if the average of health cannot be raised, it is fearful to think of." Americans have not yet attained to the robustness and the vigorous color of the parent race, but they can no longer be considered a nation of invalids. The fragile and chalky young ladies who were in fashion twenty years ago have given place to young women of clear, bright color, and healthy, vigorous step; the hollow-chested ministers and the lean and sallow business men of a former day have passed away, never, let us hope, to return.

The causes of the general improvement are not far to seek. There has doubtless been a marked change in diet. Thoroughly good cooking is no longer a rarity in private families, and the distinctively American contributions to the list of table delicacies are not regarded with the favor which they once enjoyed. Abundant markets and general prosperity have brought within everybody's reach a variety and excellence of food which ought to be much more conducive to health than the Englishman's monotony of mutton and gooseberry tart. Much more important is the change of sentiment in regard to the desirableness of keeping one's self in good physical condition. Much preaching has brought about the belief that strength is virtue, and that bad health is a species of bad morals. A low diet is no longer cultivated for the sake of delicacy of body or spirituality of mind. Invalids have become complaining, and, as in religious matters, conviction of sin is a first step toward recovery.

The feeble condition of American women Miss Martineau attributed to the vacuity of their minds. There has without doubt been a remarkable enlargement in the range of subjects with which women concern themselves, at the same time that there has been a marked improvement in their health; but it is perhaps not absolutely certain that the two facts stand in the relation of cause and effect. That there is nothing injurious to the health of women in a severe course of study does, however, seem to be established by the statistics recently collected in regard to the health of college graduates. Of the 1,290 women graduates of colleges in this country, 705 have replied in detail to an exhaustive schedule of questions sent out by the Association of Collegiate Alumnæ, and their replies have been collated and tabulated by the Massachusetts Bureau of Statistics of Labor. They are, so far as we know, the first detailed statistics that have ever been collected in regard to the health of a class of persons who are not in hospitals and who are not engaged in swelling the death-rate, and they offer many other points of interest besides furnishing a conclusive answer to the main question for the sake of which they were gathered.

It appears that of the graduates who have sent in replies, 83 per cent. are of American parentage, 23 per cent. spent their childhood in the city alone and 58 per cent. in the country alone; that they began study at the age of 5 to 6 years (41 per cent. at home and 57 per cent. at school), took 4.01 hours of exercise every day, and entered college when 18.35 years old. On entering college, 78 per cent. were in good health, 2 per cent. in fair, and 20 per cent. in poor health. Deterioration in health during the college course was shown by 19.58 per cent., and improvement in health by 21.13 per cent., or the percentage of those to whom a college course was beneficial was 1.55 greater than that of those to whom it was injurious. From statistics collected last year by the Massachusetts Bureau in regard to the health of working girls in Boston, it appears that 16 per cent. of those who returned answers have been injured in health by their occupation. If the number of women whose health has been

injured by the cares of maternity could be obtained, a much greater falling off would doubtless be shown.

Among those who studied severely during their college life, the most prevalent cause of disorders was constitutional weakness. Three per cent. of those whose parents were both in good health show an increase of health, and 17 per cent. of those whose parents were both in poor health show a decline. Only thirty cases in all of brain trouble are reported, and only twelve of diseases of the eyes. In conclusion, the Bureau of Statistics of Labor says:

"The facts which we have presented would seem to warrant the assertion that the seeking of a college education on the part of women does not in itself necessarily entail a loss of health or serious impairment of the vital forces Indeed, the tables show this so conclusively that there is little need, were it within our province, for extended discussion on the subject. The graduates, as a body, entered college in good health, passed through the course of study prescribed without material change in health, and, since graduation, by reason of the effort required to gain a higher education, do not seem to have become unfitted to meet the responsibilities or bear their proportionate share of the burdens of life."

CONDITIONS OF THE IRISH PROBLEM.

LONDON, September 15, 1885.

IN a previous letter I endeavored to indicate the impression made in England by Mr. Parnell's recent declarations, and the views which English politicians generally are disposed to express on the Irish problem. In this one I must attempt to point out the conditions of the problem itself, and the aspects of it most likely to become prominent in the discussions which will shortly occupy Parliament and the country. Assuming, what there is every ground to assume, that the Irish Nationalists in the new Parliament will number from seventy-five to eighty, they will be able to press their claim to separate legislation so forcibly upon the Government and the English and Scottish members supporting it, that if it is refused, some strong reasons for the refusal must be assigned and an alternative scheme suggested. The English have practically admitted that the present state of things is not right, and that something must be done. They are therefore bound to provide themselves with a plan of reform to be offered to the representatives of Ireland in case the solution propounded by the latter is held inadmissible.

In devising a scheme of improved administration and self-government for Ireland three objects must be kept in view. One is to give to the people of Ireland what is best for them—a system under which they will be quietly and peaceably, efficiently, purely, cheaply governed. A second is to satisfy their wishes and longings for self-government, and to respect, perhaps even to indulge, their sentiment of Irish nationality. The third is to maintain the unity of the British Empire, and especially of that heart and kernel of it which lies within the four seas that wash the British Isles. These objects are not necessarily compatible, and the main difficulty of the matter lies in determining to what extent they really are compatible; or if not, which should yield to the others.

Most English politicians are agreed with the Irish Nationalists in desiring the abolition of that farce of royalty, the Lord Lieutenancy, and in proposing to overhaul what is called "Dublin Castle," the machinery of officials which administers Ireland from Dublin. Even Mr. Clifford Lloyd, whose energetic action under Mr. W. E. Forster in 1881 and 1882 roused such animosity of the Land League party against him, has lately pronounced in a long letter to the newspapers against the maintenance of this system; and it is not likely to find many defenders in the next Parliament. But what is to be substituted for it? There must be some sort of central administration for all Ireland, and the problem is, how to construct such an administration which will be efficient and yet not unpopular. Destruction is easy enough, but difficulties begin when construction comes in view. So far as English statesmen have formed a plan, they incline to place all the boards needed for education, public works, poor-law management, and so forth, immediately under a Secretary of State for Ireland, who shall be an official of higher rank and power than the Irish Secretary (who is technically only a Secretary of the Lord Lieutenant; has hitherto been, and shall always sit in the Cabinet. But this by itself may be of no great service, for the boards of the future may be just as much out of sympathy with the masses as the boards of the past have been, and the new Secretary of State will probably support them as much and control them as little as the Secretary to the Lord Lieutenant has hitherto done.

Hence the reforming party in England proposes to go further, and create a system of popular local government in Ireland. It is suggested that every county should have its elective board, and that large powers of imposing local taxes and managing local affairs, *e. g.*, education, roads and bridges, asylums, possibly prisons, might be given to them. Ought they to have also the control of the police? In England, this is a county affair; but it is asked whether a matter so delicate and important could be left in Ireland at the mercy of the sort of persons whom the electors would in their present temper choose. The Irish police, it must be remembered, is a sort of military force, very different from the constables of an English county.

That private bills—*i. e.*, bills intended to grant powers to individuals or corporations, as, for instance, to make a railway, to construct gas or water works—relating to Ireland should have to be passed by the Parliament in London, and that for the purpose of passing them the parties interested and their witnesses should be brought over to London at a serious expense of money and time, has long been complained of as a grievance. To meet it and give further satisfaction to the Irish demand that they should do their own work at home, it is proposed to establish some sort of tribunal or body in Ireland for the purpose of dealing with private-bill legislation. These may be said to be the three planks in the platform of English Radicalism on the subject of Irish self-government. There is nothing alarming in them; nothing which most Conservatives may not accept; nothing which the present Government might not itself propose.

Unluckily, they are by no means what the Nationalist party wants. It would deride the notion that they constitute a real righting of Irish wrongs, a real gift of self-government to the Irish people. Nothing less than a Parliament of their own will do; and a Parliament of their own means to them not only a Parliament but a budget, a ministry—such a system of central and local government in Ireland as this Irish Parliament will call into being for itself. The question therefore arises, Can this demand for legislative independence be granted? It is so important to pacify and satisfy Ireland if she can be pacified and satisfied, that the reformer must be content to go further than the needs of mere good government require. He must, in fact, go as far as he can without bringing about a condition of things in which more bitter strife and an ultimate disruption of the Empire become probable.

The objections to an Irish Parliament—objections which have received very little discussion in England, because public opinion has in a blunt, unlogical English fashion simply declared itself against the idea without going into reasons—are partly constitutional, partly practical. The chief constitutional objection is, that it would apparently be necessary to turn the present United Kingdom into a sort of federation, creating a new council or assembly of some kind superior both to the Irish Parliament and to what would then be the English and Scottish Parliament—an assembly which should deal with questions pertaining to foreign and colonial policy and the military and naval services of the Empire, since these would remain matters of joint concern for both islands. We should therefore need a Federal Constitution and some sort of Federal Court to interpret that constitution. The independent authority of the Irish Parliament would, however, apparently, on Mr. Parnell's scheme, be greater than that of any State of the American Union, because it would include the power, which of course no American State nor Canadian Province can exercise, of imposing a protective tariff against English and Scottish manufactures. This would be an enormous change, highly inconvenient to England, because it would introduce a swarm of difficulties which under our system of one omnipotent Parliament do not arise, and because a federation between two states so different in population and wealth as Great Britain on one side and Ireland on the other would be far less likely to work smoothly than the American Union does. It has been suggested that Scotland, too, might have her own Parliament, but Scotland wants no Parliament, being perfectly satisfied with things as they are. The only escape from the legal complications which a federal constitution must involve would be to retain the supremacy of the present Imperial Parliament and create an Irish Parliament beneath it. But this would not satisfy the Nationalists, because the Imperial Parliament could in that case reverse anything done by Ireland for herself; nor would it be pleasant for the English, because they would still have Irish members in the Imperial Parliament, who would be able to make themselves as troublesome as they do now in case they had any complaints against an English Ministry or the English Parliamentary majority.

The practical objection to the scheme is, that it might involve conflicts between England and Ireland not less serious than those of the last few years, but conflicts in which the Nationalists would have advantages greater than they now enjoy. They would then have obtained a legal recognition as a nation distinct from the English and Scottish nation, and their Parliament would speak with national authority. Their position in the eyes of the world at large would be a stronger one than they now possess. They would have enough control over the administration of the country to make their antagonism to the military power of the United Kingdom more formidable than it could become under the present system. Grounds for struggles between them and England would still remain. Even supposing that England looked quietly on while laws were passed by an Irish Parliament bearing hardly on the landlords—many of whom are Englishmen or related to English families; foreign affairs, and colonial affairs, and the joint imperial budget, which would be partly chargeable on Irish taxpayers, would supply frequent occasions for dispute. The control of an English majority would be resented in Ireland; Irish Nationalists would ask why they should pay for the maintenance of a huge force to protect English colonies and commerce, to defend India, or safeguard English interests in the Mediterranean. The agitation against England would recommence, but it would now be an agitation for a complete separation of the two islands. England would thus be at last

driven either to recall her concessions and govern Ireland by force, or else to let the island go, and see a hostile Power—weak, no doubt, but able to enter into alliances with powerful foreign States—established within sight of her western coasts from Cantyre as far as Pembroke.

Compromises might be suggested to meet some of these difficulties. Instead of giving Ireland one central Parliament in Dublin, she might be allowed to have four, one in each province, all of course subject to the authority of the Imperial Parliament in London. The Nationalists, however, would not accept this, nor of course would it at all relieve the Imperial Parliament from the obstructive activity of Nationalist members. Or again, if a central representative body were created to meet in Dublin, it might receive from the Imperial Parliament a delegated power of legislation, limited to particular topics, or subject to certain specified conditions. The former difficulty would, however, recur under this plan. The members of this central assembly would complain that they had not a sufficiently free hand, and would set down all failures to the maintenance of English control. The concession would be used merely as a step to further concessions, ending with the repeal of the Union or the separation of the Crowns. In fact, England seems, by yielding any kind of autonomy to Ireland, beyond that which she is proposing to give to her own counties by the establishment of County Boards, to be placing herself on an inclined plane, where the descent is easy and sure to that final severance of the two islands from one another which would be an unquestionable evil for Ireland, and, to say the least, a serious annoyance, a possible menace, to Great Britain. Yet unhappily England does not feel that she now stands on firm and satisfactory ground. Ireland has doubtless been wronged in the past, and there is always, in free governments, a presumption in favor of giving to the people of any district, or a large majority of them, that which they ask for. Self-government would have the enormous advantage of enabling the Irish to acquire that training in government, that knowledge of its difficulties, that sense of responsibility, which they now lack, and which they can scarcely gain while they are able to lay the blame of all and every misfortune on the shoulders of an alien assembly.

The question of the right of one part of a State to secede from the rest is one of the most perplexing that ever present themselves in politics. In the case of your Union, twenty-five years ago, it was complicated by legal questions regarding the true construction of the constitutional pact of 1789, and by the existence of a minority loyal to the Union in most of the seceding States. In the present Anglo-Irish case it is complicated by the fact that through Ireland, and especially in the province of Ulster, there is a population, nearly one-fourth of the whole, and conspicuous for its industry, wealth, and intelligence, which is firmly attached to the union with Great Britain, and dreads the creation of an Irish Parliament. It is not impossible that, in the event of a complete political separation of the islands, this part of the population would take up arms against the majority, so that the retirement of England might involve a civil war, and a civil war in which English sympathy would be so strongly involved that intervention would be likely to follow. One may say that the right of secession, like the "sacred right of insurrection," is one of those things as to which no general rule can be laid down, but which must usually be judged by the result. In the present case, it is clear that Ireland is not strong enough to secede; it is even doubtful whether the Nationalist majority would be strong enough to overpower by force the minority of intelligent and pugnacious anti-secessionists. The appeal of the Parnellite party is therefore no wise to violence, but partly to the good-feeling of England, partly to the principles of free government she professes to hold; most of all, to her fear of the trouble and vexation which Irish members can cause to her Parliament.

The problem is far from insoluble. A strong English Government, secure of remaining in power to pursue a consistent policy for twenty years, could solve it with less friction than was involved in the reconstruction of your Union after the end of the war of secession. But the two English parties are so equally divided, and English ministries are so absolutely at the mercy of fluctuating Parliamentary majorities, that there is little prospect of any consistent policy, or indeed of the taking of any steps with a view to the more distant future. English statesmen seem for the moment more inclined to legislate on a hand-to-mouth principle, and to seek from the masses a guidance which the masses are incapable of giving, than to think out, proclaim, and stand by a comprehensive and self-consistent policy of their own. Y.

THE UNITED STATES AND THE SWISS CONFEDERATION.

LONDON, September 15, 1885.

EVERY year hundreds of Americans pass through Switzerland. Not one in a thousand learns anything about the political and social condition of a country which, to the members of the English people on either side the Atlantic, is, as Mr. Leslie Stephen has termed it, "the playground of Europe." Yet to observers who turn their attention from mountain ranges to the citizens who live at their foot, Switzerland seems not so much a playground where Americans and Englishmen may recruit their health, as a laboratory where may be seen carried on before our eyes social and constitutional experiments the issue of which will throw light on the prospects of modern democracy. To a citizen, moreover, of the Union, Switzerland presents sources of interest not to be found in any other European community. It is the one example existing in Europe of successful federalism; it is at once the forerunner and the follower of the United States. In 1789 Switzerland presented one of the rare instances in which a Federal State had held its own in the contest for existence with the body of centralized monarchies. No one can suppose from the pages of the *Federalist* that its authors had deeply studied Swiss annals. But the existence for centuries of a confederacy which, however laxly united, had still contrived to stand up against fearful odds, must have given encouragement to the hope that the effort to form a great Federal Republic would not end in disaster.

However this may have been, the statesmen who in 1848 gave Switzerland a new constitution and a new life, were profoundly influenced by the lessons of American federalism. Indeed, a hasty glance at their work suggests an idea, which is at bottom profoundly erroneous, that Swiss politicians have achieved little else than the working out of a copy in small of their great American model. The Federal Assembly, with its National Council and Council of States, at once recalls Congress, with its House of Representatives and Senate. The relation between the Central Government and the Cantons bears a close though not an exact resemblance to the relation between the National Government and the States of the Union. The Federal Tribunal, if not exactly modelled upon the Supreme Court of the United States, yet bears a strong family likeness to it. These resemblances are not accidental; a critic who was ignorant of the existence of the United States would find it as hard to understand many details of the Swiss Constitution as a student who had never studied the characteristics of the Constitution of England would find it to understand the articles of the Constitution of Belgium or of Italy.

It is, again, apparent that in some points which arrest the attention of every historian, the federalism of Switzerland has achieved exactly the same kind of success as has been attained by the federalism of America. In each case there has been an astounding reconciliation of local diversity with national unity; and of the two confederations, Switzerland has, in proportion to its resources, struggled with the greater difficulties. The country was of course free from all the perplexities caused to American statesmanship by the existence of slavery, but in every other respect the men who built up the fabric of modern Swiss federalism had to solve problems and meet risks more perplexing than the questions which demanded a practical answer from the founders of the United States. In 1847 Switzerland was torn by religious dissensions which were the outcome of discord that had endured for centuries, and were connected with that vast Ultramontane movement which still endangers the liberties of the great Continental states. In Switzerland, again, political and religious differences were mixed up with differences of race and internal dissensions which threatened at every moment to introduce foreign intervention. There is something almost ridiculous in comparing the War of the Sonderbund, in which little over 100 men perished, with the War of Secession and its hundreds of thousands of victims. But neither Grant nor Lee would have refused a tribute of admiration to the masterly generalship of Dufour, while the promptitude with which the Swiss Confederacy realized the extent of the danger in which the country was involved, and the energy of the Swiss leaders in at once summoning 100,000 men to arms and striking down rebellion before it had had time to collect all its forces, compares very favorably with the attitude of the North in the earlier stages of the contest with Secession. Nor did Switzerland fall essentially behind America in the exercise of that clemency which, after a deadly struggle, affords the only prospect of national reconciliation. The traditions of Swiss jurisprudence were bloody and cruel; and it is certainly remarkable that in 1848 Swiss Federalists put down rebellion without inflicting capital punishment on a single rebel.
